| Remedial Measures - - - - - | 69 |
| Comments upon these Extracts - - - - - | 70 |
| The Principles of the Poor Law Amendment Act, 1834 - - - - - | 71 |
| Summary of Poor Law Report of 1834 - - - - - | 80 |

PART IV.—HISTORICAL DEVELOPMENT AND PRESENT CONDITION OF THE VARIOUS BRANCHES OF THE POOR LAW.

| | PAGE |
|--|------|
| INTRODUCTION - - - - - | 85 |
| CHAPTER 1.—THE CENTRAL AUTHORITY - - - - - | 86 |
| The Poor Law Commissioners, 1834-47 - - - - - | 86 |
| The Poor Law Board, 1847-70 - - - - - | 86 |
| The Local Government Board, 1871 - - - - - | 86 |
| Powers of the Local Government Board - - - - - | 87 |
| (1) Orders and Circulars - - - - - | 87 |
| (2) Control over Local Officers - - - - - | 88 |
| (3) Power to Sanction Loans - - - - - | 89 |
| (4) Audit - - - - - | 89 |
| (5) Power to Compel Information, etc. - - - - - | 91 |
| (6) Official Inquiries - - - - - | 91 |
| (7) Inspection - - - - - | 91 |
| Scope of Board's Powers and Limits thereto - - - - - | 93 |
| Need for a more direct position of Guidance and Initiative - - - - - | 95 |
| Parliamentary Influence on Poor Law Policy - - - - - | 96 |
| Proposal to Substitute Term "Public Assistance" for "Poor Law" - - - - - | 96 |
| Summary of Recommendations and Suggestions - - - - - | 96 |
| CHAPTER 2.—THE LOCAL AUTHORITIES - - - - - | 97 |
| Overseers - - - - - | 97 |
| Magistrates - - - - - | 98 |
| The Vestry - - - - - | 98 |
| Changes Effected by the Act of 1894 - - - - - | 99 |
| Failure of Co-option - - - - - | 99 |
| Effect of popular Election on Administration - - - - - | 100 |
| Divergencies in Administration - - - - - | 100 |
| Lack of popular Interest in Guardians' Elections - - - - - | 101 |
| Defects in Administration and some of their Causes - - - - - | 102 |
| Proposed change of Title for the Local Authorities - - - - - | 108 |
| Summary of Recommendations and Suggestions - - - - - | 108 |
| CHAPTER 3.—OFFICERS OF THE LOCAL AUTHORITY - - - - - | 109 |
| Control and Dismissal of Officers - - - - - | 109 |
| Appointment of Officers - - - - - | 111 |
| Salaries of Officers - - - - - | 112 |
| Effect of the Superannuation Act - - - - - | 113 |
| Clerk to the Guardians - - - - - | 113 |
| Workhouse Masters - - - - - | 114 |
| Relieving Officers - - - - - | 115 |
| Proposed Public Assistance Service - - - - - | 121 |
| Summary of Recommendations and Suggestions - - - - - | 121 |

Part IV.—Historical Development and Present Condition of the Various Branches of the Poor Law—*cont.*

| | PAGE |
|--|------|
| CHAPTER 4.—AREAS OF ADMINISTRATION | 123 |
| Reasons for enlarging Area of Administration in 1834 | 123 |
| Policy of First Central Authority in regard to Classification of Indoor Poor | 123 |
| Arguments against Classification by Workhouses now inapplicable | 125 |
| Impossibility of proper Classification in existing Workhouses | 125 |
| Enlargement of Area for certain Poor Law purposes | 126 |
| Disregard of existing Facilities for Combination | 127 |
| Advantages of Classification by Workhouses | 127 |
| Extension of Area will Facilitate Classification | 127 |
| Financial Aspects of Enlargement and Provisions of Act, 1834 | 128 |
| Union Chargeability Act, 1865. | 128 |
| Metropolitan Common Poor Fund | 128 |
| Exchequer Contributions | 128 |
| Absence of Central Control over Grants | 129 |
| Inequalities of Poor Law Burdens | 129 |
| Equalisation of burden of Poor Relief in London | 130 |
| Summary of Recommendations and Suggestions | 130 |
| CHAPTER 5.—INDOOR RELIEF | 131 |
| Control and Supervision of Indoor Poor | 131 |
| Intention of 1832 Commission regarding Workhouses | 131 |
| The Workhouses of to-day | 132 |
| Rural Workhouses | 132 |
| Urban Workhouses | 132 |
| London Workhouses | 133 |
| Disadvantages of present System | 133 |
| Effect upon Inmates of Life in Workhouses | 134 |
| The General Workhouse in Relation to the Able-Bodied | 135 |
| Increasing Cost of Indoor Relief | 135 |
| Unnecessary Expenditure | 136 |
| Control of Expenditure by the Local Government Board | 137 |
| “Ins and Outs” | 137 |
| Periodical Revision of Indoor Cases | 138 |
| Course of Indoor Pauperism since 1871–2 | 139 |
| Attractiveness and deterrence of Workhouse to certain Classes | 139 |
| Conditions essential to effective Indoor Relief | 140 |
| Summary of Recommendations and Suggestions | 140 |
| CHAPTER 6.—OUTDOOR RELIEF | 141 |
| Orders regulating Outdoor Relief to the Able-bodied | 141 |
| Policy as to Outdoor Relief to the Able-bodied | 142 |
| Outdoor Relief of non-Able-bodied | 143 |
| Difficulties arising from Outdoor Relief | 143 |
| Recurrent interest in Poor Law Administration | 144 |
| Mr. Goschen's Minute of 1869 | 144 |
| The Crusade against Outdoor Relief in the 'Seventies | 145 |
| Extent of Present Day Outdoor Pauperism | 147 |
| Insufficient Inquiry into Circumstances of Applicants: Inadequate Outdoor Relief | 147 |
| Indiscriminate and unconditional Outdoor Relief | 150 |
| Proposed Conditions of Outdoor Relief | 152 |
| Proposed Compulsory Removal of certain Cases to an Institution | 153 |
| Outdoor Relief to Widows | 153 |
| Effects of Outdoor Relief on Women's Wages and Conditions of Employment | 155 |
| Effects of Outdoor Relief on Character | 156 |
| Effect of abolishing Outdoor Relief | 157 |
| Question of future Administration of Outdoor Relief to Widows | 157 |
| Outdoor Relief to deserted Wives | 157 |
| Effect of inadequate Outdoor Relief to Aged Women | 158 |
| Rural Labourers' Wages indirectly subsidised by Outdoor Relief | 158 |
| Future Policy as to Outdoor Relief | 159 |
| Proposed adoption of “Case-Paper” System | 160 |
| Proposed Co-operation between Poor Law and Charity | 161 |
| Summary of Recommendations and Suggestions | 162 |
| CHAPTER 7.—THE AGED | 163 |
| Modern Growth of the practice of regarding the Aged as a separate Class | 163 |
| Favourable discrimination as regards the Aged | 163 |
| Effect of Old-age Pension Question on the Treatment of the Aged | 164 |
| Improved Treatment of the Aged in Workhouses | 167 |
| Character Classification of Workhouse Inmates at Sheffield | 168 |
| Dreariness of Life in certain Poor Law Institutions for the Aged | 169 |
| The Brabazon Scheme | 169 |
| Variety of practice as to Outdoor Relief to Aged | 169 |
| Inadequate Out-relief to Aged | 170 |
| Out-relief to Aged regarded practically as Old-Age Pensions | 170 |
| Age and Character Classification of Outdoor Poor | 171 |
| Variety of Practice as to Outdoor Relief to Aged | 172 |

Part IV.—Historical Development and Present Condition of the Various Branches of the Poor Law—*cont.*CHAPTER 7.—THE AGED—*continued.*

| | PAGE. |
|---|-------|

Royal Warrant.

WHITEHALL, DECEMBER 4TH, 1905.

The KING has been pleased to issue a Commission under His Majesty's Royal Sign Manual to the following effect :—

EDWARD R. and I.

Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, to

Our right trusty and well-beloved Councillor Sir George Francis Hamilton (commonly called Lord George Francis Hamilton), Knight Grand Commander of Our Most Exalted Order of the Star of India ;

Our right trusty and well-beloved Councillor Charles Owen O'Connor (commonly called the O'Connor Don) ;

Our right trusty and well-beloved Councillor Sir Henry Augustus Robinson, Knight Commander of Our Most Honourable Order of the Bath, Vice-President of the Local Government Board for Ireland ;

Our right trusty and well-beloved Councillor Charles Booth, Fellow of the Royal Society ; and

Our trusty and well-beloved :—

Sir Samuel Butler Provis, Knight Commander of Our Most Honourable Order of the Bath, Permanent Secretary to the Local Government Board for England ;

Frank Holdsworth Bentham, Chairman of the Bradford Board of Guardians ;

Arthur Henry Downes, Doctor of Medicine, Senior Medical Inspector for Poor Law purposes to the Local Government Board for England ;

Thory Gage Gardiner, Clerk, Master of Arts ;

George Lansbury ;

Charles Stewart Loch, Bachelor of Arts, Secretary the Charity Organisation Society ;

James Patten MacDougall, Master of Arts, Vice-President of the Local Government Board for Scotland ;

Thomas Hancock Nunn ;

Lancelot Ridley Phelps, Clerk, Master of Arts ;

William Smart ;

Henry Russell Wakefield, Clerk ;

Helen, wife of Bernard Bosanquet, Professor of Moral Philosophy at St. Andrews University ;

Beatrice, wife of Sidney Webb, Bachelor of Laws ; and

Octavia Hill, Spinster. Greeting !

Whereas We have deemed it expedient that a Commission should forthwith issue to enquire :—

(1) Into the working of the laws relating to the relief of poor persons in the United Kingdom ;

(2) Into the various means which have been adopted outside of the Poor Laws for meeting distress arising from want of employment, particularly during periods of severe industrial depression ;
and to consider and report whether any, and if so, what, modification of the Poor Laws or changes in their administration or fresh legislation for dealing with distress are advisable ;

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorized and appointed, and do by these presents authorize and appoint, you, the said Sir George Francis Hamilton (commonly called Lord George Francis Hamilton) (Chairman) Charles Owen O'Connor (commonly called the O'Connor Don), Sir Henry Augustus Robinson, Charles Booth, Sir Samuel Butler Provis, Frank Holdsworth Bentham, Arthur Henry Downes, Thory Gage Gardiner, George Lansbury, Charles Stewart Loch, James Patten MacDougall, Thomas Hancock Nunn, Lancelot Ridley Phelps, William Smart, Henry Russell Wakefield, Helen Bosanquet, Beatrice Webb, and Octavia Hill, to be Our Commissioners for the purposes of the said enquiry.

And for the better effecting the purposes of this Our Commission, We do by these presents give and grant unto you, or any five or more of you full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission ; to call for information in writing ; and also to call for, have access to, and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to enquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these presents authorize and empower you, or any of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid.

And We do by these presents will and ordain that this Our Commission shall continue in full force and virtue, and that you Our said Commissioners, or any five or more of you, may from time to time proceed in the execution thereof, and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any five or more of you, have liberty to report your proceedings under this Our Commission from time to time if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any five or more of you, your opinion upon the matters herein submitted for your consideration.

Given at Our Court at *Sandringham*, the fourth day of *December*, one thousand nine hundred and five, in the fifth year of Our Reign.

By His Majesty's Command,

(Signed) A. AKERS-DOUGLAS.

By **Royal Warrant** dated the twelfth day of February, one thousand nine hundred and six, Mr. Francis Chandler was added to the Commission ; and

By **Royal Warrant** dated the thirtieth day of October, one thousand nine hundred and six, the Most Rev. Denis Kelly, Doctor in Divinity, Lord Bishop of Ross was appointed to fill the vacancy caused by the death of the O'Conor Don.

REPORT

To the King's Most Excellent Majesty,

May it Please Your Majesty,

1. We, the undersigned Commissioners, appointed by Your Majesty's Royal Warrant to inquire:—

(1) Into the working of the laws relating to the relief of poor persons in the United Kingdom;

(2) Into the various means which have been adopted outside of the Poor Laws for meeting distress arising from want of employment, particularly during periods of severe industrial depression;

and to consider and report whether any, and if so, what, modification of the Poor Laws or changes in their administration or fresh legislation for dealing with distress are advisable;

humbly beg to submit to Your Majesty our Report and the evidence upon which it is based.

2. From the outset we were impressed by the immense scope of the investigation entrusted to us. Since 1834, when the operations of the Poor Laws as a whole were last brought under the consideration of a Royal Commission, there have been presented to Parliament nearly 100 Reports of inquiries into subjects connected with the Poor Law. Magnitude of the Inquiry as compared with previous inquiries.

3. Yet these investigations, vast as they are in the aggregate, covered only isolated portions of the great domain of inquiry into which Your Majesty's Royal Warrant authorised us to enter. The Reports of previous Royal Commissions and Parliamentary and Departmental Committees dealt with particular classes of paupers or special Poor Law problems; none of them included in their purview pauperism as a whole. For the first time a Report is submitted which proposes not only large and important modifications of the Poor Law and its administration, but a revision of the methods of voluntary assistance.

4. While, therefore, we were greatly indebted to the inquiries of our predecessors, we felt ourselves bound to reconsider some of their conclusions in the light of later information and developments. We had to master, to adapt, and sometimes to supplement the results of these investigations.

5. A complete and exhaustive treatment of so large a subject, with its innumerable ramifications and side issues, must have occupied many years; and we felt that if we had thus attempted to discharge the task, the investigation entrusted to us might easily have out-lived some of the problems into which we were directed to inquire. With a view, therefore, to expediting the inquiry and reporting to Your Majesty at the earliest possible date, we resolved to adopt the following procedure.

6. Firstly, we resolved to direct our efforts towards laying down principles. The Poor Law regulates daily and almost hourly the lives of a heterogeneous population exceeding in size that of the city of Liverpool. To attempt to prescribe in detail the government of this multitude, differing among themselves so widely in needs and circumstances, would have consumed a life-time. We felt that we must be content to leave to administrators and officials to work out the details later on. In no other way was it possible, within the limited time at our disposal, even to touch upon the variety of questions presented to us in this part of our work. Procedure adopted for expediting the inquiry.

7. Secondly, and for the same reason, we limited our inquiries in the main to a survey of the general operations of the Poor Law. Our object was to offer suggestions and guidance to Your Majesty's Government; and we have not thought it well to investigate personal charges or disputes after the manner of a judicial body.

8. Thirdly, we had to consider our position in regard to other current inquiries cognate to our own. We were aware that there had been recently conducted, or were actually proceeding, a number of inquiries, by Royal Commissions and Parliamentary or Departmental Committees, into subjects which came within our terms of reference. This specially applied to Ireland where, at the time of our appointment, a Vice-Regal Commission was actually engaged in conducting an inquiry into the provisions made for the relief of the various classes of poor in that country. With regard to these inquiries we decided to adopt the following policy. We invited no fresh evidence in regard to them, but, at the same time, we undertook to consider any serious objections to the recommendations of such Commissions or Committees which might be offered to us; and our policy has been to accept these recommendations and the evidence upon which they have been based, unless, in exceptional instances, such recommendations were opposed to our own, or were inconsistent with any general system of Poor Law administration which we might advocate.

9. The three rules of procedure which we therefore adopted with a view to limiting the scope of our inquiry were :—

(1) To consider principles and, wherever possible, to avoid details.

(2) To avoid any attempt at inculpating or exculpating individuals, or individual Boards of Guardians.

(3) To accept as far as possible the evidence and recommendations of recent or current inquiries into subjects connected with our inquiry.

10. Further we considered whether we might properly expedite our proceedings by dividing ourselves into Committees for the purpose of cross-examining witnesses on particular branches of our subject. We did not, however, propose to hear any but the more important witnesses, and, in view of the gravity of the issues involved and the intimate connection between the various branches of our subject, we deemed it advisable that the oral evidence should be heard and the cross-examination of witnesses conducted by the Commission sitting as a whole. We, however, made use of the Committee system in every way in which we thought we might legitimately do so.

Order of the Inquiry.

11. Our reference included two main subjects :—

(1) The Poor Law.

(2) Methods of meeting distress outside the Poor Law.

12. The latter of these two divisions included the relief of the unemployed, and it was recognised that, on this subject, there was a widespread public wish that we should come to an early decision. On the other hand it seemed almost impossible to express an opinion on measures confessedly supplementary to the Poor Law until we had brought under our review those defects in the Poor Law which such measures were intended to supplement. Moreover, the Unemployed Workmen Act, 1905, had been passed only a few months prior to our appointment.

13. It seemed, therefore, advisable that we should begin our investigation by taking up the first part of the reference relating to the working of the Poor Laws, and that we should defer the inquiry into the various means which have been adopted outside of the Poor Laws for meeting distress arising from want of employment. By so doing we allowed the authorities established under the Act to complete two winters' work before receiving any large body of evidence relating to that part of the reference. Meanwhile we proceeded systematically with our review of the Poor Law and of such other methods of assisting the poor either by charity or voluntary effort as came under our notice in connection with the Poor Law.

Information from local bodies, etc.

Guardians.

14. The scope of the inquiry and the limited time at our disposal rendered it expedient to adopt numerous, and, where possible, concurrent methods of collecting information.

15. It was natural that we should turn at the outset to the Local Authorities for guidance and information, and our first step was to invite all Chairmen of Boards of Guardians throughout England and Wales to acquaint us with any serious defects which, in their opinion, exist in the present Poor Law system, and to suggest remedies for the removal of such defects. Subsequently, and from time to time, letters were sent to all Boards of Guardians stating that we should be happy to consider any written representations

that they might wish to make "on important questions connected with the Poor Law." Out of the 645 Unions in England and Wales on 1st January, 1906, replies have been received from 439 Chairmen, and 388 Boards of Guardians,—548 Unions being represented by the two sets of replies. Copies of the letters addressed to Boards of Guardians and their Chairmen, together with a summary of the replies received, will be found in the Appendix.

16. A letter similar to that issued to Boards of Guardians was sent to every Parish Council in Scotland. A summary of the replies received will also be found in the Appendix. Scottish Parish Councils.

17. A list of questions as to the working of the Unemployed Workmen Act was sent to every Distress Committee in the United Kingdom. Each Committee was also invited to suggest ways in which the Act should be amended in the event of its renewal. The answers received have been printed, and will be found in the Appendix. Distress Committees.

18. We have also received from Boards of Guardians, Distress Committees, and other public bodies, as well as from individuals, a large number of representations with regard to miscellaneous subjects connected with our inquiry.

19. With a subject so wide as that of the poor laws and the relief of distress, and with so many persons of experience qualified to express an opinion regarding it, the selection of witnesses who should be invited to furnish us with oral evidence was not infrequently a matter of considerable difficulty. Moreover, as the inquiry proceeded, it soon became apparent that it would be impossible, within the limited time at our disposal, to obtain by oral examination of witnesses, a body of evidence which could be taken as even approximately indicative of the views of the country as a whole, or of those portions of it from which we felt that it would be specially desirable to receive evidence. We decided, therefore, to invite a large number of persons of experience, residing in different parts of the country, to furnish us with written statements of evidence on all, or any, of a number of subjects set forth in a syllabus which we forwarded to them. These invitations were readily responded to, and, as a rule, it was from among the writers of such statements that we selected witnesses for oral examination. Evidence from Witnesses.
Oral Evidence.
Written Statements.

20. The information contained in many of these statements was so fully and clearly put before us that we did not think it necessary to trouble the writers to amplify it by *viva voce* examination. Frequently, also, it happened that the statements (some full and others quite short), although containing valuable material for examination, simply reiterated views that had already been submitted to us by a number of other witnesses; and as our inquiry proceeded, it was inevitable that an increasing number of statements should fall into this category. The exigencies of the situation compelled us, therefore, to select as oral witnesses the authors of statements which contained either special features of interest or ambiguities which it was desirable to clear up. We were thus obliged to refrain from having before us as oral witnesses the authors of many written statements whom we should have examined if time had not been so pressing.

21. We have received oral or written evidence from:—

(1) The following Government Departments:—

Representative character of Witnesses.

(a) The Local Government Boards for England, Scotland, and Ireland (including all the General Inspectors under the English Board and all the General Superintendents of Poor under the Scottish Board),

(b) The Board of Trade.

(c) The Home Office.

(d) The War Office.

(e) The Admiralty.

(f) The Board of Education.

(g) The Charity Commission.

(h) The Friendly Societies Registry.

(i) The General Register Office.

(j) The Post Office.

(k) The General Board of Lunacy for Scotland.

(2) Representatives of the chief Poor Law and charitable associations in England and Scotland.

(3) Representatives of the British Medical Association.

(4) Representatives of Trade Unions, Friendly Societies, and Co-operative Societies.

(5) Large employers of labour.

(6) Independent witnesses experienced in the theory and practice of the Poor Law and the relief of distress.

(7) Representatives of Boards of Guardians, Distress Committees, Town and County Councils, and other Authorities, from the following districts of England and Wales :—

(a) The Metropolis.

(b) Manchester and Liverpool.

(c) West Yorkshire.

(d) The Midlands.

(e) South Wales.

(f) North-Eastern counties.

(g) Eastern counties.

(h) Western counties.

(i) South-Western counties.

(8) Representatives of Parish, Town, and County Councils and Distress Committees, from the chief urban, rural, and insular districts of Scotland.

(9) Representatives of Distress Committees from various towns in Ireland.

(10) Eminent officials and experts in regard to poor relief in other countries.

22. In addition to our general syllabus of evidence, we submitted a series of questions to a number of political economists, employers of labour, and other experts on the effect of industrial conditions on unemployment. The replies of these gentlemen have been included in the Appendix.

23. Altogether we have held 209 meetings, of which 159 have been spent in hearing evidence. We have examined 452 witnesses, and the questions answered orally exceed 100,000 in number. We have, in addition, received statements of evidence, or replies to questions as above described, from about 900 persons who have not been examined orally.

Relative importance of oral and non-oral evidence.

24. We ought perhaps to offer here a few words of explanation in regard to the relative importance of the oral and written evidence above described. Broadly speaking, the oral evidence has been subjected to the test of cross-examination, and the written evidence has not. A *prima facie* presumption, therefore, arises in favour of the oral evidence. But it must be remembered that, for reasons already explained, the evidence of many eminent and expert witnesses is confined to their written statements, and that we had no opportunity of orally examining them. Moreover, even when we cross-examined a witness, we accepted his written statement as his evidence-in-chief; and though in many cases a very large number of questions were put to the witness, the questions by no means invariably covered all the points set out in the statement. In no case did we recall a witness whose evidence seemed to be controverted by another witness. We had no power to impose an oath or other searching test of credibility. Our cross-examination was therefore in the main directed towards either explaining inconsistencies, filling up lacunæ, or substantiating and developing particular points in the written statements.

25. On the other hand, in regard to the written evidence, it should be pointed out that the witness in each case, when writing his statement of evidence, was aware that he might be summoned to be cross-examined on that statement, and in our letters inviting the statement of evidence, we impressed upon the writers that "in all cases an expression of opinion should be accompanied by an indication of the facts upon which such opinion is based."

26. In our opinion, therefore, the value both of our oral and written evidence consists rather in its cumulative effect than in the idiosyncrasies of individual assertion, and when these are eliminated we believe that there will be found a mass of sober and well considered opinion suggestive and on the whole consistent.

27. Certain aspects of the subject matter referred to us seemed to require for their elucidation a personal and local investigation in typical districts, which we could not ourselves undertake. From time to time, therefore, we appointed a number of "Special Investigators" who have furnished us with a series of valuable reports on the subjects of inquiry entrusted to them. The matters inquired into, and the names of the Investigators appointed to make the inquiries are as follows:—

| Subject. | Investigators. |
|---|---|
| 1. The relation of industrial and sanitary conditions to pauperism :— (a) In certain parts of London ; and (b) In various typical provincial towns. | Mr. A. D. Steel-Maitland, and Miss Rose E. Squire. |
| 2. The effect of outdoor relief on wages and the conditions of employment in certain Unions :— (a) In London ; and (b) In the provinces. | Mr. Thomas Jones, and Miss Constance Williams. |
| 3. The effect of outdoor relief on wages and the conditions of employment :— (a) In certain rural unions in Shropshire ; (b) In certain rural Unions in the counties of Suffolk and Cambridge ; (c) In certain Unions in South Wales ; (d) In certain parishes in Scotland ; and (e) In Belfast. | Mr. Thomas Jones. |
| 4. The effects of employment or assistance given to the " Unemployed " since 1886 as a means of relieving distress outside the Poor Law ; in London and generally throughout England and Wales. | Mr. Cyril Jackson, and Rev. J. C. Pringle. |
| 5. The effects of employment or assistance given to the " Unemployed " since 1886 as a means of relieving distress outside the Poor Law in Scotland. | Rev. J. C. Pringle. |
| 6. The effects of employment or assistance given to the " Unemployed " since 1886 as a means of relieving distress outside the Poor Law in Ireland. | Mr. Cyril Jackson. |
| 7. Boy labour in London and certain other typical towns. | Mr. Cyril Jackson. |
| 8. The methods and results of the present system of administering indoor and outdoor Poor Law medical relief in certain Unions in England and Wales. | Dr. J. C. McVail. |
| 9. The administrative relations of charity and the Poor Law ; and the extent and the actual and potential utility of endowed and voluntary charities :— In certain towns and rural Unions in England ; and In certain towns and parishes in Scotland. | Mr. A. C. Kay, and Mr. H. V. Toynbee. |
| 10. The condition of the children who are in receipt of the various forms of Poor Law relief in certain Unions in London and in the provinces. | Dr. Ethel M. N. Williams. |
| 11. The condition of the children who are in receipt of the various forms of Poor Law relief in certain parishes in Scotland. | Dr. C. T. Parsons. |
| 12. A comparison of the physical condition of " ordinary " paupers in certain Scottish poorhouses with that of the able-bodied paupers in certain English workhouses and labour yards. | Dr. C. T. Parsons. |
| 13. The effect of the refusal of out-relief on the applicants for such relief :— (a) In Bradford ; and (b) In certain Unions in London and in the provinces. | Miss G. Harlock. |
| 14. The overlapping of the work of the voluntary general hospitals with that of Poor Law medical relief in certain districts of London. | Miss Norah B. Roberts. |

28. As regards the status of the Special Investigators, it was our intention that while on the one hand they should be persons of skill and tact, reporting to us on particular congeries of difficult facts, yet on the other hand their position should not be quite analogous to that of the Assistant Commissioners to the Royal Commission of 1832. To these Assistant Commissioners was practically delegated the whole responsibility for collecting the evidence upon which the Royal Commission should report. We felt that public opinion would not support us in so extensive a delegation of our responsibilities. Our purpose was to utilise the services of our Investigators in collecting preliminary evidence for us, and in indicating where further evidence might be obtained; but we felt that in all cases it was our duty to supplement and test by evidence of our own the evidence laid before us by them. Accordingly some reference should here be made to their general instructions, a copy of which will be found in the Appendix.

29. They were instructed "to collect, classify, and summarise evidence on the subject into which they were appointed to inquire, and subsequently to embody the results of their inquiry in a Report to the Commission." They were also informed that they "should, as far as possible, obtain their information by personal observation and inquiry, and by examination of documents"; that "it should in all cases be a fundamental part of their investigation to see and observe for themselves the facts connected with their subject as distinguished from merely receiving statements about the facts"; and that "wherever practicable, the statements of individuals should be corroborated by personal observation on the part of the investigators of the facts alleged and by their own inspection of such documentary proof as is available." The Special Investigators were further instructed to draw up their Reports in two parts, the first part to contain statements of the facts as ascertained by them, and the second part such conclusions as might properly be drawn from the facts so ascertained.

30. In so extended and difficult an inquiry it is hardly to be expected that these reports will pass unchallenged on one point or another. But in view of the precautions taken by us to ensure that the information obtained by the Special Investigators should be collected in a scientific manner, and should be duly authenticated, we have confidence in accepting generally the statement of facts which they have submitted to us. We have also frequently accepted the conclusions which the Investigators have drawn from the facts, but occasionally, in the light of fuller knowledge, we have felt it our duty to differ from them.

31. It is only just to the Investigators to explain that the conditions under which we worked compelled us, in the case of each inquiry, to fix a definite period by which it should be completed, although some of the wider subjects might well have engaged the attention of an Investigator for a much longer period of time than we could allow. Moreover, on some subjects, direct evidence was not easily obtainable. Great discrimination was, therefore, required on the part of the Investigators to pursue only those lines of investigation which would yield the most profitable results. Subject to these reservations, we think that their reports bear witness to the care, zeal, and ability with which the inquiries have been carried out, and we feel that the Commission and the nation are indebted to them for their patient and difficult researches.

32. In the course of our inquiries we found that we had no statistical data to enable us to form an opinion as to whether the earnings of the labouring classes are sufficient to enable them unaided to make provision for the ordinary contingencies of life. With the object of throwing some light upon this question we obtained the services of Mr. T. G. Ackland, Mr. George King, and Mr. F. G. P. Neison, all of whom are Fellows of the Institute of Actuaries, for the purpose of carrying out an actuarial inquiry into the cost of insurance against the risk of the various misfortunes which tend to drive persons to seek assistance from the Poor Law, *e.g.*, unemployment and sickness of themselves and of those dependent on them. We have to express our appreciation of the great obligation under which these gentlemen have placed us by their kindness in undertaking the inquiry and furnishing us with valuable reports on a subject in regard to which no trustworthy information was available. Their reports have been printed and will be found in the Statistical Appendix. (Part XVI.)

33. Representations having been made to us that pauperism varies considerably, not only in different parts of the country, but also in different parts of the same Union

or parish, we asked Mr. E. J. Mott, the Clerk to the Guardians of the Fulham Union, if he would, with the assistance of the relieving officers for the parish, prepare and furnish us with a map of the parish showing the situation of the residence of each out-relief case and of the previous residence of each in-relief case. This he readily assented to, and the map, with the observations of the relieving officers concerning it, was then submitted to Dr. J. C. Jackson, the Medical Officer of Health for the Borough of Fulham, who furnished further information upon the character of the houses included in the areas in which pauperism is most prevalent. We are therefore under a deep obligation to these gentlemen for the inquiries which they were good enough to undertake on our behalf. The results of the inquiry have been printed and will be found in the Statistical Appendix. (Part XVII.)

34. In order that we might compare the different methods of poor relief adopted by various Boards of Guardians, and at the same time obtain a more intimate knowledge of social and industrial conditions in various parts of the country, we paid a large number of visits to Unions in different parts of England and Wales. After having received the written statements of evidence from a district, our general practice was to visit it, and, thereafter, to examine the witnesses whom we had invited to give evidence respecting it. In each district we formed ourselves into small Committees for the purpose of visiting institutions. This enabled us to cover a good deal of ground in a limited time. We endeavoured, where practicable, to attend meetings of Boards of Guardians, Relief Committees, and Distress Committees. We interviewed as many of the local Poor Law guardians and officials as possible. We visited workhouses, labour yards, infirmaries, Poor Law schools, cottage and scattered homes for children, and other Poor Law institutions. We also took the opportunity of seeing at their own homes persons in receipt of outdoor relief and boarded-out children. For the purpose of comparing Poor Law with charitable or other methods of relieving poverty and distress, we visited a large number of miscellaneous institutions such as voluntary hospitals, orphanages, reformatories, industrial schools, prisons, labour colonies, lunatic asylums, homes for the aged, institutions for the blind, the deaf and dumb, etc. We also attended meetings of various branches of the Charity Organisation Society. We paid similar visits in Scotland and Ireland. Altogether in the course of our inquiry, we have visited about 200 Unions in England and Ireland, and 50 parishes in Scotland; we have attended about 160 meetings of local bodies, and visited some 400 institutions.

35. The printed reports of these visits will be found in the Appendix. We attach considerable importance to them, for, although as will be gathered on perusal, they are mostly informal accounts of visits compiled from rough notes jotted down *in situ*, and intended primarily for circulation among ourselves only, yet they are the actual evidence of our eyes and ears, and very frequently we were thus enabled to appreciate the evidence of witnesses. Moreover, in the aggregate, they furnish a fairly complete picture of the Poor Law administration as we found it, here full of blemishes, there with striking excellences, and there again most depressingly mediocre. We have, therefore, thought it right to publish these reports with our other evidence; but at the same time, as the information they contain was often given to us informally and in our capacity as visitors, we have by striking out names concealed the identity of the particular places and people to which the reports relate. These reports are the most graphic evidence we have of the actual working of the Poor Law.

36. A small Committee of our members have visited certain labour colonies in Belgium, Holland, Germany, and Switzerland, and inquired into the administration of relief in Hamburg. Their report will be found in the Appendix.

37. In addition to the evidence submitted to us by various witnesses regarding the methods of public relief or assistance in other countries, we have obtained information from officials and other accredited persons residing in Australia, in New Zealand, in Canada, in several European countries, and in the United States. This information was received in answer to two series of questions drawn up by us and transmitted to these Colonies and countries through the medium of the Colonial and Foreign Offices. One series of questions dealt with the relief of the poor generally, and the other more particularly with the methods adopted for supplying poor persons with medical assistance. The replies have been annotated and classified. Some of the more important foreign Poor Laws and regulations have been translated, and memoranda have been prepared explaining the chief features of the various systems. This information is printed in a separate volume, which contains also a memorandum as to the preparations for famine relief and its administration in India.

Statistical
Inquiries.

38. With regard to the classes of persons relieved by the Poor Law Authorities, we found it necessary to obtain fuller statistical information than was supplied by the published official returns. We therefore undertook two special statistical inquiries. One was a census of the persons relieved in every Poor Law area in the United Kingdom on March 31st, 1906. This census states the number of those persons, their sex, age, physical condition, and occupation or former occupation, if any; the manner of their relief, whether it be outdoor or indoor; if it be outdoor, whether it is medical relief only, and if indoor, in what class of institution the person is maintained. The other inquiry was designed to collect statistical information from certain selected Unions as to the nature of the diseases from which sick paupers are suffering. The results of these two inquiries have been tabulated, and are printed in the Statistical Appendix with prefatory memoranda.

39. While the census of pauperism, above referred to, supplied us with much valuable information—a great deal of which was comparable with the available statistics of pauperism—it gave us only the results of a day count. In this respect it failed, as do nearly all the published statistics, to provide any measure or analysis of the total volume of pauperism dealt with during a definite period. The weakness of a day count lies in this, that it cannot distinguish sufficiently between those relieved continuously and those relieved only occasionally, and that it fails to record those persons whose relief fell wholly within the interval between two day counts. We made representations to this effect, to the Local Government Boards of England and Wales, Scotland, and Ireland, and they moved for returns relating to their respective countries, showing the total number of persons relieved during the course of twelve months, and the periods and recurrence of their relief. These returns have now been published as Parliamentary Papers and the results are also included in the Statistical Appendix.

40. Other statistical returns which we have obtained give particulars as to :—

(a) The extent to which Boards of Guardians in England and Wales were on January 1st, 1908, exercising the rights of parents over children adopted under the Poor Law Acts of 1889 and 1899.

(b) The number of young persons assisted by Boards of Guardians in England and Wales during the period devoted to the acquisition of a trade, so far as that period fell within the year 1907.

(c) The extent to which paupers were removed from one Union in England and Wales to another during 1907.

(d) The work and cost of labour colonies.

41. The Local Government Board for England has furnished us with an elaborate return showing the extent to which Boards of Guardians have, since 1886, resorted to exceptional measures for the relief of distress arising from want of employment.

42. The Scottish Local Government Board has furnished returns as to :—

(a) The extent to which in certain typical parishes persons are relieved from the payment of rates on the ground of poverty.

(b) The extent to which compounding for rates prevails in such parishes.

(c) The classes of persons assisted out of the ordinary church door collections in parish churches in Scotland.

(d) The proportion of electors who voted at the Parish Council elections of 1907. (This return was published as a Parliamentary return.)

Parochial
Inquiry.

43. Through the courtesy of the Archbishops of Canterbury and York, the Bishops of the various dioceses in England and Wales, and the Moderator of the General Assembly of the Church of Scotland, we were enabled to secure the appointment of small committees of most of the Diocesan Conferences and of the General Assembly of the Church of Scotland

to carry out an inquiry in each parish of Great Britain (on lines similar to those adopted in an inquiry which had already been undertaken in the Diocese of Winchester) regarding *inter alia* :—

- (1) The extent and causes of poverty.
- (2) The question whether poverty is or is not increasing in intensity.
- (3) The method of administering charitable assistance.
- (4) The questions whether and to what extent there is overlapping of relief between voluntary agencies, and between these and the Poor Law, and if so, what steps were taken to prevent it.
- (5) The question whether any appreciable amount of distress is due to :—
 - (a) Reluctance on the part of destitute persons to apply for poor relief ; and
 - (b) The inadequacy of the relief granted by the Poor Law authority.

44. The reports of the various inquiries will be found in the Appendix. They are based on the replies of the parochial clergy, and give us an interesting account of the condition of different parts of the country in respect to poverty. The reports also contain independent and valuable criticisms of the efficacy of the existing methods and agencies for relieving distress. In making use of these reports it should, however, be observed that the terms used in the questions to the clergy were not identical in all dioceses, and in some cases were rather indefinite. Hence, a different interpretation may not infrequently have been placed upon them by different clergymen. This especially applies to such questions as deal with the intensity of poverty in the parish, and the adequacy of the relief given by the Poor Law Authorities, in regard to both of which no precise definition would be applicable. But with these slight qualifications, the reports of the parochial inquiries form a most valuable body of independent local evidence which may be used for the purpose of correcting the point of view of those actually engaged in the local Poor Law administration.

45. At our suggestion, the Local Government Board for England very kindly undertook to conduct, by means of certain of their General Inspectors, an inquiry into the condition of the outdoor poor in certain districts of England and Wales. Their Reports will be found in the Appendix.

46. The Board of Trade have furnished us with a series of very valuable Memoranda dealing with :—

Memoranda by
Government
Departments.

- (1) The method of compilation of the Board of Trade percentages of unemployed, and the extent to which they may be taken as a measure of unemployment.
- (2) Amount of time lost by workpeople through want of employment, and other causes.
- (3) Cyclical trade depressions.
- (4) The numbers of wage-earners grouped according to wages earned, and an account of the movements in the wages in certain groups of industries, and in the cost of living over a period of twenty years.
- (5) The extent to which female labour has displaced adult labour in the last twenty years.
- (6) Seasonal industries and industries carried on by casual labour, and the number of persons employed by railway companies, gas, water, and tramway companies and undertakings.
- (7) Country born men in large towns.
- (8) Emigration from the United Kingdom.
- (9) Alien immigration.
- (10) Labour bureaux.
- (11) The growth of Trade Unions, with particular reference to the payment of unemployed benefit.
- (12) Insurance against unemployment in foreign countries.
- (13) Labour colonies on the Continent.

47. The Local Government Boards of England, Scotland and Ireland, the Home Office, the Colonial Office, the Foreign Office, the War Office, the Admiralty, the Civil Service Commissioners, the Board of Education, the Registrar-General for England, the Chief Registrar of Friendly Societies, the Charity Commissioners, and the Post Office have all assisted us by supplying a number of Memoranda, etc., on miscellaneous subjects and have placed at our disposal other facilities which have enabled us to obtain information with reference to the subject-matter of our Inquiry.

48. Lastly, we have to express our sense of gratitude :—

(1) To the Boards of Guardians throughout England and Ireland, the Parish Councils throughout Scotland, the Distress Committees, and other bodies, throughout the country for the courtesy with which they have invariably received us at their meetings, and for the readiness with which they have facilitated our inquiries either by providing us with information or by allowing us to visit the various institutions, etc., within their control ; and

(2) To the many thousands of local officials, members of local Boards, and others, who have supplied us or our Investigators with information, often at the cost of much time and trouble. Without their assistance and hearty co-operation, we could not have carried through our long and arduous inquiry.

49. We are also indebted to some of our members for reports and memoranda which they have submitted to us. The following reports and memoranda have been received :—

(1) From Mr. Loch :—

Poor Relief during the period 1601–1834.

(2) From Professor Smart :—

The Report of the Commission of 1832.

The Principles of the Poor Law Amendment Act of 1834.

The Poor Law Commissioners, 1834–1847.

The Poor Law Board, 1847–1871.

The First Six Years of the Local Government Board—the Crusade against Outdoor Relief.

The History of the Scots Poor Laws prior to 1845.

(3) From Mrs. Webb :—

The Policy of the Central Authority from 1834 to 1907.

The Medical Services of the Poor Law and the Public Health Departments of English Local Government in their relation to each other, to the public, and to the prevention and cure of disease.

The History of Poor Law Administration in Bradford, 1838–1906.

The History of Poor Law Administration in Poplar 1837–1906.

We are much indebted to the Right Hon. Charles Booth for an elaborate analysis of the Poor Law statistics and for the preparation of various tables, charts, and maps, which were especially helpful to us in the early stages of our inquiry, and have been of the utmost value to us in the preparation of our Report.

50. We are far from contending that the information obtained by us is complete or that our researches have been in all cases exhaustive. On certain subjects we soon obtained evidence sufficient for the purpose of our Report, but, we felt that there was much more which might from a sociological standpoint be advantageously diagnosed,

Inquiries by
individual Com-
missioners.

especially where the inquiry related to changes in our industrial methods and system. Again, we found that it was impossible to exclude subjects which at first sight seemed outside the terms of our reference, and so we were compelled to extend somewhat widely our search for evidence and information. Our difficulty was not only to decide where to begin, but where to end such investigations. Though some of the evidence is extravagant, much of it controversial and contradictory, and a good deal of it based on impressions rather than experience, yet we may fairly claim that, through the procedure and methods adopted, we have accumulated a unique mass of information relating to the condition and environment of those who seek public relief or who are unable to maintain themselves out of their own resources. The evidence thus obtained cannot fail to be of use in promoting legislative measures and administrative reforms, and we hope that where it is incomplete it may lead to yet further inquiries into social and industrial problems.

51. Finally we would express to Your Majesty our deep sense of the loss which we have sustained in the death of the late O'Connor Don, and more recently by the resignation of Mr. Charles Booth. In the O'Connor Don we lost a colleague of ripe experience and wide administrative knowledge. To Mr. Charles Booth we are indebted not only for continual assistance in our difficulties and in the examination of witnesses, but also, as we have above indicated, for a most valuable body of statistics which, at his own expense, he compiled for our information and enlightenment. We deeply regret that towards the end of our inquiry illness should have deprived us of a colleague whose guidance and counsel had been so valuable to us in all our proceedings, and whose name carries so much weight with the public, and we trust that freedom from the responsibility of this very arduous inquiry will materially assist towards his complete restoration to health.

52. The description and criticism of the Poor Law system contained in the following Chapters refer solely to England and Wales. We have considered it expedient to deal with Scotland and with Ireland in separate reports which we intend to present to Your Majesty subsequently.

PART II.

STATISTICAL SURVEY OF POOR LAW PROBLEMS.

TABLE OF CONTENTS.

| | PAGE. |
|--|-------|
| Numbers relieved as shown by Day Counts - - - - - | 15 |
| Number relieved during a Year - - - - - | 15 |

ROYAL COMMISSION ON THE POOR LAWS AND RELIEF OF DISTRESS.

DIAGRAM A.

SEASONAL CHANGES IN PAUPERISM.

FLUCTUATIONS IN THE RATE OF TOTAL PAUPERISM IN ENGLAND AND WALES WEEK BY WEEK DURING THE YEARS 1907 AND 1908 WITH THE MEAN OF THE RATES AND THE MAXIMUM AND MINIMUM POINTS REACHED, FOR THE TEN WEEKS CORRESPONDING TO EACH OTHER IN THE TEN YEARS 1897 TO 1906 INCLUSIVE. (SEE TABLE VI. OF PART I OF STATISTICAL APPENDIX)

- (1) The rate of Total Pauperism week by week is represented by { 1908 1907
(2) The mean rate of Total Pauperism week by week for the 10 years 1897-1906 inclusive is represented by
(3) The maximum and minimum points reached for the corresponding weeks for the 10 years 1897-1906 inclusive are represented by x

(Note:- This Diagram is upon the same plan as the Unemployment Chart given upon 1st page of each issue of the Board of Trade 'Labour Gazette'.)

Note:- The rates of pauperism are exclusive of Casual Paupers and persons in receipt of outdoor medical relief only. They include Insane Paupers in Workhouses and in receipt of out-relief, but not other Insane Paupers.

PART II.

STATISTICAL SURVEY OF POOR LAW PROBLEMS.

1. The object of this chapter is to show statistically the dimensions of the problems with which we are called upon to deal, the statistical changes which have taken place in those problems, and the extent to which the existing system of administration has succeeded or failed as shown by statistics.

NUMBERS RELIEVED AS SHOWN BY DAY COUNTS.

2. For many years the statistics regularly obtained of the number of persons receiving poor relief have shown the number in receipt of relief on a given day. The days selected have been January 1st and July 1st in each year, and the numbers relieved on these days are analysed in considerable detail. Statistics have also been obtained for many years of the numbers relieved on a certain day in each week, but these are not shown in the same detail, and they have been compiled upon a slightly different basis. These weekly returns show that pauperism fluctuates with the seasons, being highest in the winter and lowest in the summer, and that at the time of the July count pauperism is generally at its lowest ebb, but that at the time of the January count pauperism, though on the upward grade, has not then reached its maximum for the winter season. The highest point is generally reached towards the end of February. (See accompanying Diagram A.)

3. According to the latest of the half-yearly returns the number of persons relieved, distinguishing the insane and casuals was as follows:—¹

| — | 1st July, 1907. | 1st January, 1908. |
|---|-----------------|--------------------|
| Insane paupers in Asylums, Workhouses, &c., &c., and in receipt of outdoor relief - - - - - | 111,074 | 112,690 |
| Casual paupers - - - - - | 11,408 | 17,083 |
| All other classes of paupers* - - - - - | 745,794 | 798,898 |
| Total* - - - - - | 868,276 | 928,671 |

4. These figures will convey some idea of the dimensions of the inquiry entrusted to us. Even omitting the casuals and insane the number of paupers on any given day is approximately equal to the population of the largest provincial city in England and Wales, viz., Liverpool. The numbers represent (again omitting the insane and casuals), 21·3 per 1,000 on July 1st, 1907, of the estimated population, and on January 1st, 1908, 22·9 per 1,000. In other words, one out of every 47 persons was a pauper on July 1st, 1907, and one out of every 44 persons was a pauper on January 1st, 1908.†

NUMBER RELIEVED DURING A YEAR.

5. But these figures do not give an adequate idea of the numbers brought under the influence of the Poor Law authorities within a specified period. They are the numbers relieved on a given day and they take no account of the persons who, though not in receipt of relief at the moment, may have been relieved at other times. In any given period the work of inquiry, the decisions to be taken, the number of admissions to institutions, and the revision of cases, are not fully represented by these numbers. All the persons who have passed through the portals of the Poor Law must be counted before the full

* Deducting 569 persons on 1st July, 1907, and 741 persons on 1st January, 1908, who are counted twice by reason of being reckoned for various reasons both as indoor and outdoor paupers.

† In order to obtain a representative figure for each year, and a figure which may be compared with the financial statistics of poor relief, it is usual to take the mean of the summer and winter counts falling within each financial year. Thus, the mean number of sane paupers other than casuals for the financial year 1907-8 is reckoned as 772,346, or 22·1 per 1,000 of the estimated population.

¹ Half-yearly Statements of Pauperism (H.C. 108-1), 1st July, 1907, and (H.C. 130), 1st January, 1908.

extent of the labours of the Poor Law authorities can be gauged. Any period may be taken, but the year is the natural period. It embraces the four seasons and is convenient when making comparisons with other statistics. A return of this nature for the year ended September 30th, 1907, was obtained by the Local Government Board on our initiative and it shows that the number of persons (excluding lunatics in asylums and casual paupers) under the care of the guardians, or having come under their care during that year, was 1,709,436 * or 2·15 times greater than the mean of the numbers relieved on January 1st 1907 and July 1st, 1907.¹ At one time or another during each year the guardians have under their care, therefore, a population equal not only to that of Liverpool, but almost equal to that of the three largest provincial cities, viz., Liverpool, Manchester and Birmingham. In relation to the population estimated to have been living in England and Wales during the year 1906-7 † the rate of pauperism thus becomes 47·7 per 1,000, as against 22·7 per 1,000 shown by the day counts for the same year.²

NUMBER OF ADULTS AND CHILDREN RELIEVED.

Number of adults and children relieved on January 1st, 1908, and excess of female pauperism.

6. Taking men, women, and children separately, it is found that nearly one-half of the paupers on any day are women, the other half including both men and children. There is a larger number of women than men in England and Wales, the excess of women in 1901 being upwards of one million, but the excess of women paupers is greater than can be explained by the excess of female population. On January 1st, 1908, the number of men, women and children in receipt of relief and the proportion to the total number of persons relieved, and to the population in each group were :—³

| | Number. | Per cent. of total number of persons relieved. | Per 1,000 of estimated population in each group. |
|-----------------------------|----------|--|--|
| Men - - - - - | 221,022 | 27·6 | 19·8 |
| Women - - - - - | 343,825 | 43·0 | 27·8 |
| Children under 16 - - - - - | 234,792 | 29·4 | 20·6 |
| Total - - - - - | 798,898† | 100·0 | 22·9 |

Number of adults and children relieved during year 1906-7.

7. Turning to the year's count it is found, however, that the excess of women relieved during the course of a year is not so great as would appear from the day count. Of the 1,709,436 persons relieved during the year 1906-7, only 618,673, or 36 per cent. were women. The year's count for women was only 1·77 times greater than the day count, whilst the year's count for men was 2·42 times greater than the day count.⁴ Consequently the rate of pauperism for women was, on the year's count, only slightly in excess of the rate for men. In tabular form the results of the year's count were :—

| | Year's count. | Mean of two day counts of 1907. | Ratio of year's count to day count. | Ratio of year's count to estimated population in middle of year. |
|-----------------------------|---------------|---------------------------------|-------------------------------------|--|
| | | | | Per 1,000 |
| Men - - - - - | 526,449 | 217,210 | 2·42 | 47·2 |
| Women - - - - - | 618,673 | 350,308 | 1·77 | 50·0 |
| Children under 16 - - - - - | 564,314 | 226,674 | 2·49 | 49·4 |
| Total - - - - - | 1,709,436 | 793,519‡ | 2·15 | 49·5 |

* The Union of Bridgnorth failed to make a return, and the persons there relieved are not included. The population of this Union was 14,485 in 1901, and the mean of the day counts of persons relieved (excluding lunatics in asylums, registered hospitals and licensed houses, and vagrants) was 330 in the year 1907.

† Omitting purely temporary residents.

‡ Deducting persons who are counted twice by reason of being reckoned for various reasons both as indoor and outdoor paupers.

¹ Statistical Appendix, Part IV., Section 2, pars. 8 and 18. ² Statistical Appendix, Part IV., Section 2, par. 16. ³ Statistical Appendix, Part I., par. 30. ⁴ Statistical Appendix, Part IV., Section 2, par. 29.

8. It is clear, therefore, that, from whatever reason, the average duration of relief is longer amongst women than amongst men. A possible explanation is that men, more frequently than women, resort to the Poor Law for the purpose of tiding themselves over periods of temporary disability or unemployment.

9. The causes of the higher rate of pauperism amongst women than amongst men are various, and some of them readily occur to the mind. Perhaps the principal cause is that of widowhood. The death of the husband if it occurs at the early ages of manhood may leave the wife with a young family which she is unable to support, and if it occurs at a later period the wife is too often left unprovided for and has no occupation to which she can turn other than domestic service. No such disability comes to a man upon the death of his wife, although there may sometimes be difficulties in adequately providing for the up-bringing of his children. The occupation statistics of the 1901 Census show that 73·5 per cent. of unmarried women aged twenty to twenty-five years were returned as engaged in occupations, and that the corresponding proportion for unmarried women aged forty-five to fifty-five years was only 57·2 per cent., whereas in the case of men at those age groups the proportions returned as engaged in occupations were 97·4 per cent., and 96·1 per cent. respectively.¹

Causes of the higher rate of pauperism amongst women.

10. To whatever cause a woman's appeal to the Poor Law may be due, the relief would generally be required for a lengthened period, whereas except in cases of permanent invalidity and of old age no man would ordinarily be allowed to remain permanently in the workhouse or be given out-relief for protracted periods. Further light is thrown upon the question by the statistics of the ages of persons relieved, which will now be considered.

CLASSIFICATION OF PAUPERISM BY AGE.

11. From the Pauper Census of March 31st, 1906*, the following Table classifying by ages the persons relieved has been obtained :—²

Number of persons relieved on March 31st, 1906, classified by ages.

| Age Groups. | Number of persons relieved (not including lunatics in asylums, &c., or casuals.) | Per 1,000 of estimated population at same ages. |
|--|--|--|
| Under 5 years - - - - - | 51,767 | 13·6 |
| 5 years and under 15 years - - - - - | 179,854 | 26·0 |
| 15 " " 25 " - - - - - | 22,583 | 3·3 |
| 25 " " 35 " - - - - - | 38,189 | 6·6 |
| 35 " " 45 " - - - - - | 58,401 | 13·3 |
| 45 " " 55 " - - - - - | 56,252 | 17·9 |
| 55 " " 65 " - - - - - | 91,530 | 43·3 |
| 65 " " 75 " - - - - - | 183,125 | 163·0 |
| 75 " " 85 " - - - - - | 117,231 | 275·9 |
| 85 years and upwards - - - - - | 18,080 | 353·1 |
| Total number of persons relieved and rate per 1,000 of estimated population - - - | 817,012 | 23·6 |

12. Dealing with adults only it will be seen that, whilst the number of persons living at each group diminishes, of course, with advancing years, the number of persons relieved increases at each group, except one, up to the age of seventy-five. After this age death more than counterbalances the incoming stream. The exception noticed is at the age-group forty-five to fifty-five, and it is found that the decrease in the numbers at those ages is wholly amongst women, and largely amongst able-bodied widows. It would seem that at those ages the widows, to some extent, again become self-supporting or are

* This was a special inquiry which we undertook as to the number of persons relieved on March 31st, 1906. (See Part I., par. 38.)

¹ General Report on 1901 Census [Cd. 2174], p. 77. ² Statistical Appendix, Part II., par. 50.

otherwise removed from the necessity of obtaining relief. Their children have reached an age when the presence of the mother in the house is no longer essential, and the mother is thus enabled to take work outside. Moreover, the children are then beginning to earn, and can assist, if necessary, towards the maintenance of their mother.

Rate of
Pauperism to
population at
different age
groups.

13. The Table also shows, as would be expected, that although the number of persons relieved during the period of adolescence and the earliest ages of manhood is considerable, yet the rate of pauperism to population at those ages is the lowest. The rate increases rapidly as the age advances, until at ages fifty-five to sixty-five there are forty-three persons per 1,000 of the population at the same ages in receipt of relief, and at ages over eighty-five one out of every three persons is relieved.

Excess of rates
for women over
those for men.

14. Taking the rates for men and women separately, it is found that those for women exceed those for men at every age-group. The excess increases up to the ages of thirty-five to forty-five, and then diminishes up to ages fifty-five to sixty. It again increases up to ages seventy to seventy-five and again subsides during the remainder of life. The oscillation at the earlier ages is produced by the changing circumstances of widows with children which have been already noticed. The increasing excess in the women's rate after the age of sixty, whilst it is also partly due to the question of widowhood, appears to be partly due to the earlier ages at which women are displaced in the industrial world, and the diminution in the excess after seventy-five years of age to the greater number of men who, having continued to work up to that age, are finally incapacitated.¹

METHODS OF RELIEF.

Indoor and
outdoor relief.

15. Turning now to the method of relief, the broad distinction is between indoor relief and outdoor relief. The extent to which the guardians make themselves responsible for the recipients varies under the two systems, and in consequence whatever the ultimate effect of the pursuit of any particular policy, the immediate cost of outdoor relief is, case for case, less than the immediate cost of indoor relief.

Day and year
counts for
in and out
relief respec-
tively.

16. The number and proportion of indoor and outdoor paupers on January 1st, 1908, and during the year ended September 30th, 1907, were² :—

| — | Indoor Relief. | Outdoor Relief. | Total. |
|---|----------------|-----------------|-----------|
| <i>Day Count.</i> | | | |
| Persons relieved on 1st January, 1908 :— | | | |
| Number - - - - - | 252,618 | 547,021 | 798,898* |
| Proportion - - - - - | 31·6 | 68·4 | 100·0 |
| <i>Year's Count.</i> | | | |
| Persons relieved during year ended 30th Sep- tember, 1907 :— | | | |
| Number - - - - - | 573,929† | 1,206,684† | 1,709,436 |
| Ratio to Day Counts of 1907 - - - | 2·26 | 2·23 | 21·5 |

Number of
adults and
children receiving
indoor and
outdoor
relief.

17. It will be seen that the persons in receipt of outdoor relief outnumber those receiving indoor relief by more than two to one, but the proportion is different for men, women and children taken separately. In the case of men the number in receipt of indoor relief is approximately equal to the number receiving outdoor relief, but of women four-fifths, and of children three-fourths of the number are in receipt of outdoor relief. The number of men, women and children in receipt of each form of relief on January 1st, 1908, was as follows³ :—

* Deducting 741 persons who are counted twice by reason of being reckoned for various reasons both as indoor and outdoor paupers.

† Including under both heads 71,177 persons who received both forms of relief during the year.

¹ Statistical Appendix, Part II., par. 54. ² Statistical Appendix, Part IV., section 2, par. 20.

³ Statistical Appendix, Part I., par. 36.

| 1st January, 1908. | Indoor. | | Outdoor. | | Total. | |
|---------------------------|---------|-----------|----------|-----------|----------|-----------|
| | Number. | Per cent. | Number. | Per cent. | Number. | Per cent. |
| Men - - - - - | 116,463 | 52·7 | 104,559 | 47·3 | 221,022 | 100·0 |
| Women - - - - - | 73,729 | 21·4 | 270,096 | 78·6 | 343,825 | 100·0 |
| Children under 16 - - - - | 62,426 | 26·6 | 172,366 | 73·4 | 234,792 | 100·0 |
| Total - - - - - | 252,618 | 31·6 | 547,021 | 68·4 | 798,898* | 100·0 |

18. This difference between the methods adopted for the relief of men and women is found at all ages. Widows with children are mostly given outdoor relief, and in the case of older persons left alone, a woman can more often manage for herself, and is given outdoor relief, where a man could not, and is consequently drawn into the Poor Law institution. Moreover, in the case of younger persons there is often greater danger of encouraging idleness in giving out-relief to men than to women. And in the case of incapacitating sickness a man is more likely to seek infirmary treatment than his wife would be. So long as the wages are assured it is possible for the wife's illness, with the assistance she can obtain, to be treated at home.

19. The similarity shown in the former of these two Tables between the ratios of the year's count to the day count for indoor relief and outdoor relief would suggest that the degree of permanence was much the same for both forms of relief, but if the cases in which the persons received medical relief only be omitted from the outdoor totals it is found that the ratio of the year's count to the day count for outdoor relief becomes only 1·76, thus showing the greater permanence of outdoor relief, and the more temporary purposes for which indoor relief is obtained.†¹

CHANGES IN NUMBER OF PAUPERS.

20. We may now turn to the changes which have taken place in the number and constitution of the pauper population during the last generation. All the statements which have been made from time to time of the number of persons relieved previous to the Act of 1834 must be regarded as estimates only. There was then no machinery for the systematic and regular collection of statistics, which with the 15,000 separate administrative bodies must have been no easy task. Such statistics as were obtained related chiefly to Poor Law finance. After the year 1834, the Poor Law Commissioners obtained certain statistics showing the numbers relieved during the first quarter of each year. This system was found to be unreliable and was abandoned in 1848 in favour of the day count. From that date we know the numbers relieved on January 1st and July 1st in each year, but even then the statistics were not complete, and it was not until the year 1872 that returns were received from the whole of England and Wales.² It will be convenient, therefore, to commence this survey at the year 1871. In that year the Poor Law Board was superseded by the Local Government Board. About this time also there was a revival of public interest in Poor Law questions after a period of comparative slackness following upon the great upheaval of 1834. As we have mentioned elsewhere, the Central Authority was engaged in an active campaign against the mis-use and waste of outdoor relief, and the record of this action is seen in the statistics of pauperism relating to the period. A system of national education had been established in 1870, and therefore from that date onward a new agency calculated to diminish pauperism has been in continuous operation throughout the whole country. Again, although employment had been improving for one or two years previously, the number of paupers attained the highest point of the period in the year 1870-1.

Statistical information obtained in past years.

* Deducting 741 persons who are counted twice by reason of being reckoned for various reasons both as indoor and outdoor paupers.

† In 1907 there were 52,673 deaths in Poor Law institutions (Annual Report of the Registrar-General for 1907. [Cd. 4464] p. 227), and to a slight extent the difference in the duration of indoor and outdoor relief would be due to the cases which only enter the institutions shortly before death.

¹ Statistical Appendix, Part IV., section 2, par. 24. ² Appendix to Vol. I. of Evidence, Appendix, No. II., par. 6.

[CYCLES OF PAUPERISM.

Similarity of cycles of pauperism and cycles of employment.

21. An examination of the statistics for the period since 1871 shows that pauperism moves in cycles of similar duration to the cycles of employment (see accompanying Diagram. B), but that the turning points are from one to two years later than the turning points in the cycles of employment.¹ In examining the figures it is desirable, therefore, to arrange them in the cycles into which they naturally fall. By this process we arrive at a trustworthy result, and the real trend of the figures is revealed. Conclusions drawn from isolated years are apt to mislead unless the position of the years in the general movement is indicated.

Number of persons relieved in the cycles since 1871.

22. In the following Table the numbers are arranged in the four cycles ending with the year 1905-6. In the two years 1906-7 and 1907-8 the numbers have oscillated, and as it is not yet clear what place they will occupy in the general movement, they are given separately² :—

| Cycles.* | Mean number of persons relieved. | Mean of the annual rates per 1,000 of estimated population. | Decrease in rate as compared with preceding cycle. |
|---------------------------------|----------------------------------|---|--|
| 1871-2 to 1879-80 (9 years) - - | 747,936 | 31.2 | — |
| 1880-1 to 1887-8 (8 years) - - | 711,625 | 26.6 | 4.6 |
| 1888-9 to 1895-6 (8 years) - - | 694,094 | 23.8 | 2.8 |
| 1896-7 to 1905-6 (10 years) - - | 718,444 | 22.2 | 1.6 |
| 1906-7 } latest years - - - { | 769,160 | 22.3 | — |
| 1907-8 } | 772,346 | 22.1 | — |

MOVEMENT IN PAUPERISM.

Increase in cycle of 1896-1905.

23. It may be observed that in the second and third cycles given in the table above, an appreciable reduction occurred in the number of persons relieved. The policy developed by the late Viscount Goschen in 1869 had a marked effect and the impetus then given to more careful administration, though its vitality had gradually diminished, was evident until almost the end of the nineteenth century. The reaction came, however, in the latest cycle, which was of longer duration than any of the three preceding cycles, whilst the mean number of persons relieved on each day throughout the period embraced was approximately 24,000 in excess of the corresponding number for the preceding cycle, and some 7,000 in excess of that for the cycle 1880-7. Some satisfaction may be derived from the reduction in the ratio of pauperism to population since the early seventies, but it should not be allowed to obscure the facts that the amount of the decrease is rapidly diminishing, that from 1901-2 to 1905-6 there was a continuous increase in the ratio, and that the number of persons relieved has considerably increased during the cycle of the last ten years.

* Brief reference may be made to some of the industrial conditions existing during these years. The years 1871-1875 were marked by great industrial activity, partly owing to the payment of the French indemnity after the Franco-German War, to reduced taxation, and to a boom in railway construction abroad. The income-tax was reduced to 2d. in 1874, and in the same year the sugar duties were abolished. In 1875 trade commenced to decline. There were heavy commercial failures and the depression increased rapidly. In 1878 the harvest was described as the worst of the century, and the depression in this year was, beyond question, worse than at any period since, and the unemployment percentage as estimated by the Board of Trade rose to 10.70.

The fluctuation of pauperism in the cycle of 1880-1887 was not very considerable. Tariff changes abroad were frequent, and the year 1886 was marked by great depression and the "unemployed" riots.

In the succeeding cycle of 1888-1895 pauperism reached a lower level than in 1880-1887. There was the London Dock strike during the improving years, and coal, cotton, and other strikes occurred during the declining years.

The cycle 1896-1905 was of longer duration than its immediate predecessors. During its improving years the progress of pauperism was checked by the South Wales coal strike (1898). Employment reached the apex of activity in 1899, and pauperism its lowest level in 1900. The turn came with the South African War, which broke out in 1899. Taxation rose to a high level, the income-tax reaching 1s. 3d. in 1902. The sugar duties were re-imposed in 1901, and other taxes were imposed. Declining trade continued until 1905, after which there was some improvement in employment, but the improvement has hardly shown itself upon the statistics of pauperism, whilst employment commenced to decline in 1907, and at the end of 1908 was worse than at the end of any year since 1892.

¹ Statistical Appendix, Part I., pars. 12 and 13. ² Statistical Appendix, Part I., par. 16.

24. Looking into these figures more closely it is found that the increase in the number of persons relieved in the cycle 1896-1905 was chiefly due to the larger number of men coming under the Poor Laws. Comparing this cycle with that of the years 1871-9 the following results are obtained¹:—

This increase chiefly due to larger number of men relieved.

| | Total Population. (Census of 1901 compared with estimate for 1875.) | | Number of Paupers. (Cycle of 1896-7 to 1905-6 compared with Cycle of 1871-2 to 1879-80.) | |
|-----------------------------|---|--|--|--|
| | Increase +, or Decrease - : | | | |
| | Per cent. | | Per cent. | |
| Men - - - - - | + 42·2 | | + 18·4 | |
| Women - - - - - | + 44·1 | | - 2·4 | |
| Children under 16 - - - - - | + 21·3 | | - 18·4 | |
| All classes - - - - - | + 34·8 | | - 3·9 | |

25. The circumstances which have contributed to produce this result are no doubt various. It may be noted that the increase in male pauperism occurred chiefly during the cycle commencing in 1896. This period coincides approximately with the passing of two important measures of social reform. The Local Government Act of 1894 changed the character of the Poor Law authorities by the abolition of the property qualification for membership of boards of guardians and of the *ex officio* members whose influence had previously been considerable. And in 1896 the first of the series of Workmen's Compensation Acts was passed which, we are told by a large number of witnesses, has made it more and more difficult for a man to obtain work when thrown out in the later years of his working period of life. No statistics could be obtained to show to what extent these measures have contributed to the increase in the number of paupers. It is, moreover, during this same period that, as we shall presently show, there has been a great development in the provision and cost of Poor Law institutions, and especially of infirmaries, and it is also in this branch of relief work that the increase in the numbers has taken place. There has, indeed, been an increase in the number of indoor paupers in every cycle, though it is specially marked in the period 1896-1905, whilst the number of outdoor paupers shows a continuous decline over the whole of the four cycles.² It would appear that the Poor Law institutions are becoming more congenial and less unpopular with certain classes who are content to regard them as supplementary domiciles. An examination of the statistics of child pauperism shows that, at any rate during the latest cycle, the number of indoor children relieved with their parents has diminished, so that the increase in adult indoor pauperism must be accounted for by persons relieved without children.³

Causes of increase in male pauperism.

Increase in number of persons receiving indoor relief.

CHANGES IN NUMBERS AT DIFFERENT AGES.

26. So far as statistics of ages of persons relieved are available for past years there would appear to have been a slightly greater proportionate increase at ages between sixteen and sixty-five than at ages above and below that group. The available information is shown in the following Table, but it should be borne in mind in considering the figures that the years 1892 and 1900 were years of low pauperism, whilst 1906 was a year of high pauperism. In the years 1899 and 1903 the level of pauperism was nearer the normal.⁴

Increase in number of persons relieved at different ages.

| Age Groups. | Increase per cent. in estimated population between | | Increase per cent. in number of persons relieved between | | | |
|---------------------|--|----------------|--|----------------|----------------|----------------|
| | 1891 and 1899. | 1891 and 1906. | 1892 and 1900. | 1900 and 1906. | 1892 and 1906. | 1899 and 1903. |
| Under 16 years - - | 3·1 | 4·5 | -8·5* | 13·4 | 3·7 | — |
| 16 and under 65 - - | 13·9 | 21·5 | 10·7 | 16·0 | 28·4 | 6·9 |

| Total - - | 9·6 | 14·8 | 3·5 | 12·6 | 16·6 | — |

¹ Statistical Appendix, Part I., par. 35. ² Statistical Appendix, Part I., par. 26. ³ Statistical Appendix, Part I., Table XVIII. ⁴ Statistical Appendix, Part II., par. 66.

* Decrease.

Increase in numbers in receipt of indoor relief at different ages.

27. For indoor paupers only there is more detailed information, and the greater proportionate increase in the number of paupers at the working years of life is more pronounced. Between 1891 and 1901 the number of youths between fifteen and twenty years of age appears to have declined, but there was an increase in the number of men at every age group above twenty-five, and the rate of increase grew at successive age groups up to the age of sixty-five. Between 1901 and 1906 every age group shows an increase, which is proportionately greatest at the ages from fifteen to sixty-five. The numbers for women and girls show very similar movements, but the rates of increase are much smaller.¹

Earlier ages at which men obtain indoor relief.

28. The numbers of paupers at each age group in 1891, 1901, and 1906 are given in the Memorandum on the Census of Paupers, and are illustrated in the accompanying Diagram C, from which it will be seen that, since 1891, men have resorted to the Poor Law institutions at earlier ages than formerly. Not only has there been a progressive increase in the number of men over twenty in receipt of indoor relief, but the rate of male indoor pauperism to male population of same ages was higher in 1901 than in 1891 at every age from forty-five onwards, and the breach widens as age increases. The rate for 1906 is higher than that for 1901 at every age group, but the difference is only slightly marked at ages thirty-five to forty-five, though it again becomes more prominent at ages from forty-five to fifty-five, and continues to increase at the later periods of life.² We are unable to say how far this tendency may be due to a larger number of acute sick treated in Poor Law institutions, for there are no comparative statistics as to the number of sick at different ages.

OCCUPATIONS OR FORMER OCCUPATIONS OF PERSONS RELIEVED.

Occupations in which rates of pauperism are highest.

29. Included in the information obtained by the Census of Paupers taken on March 31st, 1906, were the occupations or former occupations of the persons relieved. In the tabulation of this information we adopted the classification used for the General Census of 1901, in order that the results might be compared with the occupation statistics of the population generally. The results obtained by this comparison show that some industries contribute to pauperism to a greater proportionate extent than others. The groups of occupations in which the rates of male pauperism are highest are those which afford only casual and precarious employment. Thus, the six groups of occupations with the highest rates of male pauperism are³ :—

| | Per 1,000. |
|---|------------|
| General and undefined workers and dealers - - - - | 84·9 |
| Fishing - - - - - | 40·3 |
| Agricultural : on farms, woods, and gardens - - - | 39·7 |
| Dress - - - - - | 24·0 |
| Building and works of construction - - - - - | 22·1 |
| Conveyance of men, goods, and messages - - - - | 20·3 |
| General rate for all male adults - - - - - | 21·3 |

In four out of these six groups permanent employment is the exception rather than the rule. Pauperism among agriculturists is largely one of old-age, for whilst the general ratio of the number of not able-bodied male paupers to the number of able-bodied male paupers in health was 9·3 to one, in the agricultural industry it was 21·6 to one.⁴ The numbers included under “dress” are largely made up of boot and shoe makers, in which trade alien immigration, the introduction of machinery, and insanitary conditions of employment have made this industry a fruitful source of pauperism.⁵

Lower rates of pauperism in skilled trades.

30. The industries in which skilled workmen are largely employed show lower rates of pauperism, but nevertheless an appreciable proportion of their workers come upon the Poor Laws. For instance, the group of industries classed as “metals, machines, implements, and conveyances,” has a rate of 14·0 per 1,000, and workers and dealers in “wood, furniture, fittings, and decorations,” a rate of 19·0 per 1,000.³

J. C. Pringle, pp. 64 and 66.

PERIOD AND RECURRENCE OF RELIEF.

31. We must now refer to the important results of the return showing the number of persons relieved during the course of the year ended September 30th, 1907. In this return the persons relieved were classified according to the aggregate length of time, and the number of separate occasions on which each individual was relieved during the year. It was desired to ascertain how far the persons in receipt of relief were permanently enrolled upon the lists and how far they were merely relieved for temporary periods during sickness, unemployment or other misfortunes. It was also desired to ascertain to what extent the persons relieved repeated their applications, and thus to show how far the methods of the Poor Law authorities were restoring the applicants to independent life or were merely tiding them over periods of stress with no other result than to educate them in the habit of accepting the Poor Law as their support in every emergency. The results obtained from the return are sufficiently startling. They are contained in the following Table:¹—

Persons relieved during year ended September 30th, 1907, classified according to recurrence and aggregate duration of relief.

| Aggregate Duration of Relief. | Persons relieved once. | | Persons relieved twice. | | Persons relieved three times. | | Persons relieved four times. | | Persons relieved five times or oftener. | | Total. | |
|--|------------------------|-------|-------------------------|-------|-------------------------------|-------|------------------------------|-------|---|-------|-----------|-------|
| | No. | % | No. | % | No. | % | No. | % | No. | % | No. | % |

32. It will first be seen that the great majority of the persons were relieved on only one occasion, but that there were, nevertheless, 274,607 persons who made application to the guardians on more than one occasion during the year.

Persons relieved on more than one occasion during the year.

33. In the second place, it may be observed that 538,680 persons, or nearly one-third of the total, were practically permanent paupers, and the number in this class is probably greater than the table shows, for persons who died whilst in receipt of relief and aged persons who newly obtained relief during the year and may become permanent paupers would be included under other heads. The class is made up chiefly of the aged, the chronic sick, and orphan and deserted children. For the two former classes there is, so far as the persons now in receipt of relief are concerned, little chance of restoration to independent life. It may be expected, however, that the number of the aged applying for relief will diminish in the future in consequence of the establishment of the system of old-age pensions. The children who are physically and mentally sound will, in due course, pass out into the world, but their places will be taken by others, although the up-bringing of orphans is a matter which appeals very strongly to the charitable.

“Permanent” paupers.

34. The third point which may be noted is the large number of persons who were relieved for very short periods. Over 200,000 persons were relieved for less than one

Persons relieved for short periods.

* For explanation of recurrent cases in this class see pars. 37—8.

¹ Statistical Appendix, Part IV., Section 2, par. 38.

week and a further 320,000 for less than a month. The two groups comprise nearly one-third of the total number of persons relieved, and embrace cases of very differing character. The vast majority are cases of the most temporary destitution and were relieved but once during the year, but a considerable minority were relieved for short periods on two or more occasions. If any appreciable and permanent reduction in pauperism can be effected it should be more easily accomplished amongst the persons included in these groups.

Persons relieved
for lengthened
periods, but not
continuously.

35. We may next refer to the persons whose relief exceeded one month in duration but was not continuous over the whole year. Counting those only who were relieved not more than once, there were 431,801 persons included under this head. Amongst them are those who are generally in receipt of relief, but who manage in one way or another, probably during the summer months, to regain a precarious independence for a very limited period. Some again are seasonal paupers, persons whose occupation lasts for a portion only of the year, and who, owing to improvidence or low wages, resort to the Poor Law during the vacant periods. Some of these persons may be supported during their intervals of independence by relatives, but in other cases the fact that the persons are able to maintain themselves for so long a period as they do shows that they are still fit for some kinds of work, though they will not, or cannot, find it.

Recurrent cases
of relief.
Ins-and-outs.

36. Two smaller classes may receive brief mention here. There were 26,179 persons who received relief on at least five different occasions, and those of them who were relieved in the workhouses belong to the class known as "ins-and-outs." Cases have been brought to our notice of persons who have been in and out of the workhouse more than fifty-two times during the year notwithstanding the existence of the week's detention sanctioned to meet such cases by the Pauper Inmates Discharge and Regulation Act, 1871, as amended by the Poor Law Act of 1899. Mr. Lockwood mentions two cases, one of a woman of eighty-one who had been in and out of the workhouse 163 times in the year 1901, and the other of a man who has been in and out 593 times since 1884.¹ These are obviously very extreme cases, but the number of persons ascertained to have been relieved five times or oftener during the year shows the existence of a troublesome class who make a convenience of the workhouse and whose improvidence is born of the knowledge that that institution is always at hand.

Permanent
paupers who
occasionally
take their
discharge.

37. The other class consists of persons who are practically chargeable throughout the year, but who sometimes take their discharge without the slightest prospect of maintaining themselves. These persons are entered in the returns as relieved "for the whole year," and on more than one occasion. They do not remain outside for long, and frequently return the next, or even the same day. The power of detention given to the guardians appears to be insufficient in these cases, and the labour incidental to the frequent discharges and re-admissions adds appreciably to the work of the officials. The return gives some idea of the magnitude of this class and of the unnecessary labour they cause, for the re-admission of a person so discharged would be recorded as a new period of relief, although, if the re-admission occurred on the same day as the discharge, or even the day after, the person would still be recorded as relieved for the whole year because he had been relieved on every day in the year.

38. It will be seen from the Table above that the class to which reference is made do not form a large proportion of the total number of permanent paupers, but as their actions involved a large number of discharges and re-admissions they are obviously the cause of much additional work. Moreover, it should be observed that when the interval between discharge and re-admission was more than two days the pauper would be classified in the group of persons relieved for over twenty-six weeks, but less than the year, and the numbers relieved for the whole year and more than once do not, therefore, represent the whole of the class.

PERIOD AND RECURRENCE OF INDOOR AND OUTDOOR RELIEF.

Returns as to
period and
recurrence of
indoor and
outdoor relief.

39. It should be observed that the figures given in the above Table include both adults and children as well as both indoor and outdoor paupers. In order to throw further light upon the questions raised by the above statistics special returns from certain unions were asked for, and the officials were good enough to respond to our request. These returns

¹ Vol. I. of Evidence, Q. 4151.

relate to urban and rural unions comprising a population of 2,352,052, or 7·2 per cent. of the population of England and Wales, and they give particulars relating to 207,844 persons relieved during the year, or 12·2 per cent. of the total number.

40. It is found that in these unions the recurrent cases of relief are fairly equally distributed between indoor and outdoor relief. It is also the case with the persons relieved five times or oftener. The proportions for the different forms of relief are given in the following Table :—¹

Recurrent cases of indoor and outdoor relief.

| | Indoor relief. | | Outdoor medical relief only. | | Other outdoor relief. | | All forms of relief.* | |
|---------------------------------------|----------------|-------|------------------------------|-------|-----------------------|-------|-----------------------|-------|
| | No. | % | No. | % | No. | % | No. | % |
| Persons relieved once - - - | 57,213 | 83·7 | 24,070 | 83·9 | 80,026 | 80·7 | 165,811 | 79·7 |
| Persons relieved 2 to 4 times - - | 9,172 | 13·5 | 4,499 | 15·7 | 17,604 | 17·8 | 37,722 | 18·2 |
| Persons relieved 5 times or oftener - | 1,933 | 2·8 | 110 | 0·4 | 1,515 | 1·5 | 4,311 | 2·1 |
| Total - - - - | 68,318 | 100·0 | 28,679 | 100·0 | 99,145 | 100·0 | 207,844 | 100·0 |

41. These returns, as will be seen in the next Table, confirm the conclusion previously drawn that outdoor relief is more permanent than indoor relief, for it is found that of the outdoor cases (omitting cases of medical relief only) 30·6 per cent. were relieved for the whole year, whilst only 26·5 per cent. of the indoor cases were continuous throughout the year.†

Duration of indoor and outdoor relief.

42. With regard to the very short cases of relief, of which there are such a large number in the total, the returns show a high proportion of cases of "medical relief only," as many as 77·3 per cent. of such cases having lasted for less than four weeks. It is clear, therefore, that there is less reluctance on the part of the poor to applying for medical relief, and on the part of the guardians to granting it.

Short cases of medical relief.

43. In the case of indoor and other outdoor relief the proportion of cases relieved for less than one month is 30·0 per cent. and 27·4 per cent. respectively. Whether some more suitable method of dealing with these persons could not be found we shall consider hereafter. Here it need only be observed that a new light is thrown upon the problem of pauperism, when we find that, assuming the unions selected for this inquiry are representative of the whole of England and Wales, nearly one-third of the persons relieved in institutions, *i.e.*, one-third of 502,752, and upwards of one-quarter of those granted outdoor relief, *i.e.*, one-fourth of 1,135,507, were relieved for such very short periods. The figures are given below :—

Short cases of indoor and outdoor relief.

| Aggregate period of relief. | Number of persons who received the undermentioned forms of relief for the aggregate periods mentioned in the first column. | | | | | | | |
|---|--|-------|------------------------------|-------|-----------------------|-------|-----------------------|-------|
| | Indoor relief. | | Outdoor medical relief only. | | Other outdoor relief. | | All forms of relief.* | |
| | No. | % | No. | % | No. | % | No. | % |
| Not exceeding 4 weeks - - - | 20,480 | 30·0 | 22,167 | 77·3 | 27,208 | 27·4 | 71,703 | 34·5 |
| Over 4 weeks and not exceeding 13 weeks - - - - | 12,665 | 18·5 | 5,126 | 17·9 | 18,778 | 19·0 | 40,386 | 19·4 |
| Over 13 weeks but less than the year - | 17,071 | 25·0 | 1,187 | 4·1 | 22,821 | 23·0 | 46,113 | 22·2 |
| For the whole year - - - - | 18,102 | 26·5 | 199 | 0·7 | 30,338 | 30·6 | 49,642 | 23·9 |
| Total - - - - | 68,318 | 100·0 | 28,679 | 100·0 | 99,145 | 100·0 | 207,844 | 100·0 |

* Including 11,702 persons who received both indoor and outdoor relief during the year.

† See note to par. 19 as to deaths in Poor Law institutions.

¹ Statistical Appendix, Part IV., Section 2.

COST OF RELIEF.

Growth of expenditure since 1775-6.

44. We must now consider the cost of poor relief, for which statistics are available for upwards of a century. In the year ended Lady Day, 1834, the year in which the Royal Commissioners reported, the expenditure was £6,317,255, or 8s. 10d. per head of the estimated population. It had grown to this amount from £1,556,804 in the year 1775-6. In 1784-5 the expenditure was two millions, in 1802-3 it rose to four millions and in 1812-3 to six and two-thirds millions. The highest point of this time was reached in the year 1817-8, when an expenditure of £7,870,801, or 13s. 10d. per head of the estimated population, was recorded. The close of the great war had thrown large numbers of men into the already over-supplied labour market, and in this year "the Government advanced £750,000 for the employment of the labouring poor in the completion of public works in progress or to be commenced."¹ With the improvement in trade which followed the unemployed labour was absorbed and poor relief expenditure diminished to £5,736,900 in 1823-4. During the next ten years it moved up and down, and, as already stated, the Royal Commissioners found it at £6,317,255 in 1833-4. A considerable reduction followed upon the establishment of the new Poor Law, and in 1836-7 the expenditure was again only just in excess of four millions. The increase which followed caused the Poor Law Commissioners some uneasiness, and they attributed it partly to an increasing laxity with respect to the relief of the able-bodied in some unions and to evasions of the prohibitory regulations. In 1842-3 we find the expenditure was £5,208,027, after which year it oscillated between five and six millions for twenty years.² In 1871-2, when the complete statistics commence of the number of paupers, it was just upon the upward side of eight millions, or almost exactly 7s. per head of population, and since that date there have only been seven years in which a decrease has been recorded, four of which immediately followed the year 1871-2 during the campaign then being waged against out-relief. During the thirty years immediately succeeding the year 1834, there was thus no permanent change in the amount of poor relief expenditure, but the forty years which have since elapsed have seen the annual expenditure more than doubled. In the year 1905-6, the latest for which the figures have been published, the expenditure was £14,035,888, and the amount per head of the estimated population was 8s. 2½d. Compared with the population, therefore, the expenditure is only 7½d. per head below the 8s. 10d. of 1833-4. In the following Table we give the expenditure and amount per head of the estimated population for the years marking the highest points of pauperism since 1871-2 :—³

Expenditure, and amount per head of population, for selected years since 1871-2.

| Years. | Poor Relief Expenditure. | Amount per head of estimated population. | |
|-------------------|--------------------------|--|----|
| | £. | s. | d. |
| 1871-2 - - - - - | 8,007,403 | 7 | 0½ |
| 1879-80 - - - - - | 8,015,010 | 6 | 3½ |
| 1887-8 - - - - - | 8,440,821 | 6 | 0½ |
| 1895-6 - - - - - | 10,215,974 | 6 | 8½ |
| 1905-6 - - - - - | { 14,035,888* | 8 | 2½ |
| | { 14,685,983 | 8 | 7½ |

45. The great increase in expenditure has thus occurred chiefly since the year 1887-8, and if we look into the statistics for separate years it really commenced in the year 1889-90.

INCREASE IN COST OF INDOOR RELIEF.

Changes in amount of expenditure under various heads.

46. As with the number of paupers the greatest increase in expenditure has occurred in connection with indoor relief, but the expenditure has outstripped the numbers and certain items of indoor relief have increased more rapidly than others. Between 1871-2 and 1905-6, the number of indoor paupers increased by 76·4 per cent., but the cost of in-maintenance rose by 113 per cent., the debt charges multiplied four times, and the amounts expended in the remuneration of officers trebled. The amounts expended on

* The expenditure of the Metropolitan Asylums Board on fever and small-pox hospitals and ambulance service is omitted from this figure, but is included in all the other figures given in the Table.
¹ "A Sketch of British Economic History," by Prof. Smart, Chapter 1. (See Appendix, Vol. XII.).

the different items are given in the following Table, the years selected being again those in which the number of paupers was highest¹:—

| Years in which number of paupers was highest. | In-main-tenance. | Out-relief. | Mainten-ance of Lunatics in County and Borough Asylums, Registered Hospitals, and Licensed Houses. | Work-house and other Loans repaid and Interest thereon. | Salaries and Rations of Officers (and superan-nuation allowances). | Other ex-penses of or imme-diately connected with Relief. | Total. |
|---|------------------|-------------|--|---|--|---|------------|
| | £. | £. | £. | £. | £. | £. | £. |
| 1871-2 - - - | 1,515,790 | 3,583,571 | 742,483 | 278,566 | 871,402 | 1,015,591 | 8,007,403 |
| 1879-80 - - - | 1,757,749 | 2,710,778 | 994,204 | 319,426 | 1,053,218 | 1,179,635 | 8,015,010 |
| 1887-8 - - - | 1,855,304 | 2,537,686 | 1,167,765 | 585,660 | 1,342,079 | 952,327 | 8,440,821 |
| 1895-6 - - - | 2,254,350 | 2,644,650 | 1,556,133 | 738,237 | 1,739,264 | 1,283,340 | 10,215,974 |
| 1905-6* . - - | 3,229,122 | 3,374,427 | 2,355,212 | 1,189,603 | 2,491,373 | 1,977,196 | 14,616,933 |
| Increase (+) or decrease (-) between years 1871-2 and 1887-8 (16 years) - - - | + 339,514 | - 1,045,885 | + 425,282 | +307,094 | + 470,677 | - 63,264 | + 433,418 |
| 1887-8 and 1905-6 (18 years) - - - | +1,373,818 | + 836,741 | +1,187,447 | +603,943 | +1,149,294 | +1,024,869 | +6,176,112 |
| Increase (+) or Decrease (-) per cent. in 1905-6 as compared with 1871-2 - - | + 113.03 | - 5.84 | + 217.21 | + 327.05 | + 185.90 | + 94.68 | + 82.54 |

COST OF IN-MAINTENANCE.

47. The cost of maintaining the persons relieved in Poor Law institutions (with which is also included the cost of heating, cleansing, and lighting the institutions) shows the lowest proportionate increase of the three items mentioned above. It should, however, be remembered that prices of food and drink are generally much lower now than they were thirty to forty years ago, although the price of coal is rather higher than it was then. The Board of Trade index number of prices of food and drink was 144.6 in 1871, and 105.1 in 1907, and the corresponding index numbers for coal were 58.3 and 76.5.² It seems clear, therefore, that the cost of maintenance has increased to a much greater extent than the expenditure shows, but in the absence of fuller details of the expenditure it is impossible to say to what extent this is the case.

COST OF REMUNERATION OF POOR LAW OFFICIALS.

48. Some of the increased cost of remunerating Poor Law officials must necessarily be due to the substitution of paid nurses for pauper nurses. ³We show in Part IV., Chapter 3, that the number of nurses has risen from 1,406 in 1872 to 6,094 in 1906. The rate of increase in the expenditure on remuneration of officials has been considerably greater

* The figures for 1905-6 exclude the expenditure of the M.A.B. on fever and small-pox hospitals and ambulance service, which amounted to £650,095. The corresponding expenditure is included in the figures for the earlier years. The figures for 1905-6 also differ from those for earlier years in so far that they are gross figures and include £581,045, representing transfers from productive accounts and receipts on account of non-settled poor. Deductions were made in earlier years in respect of these items.

¹ Annual Reports of the Local Government Board [Cd. 292] 1899-1900, p. 436, and [Cd. 3665], 1906-7, p. 403. ² Twelfth Abstract of Labour Statistics [Cd. 4413], pp. 80-1. ³ Vol. I. of Evidence, Q. 3376.

since 1895-6 than before that date.¹ The Superannuation Act of 1896 contributed to some extent to this acceleration,* but one of the most potent factors has probably been the development in specialised institutions which has taken place during the last ten years.² The erection of large infirmaries and separate institutions for children, and the adoption of the system of scattered homes have all demanded a larger number of officials with superior qualifications.

DEBT CHARGES AND CAPITAL COST OF INSTITUTIONS.

Increase in debt charges compared with increase in number of indoor poor.

49. The enormous proportionate increase in the debt charges is a matter to which we have given much consideration. It is due to many causes, and is obviously very largely independent of the increase in the number of indoor poor, which, as already stated, has been 76·4 per cent. since 1871-2. Between the years 1887-8 and 1892-3, in which years the number of indoor paupers was much the same, and in the intermediate years was lower, expenditure exceeding two and a half millions was sanctioned for buildings, and similarly between the years 1895-6 and 1900-1, in both of which years the number of indoor paupers was nearly 214,000, additional expenditure on buildings to the amount of seven and a half millions was sanctioned.³

Cost per bed of work-houses, infirmaries, cottage homes, and casual wards.

50. Again, Mr. Davy has furnished us with certain Tables showing the cost per bed of workhouses, infirmaries, and cottage homes (exclusive of sites) the erection of which was approved by the Local Government Board during the twenty years ended 1904.⁴ In order to show the increasing cost per bed we have divided the total period into four quinquennial periods and calculated the average cost per bed of the institutions erected in each of them. The results are shown in the following Table, which also includes particulars of casual wards compiled from corresponding information supplied to the Vagrancy Committee by Mr. Kitchin⁵ :—

| Classes of Poor Law Institutions. | 1885-9. | | 1890-4. | | 1895-9. | | 1900-4. | |
|-----------------------------------|-----------------------|-------------------|-----------------------|--------------------|-----------------------|--------------------|-----------------------|---------------------|
| | No. of beds provided. | Cost per bed. | No. of beds provided. | Cost per bed. | No. of beds provided. | Cost per bed. | No. of beds provided. | Cost per bed. |
| Workhouses † | 1,873 | £ s. d. 69 2 0 | 1,468 | £ s. d. 116 6 0 | 7,431 | £ s. d. 184 4 0 | 1,893 | £ s. d. 222 10 0 |
| Infirmaries | 484 | 70 2 0 | 2,481 | 200 5 0 | 4,712 | 234 10 0 | 2,272 | 158 4 0 |
| Casual wards : | | | | | | | | |
| London | 59 | 107 16 0 | 168 | 188 8 0 | 247 | 245 11 0 | 136 | 159 16 0 |

| Cottage homes : | | | | | | | | |
| London | 337 | 182 0 0 | — | — | 80 | 164 0 0 | 2,704 | 235 10 0 |
| Extra-Metropolitan | 1,310 | 105 17 0 | 365 | 106 5 0 | 1,935 | 148 8 0 | 1,904† | 121 2 0 |
| England and Wales | 1,647 | 121 8 0 | 365 | 106 5 0 | 2,015 | 149 1 0 | 4,608 | 188 4 0 |

* In 1905-6 the contributions under the Act amounted to £55,472, and the superannuation allowances under the Act to £124,285. Superannuation allowances amounting to £20,665 were paid in addition, but not under the provisions of the Act.

† Many of the institutions included under this head also comprise infirmaries, but cases of this kind are included in every period.

‡ Including three small groups of cottage homes approved by the Local Government Board in 1905.

¹ Vol. I. of Evidence, Q. 1668 and 2006. ² Vol. I. of Evidence, Q. 1928. ³ Appendix to Vol. I. of Evidence, Appendix, No. V. (1). ⁴ Appendix to Vol. I. of Evidence, Appendices, Nos. V. (2-5).

⁵ Report of the Vagrancy Committee [Cd. 2892], pp. 153 *et seq.*

51. The growing cost of workhouses and the London cottage homes is specially noticeable. In the case of infirmaries there has been a slight check, but the cost of those buildings the erection of which was approved in 1895-9, averaged £235 per bed, exclusive of the site.

52. Causes for the increased expenditure must be sought in several directions. Causes of One factor appears to have been an actual increase in the cost of construction. Wages increased ex- in the building trades have increased considerably, and in 1874 they were only 81 per cent. of the rates current in 1907.¹ Poor Law institutions.

53. On the other hand, the price of some of the principal building materials has considerably diminished, *e.g.*, lead and timber. The price of bricks has fluctuated, but on the whole there has also been a diminution.²

54. We are disposed, however, to attribute much of the increasing charges for buildings to other influences. The first is the extension of the present system of classification within institutions. Classification within a single institution involves a large number of separate blocks which add appreciably to the cost of the building as a whole.

55. The extension of infirmary accommodation apart from the workhouse has been another important factor in the expenditure upon buildings. Not only have these institu- Increased ex- tions generally been fitted with all modern conveniences, but with each it is usual to erect penditure on infirmaries. special buildings for the medical superintendent, the nurses, and other officers. In this way a certain amount of expenditure is recorded under debt charges which is really in the nature of salaries. The increase in the number of nurses must, of itself, have involved a large increase in the provision of accommodation.³ The whole standard of efficiency and comfort in these institutions has been forced up by the improvement of the general hospitals, and it is not possible even if it were advisable for the Poor Law infirmaries to be markedly inferior in the accommodation and treatment they offer to their inmates to that given in general hospitals.

56. Of the total expenditure on buildings in 1904, amounting to £752,000, Mr. Kitchin informed us that £329,500 or 44 per cent. was in connection with accommodation for the sick, and £176,500, or 23·5 per cent. was expended upon administrative buildings.⁴

57. Again, we may refer to the change in the system of bringing up Poor Law children Expenditure on from the school with large residential buildings to the cottage home. This was a very cottage homes costly change in public opinion. Mr. Kitchin put in Tables showing that expenditure to following upon the extent of £655,000 was incurred in the provision of cottage homes to take the place closing of of the schools belonging to the Forest Gate and South Metropolitan school districts. district schools. The number of children accommodated was 2,728, and the cost per head was, thus, £240.⁵ Receiving homes, costing £50,145, had also been built by the constituent unions or parishes since the dissolution.*

58. The Local Government Board inspectors have generally stated that it is difficult Other influences to induce some boards of guardians to initiate a scheme for improving their accommoda- increasing the tion, but that once it has been decided to proceed they seem to lose sight of economy. cost of Poor Law This may be due to some extent to the influence of the architectural profession,⁶ for natu- buildings. rally an architect desires to put up a building that will do him credit, and, moreover, as he is generally paid for his services a percentage upon the total cost of the building erected, there is direct pecuniary inducement to secure as large an expenditure as possible. The guardians often lose sight of the total cost of the buildings they are erecting. They find that the cost for interest and sinking fund is only 5 per cent. or 6 per cent. per annum and that the immediate increase in the rates will not be large.⁷

* Against the expenditure thus incurred in the provision of cottage homes, etc., there should be set the sum of £260,000 derived from the sale of the buildings formerly belonging to the Forest Gate and South Metropolitan School Districts.

¹ Twelfth Abstract of Labour Statistics [Cd. 4413], p. 54. ² Twelfth Abstract of Labour Statistics [Cd. 4413] pp. 81 and 89. ³ Vol. I. of Evidence, Qs. 3575-7. ⁴ Appendix to Vol. I. of Evidence, Appendix No. VI. (G). ⁵ Appendix to Vol. I. of Evidence, Appendix No. VI. (F). ⁶ Vol. I. of Evidence, Qs. 10976-8. ⁷ Vol. I. of Evidence, Q. 1642.

Central control over expenditure. 59. The question of curtailing unnecessary expenditure on buildings is one to which the Local Government Board attach considerable importance. In 1870, the Board stated that they were compelled to check expenditure in the more ornamental parts of workhouses, and the matter was reverted to in 1900.¹ Mr. Kitchin mentions a case in which £15,000 was saved upon a total estimate of £52,000 by the action of the Local Government Board.²

Responsibility of guardians. 60. Whilst, therefore, some of the increase in debt charges has been caused by circumstances over which the guardians have no control, *e.g.*, cost of wages and material, and changes in public opinion as to the best forms of treatment, yet these elements of increased cost are not sufficient to account for the heavy augmentation of expenditure which the figures quoted show.

COST OF OUT-RELIEF.

Increase in amount of out-relief per pauper. 61. It was shown in the Table, in paragraph 46 that the expenditure on out-relief has diminished since 1871-2 by 5·84 per cent. This compares with a decrease of 31·1 per cent. in the number of persons in receipt of such relief, and consequently the average amount granted to each person relieved must have increased. It is shown in the Table, moreover, that up to 1887-8 the expenditure decreased by £1,046,000 since which year it has again increased by £837,000. This increase may perhaps be attributed to two new factors. In 1895, the Report of the Royal Commission on the Aged Poor was issued, and amongst the recommendations made it was urged³ :—

“That boards of guardians, in dealing with applications for relief, should inquire with special care into the antecedents of destitute persons whose physical faculties have failed, by reason of age and infirmity; and that outdoor relief should in such cases be given to those who are shown to have been of good character, thrifty according to their opportunities, and generally independent in early life, and who are not living under conditions of health or surrounding circumstances which make it evident that the relief given should be indoor relief.”

62. About this time the expenditure upon out-relief commenced to rise. The amount granted per pauper had been practically stationary since 1881, and in the six years ended with 1899-1900, the amount increased from £4 13s. 11d. to £5 6s. 10d.*⁴

63. Then in 1900, Mr. Chaplin's circular regarding adequate outdoor relief was issued, and we find that of the increase of £837,000 since 1887-8, in the expenditure on out-relief, no less than £677,000 has accrued since 1899-1900, whilst the amount granted per head has risen from £6 13s. 1d. in 1900-1 to £7 2s. 7d., in 1905-6.†⁵

INTER-RELATION OF INDOOR AND OUTDOOR RELIEF.

Comparison of changes in indoor and outdoor pauperism. 64. The administrators of the Poor Law have been changing the character of their system. It has become more and more an indoor system. In 1871-9, the outdoor poor outnumbered the indoor poor by 4·5 to 1. In 1896-1905 this proportion had been reduced to 2·6 to 1. We may reasonably inquire in what way this has affected the general results. Taking the figures of the first and last of the four cycles we find that outdoor pauperism decreased by 94,000, whilst indoor pauperism only increased by 65,000. The removals from the outdoor lists did not thus result in a corresponding addition to the indoor lists. But if we compare all the cycles, one with another, it is found that this result is not always achieved.⁶

* These sums are the expenditure upon out-relief only, and do not include salaries of relieving officers, etc.
† These amounts include all expenditure on out-relief.

¹ Vol. I. of Evidence, Q. 1633. ² Vol. I. of Evidence, Qs. 3659 and 3699 ³ C. 7684, pp. lxxxiii. and lxxxiv. ⁴ Annual Report of the Local Government Board [Cd. 2214], 1903-4, p. lxxxvii.
⁵ Annual Report of the Local Government Board [Cd. 3665], 1906-7, p. 405. ⁶ Statistical Appendix, Part I., par. 26.

| | Decrease in mean number of outdoor paupers. | Increase in mean number of indoor paupers. |
|---------------------------------|---|--|
| Between— | | |
| 1871-9 and 1880-7 - - - - - | 64,591 | 28,124 |
| 1880-7 and 1888-95 - - - - - | 26,833 | 9,188 |
| 1888-95 and 1896-1905 - - - - - | 3,035 | 27,585 |

Thus, comparing the two last cycles, the reduction in outdoor pauperism was more than counterbalanced by the increase in indoor pauperism. How far the one was the result of the other we are not prepared to say, but it is obvious that the increase in indoor pauperism in 1896-1905 could have been due only very partially to a transference from the outdoor lists.

65. It is equally important to examine these figures from the financial standpoint. In 1905-6 the total cost of each indoor pauper averaged £27 15s. 10d. ; of each outdoor pauper it averaged £7 2s. 7d.¹ Indoor pauperism is thus, approximately, four times as expensive, case for case, as outdoor pauperism. The proportion may have changed since 1871, but we have no figures for years before 1900-1. Accepting the proportion as applicable to the whole period from 1871 to 1905, we find that the addition to the indoor numbers is far in excess of one-fourth of the reduction in the outdoor numbers. Thus—

Financial effect of change in form of relief.

| | One-fourth of decrease in outdoor numbers. | Increase in indoor numbers. |
|---------------------------------|--|--------------------------------|
| Between— | | |
| 1871-9 and 1880-7 - - - - - | 16,148 | 28,124 |
| 1880-7 and 1888-95 - - - - - | 6,708 | 9,188 |
| 1888-95 and 1896-1905 - - - - - | 759 | 27,585 |

66. The proportion we have taken is undoubtedly affected by the inclusion of the sick and the children, and the relative cost of indoor and outdoor relief would probably not be so divergent in the case of other classes. Moreover, the comparative cost may vary from district to district. But, upon the whole, the statistical evidence shows that the financial effect of the change in policy over the last thirty-five years has not been to lighten the burden of poor relief.

REVIEW OF GROWTH OF EXPENDITURE.

67. Summing up the general situation in regard to the increase in expenditure, we find that, whilst the expenditure per inhabitant has increased from 7s. 0½d. to 8s. 2¾d. since 1871-2, and is only 7¼d. less than it was in 1834, the expenditure per pauper has increased from £7 12s. 1d. to £15 12s. 6d. in the same period.² The country is maintaining a multitude of paupers not far short of the numbers maintained in 1871-2, and is spending more than double the amount upon each individual. The increased expenditure has done little towards diminishing the extent of pauperism. Such advance as the nation has made has been accomplished at an enormous cost, and absorbs an annual amount which is now equivalent to nearly one-half of the present expenditure upon the Army. It may be urged that the rate of pauperism has diminished from 31·2 per 1,000 in 1871-9 to 22·2 per 1,000 in 1896-1905, and this is certainly a matter for congratulation, but it has been the result of the large increase in the population rather than of any considerable reduction in the number of paupers. Indeed, the number of paupers in the cycle of 1896-1905 has been greater than in the two preceding cycles. Moreover, the period of the greatest increase in the expenditure per pauper corresponds with the period of increasing numbers, as the following figures show³ :—

The increase in expenditure has not diminished pauperism.

¹ Annual Report of the Local Government Board [Cd. 3665], 1906-7, p. cxlviii. ² Annual Report of the Local Government Board [Cd. 3665], 1906-7, p. 404. ³ Statistical Appendix, Part I., par. 16, and Annual Report of the Local Government Board [Cd. 3665], 1906-7, p. 404, and similar information from previous reports.

| Cycles. | Mean Number of Persons relieved. | | Mean of Annual Rates of Expenditure per Pauper. | |
|-------------------|----------------------------------|---|---|---|
| | Number. | Increase (+) or decrease (-) as compared with previous Cycle. | Mean. | Increase as compared with previous Cycle. |
| | | | £ s. d. | £ s. d. |
| 1871-2 to 1879-80 | 747,936 | — | 9 11 8½ | — |
| 1880-1 to 1887-8 | 711,625 | - 36,311 | 10 12 0½ | + 1 0 4 |
| 1888-9 to 1895-6 | 694,094 | - 17,531 | 11 14 4¼ | + 1 2 3¼ |
| 1896-7 to 1905-6 | 718,444 | + 24,350 | 14 13 10¾ | + 2 19 6½ |

68. It may also be observed that the extent of the diminution in the rate of pauperism has been lessening, and has been nearly halved with each successive cycle, so that the greatest increase in the expenditure per pauper has also been accompanied by the smallest diminution in the rate of pauperism. And whilst there has been little falling off in the numbers since the apex of the last cycle was reached, the latest statistics convey little hope that any further reduction is imminent.

DISTRIBUTION OF PAUPERISM.

ates of
pauperism in
counties.

69. So far we have only dealt with the question of poor relief in England and Wales as a whole. It is important to consider the distribution over different districts. We find that the extent of pauperism varies in different parts of the country, and especially as between towns and rural areas.

70. Taking the rates of pauperism for the different counties, we find that on January 1st, 1908, they varied from 15·7 per 1,000 of the estimated population in the West Riding of Yorkshire to 38·5 per 1,000 in Norfolk.*¹ Generally speaking, the rates are lowest in the northern counties, five out of the seven counties having rates below 20 per 1,000 being found in this group. Thus :—

| | | | | | | | | | | |
|----------------|------------|---|---|---|---|---|---|---|---|------|
| | Per 1,000. | | | | | | | | | |
| Northumberland | - | - | - | - | - | - | - | - | - | 19·5 |
| Westmorland | - | - | - | - | - | - | - | - | - | 19·4 |
| Chester | - | - | - | - | - | - | - | - | - | 19·3 |
| Warwick | - | - | - | - | - | - | - | - | - | 18·7 |
| Lancaster | - | - | - | - | - | - | - | - | - | 17·6 |
| Middlesex | - | - | - | - | - | - | - | - | - | 16·7 |
| Yorks, W.R. | - | - | - | - | - | - | - | - | - | 15·7 |

71. The highest rates occur in different parts of the country, east, south and west, thus :—

| | | | | | | | | | | |
|----------|------------|---|---|---|---|---|---|---|---|------|
| | Per 1,000. | | | | | | | | | |
| Norfolk | - | - | - | - | - | - | - | - | - | 38·5 |
| Dorset | - | - | - | - | - | - | - | - | - | 37·3 |
| Anglesey | - | - | - | - | - | - | - | - | - | 36·5 |
| Suffolk | - | - | - | - | - | - | - | - | - | 36·4 |
| Hereford | - | - | - | - | - | - | - | - | - | 34·7 |
| Oxford | - | - | - | - | - | - | - | - | - | 33·3 |

Unions with
highest and
lowest rates of
pauperism.

72. The extremes in the case of individual unions are obviously still wider apart. Thus, on March 31st, 1906, for which date we have the figures, the rates varied from 8·5 per 1,000 of the population in 1901 in the Fylde Union (Lancashire) to 73·1 per 1,000 in the Strand Union.† Special considerations apply, no doubt, in the latter case, and the next

* These rates include insane in workhouses and on out-relief, and vagrants, but not insane in asylums, etc.
† These rates include insane in workhouses and on out-relief, but not insane in asylums, etc., or vagrants.

¹ Half-yearly Statement of Pauperism, January 1st, 1908 (H. C. 130).

highest were 56·8 per 1,000 in the Poplar Union and 56·7 per 1,000 in the Thingoe Union (Suffolk). We give, in the following Table, the six unions with the highest rates and the six with the lowest rates¹ :—

| Highest Rates per 1,000. | Lowest Rates per 1,000. |
|-----------------------------|---|
| Strand (London), 73·1. | Saddleworth and Todmorden (both in Yorks., W.R.), 10·3. |
| Poplar (London), 56·8. | Lunesdale (Lancs.), 9·9. |
| Thingoe (Suffolk), 56·7. | Haslingden (Lancs.), 9·8. |
| Mildenhall (Suffolk), 55·1. | Lancaster (Lancs.), 9·3. |
| Dore (Hereford), 53·7. | Hampstead (London), 8·7. |
| Cosford (Suffolk), 53·2. | Fylde (Lancs.), 8·5. |

URBAN AND RURAL PAUPERISM.

73. This extraordinary divergence in the rates of pauperism is a matter into which we have made further statistical investigation, and we find that, generally speaking, the rates are lowest in urban unions and highest in rural unions. The results of this investigation are given in the following Table² :—

PAUPERISM IN URBAN AND RURAL AREAS (EXCLUDING INSANE AND CASUALS).

| Groups of Unions (arranged in order of rate of increase in population between 1891 and 1901). | Estimated population in middle of 1905. | Rate per cent. of increase in population between 1891 and 1901. | 1891-2 (a good year). | | 1895-6 (a bad year). | | 1900-1 (a good year). | | 1905-6 (a bad year). | | Increase (+) or Decrease (-) in rate per 1,000 of population. | |
|---|---|---|---------------------------|---|---------------------------|---|---------------------------|---|---------------------------|---|---|----------------------------|
| | | | Mean Number of Pau- pers. | Rate per 1,000 of estimated population in 1891. | Mean Number of Pau- pers. | Rate per 1,000 of estimated population in 1895. | Mean Number of Pau- pers. | Rate per 1,000 of estimated population in 1900. | Mean Number of Pau- pers. | Rate per 1,000 of estimated population in 1905. | Between 1891-2 and 1900-1. | Between 1895-6 and 1905-6. |
| Unions of which the following propor- tions of the population are com- prised in boroughs or urban districts :— | | | | | | | | | | | | |
| 1. 75 per cent. and under 100 per cent. | 9,783,000 | 18·33 | 141,019 | 18·4 | 160,350 | 19·6 | 157,396 | 17·6 | 188,011 | 19·2 | - '8 | - '4 |
| 2. 100 per cent. (extra Metropolitan unions wholly urban). | 8,685,000 | 17·11 | 132,955 | 19·3 | 151,846 | 20·6 | 143,763 | 17·9 | 177,047 | 20·4 | -1·4 | - '2 |
| 3. 50 per cent. and under 75 per cent. | 4,565,000 | 12·52 | 95,619 | 24·4 | 99,769 | 24·4 | 93,010 | 21·7 | 102,174 | 22·4 | -2·7 | -2·0 |
| 4. 100 per cent. (London) - - - | 4,685,000 | 7·29 | 86,570 | 20·5 | 98,738 | 22·5 | 96,637 | 21·1 | 117,466 | 25·1 | + '6 | +2·6 |
| 5. 25 per cent. and under 50 per cent. | 3,505,000 | 3·48 | 109,470 | 31·8 | 111,991 | 32·3 | 97,618 | 28·2 | 100,470 | 28·7 | -3·6 | -3·6 |
| 6. Nil (unions wholly rural) - - - | 1,324,000 | 2·09 | 40,576 | 31·1 | 40,922 | 31·3 | 36,529 | 28·0 | 38,348 | 28·9 | -3·1 | -2·4 |
| 7. Under 25 per cent. but not wholly rural. | 1,606,000 | -·48 | 56,183 | 33·8 | 57,490 | 34·8 | 50,857 | 31·1 | 51,349 | 32·0 | -2·7 | -2·8 |
| England and Wales - - - - | 34,153,000 | 12·17 | 662,392 | 22·8 | 721,106 | 23·7 | 675,810 | 21·0 | 774,865 | 22·7 | -1·8 | -1·0 |

74. It will be noticed, in the first place, that the lowest rate occurs in the group of unions in which the population increased most rapidly, and that, without exception, the rates for 1905-6 become higher as the rate of increase in the population falls. It is probable that, to some extent, the reason for the higher rate in rural unions is that the movement of the working section of the population to the towns leaves behind a mass of pauperism which will obviously bear a large proportion to the remaining population. In the urban unions, on the other hand, the accretion of population tends to diminish the ratio of pauperism to population. The relative extent of pauperism in different areas is, therefore, influenced, in an important degree, by circumstances over which the guardians have no control.

¹ Statistical Appendix, Part II., Table 14. ² Statistical Appendix, Part I., par. 85.

75. Within the groups, however, the limits of variation are almost as wide as those for the whole country, and the variations appear to depend not only upon the efficiency of the administration, but upon the economic conditions prevailing in the unions. From the Census of Paupers, it is found that the lower limits in the groups of unions in the above table range from 8·5 to 14·6 per 1,000, and the higher limits from 44·8 to 73·1 per 1,000.¹

76. Secondly, comparing the years of similar industrial activity, the Table shows that in London alone of the seven groups has the ratio of pauperism to population increased during the last fifteen years. In the other six groups the decrease in the ratio is least in the two groups of urban unions in which the population is most rapidly increasing. Whilst the unions with a declining or only slightly increasing population have been able to effect considerable reductions in their pauperism, both in number and in relation to population, the rapidly growing unions are supporting a larger number of paupers and show a diminution in the ratio incommensurate with their industrial progress.

Increase of adult pauperism in urban areas.

77. The position in the urban areas is even worse than that disclosed by the Table, for an examination of the statistics for men, women, and children separately shows that, although the movement in male pauperism is everywhere more unsatisfactory or less favourable than the movement in pauperism amongst women and children, yet the increase in adult pauperism, both male and female, has wholly occurred in London and the other urban areas. Moreover, the decrease in child pauperism has been confined almost wholly to the rural areas, where enormous reductions have taken place.²

Other unsatisfactory features of urban pauperism.

78. We have also examined the age statistics of the population living in these different groups of unions and of the persons chargeable to the unions. As might be expected, the proportion of old people amongst the population is higher in the rural and mainly rural groups than it is in the urban and mainly urban groups. To some extent this would also explain the higher rates of pauperism in the rural unions, and the greater extent to which outdoor relief is given. We also find that the proportion of old people relieved is higher in the rural unions than in the urban unions, and this may perhaps be explained by the lower rates of wages current in the rural areas, though, somewhat strangely, the proportion in London is higher than in any other group. The figures, taken from the Census of Paupers, are given in the following Table, to which have been added the crude and corrected pauperism rates on March 31st, 1906,³ the rates per 1,000 of the population of the number of persons relieved during the year ended 30th September 1907, the ratios of the year's count to the day count, and the proportions of paupers who were relieved five times or oftener and for periods not exceeding one week ⁴:-

| Groups of Unions. | Persons over 60 per 1,000 of population in 1901. | Paupers over 60 (March 31st, 1906) per 1,000 of population over 60 in 1901. | Total number of Paupers per 1,000 of population, on March 31st, 1906. | | Persons relieved during year ended 30th Sept., 1907, per 1,000 of estimated population. | Ratio of Year's Count (1906-7) to mean of Day Counts of 1907. | Proportion per cent. of Persons relieved five times or oftener to total (Year 1906-7). | Proportion of Persons relieved for a period not exceeding 1 week (Year 1906-7). |
|--|--|---|---|-------------------|---|---|--|---|
| | | | Crude rates. | Corrected rates.† | | | | |
| Unions in London - - - - - | 66·9 | 187·1 | 27·8 | 29·83 | 71·3 | 2·79 | 3·7 | 14·0 |
| Extra-Metropolitan Unions :- | | | | | | | | |
| 1. Unions wholly urban - - - | 63·0 | 152·8 | 23·2 | 25·33 | 49·7 | 2·47 | 1·7 | 14·8 |
| 2. Unions partly urban and partly rural of which the following proportions of the population are comprised in boroughs or urban districts :- | | | | | | | | |
| (a) 75 per cent. or upwards - | 64·3 | 142·8 | 21·5 | 22·98 | 40·7 | 2·12 | ·8 | 11·8 |
| (b) 50 per cent. and under 75 per cent. - - - - - | 81·6 | 148·3 | 24·7 | 23·29 | 40·6 | 1·79 | ·6 | 10·0 |
| (c) 25 per cent. and under 50 per cent. - . - - - | 98·6 | 166·4 | 30·3 | 25·46 | 49·2 | 1·71 | ·6 | 7·7 |
| (d) Under 25 per cent. - - | 107·0 | 171·3 | 33·2 | 26·74 | 52·0 | 1·58 | ·6 | 6·3 |
| 3. Unions wholly rural - - - | 104·8 | 160·9 | 30·3 | 24·28 | 50·7 | 1·74 | ·4 | 7·3 |
| England and Wales - - - - - | 74·0 | 157·7 | 25·1 | 25·11 | 48·9 | 2·15 | 1·5 | 11·9 |

† These are the rates at all ages that would have resulted from the rates prevailing at the separate age groups if the sex and age constitution of the population in these areas, severally, had been identical with that of the population of England and Wales, as enumerated at the Census of 1901.

¹ Statistical Appendix, Part II., Table 14. ² Statistical Appendix, Part I., par. 89. ³ Statistical Appendix, Part II., Table 13. ⁴ Statistical Appendix, Part IV., Section 2, pars. 49 and 52.

79. From whatever standpoint we look at the statistics for the urban areas they suggest a very unsatisfactory condition regarding the persons relieved. Not only has the reduction in their rate of pauperism been small, and the increase in the number of men relieved been large, but the recurrence of relief is frequent, and a large proportion of persons resort to the Poor Laws for very temporary and trivial reasons.

80. It is true that the rates of pauperism corrected for age distribution are still higher in the rural areas than in the urban areas outside London, but the movement of the more capable section of the population from the country to the town, to which reference has already been made, would largely, if not wholly, account for the difference. In the Report upon the Census of 1901 it is shown that the loss of population by migration in Registration Districts wholly or almost wholly rural amounted to 9·1 per cent. in the decade 1891 to 1901¹.

81. We have dealt more fully with the position in London in the Statistical Appendices to our Report, but in addition to what has been shown above, we may mention that London is maintaining 15,800 more paupers than it was in the eighties, that the rate per 1,000 which was generally below that for the rest of England and Wales has risen above it that the larger numbers maintained in London chiefly consist of men relieved indoors, the increase being relatively greater than elsewhere, and that this increase is not due to a transference from the outdoor lists.² There is, thus, abundance of statistical evidence to show that the present position is more serious in London than in any other part of the country.

82. We now propose to make a brief reference to the various classes of persons in receipt of relief, viz., widows, the aged, children, the able-bodied, the sick and vagrants.

WIDOWS.

83. The question as to the relief of widows is, generally speaking, only differentiated from that of relief to single persons when there are dependent children. There are no statistics showing the total number of widows relieved, but the number of widows with children relieved on January 1st, 1908, was 36,166, and the number of children of widows was 100,986.³ During the year ended September 30th, 1907, relief was given to 91,649 women who were described as heads of families, and it may be estimated that three-fourths of these, or say 70,000, were widows with children.⁴

84. From the Census of Paupers it has been ascertained that 34,832 widows were in receipt of indoor relief on March 31st, 1906. They were classified as follows :—

| Ages. | Able-bodied Widows. | | Widows. |
|--------------------------|---------------------|-----------------------|------------------|
| | In health. | Temporarily disabled. | Not able-bodied. |
| 20 to 44 - - - - - | 662 | 761 | 334 |
| 45 to 59 - - - - - | 1,056 | 1,907 | 1,693 |
| 60 and upwards - - - - - | 48 | 231 | 28,140 |
| Total - - - - - | 1,766 | 2,899 | 30,167 |

85. Of the temporarily disabled 586, or 20·2 per cent., were in separate infirmaries or sick asylums, whilst of the not able-bodied 3,566, or 11·8 per cent., were relieved in those institutions.

86. On January 1st, 1907, there were 1,240 widows with children in receipt of indoor relief, and their children numbered 2,998, an average of 2·4 children to each widow.

¹ Report, upon Census of 1901 [Cd. 2174], p. 26. ² Statistical Appendix, Part I., pars. 65, 66, 68, 69, and 70. ³ Half-yearly Statement of Pauperism, January 1st, 1908 (H. C. 130), p. vii. ⁴ Statistical Appendix, Part. IV., Section 2, par. 32.

Widows in receipt of outdoor relief.

87. The total number of widows in receipt of outdoor relief cannot be stated, but for the years since 1884 we have annual statistics of the number of able-bodied widows, and of their children, receiving outdoor relief. For January of the years 1905-7 we also know the number of widows with children, and of their children, receiving outdoor relief, and a comparison of the two series suggests that the two classes are practically identical. Assuming that this is so it appears that the outdoor widows with children have diminished considerably.

| Out-relief. | 1st January. | | |
|--|--------------|--------|--------|
| | 1884. | 1907. | 1908. |
| Able-bodied widows - - - - - | 41,486 | 33,664 | 32,773 |
| Percentage to total number of women in receipt of out-relief - - - - - | 16·8 | 12·4 | 12·1 |
| Children of able-bodied widows - - - - - | 119,451* | 93,051 | 92,344 |
| Average number of children to each widow - | 2·88 | 2·76 | 2·82 |
| Widows with children - - - - - | — | 34,749 | — |
| Their children - - - - - | — | 96,342 | — |

Decrease in number of able-bodied widows receiving out-relief.

88. The decrease in the number of able-bodied widows accounts for nearly the whole of the decrease in the number of able-bodied women in receipt of outdoor relief, whilst during the same period the number of outdoor female paupers who are not able-bodied has increased. Amongst the general population the proportion of widows to women aged twenty years and upwards, has fallen from 137 per 1,000 in 1881 to 126 per 1,000 in 1901, and this would partly explain the decrease in the number of able-bodied widows relieved.¹ It would not appear that the guardians are refusing relief more frequently than heretofore in cases where the number of children is small, for the average number of children to each widow has hardly changed during this period.

Ages of able-bodied widows receiving out-relief.

89. An examination of the ages of able-bodied widows shows that as their children become self-supporting and able to contribute towards the support of their mothers the widows cease to be chargeable. The ages of able-bodied widows in receipt of out-relief on 31s 1906 were as follows:²—

| | Able-bodied widows in receipt of out-relief. |
|---------------------------------|--|
| 20 years and under 25 years - - | 287 |
| 25 " " " 35 " - - | 7,173 |
| 35 " " " 45 " - - | 16,242 |
| 45 " " " 55 " - - | 9,412 |
| 55 " " upwards - - | 1,912 |
| | 35,026 |

THE AGED.

Available statistics as to aged pauperism.

90. The regular statistics of pauperism do not distinguish the aged from other classes of adults, and such statistical information as is available is contained in various special Returns, the Decennial Censuses of 1891 and 1901, and the Pauper Census of March 31st, 1906.³ These Returns have not been compiled upon a uniform basis, and even as regards age some of the Returns draw the line between the "aged" and other adults at sixty years, and others at sixty-five years. Comparisons are, therefore, difficult.

* From 1884 to 1901 the heading was "Children dependent on widows."
¹ General Report on Census of 1901 [Cd. 2174], p. 68. ² Statistical Appendix, Part II., Table 1.
³ H.C. 36, 1890; H.C. 265, 1892; H.C. 113, 1904; Census 1891, C. 7058, p. lxiii.; Census 1901 [Cd. 1523], p. 184; Annual Report of the Local Government Board, 1899-1900 [Cd. 292], p. lv. and 1900-1 [Cd. 746], p. lvi.

91. The statistics of old-age pauperism have a special bearing upon the question of Old-Age Pensions. The benefits of the Old-Age Pensions Act of 1908¹ are confined to those persons over seventy years of age who have not received since January 1st, 1908, any "poor relief," though medical relief and the maintenance of dependants in asylums, infirmaries, or hospitals, are not regarded as "poor relief" for the purposes of the Act. The statistics have, thus, a double interest.

92. According to the Pauper Census the number of persons over sixty (omitting lunatics in asylums, etc., and vagrants) in receipt of relief on March 31st, 1906, was 379,902, or 46·5 per cent. of the total number of persons relieved.² This number was made up as follows:—

AGES OF PAUPERS OVER 60 (INDOOR AND OUTDOOR), MARCH 31ST, 1906.

| Ages. | Males. | | | Females. | | | Total. | |
|---|---------|---|--------------------------------------|----------|---|--------------------------------------|---------|--|
| | Number. | Percentage to estimated male population of same ages in 1906. | Proportion relieved in Institutions. | Number. | Percentage to estimated female population of same ages in 1906. | Proportion relieved in Institutions. | Number. | Percentage to estimated population of same ages in 1906. |
| 60 years and under 65 years | 25,654 | 5·81 | 66·6 | 35,812 | 6·92 | 21·7 | 61,466 | 6·41 |
| 65 " " " 70 " | 33,793 | 11·45 | 56·6 | 55,169 | 15·03 | 17·4 | 88,962 | 13·43 |
| 70 " " " 75 " | 35,475 | 17·67 | 42·9 | 58,688 | 22·51 | 16·0 | 94,163 | 20·40 |
| 75 " " " 80 " | 30,354 | 25·39 | 37·8 | 46,486 | 28·54 | 17·8 | 76,840 | 27·21 |
| 80 " " " 85 " | 15,744 | 27·57 | 36·2 | 24,647 | 28·87 | 21·7 | 40,391 | 28·35 |
| 85 " " upwards - | 6,525 | 34·39 | 40·7 | 11,555 | 35·85 | 28·9 | 18,080 | 35·31 |
| Total, pauper adults 60 and upwards - - - | 147,545 | 13·02 | 48·3 | 232,357 | 16·30 | 18·8 | 379,902 | 14·85 |

93. The increasing proportion of persons relieved as age advances, the excess of the proportions for women over those for men, and the preference shown for the outdoor method of relief in the case of women have already been mentioned. In the total the excess of aged women relieved amounts to 85,000.

94. The method of relief adopted for the aged is shown by the following figures for March 31st, 1906³:—

| | Paupers 60 years of age and upwards. | | |
|----------------------|--------------------------------------|---------|---------|
| | Men. | Women. | Total. |
| | | | |
| In receipt of | | | |
| Indoor relief - - - | 71,263 | 43,701 | 114,964 |
| Outdoor relief - - - | 76,282 | 188,656 | 264,938 |
| Total - - - | 147,545 | 232,357 | 379,902 |

95. Comparing old-age pauperism with the aged population we have also shown that between 1892 and 1900 the number of paupers over sixty-five increased at much the same rate as the aged population, but that since 1900 the increase in the numbers over sixty-five has probably been more rapid than the increase in the aged population. Taking indoor paupers alone the number of aged paupers in proportion to aged population has greatly increased since 1891. It would thus appear that indoor relief is now adopted more frequently for the treatment of the aged.

96. On the other hand the number of persons over sixty-five receiving outdoor relief has increased, between 1892 and 1906, in a slightly smaller proportion than the

¹ 8 Edw. VII., c. 40. ² Statistical Appendix, Part II., par. 47. ³ Statistical Appendix, Part II., Tables C. and D.

aged population. The increase between 1891 and 1906 in the estimated population at those ages was 12·8 per cent. In the number of outdoor paupers over sixty-five the increase between 1892 and 1906 was 11·4 per cent. whilst the increase in the number of indoor poor over sixty-five between 1892 and 1906 amounted to 42·2 per cent. The actual numbers and rates to population are as follows :—

| | 1892. | 1900. | 1906. |
|---|---------|---------|---------|
| Number of Adults in receipt of out-door relief :— | | | |
| 16 to 64 years - - - | 125,756 | 137,175 | 153,527 |
| 65 years and upwards - - | 205,045 | 212,913 | 228,346 |
| Ratio to estimated population per cent. | | | |
| 16 to 64 years - - - - | 0·7 | 0·7 | 0·7 |
| 65 years and upwards - - | 14·9 | 14·3 | 14·3 |

97. It would seem, therefore, that although the financial effect of Mr. Chaplin's circular of 1900 may have been to increase the expenditure upon out-relief there has been no increase in the proportion of the aged population on the out-relief lists.

98. As in the case of the ratios of the total number of paupers to population, the ratios of aged paupers to aged population vary considerably. In the counties, the rates varied on 31st March, 1906 from 86·9 per 1,000 in Westmorland to 209·2 per 1,000 in Monmouth, and in the unions from 37·8 per 1,000 in the Fylde Union (Lancashire) to 561·5 per 1,000 in the Strand Union (London).¹ The rates were high in many of the central unions of London. Of the six unions with the highest rates of aged pauperism five were in London :—

| | Per 1,000. |
|--------------------------|------------|
| Strand - - - - - | 561·5 |
| Holborn - - - - - | 439·2 |
| City of London - - - - - | 401·3 |
| Poplar - - - - - | 372·7 |
| Bermondsey - - - - - | 347·2 |
| Liverpool - - - - - | 340·1 |

99. In the following Table we give the proportion of aged persons over sixty to the total population for urban and rural groups of unions, and the proportion of such persons in receipt of poor relief² :—

| Groups of Unions. | Persons over 60 per 1,000 of population (1901) of both sexes. | | | Male and female paupers over 60 on 31st March, 1906, per 1,000 of male and female population at same ages in 1901. | | |
|---|---|----------|--------|--|----------|--------|
| | Males. | Females. | Total. | Males. | Females. | Total. |
| Unions of London - - - | 27·9 | 39·0 | 66·9 | 186·3 | 187·8 | 187·1 |
| Extra-Metropolitan Unions :— | | | | | | |
| 1. Unions wholly urban - - | 27·1 | 35·9 | 63·0 | 137·6 | 164·3 | 152·8 |
| 2. Unions partly urban and partly rural of which the following proportions of the population are comprised in boroughs and urban districts :— | | | | | | |
| (a) 75% and upwards - | 28·3 | 36·0 | 64·3 | 124·2 | 157·4 | 142·8 |
| (b) 50% and under 75% | 37·1 | 44·5 | 81·6 | 126·1 | 166·7 | 148·3 |
| (c) 25% and under 50% | 45·8 | 52·8 | 98·6 | 136·4 | 192·5 | 166·4 |
| (d) Under 25% - - - | 50·2 | 56·8 | 107·0 | 135·6 | 202·8 | 171·3 |
| 3. Unions wholly rural - - | 50·2 | 54·6 | 104·8 | 131·7 | 187·7 | 160·9 |
| England and Wales - - - | 32·9 | 41·1 | 74·0 | 137·7 | 173·8 | 157·7 |

¹ Statistical Appendix, Part II., Tables 11 and 14. ² Statistical Appendix, Part II., Table 13.

Unions with the highest rates of aged pauperism.

Aged pauperism in urban and rural unions.

100. This Table shows that the proportion of aged persons is much higher in the rural areas than in the urban areas, and it also shows that the rate of pauperism is higher amongst the aged population in rural areas than amongst the aged population in extra-Metropolitan urban areas. In London the rate of aged pauperism amongst males is considerably higher than in any other group, and amongst females it is much higher than in other urban areas. The movement outwards of the residential population no doubt tends to produce this result, but the increase which has occurred in the numbers relieved in London shows that the higher rates of pauperism there cannot be wholly attributed to this movement.

101. The number of persons in England and Wales over seventy years of age in 1901 was :—¹

| | Men. | Women. | Total. |
|---------------------------|---------|---------|---------|
| 70 and under 75 - - - - - | 195,465 | 250,868 | 446,333 |
| 75 " " 80 - - - - - | 113,096 | 151,384 | 264,480 |
| 80 " " 85 - - - - - | 52,137 | 76,631 | 128,768 |
| 85 " upwards - - - - - | 17,971 | 30,528 | 48,499 |
| Total - - - - - | 378,669 | 509,411 | 888,080 |

Population over seventy years of age and estimated number disqualified under Old-Age Pensions Act.

102. The number of paupers at these ages is given in the Table in paragraph 92, but those figures only relate to the day count, and a much larger number of persons over seventy years of age would have received such poor relief in 1908 as would disqualify them for the receipt of old-age pensions under the Act. After the introduction of the measure into the House of Commons persons over seventy who had not so far during the year 1908 received relief would, no doubt, make every effort, and would be assisted by others, to avoid applying for relief, in order that they might not incur disqualification for the pension on January 1st, 1909.

CHILDREN.

103. The up-bringing of Poor Law children probably affords more opportunity for the exercise of preventive influences than any other branch of Poor Law work. The question is no less important from the statistical point of view, for children under sixteen years of age form nearly one-third of the total number of persons in receipt of relief. On January 1st, 1908, relief was given to 234,792 children (omitting insane and casuals), a number which represents 20·6 per 1,000 of the estimated child population of the same ages. During the year 1906-7 the number of children relieved was 564,314 (omitting lunatics in asylums, etc., and casuals), or 2·49 times more than the mean number for the day counts of that year.

Number of children relieved on January 1st, 1908, and during year 1906-7.

104. Classified by age the children are grouped as follows² :—

POOR LAW CHILDREN ON 31ST MARCH, 1906 (OMITTING LUNATICS IN ASYLUMS, ETC., AND CASUALS).

Ages of Children relieved on March 31st, 1906.

¹ Summary Tables, Census 1901 [Cd. 1523], p. 139. ² Statistical Appendix, Part II., Tables C. and D, and par. 47.

Ages at which children commence work.

105. The decrease from 90,586 at ages ten to fifteen to 12,485 at ages fifteen to twenty is due, of course, to the boys and girls being sent to work and becoming self-supporting, but in the more detailed figures in the other columns it is shown that the decline due to this cause commenced at an earlier age than fifteen. Up to ages between ten and thirteen the proportion to population increases continuously, but thereafter diminishes. It is clear, therefore, that many pauper children commence their industrial careers at thirteen years of age, if not earlier. A closer examination of the rates for indoor and outdoor pauper children respectively shows, however, that whilst the rate for outdoor pauper children commences to diminish at thirteen, the indoor rate does not decline until the age of fourteen years has been reached. At thirteen years of age, indeed, the indoor rate shows an increase over that for ages ten to thirteen. It is not amongst the indoor children, therefore, that work commences at such early ages.

Cause of larger ratio of child pauperism at higher ages.

106. The increasing proportion of pauper children to population at ages up to the group ten to thirteen may probably be due to the fact that as children grow older, there is a greater risk of their losing one or both of their parents. Upwards of 60 per cent. of the pauper children are orphans or are dependent on widows, and it will easily be seen how great an influence this factor must have upon the number of children relieved at different ages.¹

Children maintained in workhouses.

107. In regard to the provision of special institutions, children have received more attention than any other class, and of the indoor children few are now left in the workhouses. Out of the 237,721 Poor Law children tabulated above only 18,558 were maintained in workhouses, and out of that number upwards of 4,000 were in wards for the sick. In the ordinary wards of the workhouses there were, thus, only 14,439 children, and of these 3,367 were infants under three years of age².

Children relieved in institutions not under control of Poor Law authorities.

108. The advance which has been made in this respect during the last few years will be seen in the statement that, whilst on January 1st, 1899, workhouses and infirmaries housed 48·7 per cent. of the indoor children, on January 1st, 1908, the corresponding percentage had been reduced to 36·0. On January 1st, 1904, workhouse wards other than the infirm wards contained 27·5 per cent. of the indoor children, whilst on January 1st, 1908, the percentage was only 24·1. There appears to be a growing inclination to send children to certified and other institutions, not under the control of the Poor Law authorities, the number maintained in such institutions having risen from 7,274 on January 1st, 1899, to 9,369 on January 1st, 1908.³ The total number of paupers maintained in non-Poor Law institutions has risen from 4,877 on January 1st, 1886, to 11,509 on January 1st, 1908, and, as will be seen, the greater proportion of persons maintained in such institutions are children.⁴

Decrease in number of children in receipt of indoor and outdoor relief.

109. There has been a considerable reduction in the number of children in receipt of Poor Law relief since the year 1871. In that year the number approached 400,000. It is now, as we have shown, less than 250,000. The reduction has taken place wholly in the outdoor section, and, as nearly three-fourths of the Poor Law children receive this form of relief the small increase in the numbers relieved indoors has no appreciable effect on the total. Arranged in the usual cycles the statistics are as follows ⁵ :—

| Cycles. | Indoor. | Outdoor. | Total. |
|-------------------------|---------|----------|---------|
| 1871-2 to 1879-80 - - - | 47,814 | 220,765 | 268,579 |
| 1880-1 to 1887-8 - - - | 54,863 | 205,330 | 260,193 |
| 1888-9 to 1895-6 - - - | 51,002 | 184,439 | 235,441 |
| 1896-7 to 1905-6 - - - | 52,661 | 166,475 | 219,136 |

110. Comparing the first and last cycles it was shown in paragraph 24 that the child population had increased by 21·3 per cent., whilst child pauperism had decreased by 18·4 per cent.

¹ Statistical Appendix, Part II., Table I. ² Statistical Appendix, Part II., par. 135, ³ Statistical Appendix, Part I., Table XVII. ⁴ Statistical Appendix, Part I., Table XII. ⁵ Statistical Appendix, Part I., par 42.

111. Children, other than orphans and deserted children, have been classified in the regular Returns according to the physical condition of their parents, and since 1894, also according to the condition of their parents as to marriage. The first classification is as follows :—¹

| January 1st, 1908. | Indoor. | Outdoor. | Total. |
|--|---------|----------|---------|
| Children relieved with parents : | | | |
| i. Children of able-bodied widows relieved - | 25,853 | 92,344 | 188,541 |
| ii. Other children relieved with one or both parents being able-bodied - - - - | | 50,656 | |
| iii. Children of not able-bodied parents relieved | | 19,688 | |
| Orphans or children relieved without parents - | 36,573 | 9,678 | 46,251 |
| | 62,426 | 172,366 | 234,792 |

112. And the 188,541 children with parents, are re-classified under the following heads :—²

| | Number. |
|--|----------------|
| Children of married couples relieved - - - - - | 51,985 |
| " widowers relieved - - - - - | 2,966 |
| " widows relieved - - - - - | 100,986 |
| " married men relieved without wives - - - - - | 5,095 |
| " deserted and other married women relieved without husbands - - - - - | 20,774 |
| " (illegitimate) relieved with mothers - - - - - | 6,735 |
| | <u>188,541</u> |

113. It may be noted that the children of widows form the largest group, and we have already shown that since 1884 a considerable decrease has occurred in this class. Children of other able-bodied parents in receipt of out-relief number upwards of 50,000 and have in recent years increased considerably. Orphans and children relieved without parents are chiefly in receipt of indoor relief, and this class accounts for the whole of the increase in the number of indoor children in the cycle of 1897–1906 as compared with that of 1889–96. The number of illegitimate children, whose mothers are in receipt of relief, has fallen from 8,569 on January 1st, 1884, to 6,735 on January 1st, 1908.³

114. Child pauperism varies between district and district in much the same way as total pauperism. For instance, whilst the rates for all classes varied from 8·5 to 73·1 per 1,000 on March 31st, 1906, those for children under 16 varied from 4·7 per 1,000 in Lutterworth (Leicestershire) to 48·4 per 1,000 in Alston-with-Garrigill in Cumberland.⁴ The rural unions have a higher proportion of children amongst their population, but the rate of child pauperism to child population does not greatly vary between the different groups. London, however, has the lowest proportion of child population, and the highest ratio of child pauperism to child population. Moreover, whilst the decrease since 1871–2 in the number of outdoor children in London has been largely discounted by an increase in the number of indoor children, outside London the number of children in receipt of both forms of relief has diminished. Since 1891–2, there have been large reductions in the number of children in receipt of relief in rural unions, whilst in London and the groups of urban unions, the reductions have been much smaller or there have been considerable increases.

115. The question of child pauperism differs from that of adult pauperism in that no degree of responsibility for their condition of dependence attaches to the children. Except in regard to orphans, both causes and treatment must be considered from the point of view taken up in regard to the parents. The reduction in child pauperism, in

¹Half-yearly Statement of Pauperism, January 1st, 1908 (H.C. 130), p. xiv. ²Half-yearly Statement of Pauperism, January 1st, 1908 (H.C. 130), p. vii. ³Statistical Appendix, Part I., Table XVIII. ⁴Statistical Appendix, Part II., Tables 12 and 14.

so far as it represents greater independence of the parents, is therefore a matter for congratulation, but it should be borne in mind that the reduction has been chiefly in the number of widows' children, whilst the number of children of other able-bodied parents receiving out-relief has increased, and that the reduction during the last fifteen years has been effected principally in the rural unions.

THE ABLE-BODIED.

Changes in number of able-bodied persons relieved.

116. We refer in the Statistical Appendix to the uncertainty of the statistics regarding able-bodied pauperism.¹ The term is applied not only to the persons who are ordinarily able-bodied in health but also to those who are ordinarily able-bodied but temporarily disabled, and it is only in comparatively recent years, *i.e.*, since 1891-2, that these two classes have been distinguished. Taking the two together we find that there are about 110,000 able-bodied persons, *i.e.*, about one-fifth of the adult paupers are so classified. The proportion has diminished considerably since 1871-2, but the diminution has been wholly in the outdoor section, the proportion of indoor paupers classified as able-bodied having risen from 21·7 per cent. in 1871-9 to 25·6 per cent. in 1896-1905.² Moreover, the proportion of the able-bodied to the total number of adults has risen in the case of men, whilst it has diminished in the case of women. The increase in the number of indoor able-bodied has, at all events since 1891, been chiefly in the numbers who are sick, but during the last ten years there has also been an appreciable addition to the number of healthy able-bodied men in receipt of relief. The figures for the latter class are as follows³ :—

| Years. | Mean number of ordinarily able-bodied in health. | | |
|---|--|----------|---------------------------|
| | Males. | | Females (indoor only). |
| | Indoor. | Outdoor. | |
| 1891-2 (first year available—a good year) - - | 5,070 | 4,201 | 7,094 |
| 1895-6 (a bad year) - - - - - | 8,158 | 4,769 | 8,869 |
| 1900-1 (a good year) - - - - - | 5,399 | 3,009 | 7,475 |
| 1905-6 (a bad year) - - - - - | 9,884 | 7,147 | 8,563 |
| 1906-7 } latest years { - - - - - | 9,047 | 5,464 | 8,086 |
| 1907-8 } available { - - - - - | 9,164 | 5,660 | 8,248 |

Number and classification of healthy able-bodied men relieved.

117. Healthy able-bodied men in receipt of outdoor relief are classified under different heads, and it appears that the greater number are “relieved on account of the sickness, accident, or infirmity of some member of the family, or on account of a funeral.” The number fluctuates with the cycles of trade, but does not vary greatly. On the other hand the number “relieved on account of want of work or other causes” has varied since 1884 between the minimum of 297 reached on January 1st, 1900, and the maximum of 7,872 on January 1st, 1905. The numbers on January 1st, 1908, were :—

| | |
|--|-------|
| Relieved on account of :— | |
| Sudden and urgent necessity - - - - - | 482 |
| Sickness, etc., of family - - - - - | 3,952 |
| Want of work or other causes (except man's own sickness) - - - - - | 2,732 |

Ages of able-bodied persons in health relieved on March 31st, 1906.

118. In the following Table the ages of the able-bodied are given, and it will be seen that a large proportion are young persons and persons in the prime of life who might be expected to make independent provision for themselves and their families⁴ :—

¹ Statistical Appendix, Part I., par. 45. ² Statistical Appendix, Part I., par. 53. ³ Statistical Appendix, Part I., par. 57. ⁴ Statistical Appendix, Part II., Table 1.

ORDINARILY ABLE-BODIED IN HEALTH ON 31ST MARCH, 1906.

| Age Groups. | Indoor. | | Outdoor. | | |
|-------------------|---------|--------|----------|---|----------------------------------|
| | Men. | Women. | Men.* | Single women without children (healthy and sick). | Other women (healthy and sick)†. |
| 16 and under 20 - | 525 | 729 | 70 | 500 | 40 |
| 20 „ „ 25 - | 351 | 790 | 261 | 436 | 1,133 |
| 25 „ „ 35 - | 1,097 | 2,270 | 2,198 | 546 | 13,008 |
| 35 „ „ 45 - | 2,153 | 2,465 | 2,914 | 537 | 23,351 |
| 45 „ „ 55 - | 3,499 | 1,894 | 1,780 | 437 | 12,697 |
| 55 „ „ 65 - | 2,319 | 903 | 743 | 249 | 2,719 |
| 65 „ „ 75 - | 105 | 28 | 126 | 27 | 325 |
| 75 „ „ 85 - | 11 | 4 | 11 | 7 | 72 |
| 85 „ upwards - | - | - | - | - | 5 |
| Total - - | 10,060 | 9,083 | 8,103 | 2,739 | 53,350 |

119. An important change in regard to the relief of the able-bodied is concealed by the total figures. If an examination be made in urban and rural unions separately it is found that whilst the numbers have diminished in rural unions they have increased in urban unions. This important change is brought out in the following Table¹ :—

Changes in number of able-bodied men relieved in urban and rural unions.

INCREASE OR DECREASE PER CENT. IN NUMBER OF ABLE-BODIED MEN IN HEALTH.

| Groups of Unions. | Indoor. | | Outdoor. | |
|---|----------------------------|----------------------------|----------------------------|----------------------------|
| | Between 1891-2 and 1900-1. | Between 1895-6 and 1905-6. | Between 1891-2 and 1900-1. | Between 1895-6 and 1905-6. |
| Unions in London - - - - - | + 0·7 | + 38·4 | + 6·6 | + 137·9 |
| Extra-Metropolitan Unions :— | | | | |
| 1. Unions wholly Urban - - - - - | + 12·8 | + 24·4 | - 5·5 | + 133·8 |
| 2. Unions partly Urban and partly Rural of which the following proportions of the population are comprised in Boroughs and Urban Districts :— | | | | |
| (a) 75 per cent. and upwards - - - | + 34·0 | + 19·2 | - 32·6 | + 56·3 |
| (b) 50 per cent. and under 75 per cent. | - 3·5 | + 2·3 | - 48·9 | - 18·5 |
| (c) 25 per cent. and under 50 per cent. | - 6·4 | + 8·4 | - 45·0 | - 39·3 |
| (d) Under 25 per cent. - - - - - | - 26·1 | - 19·0 | - 44·2 | - 34·4 |
| 3. Unions wholly Rural - - - - - | - 30·0 | - 33·7 | - 41·0 | - 37·7 |
| England and Wales - - - - - | + 6·5 | + 21·2 | - 28·4 | + 49·9 |

120. The consideration of these statistics leads to the conclusion that it is in regard to the able-bodied that least progress has been made. Indeed it would appear that there has recently been a considerable retrogression in this branch of the Poor Law. Either the urban population is becoming less fitted for maintaining their independence, or the facility with which relief may be obtained and the immunity from labour which it confers are enticing a larger number of persons to avail themselves of Poor Law relief.

Conclusions regarding able-bodied pauperism.

* Excluding men relieved on account of their own sickness, accident, or infirmity.

† Wives of men receiving out-relief are classified as able-bodied if their husbands are able-bodied, but not otherwise.

¹ Statistical Appendix, Part I., par. 96.

THE SICK.

Regular statistics of sick persons relieved.

121. The regular statistics of pauperism give no comprehensive account of the number of paupers who are sick. They have, since 1891, distinguished the able-bodied indoor paupers who are sick from those in health, and a similar distinction has been made since 1884 as regards able-bodied men in receipt of outdoor relief. The numbers in receipt of outdoor medical relief only have been shown since 1893.

Number of able-bodied sick.

122. The increase in the number of the able-bodied sick relieved indoors is shown in the following Table :—¹

| Years. | Mean number of ordinarily able-bodied who are sick. | | |
|--|---|----------|---------------------------|
| | Males. | | Females (indoor only). |
| | Indoor. | Outdoor. | |
| 1891-2 (first year available, a good year) - - - | 7,304 | 8,748 | 6,923 |
| 1895-6 (a bad year) - - - - - | 10,281 | 8,831 | 8,370 |
| 1900-1 (a good year) - - - - - | 11,449 | 6,950 | 9,257 |
| 1905-6 (a bad year) - - - - - | 15,913 | 8,901 | 12,187 |
| 1906-7 (latest years available) { - - - - - | 15,913 | 9,028 | 12,338 |
| 1907-8 { - - - - - | 16,061 | 8,569 | 12,661 |

123. The increase has been fairly general in both urban and rural areas, but still it has been highest in some of the urban groups of unions.² The development of separate Poor Law infirmaries has, probably, rendered the receipt of indoor medical treatment less distasteful, and many who would not previously have accepted such treatment now take advantage of the new institutions. The numbers under treatment in infirmaries and infirm wards of workhouses has risen from 78,319 on January 1st, 1904, to 91,738 on January 1st, 1908.³ There has been nothing like the same expansion in the number of able-bodied in receipt of outdoor medical relief, or in the number of outdoor paupers of all classes in receipt of medical relief only.

Persons under medical treatment in certain unions on April 13th, 1907.

124. Realising the incompleteness of this information, we obtained a return from 128 unions giving statistics of the persons under medical treatment at noon on April 13th, 1907. From this return we find that nearly one-third of the persons in receipt of relief are under medical treatment, and that this proportion rises to nearly one-half in the case of the indoor poor, and falls to one-fifth in the case of the outdoor poor. For men under fifty years of age the proportion reaches three-fifths, and for men of these ages relieved indoors it rises to two-thirds. The proportion of women under medical treatment is smaller than that of men, especially in the case of out-relief.⁴

Most important diseases amongst persons relieved.

125. The five most important groups of the specified diseases amongst the persons relieved, and the proportions under medical treatment for each of them, are⁵ :—

- (1) Bronchitis and pneumonia, 44·0 per 1,000 of the total number of persons relieved.
- (2) Rheumatism and gout, 19·9 per 1,000 of the total number of persons relieved.
- (3) Pulmonary tuberculosis, 15·8 per 1,000 of the total number of persons relieved.
- (4) Heart disease, 13·9 per 1,000 of the total number of persons relieved.
- (5) Ulcerated legs, 12·1 per 1,000 of the total number of persons relieved.

¹ Statistical Appendix, Part I., par. 57. ² Statistical Appendix, Part I., par. 96. ³ Statistical Appendix, Part I., Table XII. ⁴ Statistical Appendix, Part III., pars. 5 and 7. ⁵ Statistical Appendix, Part III., Table III.

126. Over three-fourths of the poor under medical treatment in London are relieved in Poor Law institutions, whilst less than one-half are so relieved outside London.

127. In the following table we give the proportions under medical treatment for London and the extra-Metropolitan unions respectively¹—

Proportion of paupers receiving indoor and outdoor medical treatment.

| | | Proportion under medical treatment per 1,000 Indoor and Outdoor Paupers (taken together) at each age group. | | | | | | |
|---------------------------------------|---|---|---------------------------------|------------------------|------------------------------|------------------------|------------------------------|--------|
| | | — | Children under 16 years of age. | Men. | | Women. | | Total. |
| | | | | Under 50 years of age. | 50 years of age and upwards. | Under 50 years of age. | 50 years of age and upwards. | |
| London (31 unions) | { | I. | 174·0 | 603·2 | 318·7 | 393·8 | 261·7 | 292·9 |
| | | O. | 54·0 | 92·0 | 56·7 | 118·2 | 120·9 | 85·0 |
| | | T. | 228·0 | 695·2 | 375·4 | 512·0 | 382·6 | 377·9 |
| Extra-Metropolitan unions (97 unions) | { | I. | 41·7 | 313·7 | 183·7 | 156·3 | 117·7 | 126·8 |
| | | O. | 58·8 | 215·2 | 127·7 | 152·7 | 172·9 | 131·4 |
| | | T. | 100 5 | 528·9 | 311·4 | 309·0 | 290·6 | 258·2 |

128. Notwithstanding the large number of medical charities in London, the London proportions for indoor and outdoor paupers taken together are higher than the provincial proportions in every group, and it will be seen that the excess is wholly due to the larger numbers under treatment in institutions. In the case of children and of men and women under fifty the excess of the London proportion over the provincial proportion is very considerable.²

Excess of London proportions under medical treatment.

| | Excess (+) or deficit (–) of London proportions under medical treatment over provincial proportions. | | |
|--------------------------------|--|----------|---------|
| | Indoor. | Outdoor. | Total. |
| Children - - - - - | + 132·3 | – 4·8 | + 127·5 |
| Men under 50 - - - - - | + 289·5 | – 123·2 | + 166·3 |
| Men 50 and upwards - - - - - | + 135·0 | – 71·0 | + 64·0 |
| Women under 50 - - - - - | + 237·5 | – 34·5 | + 203·0 |
| Women 50 and upwards - - - - - | + 144·0 | – 52·0 | + 92·0 |

129. These figures show to what an abnormal extent the young and those of middle age avail themselves of the London Poor Law infirmaries, for the difference between the London and provincial proportions can hardly be attributed solely to a difference in the sickness rates. The excess is not nearly so great in the case of men and women over fifty. Moreover, the “uncorrected” death rate for London in 1907 (viz., 14·7 per 1,000) was lower than that for the whole of England and Wales, viz., 15·0 per 1,000.³

130. In this connection we may also refer to the occupation statistics of persons relieved, from which it would appear that, comparing the healthy able-bodied men relieved indoors with the able-bodied men who are sick, those engaged in the more highly-paid and more regular employments take advantage of the Poor Law medical service

Advantage taken of Poor Law medical institutions by more highly paid and regular workers.

¹ Statistical Appendix, Part III., par., 14. ² Statistical Appendix, Part III., par. 15. ³ Annual Report of the Registrar General, 1907 [Cd. 4464], page xxxvii.

to a greater proportionate extent than persons in other industries. The proportion of sick to healthy able-bodied indoor paupers was, in the total for England and Wales, 1·75.

131. In the following groups of occupations the proportion was in excess of the general average¹:—

| Groups of Occupations. | Ordinarily Able-bodied males relieved who were returned under the occupations given in the 1st column. | |
|--|--|--------------------------------|
| | Total Number. | Proportion of Sick to Healthy. |
| Defence of the country - - - - - | 75 | 4·8 |
| General or Local Government of the country - - - | 37 | 3·6 |
| In and about and dealing in the products of mines and quarries | 700 | 3·3 |
| Precious metals, jewels, watches, instruments and games - | 158 | 3·2 |
| Gas, water, and electricity supply - - - - - | 69 | 2·8 |
| Fishing - - - - - | 84 | 2·7 |
| Professional occupations and their subordinate services - | 226 | 2·6 |
| Metals, machines, implements and conveyances - - - | 2,070 | 2·5 |
| Brick, cement, pottery and glass - - - - - | 241 | 2·4 |
| Paper, prints, books and stationery - - - - - | 348 | 2·3 |
| Chemicals, oil, grease, soap, resin - - - - - | 119 | 2·1 |
| Conveyance of men, goods, and messages - - - - - | 4,041 | 2·0 |

CASUAL PAUPERS.

No complete statistics of casual paupers.

132. No precise statistics of the number of casual paupers at any given moment can be obtained, for the simple reasons that they are never all in receipt of relief at the same time, and that their peregrinations frustrate any attempt to spread the enumeration over a period.

Estimate of total number of vagrants.

133. The Vagrancy Committee considered the question, and after referring to the various estimates which had been put forward of the total number of vagrants, concluded as follows²:—

“The only conclusion from the figures at which we arrive is that the number of persons with no settled home and no visible means of subsistence probably reaches, at times of trade depression, as high a total as 70,000 or 80,000, while in times of industrial activity (as in 1900) it might not exceed 30,000 or 40,000. Between these limits the number varies, affected by the conditions of trade, weather, and economic causes. In our Inquiry, we are more concerned with the habitual vagrant, that is, the class whom trade conditions do not affect. Of this class there is always an irreducible minimum, though successive depressions of trade may increasingly swell the numbers. No definite figures as to this permanent class can be obtained, but we are inclined to think that the total number would not exceed 20,000 to 30,000.”

Difficulty in obtaining complete statistics of casuals.

134. The numbers obtained from our Census of Paupers are those of casuals relieved at midnight between March 31st and April 1st, 1906, that is to say, they are the numbers relieved at a given moment. The number of people who are habitually tramping from place to place will be much larger than this, for they will not all be in receipt of relief at the same time. The statistics obtained by the Local Government Board have shown the number relieved at any time during the day of the half-yearly counts, though the number relieved on one night only has been added in recent years. The total number relieved during the course of the day includes twice over those casuals who slept in different casual wards on the two nights forming part of the day of the count, and it appears that, taking the half-yearly counts between July 1st, 1898, and January 1st, 1908, inclusive—a period of ten years—the number has exceeded the number relieved on one night only by a mean percentage of 74·9 for the winter counts, and of 71·0 for the summer counts. It is obvious that no count of the number of casuals during a period of time embracing more than one

¹ Statistical Appendix, Part II., Table 16. ² Report of Vagrancy Committee [Cd. 2852] p. 22.

night can claim to avoid duplicate reckonings, and though an accurate count of the casuals relieved at a given moment may be obtained it is much smaller in relation to the total number of casuals than in the case of other classes of paupers.¹

135. The number of casual paupers at the date of the Census was 10,927, all but 110 of whom were relieved in the workhouse, casual wards, or infirmaries. Their ages were as follows:²—

Casual paupers on March 31st, 1906.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|--------|
| Children under sixteen years of age | - | - | - | - | - | - | - | - | - | 245 |
| Adults, sixteen years and under sixty years | - | - | - | - | - | - | - | - | - | 8,645 |
| Adults, sixty years and upwards | - | - | - | - | - | - | - | - | - | 2,037 |
| Total | - | - | - | - | - | - | - | - | - | 10,927 |

136. The particulars obtained did not include the sex of casuals, but according to the Report of the Departmental Committee on Vagrancy the sex and age of the vagrants relieved on January 1st, 1905, were:—³

Sex and age of casuals on January 1st, 1905.

| | Men. | Women. | Children. |
|-----------------------|-------|--------|-----------|
| Under 16 years of age | - | - | 188 |
| 16 years and under 35 | 2,156 | 132 | - |
| 35 „ „ 65 | 6,143 | 660 | - |
| 65 „ „ upwards | 394 | 95 | - |
| | 8,693 | 887 | 188 |

The number of women and children amongst the vagrant population is thus comparatively small.

137. It may be observed that the number of casuals appears to fluctuate to some extent with the cycles of trade, for the lowest numbers on the night of January 1st were in the years 1891 and 1900. Since the year 1900 there has been a considerable increase and the number on January 1st, 1908, was the highest on record, viz., 10,436. The numbers shown by the day count, in which many will be counted twice over, have risen from 3,378 on January 1st, 1872, to 17,083 on January 1st, 1908.

Changes in number of casuals relieved since 1872.

138. During the last ten years the number of casuals relieved on the day and night respectively of January 1st was ⁴:—

| Year. | Casual Paupers Relieved. | |
|-------|-------------------------------------|------------------------------|
| | At any time during the 1st January. | On the night of 1st January. |
| 1899 | 13,366 | 7,499 |
| 1900 | 9,841 | 5,579 |
| 1901 | 11,658 | 6,795 |
| 1902 | 13,178 | 7,840 |
| 1903 | 14,475 | 8,266 |
| 1904 | 15,634 | 8,519 |
| 1905 | 17,524 | 9,768 |
| 1906 | 16,823 | 9,708 |
| 1907 | 14,957 | 8,346 |
| 1908 | 17,083 | 10,436 |

¹ Statistical Appendix, Part II., par. 87. ² Statistical Appendix, Part II., par. 85. ³ Report of Vagrancy Committee [Cd. 2852], p. 18. ⁴ Half-yearly Statement of Pauperism, January 1st, 1908 (H.C. 130), p. xv

INEFFECTIVENESS OF EXPENDITURE ON EDUCATION IN REDUCING PAUPERISM.

Pauperism not reduced by increased expenditure upon education.

139. The position which we have thus shown to exist becomes still less satisfactory when we consider the vast sums which are, and have been, spent in connection with education and the public health. In the early part of the nineteenth century the system of elementary education was in its infancy and sanitary legislation was practically unknown. Now we have free education in the elementary subjects for every child in the Kingdom, and large sums are spent annually from public funds in secondary and technical instruction. No boy or girl physically and mentally capable of learning may now go out into the world without, at any rate, a fair educational knowledge, and with the increasing facilities for obtaining all forms of instruction it might reasonably be expected that the people would more readily command employment and higher remuneration. In the year 1871, the expenditure upon elementary education was slightly in excess of two millions, of which some £550,000 was met by school fees.¹ In 1905-6, the latest year for which the particulars are available, the expenditure had risen to about twenty millions, whilst approximately another three millions were expended upon various forms of higher education.² A generation has elapsed since elementary education became universal, and the benefits to be derived from the system should now be accruing to the nation. Persons now above fifty years of age have not, it is true, participated in the advantages conferred in 1870, but of persons below that age we have shown that there is no diminution in the number coming upon the Poor Laws.

MOVEMENT IN WAGES.

Paucity of statistical information with regard to wages.

140. Whether wages have increased upon the whole is a question to which no definite answer can be given, for there is a great paucity of statistical information for earlier years, and we are still without any reliable data of the average earnings in many trades, especially those of an unskilled or casual nature. The Board of Trade is, we understand, engaged upon an inquiry into wages, the results of which will be invaluable in the consideration of this question, though we shall still be without reliable comparisons for former years. That Department has, however, constructed index numbers of wages in certain trades for the years since 1874, and the comparison may be carried back to 1860 by the aid of estimates made by Mr. A. L. Bowley.³

Increase in wages.

141. The trades covered by these index numbers are the building trades, coal-mining, engineering, textile and agricultural industries. In these trades the general level of wages has risen from about 67 in 1860 to 102 in 1907, if the level of the year 1900 be taken as 100.⁴ There are well-defined fluctuations corresponding with the cycles of trade, but except during the booming years of the early 'seventies, when Mr. Bowley estimates that the level rose to about 96, wages have never since 1860 been at the level of the opening years of the present century. In his book "Wages in the United Kingdom," Mr. Bowley writes:—

"The study of the period 1830-60 has been much neglected. In it wages in the cotton industry increased about 2s. on 10s., although there was a falling off until 1845-6. Building trades and town artisans did not improve their earnings by so large a percentage. The wages of seamen increased over 10 per cent. between 1840 and 1860, but the percentage of increase between 1830 and 1840 cannot be accurately measured, except for one port, where they appear to have been stationary. Compositors' wages in small towns increased rapidly, but in large towns were stationary, and the average increase was 10 per cent.; those of agricultural labourers increased from 10s. to 11s. 7d., and of miners diminished."

"Between 1860 and 1891 increases were very general and averaged about 35 per cent., but the increase was not uniform throughout the period, and the money wages and real wages took very different courses through the stormy period of the 'seventies. Between 1891 and 1898 wages on the whole were stationary, except that they have fluctuated in the mining industry, and that in the building trades their rate of increase has come up to the general average. In many cases it is likely that the money wages paid in some year of the inflation of the seventies was greater than any wage since; but owing to the very rapid fluctuation of wages and prices at that time it is not easy to make any useful comparison. It is better to say that money wages in the 'nineties were 10 per cent. above those of the 'eighties, and 30 per cent. above those of the 'sixties."

Movement from the lower paid occupations to the higher paid industries.

142. Taking the wage-earners as a class they have, moreover, benefited in another way. There has been a considerable movement from the lower paid occupations to the

¹ Appendix to Report of Local Taxation Commission [Cd. 1221], p. 21.

⁴ Twelfth Abstract of Labour Statistics 1906-7 [Cd. 4413], page 54.

higher paid industries. Thus, men engaged in agriculture in England and Wales fell from 138 per 1,000 males above ten years in 1881 to 95·5 per 1,000 in 1901, whilst men employed in the coal-mining industry rose from 41 per 1,000 to 53 per 1,000 in the same period, and men engaged in shipbuilding from 5·8 per 1,000 to 7·1 per 1,000.¹ The point is put concisely by Mr. Bowley in "National Progress in Wealth and Trade." He writes:—

"Wages have risen during the last twenty years from two causes, of which the latter has been ignored in recent discussions: First, the weekly rates for nearly all occupations have risen; secondly, there has been a very considerable flow from low-paid to better-paid trades. If there had been no change of employment, our records would show an increase of about 15 per cent. in average rates of wages when 1902 is compared with 1882 in this case there is nothing invidious in the choice of these two years; but when the transference of labour is allowed for, the increase is 30 per cent. This result is mainly but not entirely due to the diminution of the number of agricultural labourers. In 1886 the average weekly wage of English agricultural labourers, *when all their special earnings and allowances through the year were included*, was about 14s. 6d.; that for the great bulk of other trades was 24s. The purchasing power of money in the country cannot be considered to be much (if at all) greater than in the town; and the greater rent in towns cannot, however reckoned, be held to neutralise more than a fraction (say one-third, or less) of the difference. The other main factor in the above result is the great increase in the number of coal-miners, whose wages have increased very rapidly in the last fifteen years. In addition to these main causes, there has been on the whole a very natural and considerable flow of labour to those industries where wages were rising with special rapidity."

143. We may also refer to the Memorandum on the movements in wages prepared for us by the Board of Trade, in which it is concluded that, allowing for trade cycles, a general tendency of wages to rise is perceptible through the last thirty years, and that the number of persons employed in those trades in which the advance has, on the whole, been the greatest, has increased more rapidly than the occupied population as a whole. The conclusion is, however, qualified by the following passage²:—

"It is mainly as regards labour in organised industries, and especially skilled workers, that any exact data with regard to wages are available. While there is reason to believe that unskilled and even casual labour is generally remunerated at a higher rate than formerly, it is possible that the large mass of casual time labour is not making any substantial advance in weekly or yearly earnings."

144. If then, wages have increased, the extent of the classes who are without sufficient resources wherewith to maintain their independence should have diminished, and we should have expected to find this diminution reflected in the statistics of pauperism. That the pauperism statistics have not responded to this influence we have already shown. Higher wages have not reduced the number of paupers.

CHANGES IN COST OF LIVING.

145. But the increase in wages is not the only way in which the independence of the working classes has been rendered more secure. The cost of living, which is just as important as the workman's wages, has undoubtedly diminished during the last thirty or forty years. Reference has already been made to the decrease in the cost of food and drink, and taking the four principal items of workman's expenditure, viz., food, rent, clothing, and fuel and lighting, the Board of Trade have constructed a series of index numbers based upon the prices of 1900 which show that the cost of living has fallen from 121·7 in 1880 to 101·4 in 1903.³ Decrease in the cost of living.

146. The Board of Trade point out, however, that housing and fuel have increased in cost, and that these items form a larger part in the budgets of the lower paid workers than in those of the higher paid workers, and that the poorest classes, whose retail purchases are made in very small quantities, also gain least from the lower prices of other commodities than housing and fuel.²

DEVELOPMENT OF THRIFT.

147. The working classes would thus appear to be better off both as regards their income and their expenditure than they were in the middle of the nineteenth century. Progress of friendly societies, trade unions, and savings banks.

¹ General Report on Census 1901 [Cd. 2174], pp. 270 *et seq.*

² Vol. IX. of Evidence, Appendix No. xxi. (E).

³ British and Foreign Trade and Industry (Second Series) [Cd. 2337], p. 33.

and it may be counted to their credit that they have taken advantage of their improved position to further strengthen their independence by a variety of forms of thrift. Provident societies of all kinds have sprung up and flourished. For statistical evidence of this we may refer to the progress of friendly societies, trade unions, and savings banks. In 1905 the membership of registered friendly and benefit societies was 14,595,528, and their funds amounted to £52,619,392. Comparative figures are not available for years before 1897, but even then the membership was only 10,934,144, and their funds £35,736,250.¹ No complete statistics of the membership of trade unions can be given over a long period but Mr. and Mrs. Sidney Webb show, in their "History of Trade Unionism" that the membership of fifteen societies for which the figures are available increased from 24,737 in 1850 to 184,948 in 1890, and from statistics supplied to us by the Board of Trade it appears that the membership of 100 principal trade unions rose from 915,545 at end of 1892 to 1,273,995 at end of 1906,² whilst their funds increased from £1,580,397 at end of 1892 to £5,198,536 at end of 1906.³ The aggregate membership of Trade unions known to the Labour Department of the Board of Trade to be in existence at the end of each of the fifteen years from 1892 to 1906 inclusive, rose from 1,513,647 at end of 1892 to 2,106,283 at end of 1906.⁴ And the number of depositors in the Post Office and trustee savings banks rose from 1,277,873 in 1854 to 12,094,000 at end of 1906, whilst the amounts due to them increased from £33,700,000 to £209,000,000.⁵ It is clear, therefore, that amongst a large and growing section of the working population of the country habits of thrift are more and more to be observed. But it is equally clear that there is another section who have not the ambition or the ability to establish out of their wages a fund to which they may turn in times of stress, and thus in 1896-1905 we still had half a million adult paupers—a larger number than in the period 1871-9.

INEFFECTIVENESS OF PUBLIC HEALTH EXPENDITURE IN REDUCING PAUPERISM.

Absence of
reduction in
pauperism not-
withstanding
sanitary
improvements.

148. The incongruity is no less remarkable when we consider the developments in the public health services. On more than one occasion the Central Authority has referred to the effects of epidemics of infectious diseases upon pauperism. Thus, in the Report of the Poor Law Board for 1867-8 we read that :—

"The cholera which prevailed in the summer and autumn of 1866, added still further to the distress thus caused, carrying off in the East of London many of the heads of families, whose wives and children were left almost entirely dependent upon the poor rates."

In its First Report (1871-2) the Local Government Board attribute the increase in poor relief expenditure in 1870-1 partly to the expenses consequent upon the epidemic of small-pox. And Mr. Rawlinson, C.B., Government Engineer, in his Report to the Poor Law Board in 1869, says :—

"An increasing of permanent pauperism is also the usual result of any epidemic disease, such as fever or cholera, aggravated by defective sanitary arrangements."

Although no reference is made in the Reports of the Central Authority to the effects upon pauperism of the previous outbreaks of cholera we find the General Board of Health, in a circular issued in 1854, referring to the outbreaks of 1831, 1849, and 1854, and pointing out "the permanent expense entailed on towns both by public rates and private contributions for the maintenance of widows, orphans and others pauperised by the epidemic." The advance of sanitary and medical science has brought these epidemics largely under control, and the country has been spared the repetition of the devastating outbreaks which were recorded in the first half of the nineteenth century. Moreover, sanitary legislation and administration have effected a marked improvement in the public health generally. The first move in sanitary reform was prompted by the outbreak of cholera in 1831, but as late as 1871 the Royal Sanitary Commission⁶ reported that their evidence disclosed a very imperfect condition of local government for sanitary purposes in the extra-

¹ Twelfth Abstract of Labour Statistics, 1906-7 [Cd. 4413], p. 179. Of the membership in 1897, 5,826,420, and of that in 1905, 8,695,610, members belonged to Collecting and other special classes of Friendly Societies. The Collecting Societies "are societies purely for insuring burial money," in the numbers for which "every infant member of the family whose life is insured" is counted. Brabrook, 35, 158.

Metropolitan parts of England and Wales, and that “ a considerable portion of the working classes is debilitated, and thrown into sickness and poverty, by a tainted atmosphere and unhealthy dwellings.” Some progress had already been made in the Metropolis under the Metropolis Management Act of 1855, and the passing of the Public Health Act of 1872, and of its successor of 1875 gave a great stimulus to sanitary improvements elsewhere. The directions in which the sanitary authorities now endeavour to promote the public health are legion. Amongst the matters claiming their attention are the stamping out of infectious diseases and the provision of hospitals for such diseases, the removal and destruction of house refuse, sewerage, water supply, the provision and control of parks, baths, cemeteries and slaughter-houses, and the housing of the working classes. Vaccination and the registration of births and deaths may also be mentioned. An approximate estimate of the expenditure incurred in the year 1904-5 upon what may be described as “ sanitary services ” gives a total of nearly sixteen millions, and this does not include the scavenging or lighting of streets, or the full cost of the remuneration of officers whose duties are not confined to particular branches of sanitary administration. What the expenditure may have been in the early years of the nineteenth century we are unable to say, but it may be pointed out that in the year 1841 only £8,101,000 was raised by local rates, of which sum nearly five millions was absorbed in poor relief.¹ It is obvious, therefore, that, at that date, little could have been spent upon sanitary services.

DECREASE IN DEATH RATE.

149. We are far from suggesting that the vast increase in sanitary expenditure has not been justified by its results, for the annual death rate has diminished from 21·4 per 1,000 in the five years 1841-5 and 23·3 per 1,000 in the five years 1846-50 to 16·0 per 1,000 in the five years 1901-5, and it may be noted that the greater part of the decrease has occurred since the passing of the Public Health Act of 1875. In the five years 1871-5, the death rate was still 22·0 per 1,000. Moreover, the corrected death rate for phthisis, perhaps the most pauperising disease, has fallen from 2·7 per 1,000 in 1857, to 1·14 per 1,000 in 1907.²

150. It may, of course, be argued that in so far as the decrease in the death rate has prolonged life in old age, it has added to the number of persons who most frequently come upon the Poor Laws, and may thus be counteracting, to some extent, the improved economic position of the working classes. How far this may be the case could hardly be estimated, but we think that the greater earning power conferred upon persons at the working period of life by the improvement in the public health would far outweigh any tendency towards the creation of old-age pauperism by a diminution in the death rate. Moreover, so far as statistics of old-age pauperism are available, we do not find that aged persons in receipt of relief have increased more rapidly than other adult paupers.

ILLEGITIMACY.

151. The effect of the advance in education and sanitation upon the question of illegitimacy may here be mentioned. The influence of illegitimacy upon pauperism is well understood, and we refer to it elsewhere. Here we need only point out that, by whatever standard the illegitimate births be measured, there has been a considerable decrease. We give the rates in tabular form³ :—

| Period. | Annual Illegitimate Birth Rates. | | |
|--------------|----------------------------------|-------------------|---|
| | Per 1,000 Persons living. | Per 1,000 Births. | Per 1,000 Unmarried and Widowed Females aged 15-45 years. |
| 1846-50 - - | 2·2 | 67 | — |
| 1876-80 - - | 1·7 | 47·5 | 14·4 |
| 1901-5 - - - | 1·1 | 39·5 | 8·4 |
| 1906 - - - - | 1·1 | 40·0 | 8·1 |
| 1907 - - - - | 1·0 | 39·4 | 7·8 |

CONCLUSION.

Conclusion.

152. It is very unpleasant to record that, notwithstanding our assumed moral and material progress, and notwithstanding the enormous annual expenditure, amounting to nearly sixty millions a year, upon poor relief, education, and public health, we still have a vast army of persons quartered upon us unable to support themselves, and an army which in numbers has recently shown signs of increase rather than decrease. To what is the retrogression due? It cannot be attributed to lack of expenditure. Is this costly and elaborate machinery we have established defective, and if so where does it fail to accomplish its end? Is the material upon which this machinery operates becoming less amenable to the remedies applied?

153. The recommendations we shall make in later stages of this Report will furnish the reply to these interrogations, but the statistical review of the expenditure incurred and of the results attained by it prove that something in our social organisation is seriously wrong, and that whatever may be the evils, they are not of such a nature as to be improved or removed by the mere signing of cheques or the outpouring of public funds.

PART III.

HISTORICAL SKETCH OF THE POOR LAWS DOWN TO 1834.*

1. The Royal Commission of 1832†, its Report, and the legislation promoted by that Report, mark the beginning of a system of administration which has without serious break or sudden change continued down to this day. We do not, therefore, intend to push our inquiries further back than the appointment of that Commission, except for the purpose of obtaining a synopsis of the Acts of Parliament under which a regularised system of the relief of the poor was gradually established. Such a review is interesting historically, and is useful in showing whether there was a continuity of idea running through all this legislation, or whether the different Acts were suggested by the needs of the time and embody inconsistent theories.

2. Mr. Adrian, the Legal Adviser of the Local Government Board, gave us a succinct and luminous account of the origin, development, changes, and objects of this earlier legislation,¹ and we cannot do better than epitomise the evidence so given.

3. He pointed out that so much attention has been given to the famous 43 Eliz., c. 2, that it is sometimes assumed that it is the foundation of our Poor Law system of relief. But the practice of regulating the relief of the poor has a much older origin, being of common law genesis. According to a passage quoted from Horne's "Mirror" in Coke's Institutes, Part III., Chapter 40, folio 103, it was ordained by kings before the Conquest that the poor should be sustained by parsons, rectors, and parishioners, "so that no one should die from lack of sustenance."

4. This enunciation of the common-law principle, even if we put the production of the "Mirror" as late as the reign of Edward II., precedes by two centuries the earliest Tudor legislation. The various methods by which effect was given to the common-law rule may be assumed to have established parochial responsibility.

THE POOR LAW BEFORE AND AFTER 1601.

5. In order that its true place and value may be assigned to the Poor Relief Act 1601 (43 Elizabeth c. 2), it is necessary to take cognisance of the working of the Poor Law before and after that date. The Act of 1601 was a temporary measure. It was according to Lord Coke "a probationer."² Its details were largely a reproduction of an earlier Act—39 Elizabeth, c. 3. The chief purposes of the Act of 1601 were, in the words of the statute:—

Origin and
Antiquity of
Poor Law.

(a) "For setting to work the Children of all such whose Parents shall not by the said Churchwardens and Overseers, or the greater Part of them, be thought able to keep and maintain their children ;

(b) "And also for setting to work all such persons, married or unmarried [as]³ having no Means to maintain them, use no ordinary or daily Trade of Life to get their Living by ;

(c) "And also to raise weekly or otherwise (by taxation of every Inhabitant, Parson, Vicar and other, and of every Occupier of Lands, Houses, Tithes Impropriate, Propriations of Tithes, Coal Mines or saleable Underwoods in the said parish, in such competent Sum and Sums of Money as they shall think fit) a convenient Stock of Flax, Hemp, Wool, Thread, Iron, and other Ware and Stuff, to set the Poor on Work ;

(d) "And also competent Sums of Money for and towards the necessary Relief of the Lame, Impotent, Old, Blind, and such other among them being Poor and not able to work ;

(e) "And also for the putting out of such Children to be Apprentices, to be gathered out of the same Parish, according to the Ability of the same Parish ;

* A summary of the work of the Royal Commission of 1832 will be found in Professor Smart's two Memoranda in the Appendix, entitled, "The Report of the Commission of 1832," and "The Principles of the Poor Law Amendment Act of 1834."

† Note.—Throughout the Report, the expressions "Royal Commission of 1832" and "Royal Commission of 1834" have been used to denote the Royal Commission which inquired into the working of the Poor Laws and reported in 1834 ; the expressions "Poor Law Commission" and "Poor Law Commissioners" refer to the Authority appointed to administer the Poor Laws under the Act of 1834.

¹ Adrian, 74 to 79. ² Adrian, 75. ³ Cf. Adrian, 78.

(f) "And to do and execute all other Things, as well for the disposing of the said Stock, as otherwise concerning the Premises, as to them shall seem convenient."*

6. The Act indeed closed a series of experimental legislation which throughout the Tudor period was concerned with those whom at one time it was usual to class as the impotent poor.

7. The Tudor Acts which thus culminated in the Statute of 1601, as well as those preceding them, had largely in view the prevention and regulation of begging. The well-known authority, Dr. Burn, in his History of Poor Law, writes :—

Regulation and
restriction of
begging.

"First, the poor were restrained from begging at large, and were confined to beg within certain districts (11 Henry VII., c. 2; 19 Henry VII., c. 12; 22 Henry VIII., c. 12). Next the several hundreds, towns corporate, parishes, hamlets, or other like divisions were required to sustain them with such charitable and voluntary alms, as that none of them of necessity might be compelled to go openly in begging, and the churchwardens or other substantial inhabitants were to make collections for them, with boxes on Sundays, and otherwise by their discretions. And the minister was to take all opportunities to exhort and stir up the people to be liberal and bountiful (27 Henry VIII., c. 25). Next houses were to be provided for them by the devotion of good people, and materials to set them on such work as they were able to perform. Then the minister after the Gospel every Sunday was specially to exhort the parishioners to a liberal contribution (1 Edward VI., c. 3). Next the collectors for the poor on a certain Sunday in every year, immediately after Divine Service, were to take down in writing what every person was willing to give weekly for the ensuing year; and if any should be obstinate and refuse to give, the minister was gently to exhort him. If he still refused, the minister was to certify such refusal to the bishop of the diocese, and the bishop was to send for and exhort him in like manner. If he stood out against the bishop's exhortation, then the bishop was to certify the same to the justices in session and bind him over to appear there; and the justices at the said sessions were again gently to move and persuade him; and finally if he would not be persuaded then, then they were to assess him what they thought reasonable towards the relief of the poor. And this brought on the general assessment in the 14th year of Queen Elizabeth (5 and 6 Edward VI., c. 2; 5 Elizabeth, c. 3)."

8. In 1567 Thomas Harman published a book "A Caveat or Warening for Common Cursetors," and, according to the statements it contained, the beggar's trade was at that time thriving. Twenty years later, Harrison, in his "Description of England," published in 1586, estimated that, though not quite sixty years had passed since the trade began, the beggars numbered about 10,000.

9. The last Statute in Dr. Burn's Summary—the 14 Eliz., c. 5—aimed at the suppression of the roaming beggar by a measure also designed for the local care of the aged, decayed, and impotent. The Justices by Sec. 16 were empowered to appoint meet and convenient places for the habitations and abidings of the latter class. Those who refused to be bestowed in the appointed abiding places or left them to beg were to be punished as rogues or vagabonds (sec. 18). The Act may also deserve mention as recognising the principle of non-resident relief. It seems that Bath and Buxton were the resorts of a great number of the poor, who repaired "to the baths there for ease of their grief." These persons were to be not only licensed by Justices, but also "provided for by the inhabitants of such hundreds, parishes or places from whence they shall so be licensed to travel."

10. It should be added that the 14 Eliz., c. 5, was shortly afterwards amended by the 18 Eliz., c. 3, and that the later Act required provision to be made of a competent stock of wool, hemp, flax, iron, or other stuff to be delivered to the poor, who might work the stock into yarn or other matter, and receive payment according to the desert of the work. For those who refused or spoilt work or went abroad begging or lived idly, houses of correction were to be provided.

11. The Act of 1601 was, as we have said, passed for a limited period. It was, with other Acts, renewed at the beginning of the reigns of James I. and Charles I. In the reign of Charles I. (1641) it was made perpetual. Each occasion saw a new development. Thus on the first renewal an amendment to facilitate apprenticeship was introduced;

* For full text of the Act in its original form and apart from subsequent amendments see Appendix.

while on the second renewal this amendment was coupled with the provision that the churchwardens and the overseers of the poor in the said Act made in the three and fortieth year [of Queen Elizabeth] may, "with the consent of justices," set up, use, and occupy any trade mystery or occupation, only for the setting on work and better relief of the poor of the parish, town or place, of or within which they shall be churchwardens or overseers, any former statute to the contrary notwithstanding.¹ Even after 1641 there is ground for the belief that the operation of the Statute of Elizabeth was for many years partial.

12. These extracts seem to show that :—

- (1) Parochial chargeability ;
- (2) Repression of begging, except where authorised ;
- (3) The provision of employment as a means of assistance ;
- (4) The care of the lame, the impotent, the old and blind who are poor, and are unable to work ;
- (5) The setting to work and apprenticeship of children ; and
- (6) The free use of the house of correction for the idle and the petty offender ;

were the principles dominating the Acts passed for the relief of the poor. It may be noted that the appointment to the office of Overseer under the Act was compulsory, and that the office was unpaid.

LEGISLATION IN THE EIGHTEENTH CENTURY.

13. As regards Poor Law, the eighteenth century was one of experiment and criticism. Everyone is familiar with Adam Smith's exposure of the effects of the Law of Settlement in obstructing the mobility of labour, and with his denunciation of the law as "an evident violation of natural liberty and justice."² An Act of 1795 removed the principal hardship by forbidding the removal of persons from any parish until they became actually chargeable to the rates. But, apart from this, two marked and opposite policies emerged during the century.

14. The 9 Geo. I., c. 7 (1722) had two notable effects. First, it limited the power of the Justices, who appear to have formed the habit of ordering relief to any applicants who came to them, without the knowledge of the parish officers, by enacting that no one should receive relief from the Justices until oath were made before such Justice of some matter that he should judge to be a reasonable cause, and until the person had applied to a Vestry or to two of the Overseers and had been refused relief. Second, it went far to establish a workhouse test. Parishes, either singly or in combination, were empowered to provide houses and contract with any persons "for the lodging, keeping and maintaining, and employing" of poor persons, and "to take the benefit of their work, labour and service." And "no poor who refused to be lodged and kept in such houses should be entitled to parochial relief."

15. The immediate result of this was a diminution of expenditure. But returns to Parliament, some fifty years later, in 1776, and again in 1786, showed that, judging from the state of several parishes "the charge of maintaining their poor had advanced very rapidly, notwithstanding the aid of workhouses, and perhaps, as rapidly as in those parishes which have continued to relieve the poor by occasional pensions at their own habitations."³ According to the data available at the time, it was estimated that poor relief expenditure, which in 1701 amounted to about £900,000 for the year, had increased to £1,250,000 in 1760.⁴

16. The 22 Geo. III., c. 83 (1782), known as Gilbert's Act, insisted on the failure of the previous Act, both as regards the increase of expenditure and the increased sufferings of the poor. Power was now given to adjacent parishes to unite by voluntary arrangement into a Union or Incorporation and build a workhouse for the combined parishes. And the 29th section provided that no persons should be sent to such poor house except such as were become indigent by old age, sickness, or infirmities, and were unable to acquire a maintenance by their labour . . . and orphan children. For the able-bodied, the Guardians were ordered to find suitable employment near their own homes. Under this Act, power was again handed back to the Justices ; they were to appoint and control

¹ 1 Charles I., IV. 22 (8). ² *Wealth of Nations*, 1776. ³ Eden, I., p. 270. ⁴ "History of the English Poor Law," Nicholls, Revised Edition, Vol. I., p. 354, and Vol. II., p. 55.

visitors and paid Guardians; and by these visitors and Guardians poor relief was to be administered. Under this Act, sixty-seven Incorporations were formed, and their disinclination to come under the new Poor Law was one of the chief obstacles which the Commissioners of 1834 experienced. Poor Law expenditure continued to grow, however, and in 1785 it amounted to £2,000,000.¹

17. The period between 1793 and 1815 was one of almost continuous war, and during this time there was great distress in the country. The price of food was high and employment in the agricultural districts scarce. The poor rate rose very rapidly. During this period occurred the great change in the method of giving and regulating relief to the able-bodied, and the rise of the alleged malpractices connected with the changes in administration to which we shall presently allude.

18. In 1796, an Act² was passed repealing the earlier Statute of 1722 which restricted out-relief. This reversal of policy which encouraged out-relief to poor persons in their own homes and empowered Justices of the Peace at their own discretion to order such relief to any industrious poor person, gave a great impetus to this class of poor relief. The cost of relief rose with frightful rapidity. In 1802-3 it amounted to £4,077,000, in 1813 to £6,656,000, and ultimately it rose to the dimensions in 1818 of £7,870,000. Though the expenditure of 1818 was the highest recorded until late in the nineteenth century, and considerable fluctuations occurred in subsequent years, still in 1832, the cost of poor relief stood at the figure of £7,036,000.¹ It is difficult to estimate the exact proportion of this vast development of public expenditure which was due to the attempt to relieve distress by creating employment out of the poor rate, but that the increase was largely due to this policy is indisputable. In the House of Commons in 1817, Lord Castlereagh, who was then Leader of the House and who had given special attention to the subject, upon presentation of a petition by Mr. Calvert complaining of the burden of the poor rates, stated his conviction that "in cases where 19s. or 20s. in the £ was paid for poor rates, 15s. would be found to be wages paid in the shape of poor rates."³ Petitions to Parliament, debates in Parliament, and Committees in both Houses during this period were constantly investigating and making suggestions for the alleviation of an almost intolerable burden, but nothing was done to ease appreciably the financial strain or reduce the vast amount of pauperism associated with the system of relief then in operation.

POOR LAW COMMISSION OF 1832.

19. In 1832 a Commission, composed of :

The Bishop of London (Dr. Blomfield),
The Bishop of Chester (Dr. Sumner),
W. Sturges Bourne,
Nassau W. Senior,
Henry Bishop,
Henry Gawler,
W. Coulson,
James Raill,
Edwin Chadwick,

was appointed to inquire into the practical operation of the laws for the relief of the poor in England and Wales, and into the manner in which those laws were administered, and to report whether in their opinion any, and what, alterations, amendment, or improvements might be beneficially made in the said laws, or in the manner of administering them, and how the same might be best carried into effect.

20. The method of investigation adopted by the Commission was to prepare and circulate questions in the rural districts, and afterwards in the towns. For the better prosecution of local inquiries Assistant Commissioners were appointed to visit the several districts and report the practices which they found to prevail, the different modes of

¹ Return "Local Taxation," Goschen, 1870, reprint H.C. 201 of 1893, p. 69.

³ "History of the English Poor Law," Nicholls, Revised Edition, Vol. II., p. 164.

² 36 Geo. III., c. 23.

relief which were in force, and the effects produced¹ Owing to the difficulty of obtaining the services of suitable persons, however, some districts were left altogether unvisited, among them South Wales. Individual Assistant Commissioners made inquiries also in Scotland and Guernsey, and some valuable information regarding the public provision made for the poor in Flanders, France, and other countries of the Continent and in America was printed in the Appendix.²

21. The evidence thus came from every county and almost every town, and from a very large proportion of even the villages in England. It was :

“ Derived from many thousand witnesses, of every rank and of every profession and employment Members of the two Houses of Parliament, clergymen, country gentlemen, magistrates, farmers manufacturers, shopkeepers, artisans, and peasants, differing in every conceivable degree in education, habits, and interests, and agreeing only in their practical experience as to the matters in question, in their general description both of the mode in which the laws for the relief of the poor are administered, and of the consequences which have already resulted from that administration, and in their anticipation of certain further consequences from its continuance . . . the most extensive, and at the same time the most consistent, body of evidence that was ever brought to bear on a single subject.”³

22. After a short introduction, containing the substance of the principal enactments from 12 Rich. II. (1388) down to the 39 Eliz. (1598),⁴ omitting, as unnecessary, any account of the 43 Eliz. c. 2—“ the basis but certainly not the origin of our present system”⁵—or of any subsequent Acts, the Report abruptly began :—

“ It is now our painful duty to report, that in the greater part of the districts which we have been able to examine, the fund, which the 43rd of Elizabeth directed to be employed in setting to work children and persons capable of labour, but using no daily trade, and in the necessary relief of the impotent, is applied to purposes opposed to the letter, and still more to the spirit of that Law, and destructive to the morals of the most numerous class, and to the welfare of all.”⁶

23. The first section of the Report dealt with Outdoor Relief and begins thus :—

“ The great source of abuse is the Outdoor Relief afforded to the Able-bodied on their own account, or on that of their families. This is given either in kind or in money.”⁷

24. As relief of the able-bodied at the present moment forms not the least important or difficult of the questions referred to us, it will be well to state at considerable length the systems of able-bodied relief which the Commission found in extensive operation in most parts of the country.*

OUTDOOR RELIEF OF THE ABLE-BODIED IN KIND.

25. The “ most usual form ” of this relief was that of “ relieving the applicants, either wholly or partially, from the expense of obtaining house room.”⁸

26. One form of this was the exemption from rates given, “ almost always ” in the case of parishioners, “ frequently,” in the case of non-parishioners.⁹ One evil effect of this was, in some places, a speculation in building small tenements—yielding the owner a rent heightened by the exemption—and these of the worst and most unhealthy kind :—“ In order to make out a case for the non-payment of rates, it is necessary to have inconveniences and defects.”¹⁰

27. But in many places the rent of the parish paupers was paid out of the parish fund. In Surrey and Sussex, and even in North Wales—“ a district of comparatively good administration ”—the payment of rent was “ nearly universal.”¹¹ Paupers had thus become a very desirable class of tenants.

OUTDOOR RELIEF OF THE ABLE-BODIED IN MONEY.

28. When the outdoor relief of the able-bodied was afforded in money—the more prevalent system—this was generally effected by one of five expedients.

⌋ * The exigencies of space forbid more than a very brief summary of the leading points in the famous report. But we have tried to keep as close to the original as possible, and to preserve the *ipsissima verba* even where we do not quote in inverted commas.

¹ Report of Royal Commission of 1834: Reprinted, Cd. [2728], 1905, p. 1. ² Report, p. 2.
³ Report, p. 5. ⁴ Report, pp. 5-12. ⁵ Report, p. 13. ⁶ Report, p. 13. ⁷ Report, p. 14. ⁸ Report, p. 14.
⁹ Report, p. 14. ¹⁰ Report, p. 15. ¹¹ Report, pp. 15-16.

(1) *Relief without Labour.*

29. In many districts this was so common as to have acquired the technical name of "relief in lieu of labour," and was favoured as saving trouble and expense.¹

30. The sums were sometimes small—"insufficient for complete subsistence"—and given under the condition that the applicant should shift for himself and give the parish no further trouble.²

"But it is more usual to give a rather larger weekly sum, and to force the applicants to give up a certain portion of their time by confining them in a gravel-pit or in some other enclosure, or directing them to sit at a certain spot and do nothing, or obliging them to attend a roll-call several times in the day, or by any contrivance which shall prevent their leisure from becoming a means either of profit, or of amusement."³

(2) *Allowance.*

31. This form of relief, known in Berkshire as "make-up" or "bread-money," was the parochial relief which a person employed by individuals at the average wages of the district obtained on account of his children; sometimes a sum to meet occasional wants, sometimes a certain weekly sum or, more frequently, the value of a certain quantity of flour or bread, to each member of the family. In some places this had matured into a system, forming the law of a whole district, sanctioned and enforced by the Magistrates, and promulgated in the form of local statutes under the name of "scales."⁴ By the use of these scales the amount of relief was increased or reduced according to the price of bread. For instance, in the county of Cambridge, in December, 1821, a single woman received the price of three quartern loaves per week; a man, wife, four children, and upwards, the price of two quartern loaves per head per week. This, however, was a minimum. It was added to, not only in all cases of sickness or other kind of distress, but "particularly" as commendation and reward in the case of those who "deserved encouragement by their good behaviour." In the town of Cambridge the scale was half a loaf per head higher than in the county.⁵

32. To use a modern term, the weekly sum thus calculated was considered the "living wage" which each household, according to its constitution and numbers, should earn, and, when wages came short of this, they were supplemented according to the scale.

33. There were two ways, however, of calculating the "make-up."

"In perhaps a majority of the parishes in which the allowance system prevails, the earnings of the applicant, and, in a few, the earnings of his wife and children, are ascertained, or at least professed or attempted to be ascertained, and only the difference between them and the sum allotted to him by the scale is paid to him by the parish."⁶

This system existed in the southern counties, and was extending itself in Yorkshire, Durham, and the north of England generally. But in other parishes the labourer was not supposed to be earning more than a given sum, and if that were less than the size of the family entitled him to, the parish made up the difference.⁷

34. No consideration was given to the amount of wages earned over the year—only to those earned in the current or the previous week or fortnight. Thus:

"Many of those who at particular periods of the year receive wages far exceeding the average amount of the earnings of the most industrious labourer, receive also large allowances from the parish."⁸

35. The effect of placing married and unmarried on a different footing as to relief, was, of course, to encourage early and improvident marriages.⁹ A child very soon came to be considered as an independent claimant for relief, and entitled to it, though residing with his parents, and though the parents might be in full work at high wages.¹⁰

(3) *The Roundsman System.*

36. Under this system the parish sold pauper labour to the occupiers of property at a certain low price, and made up the difference between that and the scale allowance.¹¹ Sometimes the paupers were sold to the farmers at auction: at Yardley, Hastings, *e.g.*, all the unemployed men were put up to sale weekly, and the clergyman on one occasion

¹ Report, p. 19. ² Report, p. 19. ³ Report, p. 20. ⁴ Report, p. 21. ⁵ Report, pp. 21-2. ⁶ Report, p. 24.
⁷ Report, p. 28. ⁸ Report, p. 29. ⁹ Report, p. 30. ¹⁰ Report, p. 31. ¹¹ Report, pp. 31-2.

saw a lot of ten men knocked down to one of the farmers for 5s.¹ In a village in Dorset :

“ In 1821–22 the overseers had been in the habit of sharing out the pauper labourers amongst the farmers (including themselves) and of paying for the work done by them *wholly* out of the poor’s-rates.”²

(4) *Parish Employment.*

37. Although the 43rd of Elizabeth did not authorise relief to be afforded to any but the impotent except in return for work, payment for work appeared to be “ the most unusual form ” in which relief was administered.³ Out of over £7,000,000 expended in the year ending March 26th, 1832, for the relief of the poor, less than £354,000, or scarcely more than one-twentieth part, was paid for work, including work on the roads and in the workhouses.⁴

38. This was easily accounted for :—

(1) When work was paid for, superintendence had to be provided, and this was costly and inefficacious.

(2) Collecting the paupers in gangs for the performance of parish work was found to be more immediately injurious to their conduct than even allowance or relief without requiring work.

(3) Parish employment did not afford direct profit to any individual.⁵

39. The “ work ” provided was generally on the roads—sometimes for part of the week, or part of the day, with the intention of inducing and enabling the paupers to find work for themselves. In some of the agricultural districts, the prevalent mismanagement in this respect was found to have created in the minds of the paupers a notion that it was their right to be exempted from the same degree of labour as independent labourers.⁶ Hence the adoption in some parishes of eight till four as the hours of work, with one hour off for dinner. “ It was a thing unknown before,” said the paupers of Great Farringdon, “ in this parish, or any other, that parish labourers should work as long or as hard as the other classes of labourers.”⁷

40. In many places, while the labour exacted was trifling, the parish pay equalled or exceeded the average wage of the district, and wives of the independent labourers were heard regretting that their husbands were not paupers.⁸ “ If a man did not like his work he would say : I can have 12s. a week by going on the roads, and doing as little as I like.”⁹ Without adequate supervision, of course, this work turned into a farce ; men who bestirred themselves a little were laughed at by their companions.¹⁰

(5) *The Labour-Rate System.*

41. This was the sharing out of the labourers who had settlements in the parish by agreement among the ratepayers, each ratepayer employing a certain number, and paying them, not according to the real demand for labour, but according to rental, or acreage, or number of horses kept for tillage or contribution to rates, or some other scale. In default of employment, the ratepayer paid a corresponding sum to the overseer.¹¹

42. There were considerable differences of method and distribution, varying almost with each parish adopting this system.¹² But, generally, the practice seemed to be, “ not a sharing in fair proportions of the burthen amongst all, but a shifting of the burthen from one class to some other ” ; sometimes from the farmers to those in trade, and sometimes from large occupiers of land to small, or from arable to grass farmers ; while in some cases a strong desire was shown to place it upon the tithes.¹³ Hence the peculiar injustice of tradesmen and small farmers being saddled with labourers whom they had no means of employing—“ working out the labour rate ” as it was called—and having to pay in default. The small occupier who, by himself or with his children, was able to perform all the labour necessary for his little farm, was in the great majority of cases, the severest sufferer.¹⁴

¹⁰ Report, p. 39.

¹¹ Report, p. 42.

¹² Report, p. 195.

¹³ Report, p. 197.

¹⁴ Report, p. 210.

43. The "indirect and unrecorded loss" sustained by the ratepayers in this way was illustrated by the case of a farmer of 500 acres, paying a poor rate of 10s. per acre, who had constantly to employ four or five more labourers than he required—costing him another £100—to say nothing of the damage done by worthless labour.¹

OUTDOOR RELIEF OF THE IMPOTENT.

44. This—as no profit could be made out of it by individuals—was subject to less abuse :—

"Even in places distinguished in general by the most wanton parochial profusion, the allowances to the aged and infirm are moderate."²

45. Outdoor relief of the sick was usually effected by contract with a surgeon, but the contract generally included only those who were parishioners. On the whole, medical attendance seemed to be adequately supplied, and economically, if only the price and the amount of attendance were considered.³

46. The Commission noticed, in passing, that great good had been done in one place by the establishment of dispensaries, for the purpose of enabling the labouring classes themselves to defray the expense of medical treatment. But they were "not prepared to suggest any legislative measures for their encouragement."⁴

47. At this point, the Commission, under the heading of "General Remarks on Outdoor Relief," explained why they had dwelt at such length on this subject. It was because it appeared to be the relief then most extensively given, and to contain in itself the elements of an almost indefinite extension :—

"Among the elements of extension are the constantly diminishing reluctance to claim an apparent benefit, the receipt of which imposes no sacrifice except a sensation of shame quickly obliterated by habit, even if not prevented by example; the difficulty often amounting to impossibility on the part of those who administer and award relief, of ascertaining whether any and what necessity for it exists,* and the existence in many cases of positive motives on their parts to grant it when unnecessary or themselves to create the necessity."⁵

48. It was the impossibility of checking imposture and fraudulent claims by the closest diligence and supervision, that suggested, on the part of two officials, the words from which the Commission may have got its chief inspiration :—

"The only test of these cases is making their condition more severe than that of the lowest class of labourers who obtain their livelihood by honest industry. . . . The only protection for the parish is to make the parish the hardest taskmaster and the worst paymaster that can be applied to."⁶

INDOORS RELIEF.

49. Workhouse relief also, the Commission found to be subject to great mal-administration. Mr. Chadwick, in the "Extracts"—a volume issued by the Commission in 1833 containing part of the information then received⁷—had given a description of the management of the Reading Workhouses, which, it might be thought, must be an exception to the rule. As a fact, these were merely fair specimens of the ordinary workhouses in thriving towns. The chief evils were absence of classification, discipline, and employment, and the extravagance of allowances. Children were herded with older people, and soon acquired their bad habits—particularly was this the case with young girls obliged to associate with the many prostitutes among the inmates; paupers were allowed to leave the workhouse one day a week, and return intoxicated without punishment; prostitutes came in to recruit their health, and returned to their trade, etc., etc.⁸

* P. 44. It was observed that, in the large towns, the ease of obtaining relief was spreading the malady of pauperism to those who had no need of it. In St. George's, Southwark, respectable mechanics, petty manufacturers, and the like, were applying, in consequence of having witnessed the ease with which others who might have provided for themselves obtained relief. One of the applicants was discovered to be in receipt of relief from six different parishes administering relief on six different days of the week. From observations made, the assistant overseer calculated that £30 out of every £100 of the money given as outdoor relief was spent in the gin shops during the same day.

¹ Report, p. 55. ² Report, pp. 42-3. ³ Report, p. 43. ⁴ Report, p. 43. ⁵ Report, p. 44.
⁶ Report, p. 47. ⁷ Extracts, p. 216. ⁸ Report, pp. 51-2.

50. In some very few instances, indeed, among which Southwell, in Nottinghamshire, was pre-eminent, the workhouse appeared to be a place where the aged and impotent were maintained in comfort, and the able-bodied supported, but under such restrictions as to induce them to prefer a life of independent labour.¹

“ But in by far the greater number of cases, it (the workhouse) is a large almshouse, in which the young are trained in idleness, ignorance, and vice ; the able-bodied maintained in sluggish sensual indolence ; the aged and more respectable exposed to all the misery that is incident to dwelling in such a society, without government or classification, and the whole body of inmates subsisted on food far exceeding both in kind and in amount, not merely the diet of the independent labourer, but that of the majority of the persons who contribute to their support.”²

51. In view of the important place among remedial measures subsequently assigned to the workhouse, it is a little remarkable that so little consideration should be given to the state of the existing workhouses, and that it should be broadly stated that there were only a “ very few instances ” which might serve as models. The Report, indeed, returns at a later point to emphasise the horrible condition of the workhouses in provincial towns and in the rural districts, particularly with regard to absence of classification and promiscuous meeting.

52. This section of the Report concludes by expressing the conviction of the Commissioners that the abuses of which they had so far given a short outline, though checked in some instances by the extraordinary energy and wisdom of individuals, were, on the whole, steadily and rapidly progressive.

EFFECT OF THE RELIEF UPON THOSE AFFECTED BY IT.

53. The Report then goes on to state at some length the effects of the existing system upon the three classes affected by it, viz., the labourers, the employers, and the owners of property liable to poor rates.

(1) *Effects on Labourers.*

54. Of all the classes affected by the system, the severest sufferers were those for whose benefit the system was supposed to have been introduced and to be perpetuated, viz., the labourers and their families.³

55. First, as regards those not actually relieved. The allowance system produced the monstrous result of penalising the thrifty worker. Many instances were given where, in pauperised districts, those who preserved their independence were likely to lose their employment. Paupers were preferred. Farmers said that they could not afford to employ those for whom they were not bound by law to provide.⁴

56. Under the system, again, men who prudently deferred the period of marriage were punished either by being refused employment, or by receiving wages estimated on the basis of their not having a family to support :⁵ “ If a man has not a family, he has a bad chance of getting steady work in his own parish.”⁶ In Suffolk the policy of most parishes was to employ the married men in preference to the single, and when the single were employed, their wages were generally less.⁷ In other words, the rate of wages was regulated, not by the economic value of workers to employers, but by the parish, and as the parish gave more to a labourer with a family—in order to keep the family off the parish—than to single men, the farmers did the same.

“ Can we wonder if the labourer abandons virtues of which this is the reward ? . . . Can we wonder if, smarting under these oppressions he considers the law, and all who administer the law, as his enemies, the fair objects of his frauds or his violence ? Can we wonder if, to increase his income and to revenge himself on the parish, he marries, and thus helps to increase that local over-population which is gradually eating away the fund out of which he and all the other labourers of the parish are to be maintained ? ”⁸

57. Second, as regards those actually relieved. Here the injury done was even more certain :—

¹ Report, p. 53. ² Report, pp. 53–4. ³ Report, p. 77. ⁴ Report, pp. 77–80. ⁵ Report, p. 80.
⁶ Report, p. 84. ⁷ Report, p. 81. ⁸ Report, p. 86.

"No man's principles can be corrupted without injury to society in general; but the person most injured is the person whose principles have been corrupted. The constant war which the pauper has to wage with all who employ him or pay him is destructive to his honesty and his temper; as his subsistence does not depend on his exertions, he loses all that sweetens labour, its association with reward, and gets through his work, such as it is, with the reluctance of a slave. His pay, earned by importunity or fraud, or even violence, is not husbanded with the carefulness which would be given to the results of industry, but wasted in the intemperance to which his ample leisure invites him. It is a striking fact that, in Cholesbury, where, out of 139 individuals, only thirty-five persons of all ages, including the clergyman and his family, are supported by their own exertions, there are two public-houses."¹

58. One witness could decidedly state that, when once a family had received relief, it was to be expected their descendants for some generations would receive it also :—

"The child remembers his father's actions, and the hereditary pauper increases his ranks by instruction as well as by example."²

59. Another witness said :—

"Whoever comes to us, and swears before a magistrate that he has neither work nor money, we are obliged to relieve, because we can neither give them work, nor prove that they have constant employment; and paupers now understand the law, and also the practice of magistrates so well from the many hours that they spend in police offices applying for summonses, etc., that they claim relief, not at all as a matter of favour, but as a matter of right."³

60. But worse remained to be said. The effect of allowance was to weaken, if not to destroy, all ties of affection between parent and child. Whenever a lad came to earn wages, or to receive parish relief on his own account (and this one must recollect was at the age of fourteen), although he might continue to lodge with his parents, he did not throw his money into a common purse, and board with them, but bought his own loaf and piece of bacon, which he devoured alone. The most disgraceful quarrels arose from mutual accusations of theft; and, as the child knew that he had been nurtured at the expense of the parish, he had no filial attachment to his parents. Even mothers and children would not nurse each other in sickness unless they were paid for it.⁴

(2) *Effects on Employers of Labourers.*

61. Pointing out very forcibly how responsible a person the labourer was in agriculture—that nothing could save the farmer from loss, or perhaps ruin, unless the labourers were not only intelligent and diligent, but honest enough to resist the temptation to plunder when the act was easy and the detection difficult—the Commission went on to say :—

"The tendency of the allowance system is to diminish, we might almost say, to destroy, all these qualities in the labourer. What motive has the man who is to receive 10s. every Saturday, not because 10s. is the value of his week's labour, but because his family consists of five persons, who knows that his income will be increased by nothing but by an increase of his family, and diminished by nothing but by diminution of his family, that it has no reference to his skill, his honesty, or his diligence—what motive has he to acquire or to preserve any of these merits?"⁵

62. Unhappily the evidence showed that in the pauperised rural districts the labourer was becoming not merely idle and ignorant and dishonest, but positively hostile to his master; not merely unfit for his service, and indifferent to his welfare, but actually desirous to injure him. The answers to the scheduled question whether the labourers in the neighbourhood were supposed to be better or worse workmen than formerly, varied according to the Poor Law administration of the district. Where the administration was good, labour was "never better."⁶ Where the allowance system prevailed, the labourers were degenerate, disaffected, wasteful, lazy, fraudulent, and constantly changing their service. The general result was that, while capital "after having choked all the professions, and overflowed in all the channels of manufactures and commerce" was "still seeking employment, however hazardous and however distant," one business alone was described as ill supplied with capital, and that was the business "of all others the most healthy the most independent, and the most interesting."⁷

63. The effects of the system on the manufacturing employer were very different. The tending of machinery diminished the need for moral and intellectual qualities. In its oftentime "narrow routine of similar operations," the least error and delay were capable

¹ Report, p. 87.

² Report, p. 94.

³ Report, p. 95.

⁴ Report, p. 96.

⁵ Report, pp. 67–8.

⁶ Report, p. 68.

⁷ Report, p. 71.

of immediate detection. Judgment or intelligence was not required for purely mechanical processes. Honesty was not endangered where all the property was under one roof, and diligence was insured by the presence of a comparatively small number of overlookers, and by the almost universal adoption of piecework. Here, then, the allowance system was not so mischievous, inasmuch as it did not necessarily destroy the efficiency of the manufacturing labourer.¹

64. But in another direction the allowance system bore heavily on such employers. The manufacturer who induced or forced others to pay part of his wages was actually a pure gainer; he really could obtain cheap labour, and the loss fell principally on his competitors who did not enjoy the same advantages.

“A manufactory worked by paupers is a rival with which one paying ordinary wages, of course, cannot compete, and in this way a Macclesfield manufacturer may find himself undersold and ruined in consequence of the mal-administration of the Poor Laws in Essex.”²

65. Instances were given from the hosiery trade of Leicestershire, the ribbon-weaving of Coventry, and the stocking manufacture in Nottinghamshire, where the level of wages had been brought down by this “aid,” enabling the employers of pauper labour to undersell employers paying full wages:³—

“Whole branches of manufacture may thus follow the course not of coal mines or of streams but of pauperism; may flourish like the funguses that spring from corruption, in consequence of the abuses which are ruining all the other interests of the places in which they are established, and cease to exist in the better administered districts in consequence of that better administration.”⁴

(3) *Effects on Owners of Property.*

66. As far back as 1817, a Select Committee of the House of Commons had stated as their opinion:—

“That unless some efficacious check were interposed, there was then every reason to think that the amount of the assessment would continue to increase, until at a period more or less remote, according to the progress the evil had already made in different places, it should have absorbed the profits of the property on which the rate might have been assessed, producing thereby the neglect and ruin of the land, and the waste, or removal of other property, to the utter subversion of the happy order of society so long upheld in these kingdoms.”⁵

67. Although for six years there was a progressive diminution in the amount of the Poor Law assessment, yet, after March, 1824, the increase set in again, and the amount of relief in 1834, estimated in commodities, was greater, both absolutely and in proportion to population, than in 1817.⁶

68. Happily not many cases of the actual dereliction of estates had been stated to the Commission: some, however, had occurred. They referred to a passage in the “Extracts,” long since classic, narrating how, at Cholesbury in Buckinghamshire, where the population had been almost stationary since 1801, and “in which, within the memory of persons now living, the rates were only £10 11s. a year, and only one person received relief, the sum raised for the relief of the poor rose from £99 4s. a year, in 1816, to £150 5s. in 1831; and in 1832, when it was proceeding at the rate of £367 a year,” it was found to be impossible to continue its collection, the landlords having given up their rents, the farmers their tenancies, and the clergymen his glebe and his tithes.⁷

ADMINISTRATIVE MACHINERY.

69. The Report then went on to examine how far the character of the persons by whom relief was awarded and distributed was likely to be favourable or unfavourable to the due administration of the Poor Laws.

Without going in detail into all the charges made against the various classes, the conclusions may be summed up as follows:—

(1) *Overseers.*

70. The Overseers—generally farmers in the rural districts, shopkeepers or manufacturers in towns—were empowered by law to make, assess, collect, and distribute the fund

¹ Report, pp. 73-4.

² Report, p. 74.

³ Report, pp. 74-5.

⁴ Report, p. 76.

⁵ Report, p. 63.

⁶ Report, pp. 63-4.

⁷ Report, p. 64.

for the relief of the poor. Serving compulsorily for three, four, six, or twelve months, they might be indicted or fined if they refused or neglected to serve, but they received no remuneration for serving. On the other hand, if they refused relief, or granted less than the applicant thought himself entitled to, they might be summoned before the justices—if indeed recourse was not had to more summary forms of remedy, viz., personal violence and arson.¹ As a fact, in many districts, the principal obstacle to improvement was the well-founded dread of these atrocities.²

71. Evidence, said the Commissioners, was scarcely wanted of the bad results of such a system :—

“What could have been expected from functionaries almost always reluctant, unless indeed when their object is fraud; who neither come to their office with knowledge, nor retain it long enough to acquire knowledge; who have little time, and still less motive, for attention to its duties; on whom every temptation to misconduct has been accumulated; who have to give or to refuse public money to their own workmen, dependants, customers, debtors, relations, friends, and neighbours; who are exposed to every form of solicitation and threat; who are rewarded for profusion by ease and popularity, and punished for economy by labour, odium, and danger to their properties, and even their persons.”³

72. The powers vested in the Overseers, it is said in another part of the Report, by the statutes of Elizabeth, could only be accounted for on the supposition that the distribution of the poor's rates was little more than an occasional distribution of alms from the poor's box, too small in its amount and influence to be regarded.⁴ But now the duties and responsibilities of Overseers were so many and various that a system where many of the existing officers were ignorant, stupid, and illiterate—some indeed not able to write or read—where their private interests were often at variance with their public duties and where intimidation was often openly resorted to, was self-condemned.

(2) *Assistant Overseers.*

73. The 59 Geo. III., c. 12 authorised the appointment of Assistant Overseers, who were paid, and permanent officers, and the Reports of the Assistant Commissioners were unanimous as to their efficiency, activity, and intelligence. In 3,249 parishes there were such officers in 1831. But the adoption, nomination, continuance, and salary of these officers depended on the Vestry, and the Vestry, moreover, not the Law, determined and specified their duties. Under this perfect state of subserviency, they could not be expected to make much headway against an extravagant or jobbing Vestry. But “in the worst parishes” an Assistant Overseer was not appointed.⁵

(3) *Open Vestries.*

74. The Open Vestries consisted exclusively of the ratepayers, *i.e.*, occupiers of land and houses only—owners having no right even to be present—and were open to all ratepayers who chose to attend. The relation of the Overseers to their Vestry was that they were members of it, voting with the others, and submitting to be controlled by the majority. But, as the 43 Eliz. vested the whole power and responsibility in the Overseers, the Report said :—

“It is very difficult to say what is the legal authority as to matters of relief of an open vestry, or whether such a body has now in fact, on such matters, any legal authority at all.”⁶

75. But whatever the legal position might be, the Vestry formed, in fact, the ruling authority of the parish. Almost everywhere its practical influence was very great.⁷

76. Thus, the administration of poor relief being vested almost exclusively in those who were most tempted to pervert it for their own advantage, the result might be expected :—

¹Report, pp. 98–9. ²Report, p. 100. ³Report, p. 104. ⁴Report, p. 288. ⁵Report, p. 106.
⁶Report, p. 107. ⁷Report, p. 107.

"They form the most irresponsible bodies that ever were entrusted with the performance of public duties, or the distribution of public money. They render no account; no record need be kept of the names of the persons present, or of their speeches or their votes; they are not amenable, whatever the profusion or malversation which they have sanctioned, or ordered, or turned to their own advantage. On the other hand, they have all the motives for mal-administration which we have ascribed to the overseers. Each vestryman, so far as he is an immediate employer of labour, is interested in keeping down the rate of wages and in throwing part of their payment on others, and above all, on the principal object of parochial fraud—the tithe-owner; if he is the owner of cottages, he endeavours to get their rent paid by the parish; if he keeps a shop, he struggles to get allowance for his customers or debtors; if he deals in articles used in the workhouse, he tries to increase the workhouse consumption; if he is in humble circumstances, his own relations or friends may be among the applicants; and since the unhappy events of 1830, he feels that any attempt to reduce the parochial expenditure may endanger his property and person."¹

(4) *Representative (or Select) Vestries.*

77. These were bodies authorised by the 59 Geo. III. c., 12, consisting of householders elected by the inhabitants of the parish, together with the ministers, churchwardens, and Overseers, meeting every fortnight or oftener and keeping minutes. Their functions were to inquire into and determine the proper objects of relief, and the nature and amount of the relief to be given. The Overseers were desired to conform to their directions; and, where such a Vestry existed, the Magistrates were forbidden to order relief until it had been proved, to the satisfaction of two Justices, that the applicant was in want, and had been refused adequate relief by the Select Vestry.²

78. The weak point here was that, if the Overseers refused to "conform to the directions" of their Vestry, as "desired" by the Act, the Vestry had apparently no power to compel obedience. Hence, while Representative Vestries were admittedly superior to Open Vestries, the Commission was inclined to believe that the superiority arose principally from their comparative freedom from magisterial interference, the presence of the clergyman, and the regular minutes kept of their proceedings. They were subject to the same corrupting influences, and equally irresponsible.³

79. The Select Vestry of Morpeth, *e.g.*, consisted of twenty persons, of whom one was a brewer, two were brewers' clerks, five were publicans, two beer-shop keepers, and one a porter-seller; so that eleven, or the majority of the whole number, were interested in the sale of beer; and the mother of one, the wife of another, and the uncle, aunt, and cousins of a third were paupers. Consequently the better class of vestrymen retired in disgust from the interested clamour of their colleagues, and very often the Representative Vestry relapsed into an Open one.⁴ Thus the Select Vestries, during the previous six years, had diminished steadily from 2,868 to 2,391.⁵

(5) *Self-Appointed Vestries (also called Select).*

80. It was possible, either by prescription or under some local Act, for Vestries to be self-elected. These, as might be expected from the absence of any representative control, were the worst of all.⁶

(6) *Magistrates.*

81. But there was another local authority which had powers as regards poor relief. The 3 and 4 Will, and Mary c. 11, after reciting that many inconveniences did daily arise by reason of the unlimited powers of the Overseers, who did frequently, upon frivolous pretences, but chiefly for their own private ends, give relief to what persons and numbers they thought fit, prescribed that the poor in each parish should be registered, with date of first receiving relief, and of the occasion which brought the applicants under that necessity; that the register should be produced to the Vestry yearly in Easter-week, when there should be a call over of the persons receiving collections, and a new list made of such persons as the Vestry should think fit to allow to receive collection; and that no other person should receive collection, but by authority under the hand of one Justice of the Peace residing within such parish, or, if none were there dwelling, in the parts near or next adjoining, or by order of the Justices in Quarter Sessions, except in cases of pestilential disease.⁷

82. But owing to loose drafting of subsequent amending Acts, a Justice was enabled, on the pauper's statement of some matter which the Justice should consider to be a

¹ Report, p. 108. ² Report, pp. 113-4. ³ Report, pp. 114-5. ⁴ Report, p. 115. ⁵ Report, p. 117.

⁶ Report, p. 117. ⁷ Report, p. 118.

reasonable cause or ground for relief, to summon the Overseers to show cause why relief should not be given, and to order such relief as he should think fit. And against this order there was no appeal.¹

83. The great interference of the Magistrates began at Speenhamland in 1795, at the time of the high prices. Up to that date parochial relief appears to have been given chiefly through the workhouses, and not to have been extended to many besides the impotent.² But in that year the Berkshire Magistrates, instead of advancing wages as they were empowered to do, began a scale system—under the sanction, it must be admitted, of public opinion—and issued a table of relief, “making up” wages to a certain income corresponding with the supposed necessities of each family, and varying with the price of the gallon loaf.³

84. But though the scale was the worst form in which the influence of Magistrates could be exerted, great evils arose from their interference even when less systematically exercised.

85. In the first place, the very mode in which their jurisdiction was enforced seemed intended to destroy all vigilance and economy on the part of those who administered relief, and all sense of degradation or shame on the part of those who received it. The Overseer was summoned, perhaps, six or seven miles from his business, or his farm, to defend himself before the tribunal of his immediate superiors against a charge of avarice or cruelty. He seldom had any opportunity to support his defence by evidence; the pleadings generally consisted of the pauper's assertions on the one side, and the Overseer's on the other. The Magistrate might admit or reject the evidence of either party at his pleasure; might humiliate the Overseer in the pauper's presence, with whatever reproof he might think that the Overseer's frugality deserved, and finally pronounce a decree, against which, however unsupported by the facts of the case or mischievous in principle, there was no appeal. It must be remembered, too, that the pauper had often the choice of his tribunal. All the Overseers of a district were, therefore, at the mercy of any two Magistrates, and, it might be, even at the mercy of any one. The pauper might select those Magistrates whom misdirected benevolence, or desire of popularity, or timidity, led to be profuse distributors of other people's property, and bring forward his charges against the Overseer, secure of obtaining a verdict. He appeared in the character of an injured man dragging his oppressor to justice. If he failed he lost nothing, if he succeeded he obtained triumph and reward. And yet persons were found expressing grave regret that the parochial fund was wasted, that relief was claimed as a right, and that pauperism had ceased to be disgraceful.⁴

86. Supposing that such a power to “enforce charity and liberality by summons and fine” ought to exist, there were strong grounds for thinking that the existing Magistrates were not the best persons to be entrusted with it. In the first place, they were men of fortune, unacquainted with the domestic economy of the applicants for relief, and as unfit, from their own associations, “to settle what ought to be the weekly incomes of the industrious poor” as the industrious poor would be to regulate the weekly expenditure of the Magistrates.⁵

87. And, secondly, the Magistrate, even if he had a general knowledge of the subject, seldom had and seldom could acquire a knowledge of the individual facts on which he had to decide. A pauper claimed 3s. on the ground that his family consisted of five persons, and that he had earned during the last week only 7s. The Overseers believed that he had, in fact, earned more, or that he might have earned more if he had thought fit to exert himself, or that the lowness of his acknowledged earnings was the result of a collusion between him and his employer, in order to throw part of his wages on the parish. The Vestry agreed in opinion with the Overseer and the pauper appealed to the Magistrate.⁶

88. Can it be expected, said the Commissioners, that questions like these will be properly decided by Magistrates who give a few hours a week to the affairs of twenty parishes, who live at a distance from the scene of the dispute, and know little more than the names of the parties to it, and perhaps not even so much?⁷

¹ Report, p. 120. ² Report, p. 129. ³ Report, pp. 121–4. ⁴ Report, p. 133. ⁵ Report, p. 134.
⁶ Report, 137. ⁷ Report, p. 138.

89. It was little wonder that the Overseers complained bitterly of the obstruction given to their exertions by decisions of Magistrates.¹ As one said :—

“The greatest evil of which I am aware is the facility with which every plan of the vestry or overseer is brought into question on the complaint of the pauper, who selects a kind and often inconsiderately liberal magistrate as his patron.”²

90. In the towns, again, where investigation into cases was much more necessary and much more difficult, the jurisdiction of the Magistrates was still more objectionable. Summonses were granted indiscriminately, and relief ordered almost as indiscriminately.³ One ridiculous case was quoted where fifty paupers in a body came to the Overseer and demanded immediate relief on a Magistrate's order, and where the Overseer insisted on the whole fifty cases being gone into separately before the Magistrate, only to receive the reply that :—

“To examine into these cases of fifty paupers, at five minutes per case, would take four hours and ten minutes, which is impossible to be done, and unnecessary, inasmuch as it was the duty of the overseer to have enquired into the cases himself, and relieved the deserving, and rejected the undeserving.”⁴

91. On the whole subject, the Commissioners declared that the legislature evidently did not intend that the jurisdiction of the justice should form part of the routine of the administration of the Poor Laws. It was to be exercised *in case of emergency*. If its exercise were to be habitual, they said, every populous parish must have its peculiar Magistrate, as well as its peculiar Overseers.⁵

“A more dangerous instrument cannot be conceived, than a public officer, supported and impelled by benevolent sympathies, armed with power from which there is no appeal, and misapprehending the consequences of its exercise.”⁶

REMEDIAL MEASURES.

92. Reviewing the evidence thus presented, one may well understand the statement of the Commission that the most pressing of the evils described were those connected with the relief of the able-bodied, and that these were the evils, therefore, for which they would first propose remedies.⁷

93. If evils such as these — or evils resembling or even approaching them — were necessarily incidental to the compulsory relief of the able-bodied, they would not, they said, have any hesitation in recommending its entire abolition.

94. But they did not believe those evils to be its necessary consequences ; they believed that, under strict regulations, adequately enforced, such relief might be afforded safely and even beneficially. In all extensive communities circumstances would occur in which an individual might be exposed to the danger of perishing from want. To refuse relief, and at the same time to punish mendicity when it could not be proved that the offenders could have obtained subsistence by labour was repugnant to the common sentiments of mankind ; it was repugnant to them to punish even depredation, apparently committed as the only resource against want. In all extensive civilised communities, therefore, the occurrence of extreme necessity was prevented by almsgiving, by public institutions supported by endowments or voluntary contributions or by a provision partly voluntary and partly compulsory, or by a provision entirely compulsory, such as might exclude the pretext of mendicancy.

95. But in no part of Europe except England had it been thought fit that the provision, whether compulsory or voluntary, should be applied to more than the relief of *indigence*, the state of a person unable to labour, or unable to obtain, in return for his labour, the means of subsistence. It had never been deemed expedient that the provision should extend to the relief of *poverty* ; that is, the state of one, who, in order to obtain a mere subsistence, was forced to have recourse to labour.

96. From the evidence collected, they were induced to believe that a compulsory provision for the relief of the indigent could be generally administered on a sound and well defined principle.⁸

97. This then was the foundation of the recommended abolition of out-door relief of the able-bodied, and the establishment of the “self-acting test”—the offer of the work-house.⁹

98. It appeared to the Commission that the abolition of partial outdoor relief to the able-bodied, and particularly of money payments, should come into universal operation at the end of two years, and, as respected new applicants, at an earlier

¹ Report, p. 139.

⁸ Report, p. 227.

⁹ Report, p. 264.

period,¹ and that the chief remedy should be the reception of the able-bodied paupers in a well-managed workhouse."²

99. As to how such workhouses could be provided and the requisite management enforced, the Commissioners had no difficulty in showing that this could be obtained only if parishes were amalgamated and incorporated for the purpose.

100. At least four classes of inmates required to be distinguished:—(1) The aged and really impotent; (2) the children; (3) the able-bodied females; (4) the able-bodied males. Of these classes, the two latter would, it was trusted, be the least numerous.³

101. It appeared to the Commissioners that both the requisite classification and the requisite superintendence might be better obtained in separate buildings than under a single roof. If effected in the latter mode, large buildings would have to be erected, since few of the existing buildings were of the requisite size or arrangement; and, as very different qualities, both moral and intellectual, were required for the management of such dissimilar classes, each class would require to have its separate superintendent. Nothing would be saved, therefore, in superintendence, and much expense would have to be incurred in buildings. But if a separate building were assigned to each class, and if parishes were incorporated for the purpose, the existing workhouses might, in most cases, be made use of.⁴ In many instances, at least, classification would not involve the addition of new workhouses, as, by assigning one class of paupers to each house, a greater number might be received. The proper objects of relief might be accommodated temporarily in ordinary dwelling houses, and the existing workhouses might be utilised for the able-bodied.⁵ As regards the dreaded evil of congregating "large bodies of sturdy paupers together in workhouses," this might be avoided by better management and superintendence:—⁶

"Each class might thus receive its appropriate treatment; the old might enjoy their indulgences without torment from the boisterous; the children be educated, and the able-bodied subjected to such courses of labour and discipline as would repel the indolent and vicious."⁷

And, it was added, such a system might secure the co-operation of much voluntary service.⁸

COMMENTS UPON THESE EXTRACTS.

102. We have dwelt at some length upon these portions of the Report of the Royal Commission because they are the foundation of their main conclusions. The Commission maintained that the evils, especially of profuse and unchecked able-bodied relief, were due not to the spirit or direction of the Acts regulating poor relief in England, but to a misinterpretation of their object and meaning. They further proved, by an elaborate analysis, that the local administration in charge of the relief of the poor was wholly unsuited for the duties imposed upon it. Moreover, the conditions surrounding it, and the pressure to which it was subject, rendered it incapable of discharging impartially, intelligently, and fearlessly the duties of a relief authority. That the intention of the Statutes authorising relief to the poor was wrongly construed, and that the agencies in charge of that relief were incapable, were two allegations that had been made time after time, and were reiterated with increasing force by the Royal Commission. Their recommendations were in accord with those two allegations. As regards the principles of relief they proposed no change, but they laid down conditions to be attached to the relief of able-bodied applicants, which in their opinion gave effect to the intention and spirit of the statutes, but which were contrary to the existing practice, and would, they knew, be unpopular in many localities. They foresaw that, if such conditions were to be effectual in regulating the local distribution of relief, it was essential that a system of administrative machinery should be set up, which would not be set in motion by every gust of local popular opinion. They concentrated their attention upon the construction of that machinery, and the reforms which have been made since that date are in the main the effect of its working.

103. Even in this early stage of our Report we desire to express our agreement in this respect with the Commission. It is useless to frame laws and regulations if there is no power of continuously enforcing them. This elementary platitude, true as it is of all legal enactments, has a special force when applied to the laws relating to the relief

⁸ Report, p. 313.

of the poor. There is a subtle and constant influence, fostered by the kindly instincts of impulsive humanity, which is ever at work sapping and undermining restrictions upon the grant of public relief. This influence may sometimes seem to be in abeyance, but it is always in existence, and at times of stress or turmoil is capable of exerting a powerful emotional force which breaks down the resistance of all but the firm and convinced administrator. No doctrines, however sound or beneficent, can themselves be made the foundation of a system of national relief if they are liable at any moment to be rooted up. Improvement in administration by subordinating the local authority to a central tribunal, and a clearer definition of the intention and object of the Poor Law, are the two great changes made by the Act of 1834.¹

THE PRINCIPLES OF THE POOR LAW AMENDMENT ACT, 1834.¹

104. There is no expression more in vogue amongst those interested in Poor Law administration than that of "The Principles of 1834."

105. This frequent reference to the Principles of the Poor Law Amendment Act, 1834, First fourteen as suggesting a standard by which to judge of "strict administration" or of "lax ad- sections of Act. ministration," seems to make it desirable to state, so far as possible, *ipsissimis verbis*, what these principles were.

106. An examination of the Act itself does not give much information. It is called: "An Act for the Amendment and better Administration of the Laws relating to the Poor in England and Wales," and is dated 14th August, 1834. The first fourteen Sections provide for the appointment or removal, at the pleasure of the Crown, of three Commissioners, who, or any two of whom, may sit as a Board for carrying the Act into execution. These Commissioners are empowered to summon witnesses and examine them upon oath upon any matter relating to the poor or their relief, and to require the production of books and documents. They may appoint Assistant Commissioners (to whom the Commissioners Fifteenth Section. may delegate any of their powers except that of making General Rules), and also a Secretary, Assistant Secretary or Secretaries, clerks, and other officers. No Commissioner or Assistant Commissioner is to be capable of sitting in Parliament, and all appointments are to be limited to five years. The Commissioners are to make an annual Report, to be laid before Parliament and to give to the Secretary of State any information respecting their proceedings which he may require.²

107. In the 15th Section are laid down the functions of the three Commissioners:—

"The administration of relief to the poor throughout England and Wales, according to the existing laws, or such laws as shall be in force at the time being, shall be subject to the direction and control of the Commissioners."³

For this purpose they are authorised and required to make and issue all such Rules, Orders, and Regulations for the management of the poor, for the government of workhouses and the education of children therein, for the management of parish poor children and the superintending, inspecting, and regulating of the houses wherein such poor children are kept and maintained; for the apprenticing of poor children, and for the guidance and control of all Guardians, Vestries, and parish officers, so far as relates to the management or relief of the poor and the keeping, examining, auditing, and allowing of accounts, and making and entering into contracts in all matters relating to such management or relief, or to any expenditure for the relief of the poor, and for carrying this Act into execution in all other respects, as they shall think proper, and they may suspend, alter, or rescind the same:—

"provided always that nothing in this Act contained shall be construed as enabling the said Commissioners, or any of them, to interfere in any individual case for the purpose of ordering relief."³

108. It would seem, then, that the administration of the laws for the relief of the poor, from the 43rd of Elizabeth down to and including the Poor Law Amendment Act of 1834 itself, so far as these laws, or portions of them, were not repealed, as well as the administration of any future laws on the subject, was put under the direction and control of the three Commissioners.

¹ 4 & 5 Will. IV. Cap. 76.

² Sec. 1-14.

³ Sec. 15.

109. In succeeding Sections of the Act, the general power of administration thus given is defined as regards the following matters :—

All the powers and authorities of any Acts, general as well as local, relating to workhouses or relief of the poor.¹

The building and alteration of work-houses and making Rules and Regulations to be observed in the same.²

The declaring of unions of parishes, the alteration and dissolution of Unions, and the classification of the poor in the Union workhouses.³

The number, duties, and (within certain limits) qualifications of Guardians, and the regulation of their election.⁴

The ascertaining of the average expenditure for three years of the parishes in a Union, with a view to the assessment of parishes to a common fund.⁵

The appointment and regulating the qualifications, salaries, and duties of officers and their tenure of office, and the dismissal of the same.⁶

The making of contracts.⁷

The regulation of relief to the able-bodied or their families out of the workhouse, by such Rules, Orders, or Regulations as they may think fit.⁸

The determination of such relief as is to be considered as given by way of loan.⁹

The raising of money for emigration and its application for that purpose;¹⁰

The borrowing of money from the Exchequer Bill Commissioners on the security of the Poor Rate, for purchasing, building, or altering workhouses or for purchasing land for the purpose, or for defraying emigration expenses.¹¹

The audit of accounts.¹²

The apprenticeship of children.¹³

The calling for and publishing accounts of trusts and charities applicable to the relief of the poor.¹⁴

110. But certain other provisions were positively enacted. Such, *e.g.*, are these :—

That no inmate of a workhouse shall be obliged to attend any religious service celebrated in a mode contrary to his religious principles, nor any child be educated in a religious creed to which its parents or surviving parent shall object, or, in the case of an orphan, to which the godfathers or godmothers shall object;¹⁵

That no dangerous lunatic, insane person, or idiot, shall be detained in any workhouse (not being also a county lunatic asylum) longer than fourteen days;¹⁶

That all relief given to or on account of the wife, or children under sixteen not being blind or deaf or dumb, shall be considered as given to the husband or father, and any relief to children under sixteen of any widow shall be considered as given to the widow;¹⁷

That two Justices may order relief to a poor person out of the workhouse, provided one of them certifies of his own knowledge that such poor person is, from old age or infirmity, wholly unable to work;¹⁸

¹ Sec. 21. ² Sec. 22-3, 25. ³ Sec. 26, 32. ⁴ Sec. 38-41. ⁵ Sec. 28-9. ⁶ Sec. 46, 48.
⁷ Sec. 49-51. ⁸ Sec. 52. ⁹ Sec. 58. ¹⁰ Sec. 62. ¹¹ Sec. 63. ¹² Sec. 47. ¹³ Sec. 61.
¹⁴ Sec. 85. ¹⁵ Sec. 19. ¹⁶ Sec. 45. ¹⁷ Sec. 56. ¹⁸ Sec. 27.

The ordering of relief, which (subject to the powers of the Commissioners) is expressly vested in the Boards of Guardians or Select Vestries except in cases of sudden and urgent necessity, when temporary relief in kind is required to be given by the Overseers and, in default, may be ordered to be so given by any Justice in articles of absolute necessity, but not in money; any Justice to have the power of ordering medical relief in sudden and dangerous illness ;¹

The new bastardy regulations ;²

The new settlement regulations, including abolition of settlement by hiring and service, or by serving an office, and a requirement that, in the case of a settlement acquired by the occupation of a tenement, poor rate should be paid for one year ;³

The new regulations regarding the introduction of spirituous liquors into the workhouse.⁴

That the Rules, Orders and Regulations of the Commissioners are removable only by writ of *certiorari* to the Court of King's Bench, and are to continue in force until declared to be illegal.⁵

111. Such, then, were the provisions of the Act, and such the powers created by the legislature and confided to the Commissioners in 1834. Whether or not it be the case, as has been asserted, that "no new principle was then introduced into the law,"* it seems clear that no principle was actually enunciated in the Act. The relief of the poor was put, as regards administration, regulation, and control, into the hands of a new board of salaried public servants, but no definite principle was laid down, by preamble or otherwise,† to guide the Commissioners in that administration.

No new principles enunciated in the Act.

112. The question then presents itself; was it left to the Commissioners to formulate their own principles, and is it their formulation which constitutes the "principles of 1834" ?

113. The answer is found in the first Annual Report, presented at the end of their first year of office. There we find an almost casual reference to the Workhouse System: "Under these circumstances, we proceeded to direct our chief attention to the general introduction of the Workhouse System." A few pages further on, we find that "the principles of Poor Law administration which are sanctioned by Gilbert's Act and by most of the local Acts of incorporation of the same period," are at variance with "the principles established under the Poor Law Amendment Act"; the chief of the Gilbert Act principles being that the Guardians were required, on the application of those professing themselves unemployed and willing to work, to agree for the labour of such poor persons at any work or employment suited to their strength and capacity, not in the workhouse, but in any parish, township, or place near the place of their residence, and to cause such persons to be properly maintained, lodged, and provided for until such work could be procured.

114. From these statements we seem bound to infer that certain principles had been laid down somewhere, and were so definite and recognised as to have deserved the name of the "Workhouse System."

115. The fact is that there was an actual preamble to the Act of 1834, which was so much in everybody's knowledge at the time that it did not seem necessary to repeat it as

Report of Commission of 1832.

* Reference to the Report of 1832-4 and to the Annual Reports of the Commissioners shows that it was conceived that the provisions of the Poor Law Amendment Act only carried out the spirit and intention of the 43rd of Elizabeth, and that these had been violated by the old system.

† The only preamble is: Whereas it is expedient to alter and amend the Laws relating to the Relief of Poor Persons in England and Wales: Be it therefore enacted, etc. Section LII., however, which deals with the outdoor relief of able-bodied persons or their families, is introduced by the words: And whereas a practice has obtained of giving relief to persons or their families, who, at the time of applying for or receiving such relief, were wholly or partially in the employment of individuals, and the relief of the able-bodied and their families is in many places administered in modes productive of evil in other respects. And whereas difficulty may arise in case any immediate and universal remedy is attempted to be applied in the matters aforesaid; be it further enacted, etc.

⁵ Sec. 105.

preface to the Act. It was the Report of the Commission of 1832-4 which we have just been considering and the administration of the Act was put into the hands of men who were prominently identified with that Report and imbued with its spirit.

116. On referring to this Report, we find certain principles, and the system which logically grew out of them, stated with the utmost clearness and force :—

“From the evidence collected under this Commission, we are induced to believe that a compulsory provision for the relief of the indigent can be generally administered on a sound and well-defined principle; and that under the operation of this principle, the assurance that no one need perish from want may be rendered more complete than at present, and the mendicant and vagrant repressed by disarming them of their weapon—the plea of impending starvation.

It may be assumed that, in the administration of relief the public is warranted in imposing such conditions on the individual relieved as are conducive to the benefit either of the individual himself, or of the country at large, at whose expense he is to be relieved.

The first and most essential of all conditions, a principle which we find universally admitted, even by those whose practice is at variance with it, is, that his situation on the whole shall not be made really or apparently so eligible as the situation of the independent labourer of the lowest class. Throughout the evidence it is shown, that in proportion as the condition of any pauper class is elevated above the condition of independent labourers, the condition of the independent class is depressed; their industry is impaired, their employment becomes unsteady, and its remuneration in wages is diminished. Such persons, therefore, are under the strongest inducements to quit the less eligible class of labourers and enter the more eligible class of paupers. The converse is the effect when the pauper class is placed in its proper position, below the condition of the independent labourer. Every penny bestowed that tends to render the condition of the pauper more eligible than that of the independent labourer is a bounty on indolence and vice.”¹

117. This “the main principle of a good Poor Law administration, namely, the restoration of the pauper to a position below that of the independent labourer” was put more succinctly in the words of a witness, thus :—

“To let the labourer find that the parish is the hardest taskmaster and the worst paymaster he can find, and thus induce him to make his application to the parish his last and not his first resource.”²

118. From the mass of evidence adduced, continues the Report :—

“It appears that, wherever the principle which we have thus stated has been carried into effect, either wholly or partially, its introduction has been beneficial to the class for whose benefit Poor Laws exist. We have seen that in every instance in which the able-bodied labourers have been rendered independent of partial relief, or of relief otherwise than in a well-regulated workhouse :

- (1) Their industry has been restored and improved.
- (2) Frugal habits have been created or strengthened.
- (3) The permanent demand for their labour has increased.
- (4) And the increase has been such that their wages, so far from being depressed by the increased amount of labour in the market, have in general advanced.
- (5) The number of improvident and wretched marriages has diminished.
- (6) Their discontent has been abated, and their moral and social conditions in every way improved.”³

* * * * *

We therefore submit, as the general principle of legislation on this subject, in the present conditions of the country :—

*That those modes of administering relief which have been tried wholly or partially, and have produced beneficial effects in some districts, be introduced, with modifications according to local circumstances, and carried into complete execution in all.*⁴

The chief specific measures which we recommend for effecting these purposes, are :—

FIRST, THAT EXCEPT AS TO MEDICAL ATTENDANCE, AND SUBJECT TO THE EXCEPTION RESPECTING APPRENTICESHIP HEREINAFTER STATED, ALL RELIEF WHATEVER TO ABLE-BODIED PERSONS OR TO THEIR FAMILIES, OTHERWISE THAN IN WELL-REGULATED WORKHOUSES (*i.e.*, PLACES WHERE THEY MAY BE SET TO WORK ACCORDING TO THE SPIRIT AND INTENTION OF THE 43RD OF ELIZABETH) SHALL BE DECLARED UNLAWFUL, AND SHALL CEASE, IN MANNER AND AT PERIODS HEREINAFTER SPECIFIED ;* AND THAT ALL RELIEF AFFORDED IN RESPECT OF CHILDREN UNDER THE AGE OF SIXTEEN SHALL BE CONSIDERED AS AFFORDED TO THEIR PARENTS.⁵

* The “hereafter specified” refers to p. 297, where it was said that it appeared to the Royal Commission that this prohibition should come into universal operation at the end of two years, and, as regards new applicants, at an earlier period. “No doubt can be entertained that it was the deliberate intention of Parliament, in framing the Poor Law Amendment Act, that all outdoor relief to the able-bodied should cease at the earliest possible period that it could safely, and with propriety, be put an end to; and the question we have to successively decide as to each union is whether this time may be fairly deemed to have arrived.” (Second Report of Poor Law Commissioners, 1836, p. 7.)

¹ Report of Royal Commission of 1832, pp. 227-8. ² Report, p. 229. ³ Report, p. 261. ⁴ Report, p. 261. ⁵ Report, p. 262.

It is true that nothing is necessary to arrest the progress of pauperism, except that all who receive relief from the parish should work for the parish exclusively, as hard and for less wages than independent labourers work for individual employers, and we believe that in most districts useful work, which will not interfere with the ordinary demand for labour, may be obtained in greater quantity than is usually conceived. Cases, however, will occur where such work cannot be obtained in sufficient quantity to meet an immediate demand; and when obtained, the labour, by negligence, connivance, or otherwise, may be made merely formal, and thus the provisions of the legislature may be evaded more easily than in a workhouse. A well-regulated workhouse meets all cases, and appears to be the only means by which the intention of the statute of Elizabeth, that all the able-bodied shall be set to work, can be carried into execution.¹

* * * * *

And although we admit that able-bodied persons in the receipt of outdoor allowances and partial relief, may be, and in some cases are, placed in a condition less eligible than that of the independent labourer of the lowest class; yet to persons so situated, relief in a well-regulated workhouse would not be a hardship: and even if it be, in some rare cases, a hardship, it appears from the evidence that it is a hardship to which the good of society requires the applicant to submit. The express or implied ground of his application is that he is in danger of perishing from want. Requesting to be rescued from that danger out of the property of others, he must accept assistance on the terms, whatever they may be, which the common welfare requires. The bane of all pauper legislation has been the legislating for extreme cases. Every exception, every violation of the general rule to meet a real case of unusual hardship, lets in a whole class of fraudulent cases, by which that rule must in time be destroyed. Where cases of real hardship occur, the remedy must be applied by individual charity, a virtue for which no system of compulsory relief can be or ought to be a substitute."²

119. To sum up: What the original Report of the Commission of 1832-4 called "the first and most essential of all conditions," and what the Commissioners under the Act of 1834, in Report after Report, called "the fundamental principle of the Poor Law Amendment Act" was that the situation of the able-bodied pauper* should be, really or apparently, less eligible than the situation of the independent labourer of the lowest class. And, while this might be secured by a very carefully administered outdoor relief system, it could only be effectually secured by the offer of relief in a workhouse, where by labour, discipline, and restraint, as well as by dietary, the inmate's situation would be definitely and ascertainably less eligible than that of the poorest class of those who contributed to his support. This was the workhouse system, and, against such a system, all criticism which spoke of the Act as erecting workhouses for the imprisonment of those who could not find work outside fell pointless. The workhouse was not an end so much as a means. In the last unhappy resort it was a provision for the really destitute; primarily, the offer of it was a "self-acting test" of the reality of the claim on relief.†

120. To secure the carrying out of the principle, two things were necessary: that the wide discretionary powers hitherto exercised by the 15,500 Authorities should be taken out of their hands and put under the control of one strong Central Board, and that the administration should be uniform over the country. Hence the succeeding recommendation:—

Machinery necessary to give effect to principles laid down.

"We recommend, therefore, the appointment of a Central Board to control the administration of the Poor Laws, with such assistant Commissioners as may be found requisite; and that the Commissioners be empowered and directed to frame and enforce regulations for the government of workhouses, and as to the nature and amount of the relief to be given and the labour to be exacted in them, and that such regulations shall, as far as may be practicable, be uniform throughout the country."³

* It is rather remarkable that no definition of "able-bodied" is given in the Report except the negative one on p. 42, that aged, sick, and infirm (grouped under the expression "impotent") are not able-bodied. Hence the difficulty in which the Commissioners found themselves as regards relief to the partially disabled. They spoke of the inexpediency of continuing to give partial relief in these cases, and the injustice of thus enabling them to compete with and lower the value of the labour of the able-bodied man. "We feel the injustice and impolicy of this course so strongly that, although not desirous of urging or insisting on the application of the workhouse to all cases of this nature, we are of opinion that it is desirable that persons incapable of wholly maintaining themselves should not be suffered to receive partial relief, but should be entirely supported by the guardians, and should either be set to work by the guardians in such manner as may be suitable to their condition, or should not be suffered to do any work on their own account." ("Continuance Report," of Poor Law Commissioners, 1840, p. 43.)

† Thus modern readers are apt to think of the Report and of its remedy as "hard," even harsh, forgetting that the Commissioners had to deal with a demoralised England, where "more than one half or two-thirds of the cases of able-bodied labourers in towns were cases of indolence or imposture," and where "it rarely appeared that five or six in a hundred claimants sustained the test." We have it, however, on the authority of Mr. Mackay that Sir Edwin Chadwick always objected to the expression "workhouse test." The idea of the workhouse, he always insisted, was derived from the practice of the working classes themselves with regard to their own friendly societies. Their rule was "all or nothing." The friendly societies prohibited their members from working when in receipt of sick pay, and enforced their rule by a system of inspection. This was not practicable for the public authority, which was therefore obliged to offer all or nothing in some other form. (*History of the English Poor Law*, Vol. III., p. 126.)

¹ Report, p. 262.

² Report, pp. 262-3.

³ Report, p. 297.

121. The Commissioners were sworn into office August 23rd, 1834, and at once set to work, under the dominance of the workhouse principle, to concert such preparatory and temporary measures as seemed necessary to check the "master evil," as they called it, of relief to the able-bodied.

122. The first measures taken temporarily to apply this principle are contained under the heading "Relief," in "Orders and Regulations for the Guidance and Government of the Boards of Guardians of Unions," issued by the Commissioners:—

Firstly.—No relief shall be given in money (except in cases of sickness or accident) to any able-bodied male pauper who is in employment (the same not being parish work) and in the receipt of earnings; nor to any part of his family who shall be dependent on him, or for whose relief and maintenance he shall be liable.

Secondly.—If any able-bodied male pauper shall apply to be set to work by the parish, one-half at least of the relief which may be afforded to him or to his family shall be in kind.

Thirdly.—One-half at least of the relief which may be afforded to widows or single women, not being aged or infirm, shall be in kind.

Fourthly.—No relief shall be given to any able-bodied male pauper by payment or payments of, for or on account of, the rent for his house or lodging, or for the house or lodging of any part of his family who shall be dependent upon him and for whose relief and maintenance he shall be liable, or by allowance towards such rent.

Fifthly. Except in case of accident, sickness, or other urgent necessity, no relief shall be afforded from the poor-rates of any parish or place comprised in the said Union, to any pauper between the ages of sixteen and sixty, belonging to any such parish or place comprised in the said Union, who shall not be resident therein: provided always that this regulation shall not extend to any person, not being an able-bodied male pauper, between the ages of sixteen and sixty, who shall, on the day herein appointed for the first meeting of the guardians, be in the receipt of relief from any parish or place comprised in the said Union, although not resident in such parish or place, and although such person shall continue a non-resident; but in every case due inquiry shall be made as to the propriety of such relief being continued."¹

123. The same subject is expanded in a document issued by the Central Board, dated September 21st, 1835, entitled: "Suggestions as to the most eligible Modes of providing Outdoor Employment for Able-bodied Paupers, in Cases where there is not an Efficient Workhouse, and preparatory to the establishment of the Workhouse System." This purports to be:

"A statement of the general principles which ought to govern them (Union and parish authorities) in providing employment for paupers . . . bearing in mind always, that the best form of outdoor labour at task work on account of the parish, however well-devised and enforced, is but secondary to the application of the workhouse system, and can only be sanctioned as a palliative for a time, and until adequate and efficient workhouse accommodation shall be provided.

The two great principles to be kept constantly in view, in providing employment for paupers, are these: Firstly, that parish work should be of such a nature as to discourage applications from all who are not really necessitous, and thereby to stimulate labourers to independent exertions in seeking after and obtaining employment for themselves; and, Secondly, that pauper labour ought likewise to be of such a nature as to hold out no temptation to the employer to resort to it through an abuse of the poor-rates, rather than seek for independent labourers to perform his work.

It follows, therefore, that the work to be provided for paupers, should be of a laborious and undesirable nature in itself, and that the remuneration should be less than would be paid for work of equal quantity, if performed by independent labourers; and, further, that such work should not be of the kind in which the independent labourers of the district are ordinarily employed, neither should it be much regarded as to its profitable results; but it should be viewed merely as a condition on which that relief, which their necessities require, and which the law allows, is to be administered to paupers.

If these principles are applied to the different kinds of parish employment usually resorted to, there will be little difficulty in determining which is the least objectionable."²

124. The document then discusses the "most usual method of setting able-bodied paupers to work," the repair of roads, or the preparation of materials for that purpose; notes that the use of corn mills gets rid of the ordinary difficulty of superintending outdoor labour, etc., and continues:

"It will be perceived from the foregoing observations, that the Commissioners consider that the question whether the work performed by paupers is profitable in a pecuniary sense, is altogether secondary to the main question, namely, whether as a condition of obtaining relief it operates to discourage pauperism. From misapprehension on this point, it has been sometimes attempted to obtain a profit for the parish, not only by cultivating parish farms, but by setting

¹ First Annual Report, Poor Law Commissioners; 500, 1835, App. A, p. 52.

Employment of
able-bodied
paupers.

Nature of work
to be provided.

up various sorts of manufactures, to be carried on by pauper labour. Such efforts, however, have always proved abortive, and have invariably entailed a loss upon the parish, as well as caused injury to the independent labourer, by interfering with the labour market. The Board, therefore, must decidedly discourage all such attempts on the part of parishes or unions."¹

125. But all such suggestions for outside employment were explicitly provisional and temporary, for the guidance of Guardians till sufficient time had been given to make the transition and to furnish adequate workhouse accommodation. Thenceforward all that remained for carrying out the principle was to determine the labour which should be employed inside the workhouse, labour, of course, being one of the conditions relied on for making the situation of the pauper less eligible than that of the independent worker.

126. Here the principle laid down by the 1832-4 Report was that :

"It ought to be useful employment. Parish officers . . . have resorted to the expedient of sending paupers on fictitious errands, with baskets full of stones, or blank paper directed as letters, and other devices of the same nature, obviously intended to torment them. Such contrivances are pernicious in the revengeful feelings which they generate in the minds of the paupers themselves, and they are also pernicious in exciting sympathy in behalf of the indolent and vicious, and in the obstacles which they create to the use of legitimate labour and salutary discipline. We believe that they ought to be carefully prevented. The association of the utility of labour to both parties, the employer as well as the employed, is one which we consider it most important to preserve and strengthen ; and we deem everything mischievous which unnecessarily gives to it a repulsive aspect. At the same time, we believe that in extended districts the requisite sources of employment will be easily found. The supply of the articles consumed in workhouses and prisons would afford a large outlet for the manufactures carried on in the house."²

127. In the "Continuance Report" of 1840, the Commissioners say :

"The justice and expediency of requiring it (the labour to be performed in the workhouse) are so universally acknowledged that we deem it unnecessary to say more than that we have endeavoured to devise such modes of employment as shall interfere the least with the field of industry open to the independent labourer."³

128. Such then, are the "fundamental principles" constantly referred to in successive Annual Reports of the Commissioners from 1835 to 1847. It is obvious that they only to relate only to the able-bodied poor. This, indeed, is what might be expected. To quote the "Continuance Report" of 1840 :

"The amount of the poor rates had become grievously oppressive in most parts of the country, and in some places had become nearly intolerable, so as to threaten the abandonment of the land by the proprietors. But the heavy taxation was not so oppressive to the ratepayer as the mode of distributing the rates was pernicious to the paupers and the rest of the community. Various contrivances for confounding relief with wages had enabled the predominant interest in each locality to force their weaker neighbours to contribute to a common fund from which they did not derive an equal benefit, and had converted the state of the labourer into a condition little superior to that of predial servitude. The consequences of this perversion of the natural relations of employer and workman were developed in the agrarian disturbances and fires of 1830 and 1831, and in a general feeling of insecurity and alarm throughout the southern and eastern counties of England."⁴

129. And again :

"In no part of Europe except England has it been thought fit that the provision (against the danger of perishing), whether compulsory or voluntary, should be applied to more than the relief of *indigence*, the state of a person unable to labour, or unable to obtain, in return for his labour, the means of subsistence. It has never been deemed expedient that the provision should extend to the relief of *poverty* ; that is, the state of one who, in order to obtain a mere subsistence, is forced to have recourse to labour."⁵

But, so far had England departed from any such sound principles, that the first work set before the Commissioners was "the *restoration* of the pauper to a position below that of the independent labourer."

130. In such circumstances it may well be conceived that a Commission, however desirous of thinking out the whole question of the theory of a Poor Law and its proper administration, must have felt that it must hurry out a report. The "Extracts"—published a year before the Report—had shown that the system was not only bad in itself, but tended to "constant and indefinite increase" of the evils, by the "irresistible temptations to fraud" which it presented. £7,000,000 a year, in fact, were being spent in a way that was manufacturing able-bodied pauperism.*

* The maximum of the period was in 1817-18, when the expenditure on relief amounted to £7,870,801, or 13s. 10d. per head of population.

¹ *Ibid.*, App. A, p. 43.

⁴ Report,

p. 6. ⁵ Report, p. 227.

Limitation of
Report of 1832.

131. Thus the Report should be read in its historical context.* It does not lay down, or proceed on, any philosophical theory of the place of poverty in the social organism, of "rights" to life or to work, even of the duty of the State towards its less fortunate members, except in one particular that, where the State gives relief, it should make the situation of the able-bodied recipient less eligible than that of the independent labourer. It does not ask if and how far the very perfecting of the organisations by which wealth is produced leaves certain of the producers outside the organisation, and whether charity is the only or the best means of dealing with these. It does not, indeed, mark out the sphere of charity from that of public relief. And the legislature, taking the Report as the foundation, simply took the whole body of law relating to the subject, and passed an Amendment Act, putting the administration into the hands of a small body of experts with somewhat wide and unusual powers. The Report, then does not profess to be a complete statement of the principles of poor relief. It is rather an exposition of what a Poor Law should not do—that is, interfere with the ordinary industry of the country by giving relief on terms more eligible than men could get by their own labour. In a circular sent to Parish Officers in some Counties on November 8th, 1834, it is said:—

"The Poor Law Amendment Act was passed, not for the purpose of abolishing the necessary relief to the indigent, but for preventing various illegal and injurious practices, which had by degrees grown up in the administration of such relief."¹

132. Understanding this, we find, as we might expect, that, while there is a "fundamental principle," clearly thought out and proved by masses of evidence, as regards the able-bodied, there is no very clear guidance for the administration of the Act as regards the other classes with which the Commissioners had to deal.

Branches of
relief other than
able-bodied.

133. In the Report of 1832-4, no change was suggested in the care of the sick poor. They were, presumably, to receive outdoor relief and medical attendance as before and there is no hint of making their situation less eligible than that of the sick independent labourer.† Indeed, the clause in which the workhouse principle itself is laid down is prefaced by the words: "except as to medical attendance."² In the separate workhouses which the Commissioners advised, while classification is

* It should, moreover, be read in the light of the personality of its authors. As is well known, the Report was almost entirely the work of two men, Nassau William Senior and Edwin Chadwick. In after life each of them asserted that he had written the whole of it, with some little assistance from the other. Senior was Professor of Political Economy in Oxford, with all the prepossessions of an orthodox economist of his day. Chadwick—"that juvenile theorist of thirty-four, the sucking Solon of the Benthamite breed," as *The Times* contemptuously called him—had been for several years secretary and friend of Jeremy Bentham, and the remedial measures of the Report were certainly due to him. Nicholls—one of the original "Three Kings of Somerset House," or, "Pinch-pauper Triumvirate," and afterwards historian of the Poor Law—on retiring from the service of the East India Company, had become overseer for the parish of Southwell, in Nottinghamshire, in 1821, and had there put in successful practice the principles which he was subsequently the means of extending over England. In 1836 he was sent by Lord John Russell to Ireland, to inquire into the possibility of introducing there a Poor Law on the English model, and the Irish Poor Relief Act of 1838, which introduced the workhouse system into Ireland, was founded on his Report.

† "Previously to the passing of the Poor Law Amendment Act, there existed no statute expressly authorising the parish authorities to provide medical relief for the poor. In the statute of Elizabeth no allusion to any such relief is to be found, and in the subsequent Acts of Parliament relating to the poor the Legislature has been entirely silent on this subject. In the absence of any positive provisions, medical aid has, nevertheless, been supplied to the poor, and, as might have been expected from the uncontrolled discretion of parish officers of 15,000 districts, the arrangements for the purpose have been almost infinitely various, both as to the mode of selecting the medical attendants and the amount of their remuneration. Almost all, however, had the same defect—the absence of all effective control over the medical officer, as well as respects his due attendance on the sick, as with regard to the amount of his charges. . . . We must premise that the objects which we desire to attain are—to provide medical aid for all persons who are really destitute, and to prevent medical relief from generating or encouraging pauperism." (Continuance Report, 1840, pp. 44-5.) We learn from Assistant Commissioners' Reports that, before 1834, there had been much indiscriminating medical aid, and its dangers, as tending to dependence on the parish, are often dwelt on. "The parish authorities," said Dr. Kay, of Suffolk and Norfolk, "exercised no discretion concerning the persons who were entitled to be attended at the expense of the parish. . . . In the matter of relief by medicine almost all the rural labourers were paupers." (Second Report, App., p. 180.)

¹ First Annual Report, Poor Law Commissioners, 500, 1835, p. 45.

² Report, p. 262.

recommended, for, amongst others, the "aged and really impotent," there is no specific mention of the advantages which would accrue to the sick from medical treatment in a workhouse hospital.¹

134. Nor, curiously enough, is there any more specific mention of the aged. As just stated, separate buildings were recommended for the reception of different classes of the poor among whom were mentioned "the aged and really impotent," where "the old might enjoy their indulgences without torment from the boisterous."² The expression "indulgences" seems to suggest that the ineligible situation test was not to apply to them.*

135. It may be presumed that the Commissioners saw no objection to the aged continuing to receive outdoor relief, on the ground that, "even in places distinguished in general by the most wanton parochial profusion, the allowances to the aged and infirm are moderate."[†]

136. As regards children, still less is said, save as regards apprenticeship—"a mode of relief expressly pointed out by the 43rd of Elizabeth, and interwoven with the habits of the people in many districts"—and even this was relegated to a subsequent special inquiry.³ Children, indeed, formed one of the four classes for which separate workhouse accommodation was recommended.⁴ There they were to be educated, and mention is made of the necessity of an adequate salary "to a person properly qualified to act as a schoolmaster."⁵ Beyond this, the assumption is that children were to fare with their parents. There is no specific mention of orphans.‡

137. Women, as a class separate from men, are not mentioned, except that separate workhouse accommodation was recommended for "the able-bodied females";⁶ presumably they were to be treated, whether able-bodied, sick, or aged, and whether in the workhouse or outside, on the same footing as men.§

138. What is more surprising still is the treatment of widows by the Report. In the first part—that dealing with outdoor relief under the old system—it is noted under a separate heading that

"A class of persons have, in many places, established a right to public support, independently of either of these claims (want of employment or of insufficient wages). These are widows who, in

* In the "Continuance Report" of 1840, however, there is a strong protest against the idea that a workhouse should be placed on the footing of a almshouse. "If the condition of the inmates of a workhouse were to be so regulated as to invite the aged and infirm of the labouring classes to take refuge in it, it would immediately be useless as a test between indigence and indolence or fraud—it would no longer operate as an inducement to the young and healthy to provide support for their later years or as a stimulus to them, whilst they have the means, to support their aged parents and relatives. The frugality and forethought of a young labourer would be useless if he foresaw the certainty of a better asylum for his old age than he could possibly provide by his own exertions; and the industrious efforts of a son to provide a maintenance for his parents in his own dwelling would be thrown away, and would cease to be called forth, if the almshouse of the district offered a refuge for their declining years, in which they might obtain comforts and indulgences which even the most successful of the labouring classes cannot always obtain by their own exertions." (p. 5.)

† "It has always been our wish that the principles of the law should be applied without severity to aged persons." (Second Report, 1836, p. 8.) "We do not require aged and infirm paupers to be relieved *only* in the workhouse." ("Continuance Report," 1840, p. 32.)

‡ The Second Report, 1836, says: "The appropriate treatment of the children in the workhouse: the larger proportion of whom are orphans, must be progressive with the arrangements for the classification and treatment of the paupers within the workhouse; as yet, the regulations with respect to them are general and may be found in the rules for the management of the workhouse. Acting upon the principle of the statute of Elizabeth, which provides that 'order shall be taken from time to time for setting to work the children of all such whose parents shall not be able to maintain them,' we have endeavoured to direct the exertions of the local officers, as early as possible after the rudiments of education were obtained by the children, to gain for them independent employment out of the workhouse" (p. 28). "We do not require or permit the separation of children under seven years old from their mothers." ("Continuance Report," 1840, p. 32.)

§ In the Second Report, 1836, it was said that the rule prohibiting outdoor relief to the able-bodied had so far been "applied only to able-bodied men." The application to paupers of the other sex had been "deferred," although the indiscriminate allowances which had been habitually granted, almost as a matter of course, to widows (and to persons advanced in life) had, since the passing of the Act, "led many boards of guardians to scrutinise the lists of paupers of this description, and to put to the proof the actual destitution of many long-established pensioners on the rates." (p. 8)

¹ Report, p. 306.

⁵ Report, p. 307.

⁶ Report, p. 306

many places, receive what are called pensions, of from 1s. to 3s. a week on their own account, without any reference to their age or strength, or powers of obtaining an independent subsistence, but simply as widows."

receiving, in addition, if they have children, an allowance per child generally about 1s. 6d. a week in the rural districts, "unless the child be illegitimate, in which case it is more frequently 2s. or more."¹

But in the second part of the Report—that which deals with "Remedial Measures"—widows are not mentioned.

139. As regards mothers of bastards, drastic change was, indeed, recommended—"even among the laws which we have had to examine, those which respect bastardy appear to be pre-eminently unwise"—and the change was carried into effect by the Act; but the matter in dispute was only the chargeability of the child—not the relief of the mother.² As the Continuance Report of 1840 put it; "the Act does not repeal the right of the *mother* to relief, but merely limits the remedy of the *parish* against the putative father."³ In short, such mothers were put in the same position, as regards poor relief, as widows with legitimate children.*

140. As to vagrants, the Commission obtained much evidence, but they despaired of any remedy from detailed statutory provisions, and instanced "the tendency of legislation respecting the poor to aggravate the evils which it was intended to cure." They felt "convinced that vagrancy would cease to be a burden, if the relief given to vagrants were such as only the really destitute would accept."⁴ The remedy for pauperism was, in fact, the remedy for vagrancy. But they felt that this remedy could not be applied unless the system were general, nor by parochial officers unless under strict superintendence and control. They accordingly recommended: "That the Central Board be empowered and directed to frame and enforce regulations as to the relief to be afforded to vagrants."⁵ The Poor Law Act of 1834, however, made no special reference to vagrants, and several years passed before any regulations were made in respect of this class.

141. None of these recommendations evidently can be considered as "principles" in the same sense as the "fundamental principle" on which the workhouse system was based.

SUMMARY OF POOR LAW REPORT OF 1834.

142. From this examination of the so-called principles of the Poor Law reform of 1834, it is evident that the two main principles, so far as relief is concerned, apply to the able-bodied and the able-bodied alone, viz. :—

Firstly.—That relief should not be offered to able-bodied persons and their families otherwise than in a well-regulated workhouse.

Secondly.—That the lot of the able-bodied should be made less eligible than that of the independent labourer outside.

143. The recommendations as to the treatment of other classes of the poor were meagre, but they suggest classification, the impropriety of aggregating all classes of indoor paupers under one roof, the advisability of a more uniform treatment, and a greater utilisation of charitable effort.

* "It is satisfactory to observe that the practice which was at one time almost universal, of dealing with the mothers of bastard children differently from other paupers, is rapidly giving way; and the sounder course of giving them relief only according to the measure and character of their wants is more generally adopted." (Second Report, 1836, p. 15.)

INTRODUCTION.

1. The problem by which the Royal Commission of 1832 was confronted presented a comparatively broad and simple issue: it was a problem of able-bodied and—to a large extent—rural pauperism. Since that time the situation has been constantly and progressively changing; not only in the sense that the type and causes of pauperism change as new social and industrial conditions emerge, but also in the sense that there has been a continuous development of charitable and other agencies which hardly existed in 1834.

2. Two changes more especially are significant in their relation to Poor Law administration. The first is the restored independence of the agricultural labourer; which, when taken together with the concentration of population in cities, means that what remains to us of able-bodied pauperism is almost entirely urban. The second, and hardly less noteworthy, is the disappearance under improved sanitary conditions of diseases which were formerly among the most potent causes of destitution. To these two changes it is mainly due that in tracing the development of Poor Law administration during the last century we find that it has been continuously in the direction of clearer differentiation of the problem and closer adaptation of treatment to the needs of different classes. This could become possible only with the gradual lifting of the overwhelming burden of able-bodied pauperism. Rashly assumed responsibility for the maintenance of large numbers of able-bodied and their dependents had, prior to 1834, swamped the more delicate and discriminative work of dealing with the infirm, the sick and the children, in much the same way as the presence of an epidemic demands drastic and general treatment and distracts attention from more individual and subtle ills. It is the great merit of the early Poor Law and of early sanitary reformers to have checked the overwhelming evils of their day, and so to have cleared the way for the progressive treatment of difficulties which were then thrown into the background.

3. Granting that the position has changed, the question arises how far the law and its administration are now adequate to deal with it. It cannot be assumed that a Poor Law system which has done good work in the past, calls therefore for no change; indeed, just so far as the system has succeeded in modifying the conditions of the poor it has changed its own problem, and it may well be that corresponding changes are called for in itself—that after the first rough work is done a constantly finer instrument is needed to carry out the more specialised branches. To a large extent this specialisation of work and improvement of the instrument was foreseen and intended by the early administrators, and has been steadily progressing during the last seventy years, and indeed most of the demands for further change lie in the same direction. The question for us to-day is how to satisfy those demands without incurring any risk of reversion to the evils of administration before 1834. It would be quite possible for a Centralised Authority to-day, to do elaborately and at great expense just the same mischief as was done crudely and ignorantly by the Local Authorities before 1834.

4. The same development which we shall trace in Poor Law administration has proceeded at even a greater rate in voluntary institutions. Thus it happens that the administrator often finds himself competing or co-operating with rival agencies, some of which may be better adapted for the work he is trying to do, while others may be hindering him at every turn. It seems impossible at the present day to determine the functions of the Poor Law without also considering and determining its relations to these other agencies; and, in the following Chapters, brief reference will be made to the principal external circumstances which from time to time have affected the various branches of Poor Law work.

Chapter 1.

THE CENTRAL AUTHORITY.

The Poor Law Commissioners 1834-1847.

5. The Report of 1834 led to immediate and decisive action on the part of Parliament. It is noteworthy that in the Act which was passed in the same year¹ attention was concentrated mainly upon the improvement of administration ; but Parliament practically endorsed the recommendations and principles laid down in the Report, by authorising the appointment of a Central Authority with powers of control and supervision so strong as to enable it to carry out those recommendations throughout the country. This Central Authority was to consist of three fit persons to be Commissioners with the style of Poor Law Commissioners for England and Wales.² The Act was passed on the 14th August, and on the 23rd August Commissioners were appointed as a responsible authority for carrying its recommendations into effect. They were empowered to sit as a Board ;³ they were to have a seal ;⁴ they were to be incapable of sitting as members of the House of Commons ;⁵ and they were to hold office for a limited period of time.⁶ They were authorised to make general rules for the administration of relief, but their powers of control were limited, on the one hand by the existing laws, on the other hand by the express provision that they should not be enabled to interfere in any individual case for the purpose of ordering relief.⁷ They were also empowered to appoint Assistant-Commissioners,⁸ Secretaries and other officers.⁹ To the Assistant-Commissioners they might delegate any of their powers except that of making general rules.¹⁰ They were to make an Annual Report to be laid before Parliament.¹¹ It is from these Annual Reports that the history of their work is to be gathered, and as the expenditure upon the Commissioners and their staff was defrayed out of the Consolidated Fund,¹² the Annual Reports served to inform the House officially of the policy which they were adopting. The fact that the Commissioners were not represented in Parliament was so far advantageous in that they were almost entirely removed from the sphere of party politics ; on the other hand, it was difficult both for the Commissioners to defend their actions and for Parliament to keep in touch with them. Recourse was had to the expedient of Committees of Inquiry, and in 1837 and 1838 Committees of the House of Commons, and in 1833 also a Committee of the House of Lords, reported upon the manner in which the Board was carrying out the Act.

The Poor Law Board, 1847-1870

6. In 1847 the Commissioners were superseded by a new set of Commissioners comprising as *ex officio* members the President of the Council, the Lord Privy Seal, the Principal Secretary of State for the Home Department, and the Chancellor of the Exchequer.¹³ One of the Commissioners was to be President,¹⁴ and the President and one of the Secretaries might sit in the House of Commons.¹⁵ The essential features of the change were that now the Board was closely connected with the Government through its *ex officio* members, and was represented in Parliament.¹⁶ Another important feature was the enlargement of the powers of the President. Hitherto the Commissioners had acted as a Board, but, while they might still continue thus to act, the President himself was now authorised to carry into execution any of the powers vested in the Commissioners. "The transfer of central authority was not due to any national change of opinion as to the principles on which the Poor Law should be administered. It was not even to any great extent a change of *personnel*, for the former Assistant Commissioners became Inspectors, and Sir George Nicholls, who represented all that the opponents of the Poor Law most disliked, was made Secretary."¹⁷ In 1849 this body received authority to use the name of Poor Law Board,¹⁸ and in 1867 it was placed upon a permanent footing.¹⁹

The Local Government Board, 1871.

7. A further fundamental change in the Central Authority was made by the Act of 1871,²⁰ which transferred all the powers and duties of the Poor Law Board to the Local Government Board,²¹ a body consisting of a President, and, as *ex officio* members, the Lord President of the Council, all the principal Secretaries of State, the Lord Privy Seal and the Chancellor of the Exchequer.²² The only active member of

this Board is the President, for the *ex officio* members are never consulted, and their consent is not required to an order issued by the President;¹ while the President, on the other hand, has almost autocratic powers,² and by means of Orders and Circulars may and does initiate far-reaching changes in methods of relief both under the Poor Law and outside.³ Thus the final effect of the re-constitution of the Central Authority since 1834 has been that the ultimate responsibility for Poor Law administration has ceased to rest with a body of experts as were the Poor Law Commissioners appointed solely for the purpose, and has been assigned to a President who enters on office and leaves it with his party, and has many other duties of a very varied nature. It seems almost inevitable under these circumstances that Poor Law administration should be exposed to the influence of political pressure.⁴

8. It will have been gathered from the preceding narrative that under the Act of 1834,⁵ the Central Authority was vested with apparently supreme control over the whole of the administration of the Poor Laws and, in particular, over the conditions under which both indoor and outdoor relief should be administered. It had also conferred upon it great but not quite such unfettered powers in regard to the erection and alteration of workhouses,⁶ and the dissolution and alteration of Unions.⁷ Since 1834 the tendency of legislation has been rather in the direction of increasing than of diminishing the powers of the Central Authority, with the result that the Local Government Board now occupies a position, probably unique among Government Departments, for the amount of discretionary control it exercises over an administration which is mainly paid for out of local rates.

Powers of the
Local Govern-
ment Board,

9. There are seven chief methods by which the Central Authority normally seeks to direct local administration :—

1. By the issue of Orders and Circulars.
2. By control over local officers.
3. By the power to sanction loans.
4. By audit.
5. By the power to compel Local Authorities and their officers to furnish information and returns.
6. By official Inquiries.
7. By the influence of Inspectors.

10. The legislative decrees of the Local Government Board are embodied in Orders. An Order of the Local Government Board has the force of law, and is binding upon all the Unions to which it is issued. If issued to one Union only, it is known as a Special Order, if to two or more Unions at the same time, it is a General Order.⁸ These are officially published in the Gazette.⁹ Until 1842 the Commissioners worked chiefly by means of Special Orders issued to separate Unions,¹⁰ but at that date, “when nearly the whole of England had been brought under the operation of the Poor Law Amendment Act,” they rescinded the separate Orders and substituted general rules.¹¹ In 1847 these rules were brought together in the General Consolidated Order.¹² This, together with the Outdoor Relief Prohibitory Order of 1844 and the Outdoor Relief Regulation Order of 1852, practically regulates the whole administration of relief throughout the country. The General Consolidated Order consists of detailed regulations concerning the procedure and duties of Guardians, the government of the workhouse, the appointment, remuneration and duties of officers, etc. But, in addition to these dominant Orders, there are a very large

(1) Orders and
Circulars.

¹ Adrian, 439-43. ² Adrian, 11. ³ 34 & 35 Vict., cap. 70, Sec. 5. *Vide also* Adrian 445. ⁴ Davy, 2033, 2037; Fleming, 8967-8, Adrian, 444. ⁵ 4 & 5 Will. IV., cap. 76. ⁶ Sec. 23-25. ⁷ Sec. 32-33. ⁸ Davy, 3061-3; 10 & 11 Vict., c. 109, Sec. 15. ⁹ Davy, 3065. ¹⁰ Adrian, 437. ¹¹ Eighth Annual Report Poor Law Commissioners, 389, 1842, p. 1. (5). ¹² *Ibid.*, p. 2 (6). ¹³ Adrian, 165.

number of additional and amending Orders; and we have received many representations to the effect that codification¹ and simplification² are urgently called for. Mr. Jenner-Fust, General Inspector, states :—

“Guardians and their officers have the greatest difficulty, as things are, in ascertaining what Acts and orders are actually in force; they are scattered about, and there are a large number of amending Acts and orders which are apt to be overlooked.”³

We think that the Poor Law Statutes and Orders should be revised in accordance with the recommendations which we make in this Report and, where necessary, repealed, and we would urge that the work of consolidation and revision should be taken in hand as soon as possible. It would also seem desirable that there should be some simple handbook available, such as that issued by the Scottish Local Government Board, which would contain a clear code of Regulations and statement of policy.

Circulars.

11. To some extent the Circulars issued by the Local Government Board may be regarded as declarations of policy⁴; but too often they represent only the policy of the President for the time being, and impart neither permanence nor consistency to the general policy of the Board. And though a Circular is only an “exhortation” and cannot be enforced,⁵ it has hardly less influence than an Order, especially if it chimes in with the popular feeling of the moment.

12. Such documents as that of Mr. Goschen in 1869 on outdoor relief, that of Mr. Chamberlain in 1886 on the unemployed, and that of Mr. Chaplin in 1900 on the aged poor,* have exercised a great and sometimes unfortunate effect upon local administration; the very fact that they cannot be enforced by law leaves the interpretation of them to the Local Authority, and tends to misunderstanding and diversity of practice. The Circular of 1900 above referred to, which followed as the almost necessary corollary to the Reports of the Royal Commission on the Aged Poor and the Committee on the Cottage Homes Bill,⁶ furnishes a striking example of the misinterpretation which may be put upon the intention and even the meaning of a Circular. With regard to that Circular Mr. Bagenal says:—“The paragraph with regard to differential treatment of the aged and deserving poor has been largely twisted into a general recommendation to extend the scope of out-relief, and it has been so interpreted frequently in my presence”;⁷ and Mr. Baldwin Fleming, Mr. Bircham, Mr. Herbert, Mr. Jenner-Fust and Mr. Wethered also gave evidence practically to the same effect.⁸

(2) Control over local Officers.

13. The Orders above referred to are binding not only on the Local Authority but also, where so indicated, on the officers of the Local Authority, and perhaps in the majority of instances it is upon the officers that the administrative execution of the order depends. Accordingly the Local Government Board may prescribe the qualifications and duties of all Poor Law officers: and, in the case of the more important posts, each individual appointment must be reported to it, and the salary is sanctioned by it.⁹ Every officer is liable to direct dismissal by the Local Government Board¹⁰ and, *per contra*, none of the higher officers can be dismissed by the Local Authority except with the Local Government Board’s consent.¹¹ This direct control over the initiation and termination of the local officers’ careers tends to ensure that the level of Poor Law executive administration shall not fall below a certain minimum standard. The Board cannot in practice secure the appointment of the best man by the Guardians,¹² but it can and does prevent the appointment of a man with known disqualifications.¹³

14. Moreover, the power to prescribe duties, and to dismiss or to prevent from dismissal, is a considerable guarantee against the policy of deliberate and persistent disregard of the Board’s regulations. In the larger part of the executive work, the Guardians can only act through their officers. The officers know that persistent disobedience

to the Board's Regulations may entail dismissal, while, on the other hand, they are immune from dismissal on the ground of obedience to these Regulations, even where such obedience is distasteful to the Guardians. Further, the Local Government Board has the power to compel the Guardians to appoint officers or in cases of default to appoint them itself.¹ It is true that the Board but rarely uses these drastic powers: it is no less true that the legal procedure required to give effect to them is cumbrous. In our view it is right that they should be used with reluctance, having regard to the importance of maintaining not only the prestige of the Local Authority but also a sense of responsibility for detailed administration.

15. Control over the capital expenditure of the Local Authorities is obtained by the Central Authority's power to sanction or withhold sanction to loans.² Loans may be sanctioned for a number of Poor Law purposes, but, practically, they are almost invariably required in connection with buildings. Hence is derived one of the chief influences of the Central Authority over the methods and developments of indoor relief. For, in addition to the fact that no new institution, or structural alteration of an institution, can be undertaken by the Local Authority without the Central Authority's sanction,³ the possession of a discretion as to the amount of the loan for the improvement, or as to granting any loan at all,⁴ gives the Central Authority an enormous influence in improving the methods by which the Guardians administer indoor relief. If the Local Authority is considering the erection of alternative institutions, the Central Authority can prevent the adoption of a less desirable institution by refusing to approve the plans or to sanction a loan in respect of it. Similarly it can often secure the adoption of a desirable institution by undertaking beforehand to grant a loan for it.⁵ The control of the Local Government Board over buildings is exercised chiefly on the advice of their Architect.⁶ In the Section dealing with Indoor Relief, we shall point out some defects in the functions and usefulness of the Architect's department; but, even as it stands, the Board's architectural supervision coupled with the power to sanction loans, is a very strong weapon of control over the capital expenditure of the Local Authority. (3) Power to sanction loans.

16. The control over the current expenditure of the Local Authority is obtained chiefly through audit. Prior to 1834 the audit of Poor Law accounts rested with the Justices, and from 1834 to 1844 the Auditor was appointed by the Board of Guardians whose accounts he audited. By the Poor Law Amendment Act, 1844, the Poor Law Commissioners were empowered to combine parishes and Unions into audit districts and the Auditor of the Poor Law accounts was elected in each district by the Chairman and Vice-Chairmen of the Boards of Guardians in the district. Until 1846 (when Parliament first voted a grant for the payment of Auditors), the remuneration of the Auditors thus appointed, was paid by the Unions whose accounts they audited.⁷ In 1868 the provision in the Act of 1844 was repealed and power was given to the Poor Law Board to appoint District Auditors,⁸ and in 1879 the District Auditors Act empowered the Local Government Board to appoint such Auditors as they might deem necessary.⁹ (4) Audit.

17. Vacancies among the Auditors are usually filled by persons who have had experience in audit work, either as Assistant Auditors or as Auditors' clerks. To be qualified for appointment as an Auditor or Assistant, a person must be a Chartered or Incorporated Accountant, Barrister or Solicitor, or have undergone a course of training with a District Auditor, or have served in the Department of the Local Government Board.¹⁰

18. The abolition of the present audit system as regards the accounts of "Corporations, County Councils and Urban District Councils" was recommended by the Select Committee on Municipal Trading who proposed that accountant auditors should be appointed by the Local Authorities subject to the approval of the

(A) (3). ⁸ 31 & 32 Vict., cap. 122, sec. 24. ⁹ 42 & 43 Vict., cap. 6. ¹⁰ Burd, Vol. I., App. ix. (A) (22).

Local Government Board.¹ Apparently the main argument in favour of the proposed change was that the District Auditors are unfitted as a class for auditing the accounts of municipal trading concerns, which are “really great commercial undertakings.”² Obviously this argument does not apply to the accounts of a Poor Law Authority, whose concerns are not, and cannot possibly be, run upon a commercial basis. In addition to a thorough knowledge of accounting, an Auditor should, in our judgment, be an expert both in the law and in the practice of the Poor Law. Qualifications such as these will not, we think, be so readily forthcoming in an Accountant in private practice as in an official who, while possessing the necessary accounting knowledge, has served a preliminary period of training as an Assistant Auditor, and devotes his whole time to the work. We recommend, therefore, that the present system should be maintained, on the understanding that persons appointed as Auditors should, as a rule, have in the first instance served as Assistant Auditors, and that Assistant Auditors should, before appointment, be required to show that they have definite qualifications for that post, both by reason of their knowledge of the general administration of the Poor Law and by reason of their professional ability as Accountants; and we think that as a rule the possession of such qualifications should be tested by examination or otherwise.

19. Mr. Burd, Inspector of Audits, informs us that the audit staff is insufficient to undertake a thorough audit of all the accounts to be dealt with, and we think that it should be increased. It is understood that this matter is under the consideration of the Local Government Board.³

20. The Auditor has to judge not only of the correctness of the account, but also of the legality of the expenditure.⁴ In this connection he has had, since 1844, certain powers of disallowance and surcharge.⁵ That is to say, he can strike any illegal payment out of the account, and “surcharge” the amount on the person or persons responsible for the payment, from whom the amount can thereupon be recovered at law, unless the surcharge is declared of no effect or is remitted after appeal to the High Court or to the Local Government Board. The Auditor can also, with similar results, surcharge the person submitting an account with any amount which has not, but should have been, entered as a receipt.⁶ He may also disallow extravagant or unreasonable expenditure, but, owing to the difficulty of establishing a case which will satisfy a Court of Justice, he often does no more than report to the Local Government Board, who may then remonstrate.⁷ Appeals against the disallowances and surcharges are less frequently made to the High Court than to the Local Government Board, because appeals to the latter body involve no expense, and because the Board has an equitable jurisdiction which the Court has not. The Board can, and frequently does, even where a payment is illegal, decide that repayment need not be enforced, the ground for such remission being either that the payment was made in good faith, or that a warning is sufficient to put a stop to the irregularity.⁸ This power of surcharge, though not frequently enforced,⁹ is regarded by the Local Government Board as its chief safeguard in Poor Law administration, but it would seem that its efficacy is more against actual fraud or illegality than against bad administration.

21. There is a minor matter, however, in regard to which we think that the powers of the Local Government Board might with advantage be curtailed. The Local Authorities (Expenses) Act, 1887, 50 & 51 Vic. cap. 72 enacts that “expenses paid by any Local Authority whose accounts are subject to audit by a District Auditor shall not be disallowed by that Auditor if they have been sanctioned by the Local Government Board.” The Board’s sanction under this Act does not make the expenditure legal, and consequently it would not oust the power of the High Court to issue an injunction restraining the Local Authority from including the expenditure in their accounts, if application was made to them for the purpose, but it does preclude the Auditor from disallowing the expenditure at the audit.

¹ Report of Select Committee on Municipal Trading, 1903, par. 15–16. *Vide* also p. 418 (8). ² Report, par. 15. ³ Burd, 4765. ⁴ Burd, 4808–9. ⁵ 7 & 8 Vict., cap. 101, sec. 32. ⁶ Burd, Vol. I., App. ix. (a) (53–7, 59). ⁷ Davy, 2120–1, 2185–8. ⁸ Davy, 2030, 2086–7. ⁹ Davy, 2091.

22. We understand that the Act was intended, and has in fact been largely used by the Local Government Board, for the purpose of avoiding technical and trivial disallowances, and the consequent needless friction and trouble which would be involved in obtaining remission of the disallowance on appeal.¹ In this way doubtless the Act has been of considerable utility. We are also informed that the Local Government Board does not consider that it was intended under the Act to sanction recurrent expenditure.² The Act, however, has been interpreted by the Board as enabling it to sanction not only past but also prospective expenditure.³ It is in this connection that we think some limitation should be placed on the powers which the Act gives. As it stands, the Local Government Board is enabled to encourage a Local Authority to undertake expenditure not authorised by law. Thus for instance, the Board was able beforehand to assure Local Authorities that they would sanction under this Act contributions to the Central Unemployed Fund set up under Mr. Walter Long's scheme for the unemployed in London, and the powers under the Act have been used on other occasions to sanction prospective illegal expenditure by Local Authorities.

23. We doubt if this power to sanction beforehand the incurring of illegal expenditure by Local Authorities is a wise one. The possession of the power must without doubt be occasionally embarrassing to the Central Authority and we do not think it in the public interest that it should be possible for a Government Department without the consent of Parliament, to allow a Local Authority to initiate a new, illegal, and perhaps doubtful policy involving the expenditure of public money.

24. We think, therefore, that the powers of the Local Government Board under the Local Authorities (Expenses) Act, 1887, should be strictly limited to sanctioning expenditure after it has been incurred.

25. An important feature in the direction of administration by the Local Government Board consists of the almost unlimited power which it possesses to compel Local Authorities and their officers to furnish it with information.⁴ The information thus required may either be of a general kind and relate to England as a whole, or of a particular kind relating to one individual Union. The general information which is obtained as a matter of routine consists for the most part of returns of statistics as to the numbers of paupers, the cost of relief, etc. These, when collated, are very useful, if not essential, to the Central Authority as a guide to the variations in policy of individual Boards of Guardians. When the returns show a striking divergence from the normal in regard to a particular Union or Unions, obviously it may be a case for further Inquiry by the Board into the causes of such divergence. We understand that this method has recently been considerably developed, and with much success in connection with Inquiries which have been undertaken in the Metropolitan district.

26. For the purpose of obtaining information from a particular Union, the Board has power to institute a sworn Inquiry on any matter affecting the administration of the Poor Law. This power to obtain evidence on oath, coupled as it is with the right to compel the attendance of witnesses, is frequently used as a basis for administrative action on the part of the Board. The knowledge that such sworn Inquiries may be held must, without doubt, enhance the authority of the Central Authority in the view of the Local Authorities and their officers. These Inquiries are held by the General Inspectors, whose functions are dealt with in the following paragraphs.⁵

27. For the purpose of bringing about improvements in policy and uniformity in administration the Local Government Board relies mainly upon its inspectorate; the country being divided into fourteen districts, each of which is assigned to a General Inspector.⁶ There are, in addition, two Assistant Inspectors in London and one in Lancashire, while there is also in London an Assistant (lady) Inspector for the inspection of certain Poor Law institutions.⁷ Moreover, for Poor Law medical purposes, the Board has two Medical Inspectors, whose functions will be dealt with in the part of our Report relating to medical relief; and there are in addition three lady Inspectors of boarded-out children, to whose duties reference will be made when we deal with

¹ Pitts, 4254.² Pitts, 4255.³ Adrian, 1044.⁴ Pitts, 1463-4; Davy, 2540.⁵ Davy, 1598.

Davy, 1598.

⁷ Davy, 1604.

the question of children.¹ The duties of a General Inspector are to attend a meeting of every Board of Guardians in his district at least once a year; to inspect and report upon workhouses and all other Poor Law institutions; to advise as to any communication bearing on the current Poor Law work which may be received from his district; to hold Inquiries as to the conduct of officers, parish property, etc.; and generally to act as agent of the Board.² The position of Inspectors in relation to Boards of Guardians in their districts is merely advisory; as they have no power to alter any decision which may be taken by the Guardians, and no vote at the meetings which they attend. Moreover, in consequence of the clause in the Poor Law Amendment Act, 1834, which prohibits the Local Government Board from interfering in particular cases, it is generally held that the Inspectors should not advise on the treatment of any particular case.³ Their position, however, enables them to exercise considerable influence—

“An efficient Inspector should be looked upon by the Guardians as their confidential adviser and friend. He should so direct his conduct that they should turn to him in case of any emergency, and if he does that he is able as a matter of fact to settle a great many questions on his own initiative without troubling the Board.”⁴

28. The Local Authorities themselves seem to recognise the value of the Inspectors as a factor in good administration;⁵ indeed, we found evidence of a desire for more frequent and thorough inspection and supervision than the existing system always permits.⁶

29. An Inspector is, as we have said, required to attend a meeting of every Board of Guardians in his district once in each year, and he will visit a particular Board more frequently if necessary; but an annual visit is the rule,⁷ and several Inspectors questioned the advisability of multiplying these attendances at Guardians' meetings.⁸ We doubt, however, whether a single visit in the year can give an Inspector an intimate knowledge of the manner in which Guardians administer relief, or any considerable influence upon their policy.

30. A wider view seems to have been taken of the duties of the Assistant Commissioners to whose position the Inspectors have succeeded. In a Circular issued in 1840, they were urged to avail themselves of the means at their disposal to investigate the causes of pauperism with a view to their removal;⁹ but such considerations appear to be outside the scope of the present Inspector's work. Mr. Bagenal states:—

“The longer I am in the business, the less I think of the institutional side of it, because it is defined, and it is there, and you know exactly what it is. But you have got this enormous mass of pauperism outside, and the inspector really does not know anything about it. He has not time to devote to the examination of the causes—and we are not asked to report upon the causes—of pauperism; we have to deal with the result of pauperism, which is destitution.”¹⁰

31. The real crux of Poor Law problems lies in the treatment of the individual case at the Relief Committee and more especially of those cases which are dealt with by out-relief. With this part of the work the Inspectors are little in touch. Very largely, this is due to the pressure of other work. To quote Mr. Bagenal again:—

“I want an assistant inspector now, because I have 144 institutions to inspect every year, besides attending Boards of Guardians. My time at the present moment is very largely taken up with inspecting children's homes. . . . I should like to devote my time a great deal more to the supervision of outdoor relief, which is a great national problem.”¹¹ “We are absolutely out of touch with the details of out-relief in the country.”¹²

32. This view is strongly reinforced by evidence from the representative of the Metropolitan Relieving Officers' Association.

“One suggestion that we make is that, if possible, the relieving officer should be in closer touch with the Inspectors of the Local Government Board. It would strengthen our hands considerably if we had more frequent visits from the inspector.”¹³ “I have been eight years in London now, and I have only seen an Inspector once.”¹⁴

¹ Davy, 1605-6. ² Davy, 1598. ³ Davy, 1599-1600, 2082-3; Fleming, 9472. ⁴ Davy, 1602.

¹⁰ Bagenal, 7408. ¹¹ Bagenal, 6920. ¹² Bagenal, 6933. ¹³ Thompson, 22645. ¹⁴ Thompson, 22888.

33. The evidence would, therefore, seem to point to the necessity of increasing the General Inspectors' grasp of the Poor Law administration in their districts, by affording them generally the help of Assistant Inspectors, to whom they might depute some of their routine and less important duties, and by giving them the assistance of experts when needed.

34. Of recent years Inspectors have received no general instructions from the Local Government Board, either upon taking up their work or subsequently.¹ Each is left within certain limits to act for himself, and as they seldom meet for conference,² it is not to be expected that they are working on entirely the same lines in their different districts. They are appointed by the President of the Local Government Board, no special qualifications being laid down;³ but in recent years it has been the practice to appoint men who have had some Poor Law experience either as members of Boards of Guardians, Assistant Inspectors, or permanent officials of the Local Government Board.⁴

35. We think that definite qualifications should be laid down. Persons who are appointed Inspectors should have studied the history of the Poor Law and the causes of pauperism, and should, during a period of probationary work, have given evidence of practical administrative ability. Prior to their appointment as Inspectors, they should, as a rule, be appointed Assistant Inspectors, and in that capacity they should have opportunities of learning the character of the administration of relief, both legal and voluntary.

36. It will be gathered from the foregoing paragraphs, that, as a result of historical developments, there are vested in the Local Government Board powers, both operative and latent, of a wide and far-reaching character. Legally speaking, if it appeared to the Board to be expedient for rectifying or simplifying the areas of management, or generally, for the better administration of the relief of the poor, it could, in its administrative capacity, dissolve all the Unions in England and Wales together with their Boards of Guardians, and reconstitute the Unions into areas many times larger than their present size, thus transforming the whole aspect and character of Poor Law administration in England.⁵ Legally speaking, the Board could transfer to the Metropolitan Asylums Board, the whole of the administration of indoor relief at present exercised by London Boards of Guardians, or again, could make the conditions for granting out-relief to destitute able-bodied men so stringent as to abolish it almost entirely or so lax as to allow of abuses similar to those which obtained before 1834.⁶

37. But, in practice, these drastic powers are limited by two efficient checks. In the first place, there is the political check of the House of Commons. The President of the Board is subject to the control of Parliament, and the estimates for the expenditure of the Board are voted by the House of Commons, often after sharp criticisms and debate; in some cases its Orders become operative only when confirmed by Parliament; the Board must also draw up an Annual Report which is presented to Parliament.⁷ There is no doubt, therefore, that the Board must be, and is, susceptible to the changes of political opinion in the House of Commons.⁸

38. The second check on the power of the Local Government Board is the inherent unwillingness of Local Authorities to accept bureaucratic rule. The Board has, theoretically, unlimited power to prescribe and to prohibit; but the duty of complying with these prescriptions and prohibitions falls, not on paid officials

¹ Davy, 1607, 1617, 1761-2, 1875. ² Davy, 1607; Lockwood, 13789-94. ³ Davy, 1608, 1764

Scope of Local
Government
Board's powers
and limits
thereto.

of the Central Authority, but on a Local Authority.¹ Moreover, these Local Authorities have, by law, a very large discretion with which even the Board is unable to interfere.² This discretion may be exercised in a sense hostile to the policy of the Board, and yet in such a way as to make it difficult to prove legal contravention of particular Regulations.

39. In considering the enforcement upon Guardians of penalties for disobedience, it must not be forgotten that the persons to be punished are more or less free agents, upon whom alone the Local Government Board will in future have to rely for the carrying out of its wishes and its policy.

40. It is clear therefore that, though a large responsibility for good administration rests upon the Central Authority, and is recognised by it, its powers for enforcing good administration are limited. If a Board of Guardians neglects or refuses to obey its advice or even its instructions, it is often the case that "the only means of enforcing them is by mandamus, which is a process only to be resorted to in matters of moment and is useless for everyday administration."³

41. Hence, despite the unquestioned legal powers of the Central Authority, in practice it finds itself in a position where its powers of prohibition are great but its powers of initiation small. As Miss Sellers has said :—"The Local Government Board . . . although it can restrain them [the Local Authorities] from acting, is in practice . . . powerless to force them to act. It has no effective machinery indeed through which it can . . . force them to do anything they are determined not to do."⁴

In Scotland the Poor Law Act of 1845, enacts that if a Parish Council "shall refuse or neglect to do what is herein or otherwise by law required of them, or in case any obstruction shall arise in the execution of this Act, it shall be lawful for [the Local Government Board] to apply by summary petition to the Court of Session . . . which Court, . . . are hereby authorised and directed in such case to do therein as to such Court, . . . shall seem just and necessary."⁵

In Ireland the Local Government Board can supersede a Board of Guardians which is not carrying out its duties properly.⁶

42. But in England such an end could be attained only by the indirect method of dissolving a Union and reconstituting it.⁷ The want of direct power has been most felt in connection with the institutions of the Guardians. The Local Government Board can close a building as being unsatisfactory, but cannot enforce the building of an institution.⁸ Mr. Baldwyn Fleming considers that "The Board should have much greater practical power to require obviously proper work to be carried out. . . . The Board should be able to order such things to be done, and to do them and recover the cost from the Guardians if they refuse to act."⁹

43. Under such circumstances, as those above mentioned, supervision of one authority by another, especially when the inspected authority has independent and executive duties of its own to discharge, is a task which can be satisfactorily carried out only by the exhibition of personal qualities which cannot be provided by regulation. The Poor Law Inspectors and the Department they represent have been very successful in securing the good will of the majority of those whom they supervise and inspect, and, thanks to this good will, they have succeeded in getting changes and improvements effected, which otherwise would not have been carried through.¹⁰

44. Moreover, in larger matters the Local Authorities appear to have confidence in the control of the Central Department and display a willingness to increase rather than diminish such control. Mr. Brown, President of the Poor Law Unions Association says :—"The Guardians throughout the country have practically unquestioned confidence " in the management of the Central Authority in all matters of discipline."¹¹

¹ Davy, 2041. ² Preston-Thomas, 4575 ; Bagenal, 7324-6. ³ Fleming, Vol. I., App. xix. (A) (18) Adrian, 718-22. ⁴ Sellers, Vol. IX., App. lxxxii. (1) ; *Vide also* Davy, 1946-7. ⁵ Poor Law [Scotland] Act, 8 & 9, Vict., cap. 83, sec. 87. ⁶ 1 & 2 Vict., cap. 56, sec. 26 ; 10 Vict., cap. 31, sec. 18. ⁷ Davy 1705-6. ⁸ Davy, 1704. ⁹ Fleming, Vol. I., App. xix. (a) (18). ¹⁰ Davy, 1603 ; Brown, 24781-2 ; Cleaver, 35887 (27) ; Coulson, 52687. ¹¹ Brown, 25248.

Mr. Booker is of opinion that in large affairs the control is very judicious.¹ Mr. Cleaver says that "The supervision . . . by the Local Government Board . . . is productive of much good ; . . . it should be retained and, with the exception of the few minor matters, should be increased."² Mr. Prescott would allow and welcome an increase of the central influence of the Local Government Board in order to secure uniformity.³

45. On the other hand, there are many matters on which the control of the Board gives rise to irritation on the part of Local Authorities, who are apt both to resent what they consider interference, and to blame the Central Authority if anything goes wrong.⁴ It is thought that this question of control on minor points, as distinguished from general policy, might be much simplified, and friction diminished, by devolving some of the responsibility on a new Authority. Thus Mr. Jenner-Fust says :—

"I am in hopes that if the extension of areas should take place, such as I venture to suggest, the minute control which is now exercised by the Local Government Board would, to a great extent, disappear. You would not require the detailed duties to be so minutely laid down as they are in the Consolidated Order.⁵ . . . There would be the new centre for local administration as between the Local Government Board and the Guardians, and to that all these questions would go ?—I think to a certain extent they would. As to the control of officers for instance, you would not require a county Board of Guardians to submit every appointment for approval to the Local Government Board."⁶

46. But apart from the complaint of over-control as regards details, the cry from many parts of the country seems to be not for less, but for more and clearer guidance on questions of principle from the Central Authority. Amongst the recommendations received by the Commission from Boards of Guardians are a considerable number to the effect that the Local Government Board should do more to lay down general principles for the guidance of Guardians. Representative Boards and Chairmen of Boards of Guardians say that "the policy of the Poor Law is not at present defined with sufficient clearness, and an authoritative statement of its general principles is urgently called for, as the basis of all subsidiary reform."⁷ Canon Bury thinks that experience is large enough to authorise the Local Government Board to state a definite policy.⁸ Mr. Thomas would wish general principles to be laid down in a clearer way.⁹ Mr. Everest thinks that :—"with . . . clear orders and guidance from the Local Government Board there should arise a more uniform and intelligent administration."¹⁰ Miss Sellers is of the opinion that the higher Poor Law authority should be strengthened without weakening the sense of responsibility of the Local Authority.¹¹ Mr. Willink says :—"It is to be hoped that the Central Authority would be able through their Inspectors and regulations to ensure that such principles as might be laid down from time to time were clearly understood."¹² Sir William Chance attributes the rise of pauperism during the last fifteen years to the fact that "no definite policy or guiding principles" have been laid down by the Local Government Board.¹³ Miss Mary Clifford thinks that "absence of directing power in the Local Government Board" is the main cause of the present defective administration.¹⁴

47. We strongly endorse the opinion that it is desirable for the Central Authority, in future, to assume a more direct position of guidance and initiative in regard to the Local Authorities. There are various methods (some of which we have indicated) by which this increase of influence could be secured : first, by the simplification and consolidation of the numerous existing Statutes and Orders ; second, by strengthening the position of the Board and its Inspectors ; third, by increasing the number and efficiency of Inspectors themselves so that, as the agents of the Central Authority, they may more effectively imprint its policy upon the local administration ; fourth, by giving the Board power to withhold a part or the whole of any subvention from Imperial sources granted in relief of local rates, unless it is satisfied with the administration of the services towards which these grants go.

Need for a more direct position of guidance and initiative.

Parliamentary
influence on Poor
Law policy.

48. We shall amplify these suggestions subsequently, but we cannot leave this part of our subject without pointing out that, in endeavouring to shape a consistent policy the Board has been greatly hampered. The House of Commons has recently influenced the policy of the Board, not so much by checking its action as by altering intermittently and in detail the conditions under which the Poor Law is administered, sometimes with little or no regard to what may be termed the Poor Law side of the question. The Medical Relief Disqualification Removal Act, the Unemployed Workmen Act, the Elementary Education (Provision of Meals) Act, the Education (Administrative Provisions) Act, and the Old Age Pensions Act, have all radically affected the conditions under which Poor Law relief is administered throughout the country. In these circumstances the action of the Board is strongly influenced by the changes of political opinion reflected in the House of Commons, and it is increasingly difficult for the Board to pursue a stable and continuous policy.

Proposal to
substitute term
"Public
Assistance" for
"Poor Law."

49. It has been impressed upon us in the course of our inquiry that the name Poor Law has gathered about it associations of harshness, and still more of hopelessness, which we fear might seriously obstruct the reforms which we desire to see initiated. We are aware that a mere change of name will not prevent the old associations from recurring, if it does not represent an essential change in the spirit of the work. But in our subsequent criticism and recommendations we hope to show the way to a system of help which will be better expressed by the title of Public Assistance than by that of Poor Law. The general aim will remain, as it always has been, the independence and welfare of the people, but as a means towards that end we desire to introduce into all branches of the work a spirit of efficiency and hopefulness. We think that this object will be made more easy of attainment, and that the work will be more accurately described by a change of title. Accordingly, we recommend that the Division of the Local Government Board which has hitherto dealt with "the Relief of the Poor," should, in future, be known as the Public Assistance Division.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 1.

- (1) *The Poor Law Statutes and Orders should be revised in accordance with the recommendations which we make in this Report, and, where necessary, repealed; and we would urge that the work of consolidation and revision should be taken in hand as soon as possible. It would also seem desirable that there should be some simple hand-book available, such as that issued by the Scottish Local Government Board, which would contain a clear code of Regulations and statement of policy. (10.)*
- (2) *The present system of audit should be maintained, on the understanding that persons appointed as Auditors should be experts, both in the law and in the practice of the Poor Law, and should, as a rule, have served, in the first instance, as Assistant Auditors; Assistant Auditors should, before appointment, be required to show that they have definite qualifications for the post, both by reason of their knowledge of the general administration of the Poor Law and by reason of their professional ability as Accountants; and as a rule the possession of such qualifications should be tested by examination or otherwise. (18.)*
- (3) *The Audit Staff should be increased. (19.)*
- (4) *The powers of the Local Government Board under the Local Authorities (Expenses) Act, 1887, should be strictly limited to sanctioning expenditure after it has been incurred. (24.)*
- (5) *The General Inspectors should have afforded them the help of Assistant Inspectors, to whom they might depute some of their routine and less important duties, and should be given the assistance of experts when needed. (33.)*
- (6) *Definite qualifications should be laid down for the office of Inspector, and, prior to their appointment as Inspectors, they should, as a rule, be appointed Assistant Inspectors, and in that capacity should have opportunities of learning the character of the administration of relief, both legal and voluntary. (35.)*
- (7) *The Central Authority should assume a more direct position of guidance and initiative in regard to the Local Authorities. (47.)*
- (8) *The Division of the Local Government Board which has hitherto dealt with "the Relief of the Poor" should in future be known as the Public Assistance Division. (49.)*

Chapter 2.

THE LOCAL AUTHORITIES.

50. We now briefly indicate the changes in the local Poor Law Authorities effected by the Poor Law Amendment Act, 1834, and by subsequent legislation.

51. Prior to 1834, there were three Local Authorities concerned in the administration of relief, namely, the Overseers, the Magistrates, and the Vestry.

52. The law placed the entire legal responsibility for the assessment, collection, and distribution of the funds for poor relief upon the unpaid Overseers of the parish, or upon the paid Assistant Overseers appointed under 59 George III., cap. 12, sec. 7, to execute for a salary some or all of the duties of the Overseers.¹ The Overseers were appointed annually by the Magistrates and upon them devolved, except where local Acts were in force, the entire management of the relief of the poor.² (1) Overseers.

53. The Overseers were, however, subject to a dual control. On the one hand, the Magistrates could give orders determining to whom, to what extent, and in what way poor relief should be given, and these orders were binding on the Overseers upon pain of indictment. On the other hand, the Overseers were bound annually to submit their accounts to the Vestry, and, where a Select Vestry was appointed, they were also instructed to obey the directions of that Vestry.³ But the Statutes provided no legal method of enforcing the administrative or financial control of the Vestry,⁴ and in many cases the Overseers or Assistant Overseer administered the Poor Laws without any supervision whatever by the Vestry.⁵

54. The Vestries could, therefore, exercise no effective check on the Overseers, except with the acquiescence of those officers, but as a matter of practice it appears that, in most cases, the Overseers merged their responsibility in that of the Vestry, with whom they sat and whose practice and control they accepted. So that, over a great part of England, without any express legislative sanction, Vestries in fact performed the greater part of the work now done by Boards of Guardians.⁶

55. This practical supersession of the Overseers as a Poor Law authority was recognised and emphasised by the Act of 1834 and later Statutes, so that at the present time practically the only functions left to the Overseers in regard to the relief of the poor are these :—

(i) They make out and submit to the Assessment Committee valuation lists upon which the poor rate is based, and in some cases they can appeal or object in respect of the valuation list or the poor rate.⁷

(ii) They make the poor rate and sign and submit the rate books to the Magistrates for allowance, and afterwards collect the rate.⁸

(iii) They can give relief in kind in cases of sudden and urgent necessity.⁹

¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 98. ² *Ibid.*, p. 98. ³ *Ibid.*, pp. 98–9.
⁴ 3 Will. & Mary, cap. 11, Sec. 11; 9 Geo. I., cap. 7, Sec. 1; 59 Geo. III., cap. 12, Sec. 1. ⁵ Report of
 Poor Law Commission, 1832 [Cd. 2728], 1905. Reports from Assistant Commissioners, pp. 62, 70, 143,
 147, 164–5, 167, 199. 365 and 367. ⁶ *Ibid.*, p. 107. ⁷ Adrian, 130, 673, 1192–3; ⁸ Adrian, 477–8.
⁹ Adrian, 15, 714; Lockwood, 13930.

56. The first and second of these functions are in practice almost everywhere actually performed by an Assistant Overseer,¹ or by some other authority, except as regards the signing of the rate and submitting it to the Justices,—duties which are purely ministerial; and the third, according to our evidence, is hardly ever exercised, and then badly.²

57. In these circumstances it is questionable whether, so far as the Poor Law is concerned, there is any necessity for continuing the office of Overseer as a separate office.³ In London separate Overseers were abolished by the London Government Act, 1899, the Borough Councils being made the Overseers for each parish in the Borough.⁴

(2) Magistrates.

58. The abuses arising from the exercise by the Magistrates of their Poor Law authority have been fully dealt with in Part III.

59. The Poor Law Amendment Act of 1834 swept away all their separate powers of ordering relief with a few trifling exceptions. Under Section 27 of the Act, they were empowered to order out-relief to aged and infirm persons,⁵ and, under Section 54, they were empowered under certain circumstances to order relief upon sudden and urgent necessity in cases where the Overseer had neglected to give such relief.⁶ Their power of visiting and reporting on the state of workhouses and, in exceptional cases, ordering relief therein was also retained;⁷ but in all our evidence we have come upon no instance of the exercise of either of these powers. By way of compensation for this loss of authority, Section 38 of the Act definitely recognised the Magistrates as the local Poor Law Authority until the new Boards of Guardians should be elected, and provided also that they might, if they wished, act as *ex-officio* members of those Boards. It was, however, expressly enacted that no *ex-officio* member should have power to act in virtue of his office except as a member, and at a meeting of the Board of Guardians.⁸

60. From a superior position of practically unfettered control of the Poor Law Authorities, the Magistrates were therefore reduced to a status of equality, with a number of popularly elected Guardians. And though, had they all exercised their rights, they might still have largely or even predominantly influenced Poor Law administration, yet there is evidence that, at any rate in the years immediately preceding their abolition in 1894, the *ex-officio* Guardians, by the irregularity of their attendance,⁹ were forfeiting what might have been, and in many cases was,¹⁰ a salutary influence on Boards of Guardians.

61. The Magistrates do not now exercise any influence upon Poor Law administration, except indirectly in the exercise of their judicial functions, as when applications are made before them either for enforcing contribution orders against relatives, or for enforcing disciplinary measures against paupers. The powers mentioned in paragraph 59 may therefore be regarded as obsolete and should be abolished.

(3) The Vestry.

62. In 1834, as we have shown, the control of the Poor Law administration was in most parishes practically in the hands either of Open or of Select Vestries. Open Vestries, it is said, “formed the most irresponsible bodies that ever were entrusted with the performance of public duties, or the distribution of public money.”¹¹ The Select Vestries were undoubtedly superior to open vestries, but “they were subject to the same corrupting influences and equally free from responsibility.”¹²

IV., cap. 76, Sec. 38. ⁹ Copeman, 74488 ; James, 48468. ¹⁰ Fleming, 9445 ; Kevill-Davies, 72726-9 ; Dorington, Vol. VII., App. ccv., Stat. 6. ¹¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 108. ¹² *Ibid.*, p. 115.

63. The Royal Commission of 1832 was strongly impressed by the difficulties attaching to the distribution of relief in a small district, where distributors and recipients were near neighbours, and pointed out :—

“Where the administration of relief is brought nearer to the door of the pauper, little advantage arises from increased knowledge on the part of the distributors, and great evil from their increased liability to every sort of pernicious influence. It brings tradesmen within the influence of their customers, small farmers within that of their relations and connexions and not unfrequently of those who have been their fellow workmen, and exposes the wealthier classes to solicitations from their own dependents for extra allowances, which might be meritoriously and usefully given as private charity, but are abuses when forced from the public. Under such circumstances, to continue outdoor relief is to continue a relief which will generally be given ignorantly or corruptly, frequently procured by fraud, and in a large and rapidly increasing proportion of cases extorted by intimidation.”¹

64. The remedy contemplated by the Royal Commission was the substitution of central for local control. “It has been strongly, and we think conclusively, urged, that all local discretionary power as to relief should be withdrawn;”² hence their recommendation of the appointment of a Central Board to control local administration,³ and of the abolition of partial relief to the able-bodied.⁴ The new bodies which were to administer relief locally under strong central control, and, within these definite limitations, were Boards of unpaid Guardians, possessing a property qualification prescribed by the Central Authority elected by and representing the various parishes which were formed into a Union. To these elected Guardians were added (until 1894) as *ex-officio* members the local Justices of the Peace,⁵ and in London, in 1867, certain members nominated by the Central Authority.⁶ The new authorities were formed, not at once but gradually all over the country, the chief resistance coming from a few of those places where Unions had already been formed under Gilbert’s Act,⁷ and where the consent of a majority of the Guardians had to be obtained to a dissolution. These Guardians were paid from £5 to £20 for their attendance at their monthly meetings,⁸ and some of them succeeded in prolonging the existence of their Boards until 1868, when power was obtained by the Central Authority to dissolve them without their consent.⁹

65. The constitution of the new and unpaid Boards of Guardians remained unaltered until 1894, when the Local Government Act put an end to all property qualification for the office of Guardians, and abolished *ex-officio* and nominated Guardians.¹⁰ At the same time every Board of Guardians was given the power of co-opting a limited number of members from outside their own body.¹¹ The Act did not deal in the same way with urban and rural areas as regards the election of persons as Guardians; inasmuch as in urban districts Guardians continue to be elected *ad hoc*, and practically for Poor Law purposes only; while in rural districts they are elected primarily as District Councillors, and Poor Law business constitutes only a part of their work.¹²

66. The Act of 1894 thus effected three most important changes in the principles upon which the Local Authority was constituted. First; it swept away the *ex officio* Guardians in almost all Unions, and deprived the Local Government Board of its powers of nomination. Second; whereas from 1872 to 1894 Boards of Guardians had been in rural Unions the Sanitary Authority, by the Act of 1894 the Rural District Council (to which the powers of the Sanitary Authority were transferred) became *ipso facto* the Board of Guardians. Third; the Act, by adopting the principle of co-option, recognised the possibility of improving local administration by selecting for that work persons other than those directly elected. Changes effected by Act of 1894.

67. Unfortunately, the Boards of Guardians do not appear as a rule to have been anxious to avail themselves of the privilege of strengthening their *personnel* by co-option. Failure of co-option.

¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, pp. 276-7. ² *Ibid.*, p. 279. ³ *Ibid.*, p. 297.

option.¹ Even after fourteen years' existence of the right, it was in 1908 only exercised at all by 218 out of 643 Boards, and in none of these cases was the right used to the full extent. The general law permits each Board to choose its Chairman, its Vice-Chairman, and two members from outside its own body; but in 1908 apparently²—

| | | | | |
|----------|-----------|----------|---|--------------|
| only | 16 Boards | co opted | 3 | members each |
| only | 120 | „ | 2 | „ each |
| and only | 82 | „ | 1 | „ each |

68. Thus, in all England and Wales, there were only 370 instead of a possible 2,572 co-opted members, and on 425 Boards there were no co-opted members at all: moreover the number of Boards failing to exercise the right of co-option is apparently increasing rather than diminishing, and it is interesting to note that this increase is entirely accounted for by the rural and mainly rural Unions, where indirect election prevails.³

69. The principle of voluntary co-option seems therefore to have failed; and this failure is the more to be regretted in view of the evidence we have received as to the value of the co-opted Guardians.⁴

Effect of popular election on administration.

70. From the very first no doubt the newly-constituted Boards were a great improvement over the old Open Vestries. But it does not appear that the evils pointed out by the Royal Commission of 1832 in this regard have been adequately or permanently met by the remedies they proposed. The parish still preserves its peculiar relation to the Guardians whom it elects to represent it on the Union Board, with much the same consequences as before 1832. It is found that in many places Guardians are still interested chiefly in administering relief to their near neighbours,⁵ while the publicity given to their work by means of newspaper reports makes them even more liable to undue pressure from their constituents.⁶ Electioneering literature shows how easy it is to fall into the dangerous practice of courting popularity by promises of relief on easy terms. We may call attention in this connection to the handbill issued by certain candidates in Huddersfield in 1901, which was “followed by a distinct deterioration in administration”⁷; and to the collection of election addresses in Mr. Bagenal’s last report to the Local Government Board.⁸

Divergencies in administration.

71. If the establishment of central control had resulted, as the Royal Commission of 1832 desired, in withdrawing “all local discretionary power as to relief,”⁹ such electioneering promises would be futile; but a study of the relief given in different Unions shows how great a discretionary power is still exercised by local administrators,¹⁰ and, undoubtedly, the wideness of that power does make it possible for an elected Guardian to fulfil to some extent his election pledges. The class of applicants who have no chance of receiving outdoor relief in one Union may get it easily and as a matter of course in another.¹¹ In one Union out-relief will not be granted unless the applicants have sufficient independent means to pay their rent;¹² while in another Union the very fact of earning or possessing any independent resources will be considered a bar to relief.¹³ Some Guardians will not relieve the sick dependents of an able-bodied man at all unless the man himself comes into the workhouse,¹⁴ while other Guardians make no effort whatever to exclude even the well-to-do classes from receiving gratuitously both indoor¹⁵ and outdoor¹⁶ medical relief. Innumerable instances.

of the existing lack of uniformity will be found throughout our evidence, and this diversity applies to every form of relief and to every class of applicant. In no case is the varying interpretation placed on the claim to relief better illustrated than in the case of the widow. In one part of the country a widow with one child would get no relief whatever unless she came into the workhouse;¹ in another part of the country she would, indeed, get out-relief, but nothing for herself, and only 6d. and two loaves per week for her child;² in a third district, she would get as much as 5s. for herself, and 4s. for her child,³ and in a fourth district, she would get relief only if she consented to part with her child and send it into a Poor Law school.⁴ Or again, in one Union outdoor medical relief may be freely given to all applicants without any inquiry as to means,⁵ whilst in another Union it is refused to all persons unless they are in receipt of ordinary outdoor relief.⁶

72. While we fully appreciate the advisability of allowing a certain elasticity in the treatment even of the same class of cases, it cannot, in our opinion, be justifiable that the divergence should involve so great a curtailment or extension of the privileges of paupers, far less that it should amount to an actual denial of the right to relief. The same divergence of practice is shown throughout the statistics of pauperism. If, for example, we take the proportion of indoor paupers to outdoor paupers as affording some criterion of policy, we find it varying on 1st January 1908, between the ratios of 1,427 to 100 in the Whitechapel Union, and 4 to 100 in the Union of Newcastle-in-Emlyn (Cardigan).⁷ Similarly in regard to expenditure, the cost of in-maintenance per indoor pauper varied in 1904-5 from £6 6s. 0d. in Longtown (Cumberland), to £26 9s. 0d. in West Hampnett (Sussex), and the cost of out-relief per outdoor pauper varied in the same year from £1 5s. 0d. in St. George-in-the East, to £12 18s. 0d. in the City of London.⁸

73. In the absence of special electioneering appeals such as those above referred to, the interest shown in Guardians' elections is remarkably small.⁹ Mr. Lockwood, in his evidence, gives a return showing the percentage of voters who took the trouble to record their votes in certain districts in London in 1904; in one ward it fell as low as 13·3 per cent.¹⁰ The Chairman of the West Ham Board of Guardians thinks that about 10 or 12 per cent. vote at the elections.¹¹ Mr. Lewis, of Stepney, says: "Very little interest is taken in the proceedings of the existing Boards. The number of persons voting at Guardians' elections is small, and the Guardians are not subject to any effective public criticism."¹² The following figures compiled by the London County Council confirm statistically these witnesses' opinions as to the apathy of the electorate at the elections of Metropolitan Guardians.¹³

Lack of popular interest in Guardians' Elections.

Proportion of electorate voting at—

| | Year. | per cent. |
|--------------------------------|-------|-----------|
| Parliamentary Election - - - - | 1906 | 78·3 |
| County Council „ - - - - | 1907 | 55·5 |
| Borough „ „ - - - - | 1906 | 48·2 |
| Guardians' „ „ - - - - | 1907 | 28·1 |

74. Similar conditions seem to prevail in other parts of the country. The Chairman of the Staffordshire Chamber of Agriculture thinks that about a quarter of the electors vote, and those vote who pay the least amount of rates.¹⁴ This general indifference

to Poor Law elections may sometimes result in a good Board being elected and maintained in office, when both the few who do vote and the candidates are persons genuinely interested in Poor Law administration. But it has the marked disadvantage that the constituency is always open to capture by any party which is prepared to throw a little energy into the matter; and the whole policy of a Board may be reversed by a single election.¹ It often happens that candidates are “run” by the different political associations of the district,² sometimes with no other object than to try the relative strength of the political parties.³ Moreover, occasionally, a whole Board of Guardians may be turned out on grounds wholly unconnected with Poor Law, *e.g.*, a question connected with the Vaccination Laws.⁴ In Poor Law administration this liability to change is peculiarly disastrous. It is only by experience that Guardians learn wisdom in administration, and, to have a new set of Guardians every three years, means that both the poor and the rate-payers suffer from the constantly renewed mistakes of inexperienced administrators, and that the best class of officials are discouraged. It is unfortunate, we think, that advantage appears to have been so generally taken of the provision in Section 20 (6) of the Local Government Act, 1894, under which County Councils may direct that the whole of the Guardians of a Union shall retire together in every third year instead of one-third retiring annually.

One Guardian states :—

“I have now been a Guardian for twelve years, and have been through four triennial elections. In my opinion, each of the four Boards elected has been less good than the last. The men on it are proposed and elected without, as it seems to me, the slightest regard to whether they are fitted for the position and work of a Guardian. They are chosen and elected (often avowedly so) in order to try the strength of the political party to which they belong, and to many of them one cannot help thinking that the chief idea in being a Guardian is that it brings some notoriety, and may be the first step towards a seat in the City Council—a sort of practising ground for it. Every three years our whole Board goes out, and only about one-third returns. The new two-thirds come totally ignorant of everything to do with Poor Law, not content to wait to learn, not even waiting to understand what is going on in their particular Union, much less what has been the history of the Poor Law, and of pauperism, for some years and centuries.”⁵

Strikingly similar evidence comes from another town :—

“Many men simply become Guardians as a stepping-stone to the Town Council; they wish to gain confidence in speaking, and use the Board room as a practising ground. . . . They are often ignorant and indifferent, and stand for other reasons than their knowledge of or interest in the poor.”⁶

Defects in
administration
and some of their
causes.

75. The lack of continuity caused by recurrent elections is a sufficiently grave evil, but there are defects in administration which call still more urgently for reform. We have been strongly impressed by the need for an improvement in the treatment of cases, from the points of view of discrimination, of adequacy and of impartiality. We attach great importance to our own visits to the recipients of out-relief in all parts of the kingdom, both urban and rural; and, while fully recognising the respectability and merits of many of the recipients, we cannot fail to call attention to the many cases in which the allowances made by the Guardians are helping to perpetuate social and moral conditions of the worst type. (*Vide* Chapter 6, Out-door Relief.) Even when the relief is given to the right people, it is too often inadequate in amount and ill adapted to the particular needs of the case. We have also attended many Board meetings and Relief Committees, and have found in our experience quite enough to account for the bad work which is being done in some places. We have been present at meetings where the treatment of cases has obviously been affected by the presence of members who were house agents or owners of slum property;⁷ on other Boards the publican interest is strong⁸ (on one Board no less than seven out of thirty-five members are publicans⁹), and publicans have been heard to insist on out-relief being given to *habitués* of their houses.¹⁰ More generally, the evil is attributed to ignorance and indifference, combined with the fallacious hope of keeping the rates down by a minimum dole of out-relief.

76. It frequently happens also that the conduct of business is such as to make the proper administration of relief impossible. Committees of our number report as follows:—

“We attended a meeting of the Board. . . . The relieving officers and the chairman stated the cases so confusedly and so incompletely that it was almost impossible to form any opinion as to the methods on which out-relief is distributed, but we gathered that each Guardian decided whether relief should be given to the applicants from the parish which he represented. The relieving officer was not consulted, nor was his statement of facts considered.”¹

“We attended a meeting of the Board. There was a large number of Guardians present, and the proceedings were not very orderly; the relieving officer, a talkative, masterful man, practically decided most of the cases in conjunction with the Guardian of the parish in question. The clerk seemed to be a nonentity, and was seldom in evidence. Most of the Guardians took part in the proceedings, but as they all talked together it was difficult to judge what passed. There was practically no enquiry as to the resources of the applicant, and with the old people the amount of relief was determined solely by their age.”²

“We found a very large meeting of the Guardians, . . . the reason, as it appeared later, being that the election of a chaplain was on the agenda paper. It is difficult to say anything in praise of the method of conducting business, the chairman was totally ignorant of the procedure of a public meeting, the clerk self-assertive, ignorant and copious. . . . The election over, the Guardians streamed out of the Board room and the relief cases were taken. For this purpose, the remnant of the Board divided into two committees, one at either end of a small Board room, result, such a babel that it was difficult to hear, and impossible to estimate the merits of the applicants.”³

“We visited and attended two Relief Committees. At the first there were five Guardians present, of whom one was a lady. Relief was distributed without principle or knowledge of the facts. The Guardians paid little or no attention to the officer's report, indeed sometimes they began to discuss the amount of relief before he had completed his statement of the facts. . . . The chairman seemed weak and incompetent, without backbone, afraid of the members of the Independent Labour Party, of whom two were present.”⁴

“A large number of Guardians were present, and they seemed to us noisy in their proceedings and rough in their handling of the applicants.”⁵

“We were present at the Relief Committees. These are four in number. . . . It is not easy to convey any idea of their inefficiency. Three of them were held in close proximity—the shouting of the relieving officers, the banging of doors, made the scene a pandemonium. The procedure was as follows:—The committee sat on one side of the counter, the relieving officer on the other with a pile of money beside him. He took names in order from the Application and Report book (which seemed to be very fairly kept), summoned the applicant, stated the facts of the case, allotted the relief, and handed it to the applicant, at the same time giving a card to the chairman of the committee for endorsement. By this method thirteen cases were decided in one committee in four minutes.”⁶

“The relieving officer did not make or read out any general statement or explanation of the cases; and amidst the babel of what largely resembled a *conversazione*, it was difficult for us (or indeed any of the Guardians save the chairman with the book in front of him) to obtain a clear idea of the cases.”⁷

“We attended a meeting of the Board, at which eleven members were present, one being a lady. There had been another lady, but she was beaten at the last election by a publican, who was said to have brought twenty-five electors drunk to the poll. The out-relief was practically administered by the chairman and the relieving officer; if the Guardian of the parish in which the applicant resided happened to be present he took some interest in the case, otherwise the Board were not concerned with the relief. . . . The publican interest, we were told, was largely represented on the board, the assistant clerk being in intimate and close alliance with them. . . . The Board, as a whole, seemed slack, uninterested and unintelligent. . . . In one case where the woman was reported dirty and the man given to drink, one of the Guardians mentioned having seen him at the public-house that morning. Relief was, however, granted at the instance of the Guardian of the parish, who was also the publican whose house the man frequented.”⁸

77. Such instances as these, numerous though they were, are not given as typical of the general way in which the work is done. In many Unions the administration of relief is conducted in a very different way. Procedure is orderly, applicants are treated with courtesy and kindness, Guardians weigh carefully the needs of those who come before them, and adapt their treatment to those needs. For proof of

Defects in
administration
and some of their
causes.

this we may refer to our printed evidence, and to the reports of visits paid by ourselves. We welcome the opportunity of putting on record our high appreciation of the steadfastness and wisdom which have marked the work of such Boards. We earnestly hope that, if our recommendations take effect, every effort will be made to secure the continued services of such Guardians. But there is at present no adequate means of raising the standard of work to this high level, nor of ensuring that the condition of things to be found in many Unions shall be impossible for the future. It would seem to be imperative in the interests of good administration that the work of relief should be entrusted to persons secure both from external pressure and from the temptations of self-interest.

78. It is certain that one adverse influence to good administration lies in the great size of many Boards,¹ some of them having as many as ninety or a hundred members,² for although it is possible for a Board to obtain power to deal with relief cases by means of Committees, in many of the large Boards, especially in the country, the relief cases are taken by the Board sitting as a whole.³

79. Recent prosecutions of Guardians have brought to light the fact that systematic deception, dishonest contracting, and conspiracy to defraud the ratepayers are not inconsistent with popular election, notwithstanding the control exercised by the auditors of the Local Government Board. However, it seems only fair to point out that, while some of the worst cases of corruption and extravagance which have come to light have occurred in London, it is also in London and the immediate neighbourhood that some of the most enlightened and disinterested Poor Law work is being done. How far defects in the Local Authority are due to the more democratic element introduced by the Local Government Act of 1894, it is difficult, and perhaps unnecessary, to estimate. The immediate effect of the Act was that the membership of the Boards was very largely changed and that many new and inexperienced persons were elected. A considerable number of witnesses maintain that administration has deteriorated in consequence;⁴ others however, that there has been little or no change.⁵ The worst results have been apparent in the urban or mainly urban Unions,⁶ where, following upon the change, there has been a large increase in the number of paupers. It is true the rate of pauperism in the Urban Unions taken as a whole has slightly diminished, but it has not diminished to the extent that would be expected when we consider the rapid increase in their population, and the considerable decrease in the rate of pauperism in rural or mainly rural Unions where the population is declining or is only slightly increasing.⁷ It has been suggested by one witness that in rural districts the conditions of local self-government are more favourable than in towns; that there is definite financial responsibility; that there is an admixture of classes on the governing body; and that the best men are willing to serve.⁸ In large urban Unions, on the other hand, there is apt to be very little common interest in the locality: few of the electors take the trouble to vote;⁹ and the administration tends to fall into the hands of a class of men with little financial responsibility.¹⁰

80. One remedy which has been suggested for the apathy of the electors, and for increasing the sense of financial responsibility, is the abolition of compounding for rates, the argument being that this would force the ratepayer to realise his personal interest in economical administration.¹¹ Many of the electors pay their rates indirectly, and it is thought by some witnesses that this leads to lax administration and a high rate of pauperism. We revert to this matter in Part VIII.

¹ Herbert, Vol I., App. xvii. (A), 99; Read, 75966; Copeman, 74463; Davy, 2058. ² Statistical Appendix, Part X. ³ Visits: Rural, 35, 67, &c. ⁴ Bonar, 29635-6, Bowen-Jones, Vol. VII., App. ci. 81. But the root of the evil in our judgment is to be found in the absence of any sufficient qualification in those who elect the Boards of Guardians, and in the Guardians themselves. Persons who are not qualified even to vote at a Parliamentary or County Council election may be elected as Guardians on a franchise wider than either the Parliamentary or County Council franchise.¹ Twelve months residence in a parish is a sufficient qualification for a person to be elected as a Guardian,² and, provided a man has this qualification, he may have been a pauper or a mendicant, and the law will still pronounce him qualified to be elected as a Guardian.³ Moreover, it is technically possible for such a person, who pays no rates himself, to be elected to this position of high responsibility by voters, many of whom themselves pay no rates directly and have, therefore, no immediate interest in nor knowledge of the amount of expenditure which is placed upon the ratepayers. Or, even worse, the voters may themselves be prospective claimants for relief, and that from a Board which they know will be favourably prejudiced towards their claims: as instance the Board of Guardians who acquiesced in the following view:—

“We are sent here to give outdoor relief to our relations, our fathers, and our mothers, and our sisters, and our brothers, and our cousins, and our uncles, and our aunts, and if we did not do it we should very soon be sent about our business.”⁴

It seems clear to us that so long as such a state of affairs is even remotely possible, the law itself provides no guarantee whatever, that responsible and proper persons shall be elected as Guardians.

82. We have, therefore, scrutinised our evidence with a view to ascertaining what classes of persons as a matter of fact are elected to be Guardians under the existing system. In the rural districts there is an overwhelming mass of testimony to show that the tone and policy of the Boards of Guardians is largely determined by the tenant farmers, who are in a great majority.⁵ Interspersed among the mass of farmers are a few clergymen, still fewer country gentlemen, and a sprinkling of land agents and small tradesmen.⁶ On the one hand, as a rule, the country gentleman is unable to secure election,⁷ or holds aloof because he is not willing to seek election, and on the other hand the country labourer is missing because he cannot afford the time.⁸ There is also apparently in many parts of the country a very real difficulty in any woman securing election as a Guardian.⁹ In the year 1907 there were 16,001 Rural District Councillors, all of whom were *ex-officio* Guardians. Amongst this number there were only 146 women; that is, the number of men and women respectively was in the proportion of 109 to 1.¹⁰

83. In the towns the evidence points to the bulk of the representation on Boards of Guardians being in the hands of present or past tradesmen,¹¹ and in some Unions, the tendency seems to be in the direction of electing a lower class of small shopkeepers.¹² In urban Unions, the preponderating influence of the shopkeepers is, however, modified on the one hand by representatives of the working men¹³ and on the other by a sprinkling of clergymen and professional men.¹⁴ There are also a fair number of

Defects in
administration
and some of their
causes.

urban Unions in which women seek election and become Guardians;¹ of the 8,231 Guardians serving in 1907 who were elected for urban parishes 953 were women, the proportion here being nine men to one woman.²

84. Two shortcomings in administration are specially conspicuous.

85. On the one hand, and perhaps especially in the case of rural Guardians, it is alleged that excessive economy has tended to impair the administration in such matters as the supply of proper buildings,³ the provision of sufficient relieving officers,⁴ and the granting of adequate relief.

86. Thus, Mr. Preston-Thomas, the late Senior Inspector of the Local Government Board, says of the west country :

"A difficulty is, that in London, for instance, and in some other districts, one important function of the Local Government Board may be to cut down proposals for spending, whereas in the west it is all the other way. We have to try exceedingly hard to get most of the Guardians to spend money for the most necessary purposes, so that we have to push them to spend, and not to curb their extravagance. I can give you numbers of instances as to the difficulties I have had in getting an infirmary built for the sick, or something of that sort. It is generally done in the end, but the reluctance of the farmers has to be combated. They always look at every penny they pay in rates very keenly, and they come in and oppose expenditure of all kinds."⁵

Mr. Willis Bund, Chairman of the Worcestershire County Council, says their one idea "is to keep down the rates."⁶ Mr. Ross says: "Rural District Councils, with little debate, will add £100 or more to the expenditure on the roads but . . . haggle long about a shilling more or less to a widow's outdoor-relief."⁷ Mr. Macnaughton-Jones stated that they "are desperately keen in cutting down relief to the last farthing to save the rates."⁸

87. When the rule of economy is broken it is often in favour of particular paupers in whom particular Guardians are interested. Thus, Mr. Preston-Thomas says:—

"It is a little different *** when the question is whether they shall be generous, as they call it, to this or that individual applicant for relief, and what they call their generosity, which is often very bad for the community, in particular cases outweighs their desire to be economical."⁹

Thus, too, one relieving officer thinks that the system by which Guardians become associated with the interests of those they represent paralyses the efforts of a relieving officer to keep down relief.¹⁰ Or, again, the average Guardian's interest in his work is confined to interest in a particular case when out-relief is applied for,¹¹ and "a Guardian frequently acts as special pleader on behalf of a particular applicant, sits in judgment, and votes upon the case."¹² Applicants for relief will speak of "my friend on the Board."¹³ The injustice of such procedure is emphasised by Mr. Mackay, who says: "It is cruel that poor people should go to the Board of Guardians and have it left a mere question of chance whether their particular friend is present or not, whether they get relief or not."¹⁴

(25). ¹³ Klassen, Vol. IX. App. lxxviii. (10). ¹⁴ Mackay, 30026.

88. In fine, there is, as will be seen by a reference to the evidence, a body of testimony which we cannot overlook to the effect that the policy of many Boards of Guardians is one of parsimony tempered by patronage.¹

89. On the other hand, in the towns there are not wanting, as has been above explained, indications that political motives govern the conduct of many of the Guardians,² who are often elected by the help of political organisations;³ with the result that, in contrast with the rural districts, extravagance rather than parsimony dominates their policy.⁴

90. Moreover, the system does not always exclude the election of persons whose motives in administering the Poor Law are inextricably interwoven with their own interests.⁵ Thus, Dr. Burnet says:—"It is impossible to get a complete Board of Guardians in any Union which is not liable to be associated with self-interest with respect to some of its members."⁶ Cases have been brought to our knowledge in which Guardians have been administering relief to those on whom they rely for support in their business, as customers or tenants. Scarcely more creditable is the case of those who seek election as Guardians with a view to the patronage which the distribution of relief confers.⁷ We do not intend to imply that the instances we have cited are necessarily typical of the characters and motives of Guardians as a whole. On the contrary, we are convinced that a very large number of Guardians are as a class not actuated by motives of self-interest in their administration. But all this points to the absence of safeguards against the election of undesirable Guardians under the existing system.

91. We are reluctantly forced to the conclusion that whatever may be the high qualities of individual Guardians or individual Boards of Guardians, the system of direct election has not succeeded on the whole in giving us Local Authorities who have an adequate or uniform appreciation of the difficulties and responsibilities which beset the administration of the Poor Laws.

92. Under the present method of direct election for small and self-contained areas there is no security that the Guardians elected will be those who are most suited to the position. The work is tending more and more to fall into the hands of persons who, caring more for their own interests than for those of the community, direct their administration more towards the attainment of popularity than towards the solution of the real problems of pauperism. It is not a class question in any sense; as one witness tells us, "it is not a question of the social *status* of the Guardians, still less of wealth or poverty. I have known some of the best Guardians the poorest and *vice versa*."⁸ But it is a question of choosing, from whatever class in the community, experienced, thoughtful, and, above all, disinterested men and women to perform a most important public service. We believe that there are many such men and women quite prepared to give the service, who will not face a popular election carried on under the present conditions; and who, in particular, will not make the promises of liberal relief which are so potent in an election and so fatal to good administration. At present there is no doubt that the work of Boards of Guardians has fallen into disrepute, and nothing short of a determined effort will restore it to the esteem which it deserves. As a step towards this we shall recommend that, in future, the members of the Local Authority shall be largely nominated from amongst men and women of experience, wisdom and unselfish devotion to the public good. It is hoped that many of the evils alluded to will then disappear, and the way be prepared for a disinterested and progressive administration.

Proposed change
of title for the
Local Authorities.

93. In accordance with the change of title recommended for the Division of the Local Government Board which at present deals with Poor Law matters, we also recommend that the new Local Authority shall be known as the Public Assistance Authority, and that the bodies which carry on its work in the smaller areas shall be known as the Public Assistance Committees. The name is not intended to disguise the fact that those who come within the scope of the operations of the new authority are receiving help at the public expense ; but it is intended to emphasise the importance of making that help of real assistance. We hope also that the change may make it easier for those directly engaged in administering relief to build up new traditions, and to carry on their work with a higher aim before them.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 2.

(1) *The powers of Magistrates mentioned in Par. 59, may be regarded as obsolete and should be abolished. (61.)*

(2) *In future the members of the local authority should be largely nominated from amongst men and women of experience, wisdom, and unselfish devotion to the public good. (92.)*

(3) *The new local authority should be known as the Public Assistance Authority, and the bodies which carry on its work in the smaller areas should be known as the Public Assistance Committees. (93.)*

Chapter 3.

OFFICERS OF THE LOCAL AUTHORITY.

94. For an efficient administration of relief the Local Authority must depend very largely upon the officers by whom it is served. Unless there are capable men and women, giving their best energies to carrying on work which is always arduous and sometimes very delicate, the people committed to their care will inevitably suffer and the whole administration of the Poor Law will deteriorate. So much was this felt by the Royal Commission of 1832, that the provision of properly paid and efficient officers was one of the express purposes for which they recommended the incorporation of parishes into Unions;¹ and the Poor Law Commissioners in their First Annual Report lay special emphasis on the advantages of a large over a small area in the matter of obtaining a competent staff of officers.²

95. But even with an enlarged area, the Royal Commission could not “conceal their fear”³ that it would be difficult to secure the appointment of efficient officers. Accordingly, they advanced many arguments in favour of allowing the Central Authority to appoint the local officers, and only refrained from positively recommending this drastic course on account of the practical difficulty of making a Central Department responsible for so vast a number of local appointments. Their final recommendations, which are embodied in the Act of 1834, were that the officers should be appointed by the Local Authorities, but that the Central Authority should prescribe their qualifications and have power to dismiss them when unfit.⁴ One recommendation not incorporated in the Act was that the Central Authority should have power to “recommend” to the Local Authorities proper persons to act as paid officers. On the other hand, the Act went further than the specific recommendations in that it enabled the Central Authority to fix the salaries, duties, and method of appointment of all Poor Law officers, and to direct what kind, and how many, of such officers each Local Authority should appoint.⁵ By the first Regulations made under these powers, every appointment by the Local Authority was to be reported to the Central Authority “so that they might approve or disallow” of the same, and for some years the Poor Law Commissioners did not hesitate to withhold their sanction to unsuitable appointments.⁶

96. These Regulations in regard to the appointment of officers were practically repeated in the General Consolidated Order of 1847, which is still in the main the charter of the rights and duties of Poor Law officers, both in relation to the Central and to the Local Authorities. Under this Order, the appointment of paid officers is not subject to the sanction of the Local Government Board, but their salaries are;⁷ and this, combined with the power to dismiss, gives the Central Authority control (if they wish to exercise it) over the appointment of every important Poor Law officer in England and Wales. In addition, by subsequent legislation, the Local Government Board has statutory power to appoint necessary officers in case the Guardians refuse to do so.⁸

97. We have pointed out in a previous chapter the great control over local administration which the Central Authority possesses in virtue of its relations with the local officers. It must not, however, be supposed that the Guardians are without control and authority over officers.

¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 326. ² First Annual Report, Poor Law Commissioners, H.C. 500, 1835, p. 11. ³ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 326. ⁴ *Ibid.*, p. 329. ⁵ 4 & 5 Will. IV., cap. 76, Sec. 46. ⁶ Third Annual Report, Poor Law Commissioners, H.C. 546-1, 1837, p. 49, par. 20. ⁷ General Consolidated Order, 1847, Art. 172. ⁸ 31 & 32 Vict., cap. 122, Sec. 7; 30 & 31 Vict., cap. 6, Sec. 80.

over their officers. On the contrary, it is the Guardians who select and appoint the officers,¹ and it is only in very extreme cases that the Local Government Board interferes with their selection. When the Board is only doubtful of the wisdom of an appointment, it is always willing, if the Guardians desire it, to allow the selected officer to be appointed temporarily on probation. After appointment the officers must obey all lawful orders of the Guardians,² and the officers know that it depends on the Guardians in the first instance whether any increase is made in their salaries and is sanctioned by the Board; while minor amenities such as hours, leave of absence, etc., are entirely within the discretion of the Guardians.

98. As regard the termination of officers' appointments, the Clerk, Treasurer, Chaplain and the Medical Officers can be dismissed only by the Local Government Board.³ The master and matron, schoolmaster and schoolmistress and superintendent nurse of a workhouse, and the relieving officer, can be dismissed by the Guardians with the consent of the Local Government Board, and with the like consent these officers' appointments may be terminated by three months' notice at any time within twelve months of their appointment.⁴ Moreover there are a number of subordinate officers whom the Guardians can appoint, pay and dismiss, at their discretion.⁵ The Guardians have power of suspending from their duties, officers other than the Clerk, Treasurer, and Chaplain.⁶ Such suspension, if confirmed by the Local Government Board and followed by dismissal, carries with it loss of salary during the period of suspension.⁷

99. To sum up, therefore, except as regards the salary and dismissal of superior officers, the Guardians can exercise effective supervision and control over their staff.

100. It is alleged to be a disadvantage of the existing arrangements as to tenure of office, that, after the expiry of the probationary period, it is very difficult, if not impossible, for the Guardians to get rid of an officer on the ground of unsuitability, apart from misconduct.⁸ The Local Government Board can, under Section 46 of the Act of 1834, determine the continuance in office or dismissal of any Poor Law officer, but commonly it takes action only when the case comes under Section 48 and the officer in its opinion ought to be removed on the ground of unfitness, incompetency, or wilful disobedience to its orders;⁹ but it is alleged that officers may occasionally become unsuitable for their posts to an extent which causes friction, or apathy in administration, and yet the unsuitability may not amount to positive unfitness or incompetency for office, such as would justify dismissal by the Local Government Board under the latter Section.¹⁰

101. In view of the importance which we attach to the maintenance of an efficient staff, we think that there should be greater facilities than at present exist to enable a Local Authority to get rid of an apathetic or unsuitable officer; we therefore think that, when a Local Authority and the Local Government Board concur in the opinion that the retention of any officer is on general grounds detrimental to the administration, the Local Authority should have power to terminate that officer's appointment after proper notice.

102. With this exception, however, we do not think it would be wise at the present juncture to recommend any alteration in the existing method of terminating the appointments of officers. The whole question was considered in 1860-4 by a Select Committee of the House of Commons, who unanimously recommended:—

“That in order to secure the due discharge of their duties by the principal officers of Unions and parishes, it is essential that their tenure of office should not be terminable without the concurrence of the Central Authority.”

The grounds for this recommendation were:—

“If the tenure of officers was altogether uncontrolled by the Central Authority, they would not only perform their duties less independently, but would be subject to removal from personal bias, political causes, and various other motives which ought not to be allowed to operate in deciding upon their fitness or unfitness to retain office.”¹¹

¹ Curtis and Battersby, 28, 997. ² General Consolidated Order, 1847; Art. 154. ³ *Ibid.*, Art. 187.
⁴ Order, February 12th, 1879, Art. 1. ⁵ General Orders, August 19th, 1867, and September 7th, 1899.

Committee on Poor Relief (255), 1864, p. 13.

103. It is true that we propose to set up a new Authority which we trust will be free from any suspicion of acting on grounds of personal or political bias ; but on the other hand the very fact that we are proposing to set up a new system under a new Authority renders it more desirable that the new authority should be assisted and advised by officers who are in a position to carry out their duties independently and in accordance with the spirit of the new Regulations. A new Local Authority may not always at the outset see the reason for Regulations with which they are not familiar ; and if the Central Authority is to be ultimately responsible for laying down and enforcing the Regulations of the new system, it is essential that it should retain some control over the officers who carry out these Regulations under the supervision of the Local Authorities.

104. We think, however, that the Local Government Board should lay down more precisely the qualifications for the higher offices under the new system. If this were done the future Authority might be given full discretion in appointing to these offices, but we think that in all cases evidence should be furnished to the Local Government Board that the qualifications are fulfilled.

105. Down to the present time little has been prescribed by way of qualification.¹ For instance, the only disqualification prescribed for the important office of Clerk to the Guardians is that the person appointed shall not be a legal infant.² The only qualification for the master of a workhouse is that he must be able to keep accounts.³ Until 1897 the only qualification for the office of nurse was that the person appointed should be able to read written directions upon medicines.⁴ Even these modest safeguards may be dispensed with by the Guardians with the consent of the Local Government Board.

106. We do not propose to enter into any details as to what these qualifications should be, as this is a matter which the Central Department might be trusted to decide after consultation with experienced Local Authorities and officers. We think it is clear that no person should be appointed as Clerk who has not some knowledge and experience of the Poor Law, no person as superintendent of an institution who has not had some experience in dealing with the classes which the institution contains, and no person as a relieving officer who has not had some previous training as an assistant relieving officer or has not passed an examination and obtained a certificate of an examining authority recognised by the Local Government Board.

107. Already a system of examinations has been adopted with courses of instruction for relieving officers and others in connection with the London School of Sociology and Social Economics. Established first of all in London it has been extended to Liverpool in connection with the School of Social Science (Liverpool University) and is now being extended to other centres. It has been stated by the National Poor Law Officers Association that they contemplate "establishing a board of examiners empowered to issue certificates of proficiency and qualification to hold appointments in the Poor Law service to members and others," something like the Sanitary Examination Board in London.⁵ We recommend that some system of certificates should be instituted with courses of instruction and examination prescribed by the Local Government Board, and, if possible, in connection with an institution or institutions recognised for the purpose by the Universities. But whatever the more precise qualifications ultimately decided on, we think that once these are laid down, the entire responsibility for the appointment of all officers might be left to the new Local Authorities. It would not then in fact be legal for the Local Authorities to appoint any person without the prescribed qualifications, and, on the other hand, it would be legal for them to appoint any person with the prescribed qualifications. In the same way we think the Local Government Board might sanction a scale of officers' salaries for each local authority, and so long as the salaries, or increases of salaries were in accordance with that scale, it should not be necessary for the Local Authority to require the sanction

¹ General Consolidated Order, 1847, Arts. 162-6. ² *Ibid.*, Art. 162. ³ *Ibid.*, Art. 163. ⁴ *Ibid.*, Art. 165. ⁵ Curtis and Battersby, 28796 (30), 28998. *Vide also* Williams, 45554 ; Craig, 19466 (29) ; Hill, Vol. IX., App. lxiv.

of the Local Government Board to individual salaries. In this manner, we think that the freedom of the Local Authorities might be increased and the Central Authority at the same time released from a mass of routine work in regard to individual appointments and salaries.

Salaries of
Officers.

108. It will be seen that we still propose to retain a central control over the amount of the salaries of local officers. We think that the retention of such control is justified in view of the great rise especially in London during recent years in the amounts expended upon the salaries and other remuneration, rations, and superannuation allowances of Union officers and servants, notwithstanding the restraining influence of the Local Government Board. In the year 1852-3 this expenditure amounted to £596,000¹ whilst in 1905-6 it had grown to £2,491,000.² The number of the principal officers has no doubt increased, but in nothing like the same proportion. In the years 1872 and 1906 the principal offices held under the Poor Law Authorities numbered respectively³:-

| | 1872. | 1906. |
|---|--------|--------|
| Clerk - - - - - | 661 | 670 |
| Chaplain - - - - - | 544 | 599 |
| Medical officers (institutional) - - - - - | 741 | 1,010 |
| Medical officers (district) - - - - - | 3,458 | 3,718 |
| Master, steward or superintendent - - - - - | 716 | 812 |
| Matron - - - - - | 734 | 835 |
| Schoolmaster or schoolmistress - - - - - | 924 | 448 |
| Nurse - - - - - | 1,406 | 6,094 |
| Relieving officer - - - - - | 1,606 | 1,892 |
| | 10,790 | 16,078 |

109. We do not intend to imply that the amount at present spent upon the salaries, etc., of officers is necessarily in excess of what is needed for a proper administration of Public Assistance. An adequately paid and efficient staff of officers should be in itself a safeguard against lax or corrupt administration, and their cost should be regarded as a form of insurance against the calamity of a growing pauperism. This point of view, and the danger of unduly restricting the salaries of Poor Law officers, was so ably put by the Poor Law Commissioners of 1840, that we feel justified in reproducing the gist of their argument:-

“It is difficult to overrate the importance to a Union of possessing a body of efficient paid officers. Without efficient paid officers no Union, of whatever size, can conduct its Poor Law business in an economical and satisfactory manner. Although the vigilant superintendence of the Guardians is necessary to the well-working of the Union, it is not alone sufficient; and without able instruments for carrying the directions of the Guardians into effect, even a closer and more constant attention to details than can fairly be expected of a body of unpaid officers, would fail to accomplish the desired purpose. Many of the results produced by efficient Union officers are positive and apparent, such as the order, cleanliness, and salubrity of the workhouse; the good discipline of its inmates; the progress of the workhouse children in industrial, moral, and religious acquirements; the regular keeping and accuracy of the Union accounts; a frequent inspection of the outdoor paupers; a reduction of outdoor pauperism and of vagrancy. On the other hand, many of the results produced by efficient Union officers are merely negative, and, therefore, although they may be equally important with the others, they are likely to escape the attention of many persons, and their existence can always be disputed by uncandid reasoners. Thus the great diminution in the law expenses of parishes which had taken place since the passing of the Poor Law Amendment Act is partly to be attributed to the changes in the law effected by that Act, and partly to the measures and the advice of the Poor Law Commission; but it is also to a large extent to be attributed to the management of parochial business by a class of officers superior to the parish overseers; officers, many of whom (particularly the clerks of unions) had had a professional education, and could, therefore, save parishes from the rashness, the ignorance, and the carelessness which, directly or indirectly, produced so much of the vexatious and expensive litigation which took place under the unreformed system. In like manner, when pauperism has been diminished or prevented from increasing, by the exertions of the Union officers, the small quantity of their apparent business (which is owing to their efficiency) is made an argument for reducing their salaries, or even for dismissing them altogether. A similar mode of reasoning has been sometimes employed respecting policemen who have been thought useless, in the exact proportion in which they were successful in preventing the commission of crimes.”

¹ Sixth Annual Report, Poor Law Board, 1797-1854, p. 90.

² Thirty-sixth Annual Report, Local Government Board [Cd. 3665], 1907, p. 403.

³ Second Annual Report, Local Government Board [Cd. 748], 1873, pp. 330-1 and [Cd. 3665], 1907, p. 438.

110. It is not, therefore, our intention to suggest that the salaries of Poor Law officers should be reduced; but it will be our endeavour to introduce a system which ensures that the country obtains the full benefit which ought to be derived from the services of an adequately supervised and adequately remunerated staff of efficient officers.

111. Our attention has been called to the restrictive effect which the Poor Law Officers Superannuation Act, 1896 may in some cases have upon the circulation or promotion of officers in the Poor Law service. Under the terms of that Act an officer is entitled, at a certain age or in certain events, to a superannuation allowance.¹ The allowance is payable in full by the particular Union by whom the officer is employed at the time when he becomes entitled to his allowance.² On the other hand, from the commencement of an officer's career each Union which employs him in turn deducts and retains a certain percentage of his salary by way of contribution towards the superannuation allowance. These contributions remain the property of the Union which has deducted them, and are not transferred to any other Union which may subsequently employ the officer.³ Effect of the Superannuation Act.

112. Under this arrangement it is clearly to the financial advantage of a Board of Guardians, in making an appointment, to select a young officer who presumably will make many contributions before he becomes entitled to superannuation, rather than an older officer, who will become entitled to superannuation at an earlier date and the bulk of whose contributions have already been paid to some other Union or Unions.

113. We have received evidence to the effect that these considerations do prejudicially affect the chances of elderly and experienced men being appointed to Poor Law posts.⁴ We think it highly inexpedient that any inducement should be given to the appointment of inexperienced officers, or that middle-aged officers should be led to believe that, however efficiently they perform their duties, they have no chance of promotion to better positions in other Unions.

114. We strongly recommend that this restriction on the mobility of the Poor Law service be removed and that a central superannuation fund be established for the whole service,⁵ and we think that, in the case of teachers transferring themselves from public elementary schools to the Poor Law service and, *vice versa*, arrangements should be made by which any sacrifice of pension is avoided.

115. We have now dealt with what appear to us to be the more important matters affecting the Poor Law service as a whole. We pass on to consider the duties and position of the higher officers in that service at the present time, and the changes which will be necessary under the system which we propose to introduce.

116. The Clerk to the Guardians is perhaps at present the most important officer of the Local Authority. He conducts all their general business, is the channel of communication between the Central Authority and the Guardians and other officers, and has multifarious duties which are prescribed in the General Orders and by Statute. In addition, if a Solicitor or Attorney, he conducts all ordinary legal business connected with the Union without extra remuneration; and he is the skilled adviser of the Guardians in all technical and administrative matters, such as the interpretation of the law, or of the Orders and Regulations of the Central Department.⁶ In large urban Unions, his position is one of little less responsibility than that of Clerk to the Borough or County Council. On the other hand, in a large urban Union, although he is the expert adviser of the Guardians in all technical matters, it is held to be no part of his duty to supervise and guide the relieving officers in the discharge of their duties. Neither has he that power over subordinate officers nor that responsibility over the general administration of relief which devolves upon the Inspector of Poor in Scotland.⁷ In rural Unions, the volume of his duties may be less, but his responsibility is equally great. Clerk to the Guardians.

¹ 59 & 60 Vict., cap. 50, Sec. 2. ² Davy, 1930. ³ Curtis and Battersby, 28967. ⁴ Davy, 1930. Anderson, 39013 (18); Curtis and Battersby, 28966. ⁵ *Vide* Memoranda by Home Office and Board of Education relating to Superannuation of Police and Elementary School Teachers respectively. Statistical Appendix, Part XVIII. ⁶ General Consolidated Order, 1847, Art. 202; Amendments of Consolidated Orders, 1866, Art. 3. 4. ⁷ *Vide* Part IX., par. 19.

117. In many of the urban Unions the Clerk gives the whole of his time to his duties, but in the smaller urban and in the rural Unions only part of his time is usually given to them.¹ The advantages of a "whole-time" appointment are that the Clerk gives his undivided attention to his work and is more likely to have a complete grasp of those details the mastery or neglect of which in the aggregate makes good or bad Poor Law administration.² The advantages of a "part-time" appointment are that the Guardians are thereby enabled to obtain the services of a higher type of man than they could afford to pay as a whole-time officer, especially where the work is not sufficient to occupy the whole time of an able man.³ These considerations are of special weight in the country, where the Guardians often find it to their financial interests to employ as Clerk a local Solicitor who is also Clerk to the Magistrates.⁴ In certain of these cases, we found from actual experience that the Clerk knew little or nothing about the Poor Law or its administration,⁵ but relied upon some subordinate in his office for guidance and for the necessary knowledge in such matters.⁶ Such division between responsibility and knowledge is not, in our judgment, to be defended. We, therefore, recommend that the Clerk of the future or any officer performing analogous duties to any Local Authority, shall not, save under very exceptional circumstances, and subject to the consent of the Local Government Board, be a part-time officer.

Workhouse
masters.

118. In regard to workhouse masters, the "general workhouse" system imposes upon the official head of the workhouse responsibility for the care of children, healthy adults, imbeciles, aged and sick persons. The workhouse master is expected to exercise supervision over the workshop, nursery, school, asylum, and hospital. The position in fact, is impossible, and is recognised to be so by the more thoughtful of the masters themselves;⁷ moreover, they complain that their difficulties are enhanced by the amount of book-keeping imposed upon them, which distracts their attention from their more responsible duties of supervising the care of the inmates.⁸ If, as we intend to recommend, the "general workhouse" is abolished, each of the specialised institutions which takes its place will require a superintendent, qualified by knowledge and experience for its management. The selection of men for such posts will be a matter requiring great care and discrimination, and the salary offered must be sufficient to attract men not merely of organising power, but having the moral qualities necessary to develop the capacities of those under their charge.

119. Similarly in our judgment highly trained officers will be required in what are now regarded as less important posts. Whilst visiting workhouses in different parts of the country we have noticed, especially in thickly populated urban Unions, that the number of labour masters is often insufficient, and that they lack the training needed for the difficult duties which they have to perform. The marked improvement in the treatment and condition of the sick in Poor Law infirmaries, which is seen everywhere, is due in great measure to the introduction of trained nurses. If the condition of the able-bodied is to be improved in like manner the qualifications of those entrusted with their care must be raised. For purposes of comparison we have visited some of His Majesty's prisons, and we have been impressed by the industry which we found there as contrasted with the listlessness and idleness of a workhouse. After making every allowance for the fact that detention is the rule in the one case and not in the other, we are of opinion that the difference is due to the thoroughness of the supervision exercised by warders and the curative treatment recently introduced by the Prison Commissioners.

120. In this connection we desire to call attention to the need which exists for an extension and improvement of the religious ministrations which are provided in Poor Law institutions. All denominations are in our judgment entitled to receive religious instruction from the clergy of their respective churches, and provision for this need ought to be made. To secure the moral welfare and progress of all the inmates of a workhouse is as much a duty as their physical maintenance, and without religious and moral influences improvement is impossible.*

* *Vide Appendix.*

(8); Davies, Vol. VII., App. cix. (8); Cross, Vol. VII., App. clxxi. (22); Ingledew, Vol. V., App. xxvii. (13).

121. Before we leave the subject of indoor officers we desire to express a strong opinion that the indoor staff should be allowed to live out, where circumstances permit, and so far as is consistent with discipline and the proper discharge of their duties. We cannot approve of a system by which persons with families are practically excluded from indoor appointments, or by which parents are separated from their children at a time when parental control is important. We believe that in most institutions arrangements could be made by which the number of resident officers would be greatly reduced.

122. In so far as the Local Authority is engaged in adjudicating upon individual cases, Relieving the most important of their officials is the relieving officer.¹ Unless he submits the cases officers. to them with impartiality and a full knowledge they cannot be sure of coming to a wise decision. It is true that Guardians sometimes have local knowledge that is useful, but even the intimacy of a lifetime will often fail to reveal essential facts while it may still more often stand in the way of an impartial and independent judgment; and quite as essential is the constant supervision and attention which a good relieving officer gives to the cases under his care.²

123. In the Orders and Regulations of the Poor Law Commissioners, provision is made for the appointment of relieving officers³ and in subsequent sections their duties are defined. Those duties, as now prescribed in the General Consolidated Order, will be found set out in full in Mr. Adrian's evidence.⁴ Briefly, they are: To receive all applications for relief, and forthwith to examine into the circumstances of every applicant by visiting the house and by making all necessary inquiries; to visit from time to time all paupers receiving relief; to report to the Guardians; to carry out the instructions of the Guardians with reference to relief; to supply immediate relief in cases of sudden and urgent necessity; and to procure medical attendance where necessary.

124. It is clear that the efficiency of the Guardians' administration must depend very largely upon the faithfulness and intelligence with which these duties are carried out by their officers. Unless full and accurate information is laid before them they will not be in a position to form a right judgment upon the needs of an applicant, and may be gravely misled as to the right course to pursue.⁵ On the other hand, unless the Guardians give proper weight to the relieving officer's evidence, and are to some extent guided by his opinion, he is only too likely to become discouraged and indifferent.⁶ We have been much impressed by what we have seen and heard as to the importance of preserving the right relation between the relieving officer and his Board, and by the great diversity of practice. It happens not infrequently that where the relieving officer is a masterful man, he completely dominates the situation making known as much or as little of the facts of the case as he chooses, and dictating to whom relief shall or shall not be given, and in what amount.⁷ It is a practice which may work without any serious miscarriage of justice, but it is clearly open to grave abuse; and it is fatal to any genuine interest in the work by the Guardians themselves when they merely ratify the decisions of their officer.

125. But the results may be still more serious where the information and recommendation of the relieving officer are brushed aside, and the cases dealt with on other grounds.

"The relieving officer is paid to know, and, if he has time and is not overworked, ought to know all the facts, but I have over and over again seen his judgment and recommendation overridden by Guardians whose feelings or want of knowledge or partiality overcame their reason. That is a great discouragement to the relieving officers, who have often complained to me of this weak point in administration."⁸

The President of the Metropolitan Relieving Officers' Association says:—

"Relieving officers generally feel that their advice and opinion should not be so readily set aside as it is at the present time;⁹ I have heard relieving officers make this remark time after time:

¹ Morris, 16675. ² Rigby, 40718 (16); Cooper, Vol. IV., App. lxii. (17). ³ First Annual Report, Poor Law Commissioners, H.C. 500, 1835, p. 159. ⁴ Adrian, 232. ⁵ Visits: Urban 2 D. ⁶ Thompson, 22801-2; Dodd, 47191 (34i); Chance, 27301; Visits: Urban, 22 C, 24 B; Jones, 49790. ⁷ Visits: Urban, 5 A, 25 A, 45 B; Rural, 75, 82. ⁸ Bagenal, Vol. I., App. xv. (A) (131). ⁹ Thompson, 22636.

‘What is the good of our making inquiries and looking into cases when the Guardians will not take any notice of our recommendations when we bring the case up?’¹ We feel that experience is so often set aside for personal policy.”²

In places where the poor are allowed to make statements for the purpose of obtaining relief without due verification being made of these statements, a whole class of the population is being tempted daily into habits of deceit. Of one London Union we are told:—

“Inquiry into character of applicants for out-relief and into truth of their statements is discouraged. In no case are employers asked. The superintendent relieving officer has applied three times to the Guardians for permission to request the officers to ascertain the wages of persons applying for relief. They absolutely refused to grant such permission. The result is: ‘We are “done” every day we rise.’ On several occasions it has been found that recipients of out-relief under-stated their earnings, or that after relief had been granted they obtained remunerative employment. These facts, when brought to the knowledge of the Guardians, are ignored, and the relief is continued as before.”³

126. Perhaps the most striking evidence in this connection is a list of cases from Leicester in which relief has been continued by the Guardians although the relieving officers have reported the cases as unsatisfactory.⁴

127. In one respect the position of the relieving officer in relation to the Guardians is a peculiarly difficult one for him. He is their paid servant, and is bound to carry out their instructions with regard to relief; and yet it is he who is responsible if, in consequence of those instructions, any misadventure should occur. If, for instance, the Guardians order that relief shall be given only in the workhouse, and the applicant refuses to enter, then the relieving officer is not free from responsibility but must “watch the case,” giving sufficient food from time to time to prevent starvation⁵:—

“It is a most onerous responsibility, and what is more, exposes the relieving officer to threats of being indicted for manslaughter and so on in case the man dies.”⁶

The Metropolitan Association of Relieving Officers ask that their members may be relieved of this responsibility. They say:—

“Where a case has been adjudicated by the Board of Guardians and they are of opinion that indoor relief is the proper relief to offer, then the relieving officer should not be left with the responsibility of dealing with the cases when the applicants object to go inside.”⁷ . . .

“The Guardians will very often tell the officer that he must watch the case. But what is meant by watching the case?—simply that to protect himself he goes and gives them relief. . . . We feel that it should not rest with us. We feel that the applicant having had the opportunity of accepting or rejecting the relief offered, should abide by the consequence of his own choice.”⁸

128. We think that this request is reasonable, and we would add that, in our opinion, this construction of the law imposes on relieving officers an excess of obligation which interferes with the just and proper administration of relief. If there is any dereliction of duty there is ample opportunity for the Local Authority or for any private person to report the matter to the Local Government Board, who can investigate the complaint, and if he is culpable, deprive the officer of his post. We think that administrative appeal and administrative action on these lines should be sufficient

129. It is clear that if the relieving officer is to perform his work satisfactorily he must not be burdened with too large a number of cases. This is important not only from the point of view of the original inquiries, but also from that of the subsequent supervision. His duty is not ended when he has carried out the first order of the Guardians. A large number of cases remain on his books for a considerable time, many are permanent, and these should be constantly visited. We have found a great diversity of opinion as to

¹ Thompson, 22638. ² *Ibid*, 2271.5. ³ Report as to Effect of Outdoor Relief on Wages and the Conditions of Employment in London, by Miss Williams and Mr. Jones, p. 13. ⁴ Kemp, 46894-6, App. xxv. (a) ⁵ Adrian, 758-60, 955-60; *vide also* Young, 69537 (9), 69587, 69595-601; Burnell, 68171-5; Hurworth, 53035-43; Solomon, 50703. ⁶ Davy, 3020. ⁷ Thompson, 22572. ⁸ *Ibid*, 22573-4.

the number of cases which a relieving officer can look after, and a still greater diversity of practice. Mr. Bagenal writes on this point :—

“As to the number of cases which a relieving officer can deal with, both population and acreage must be taken into account. A very experienced superintendent of out-relief expressed quite recently to me the opinion that in a small densely populated district a good relieving officer can look after 300 cases, assuming he has no other duties and there is a superintendent and cross-visitor.”¹

Mr. Lockwood quotes an experienced officer as holding that the proportion should not exceed 150 to each officer.² Mr. Preston-Thomas says :—

“In many of the Unions, the staff of relieving officers is so inadequate as to make it quite out of the question that cases should receive sufficient investigation; and some Boards of Guardians, even if they desired to reform their present laxity in the grant of relief, would probably find it impossible to do so without reorganising their official machinery in this respect. Cases are too often decided according to the sympathies of individual Guardians rather than on facts systematically ascertained by relieving officers. . . . The Local Government Board have indicated between 250 and 300 as the maximum number with which one relieving officer can efficiently deal.”³

Mr. Preston-Thomas quotes, as an instance, the case of Barnstaple in 1902 :—

“For 1,479 outdoor paupers it has only three relieving officers, much of whose time is taken up with other duties, two of them being also inspectors of nuisances, while the third is so much occupied with his functions as registrar that he has frankly stated his inability properly to investigate the circumstances of the paupers to whom he administers relief; and of whom he has over 700 on his books.”⁴

In this case the Local Government Board intervened, and insisted on the appointment of another officer with the result that :—

“they had saved the salary of the officer several times over, and they were now in a position to judge whether their people wanted relief or did not want relief, which was the great thing.”⁴

130. The largest proportion of cases to relieving officers which has been reported is at Leicester, where in 1906 it stood over 1,000, and is still more than 800 to each officer.⁵ It is obvious that where the number of families becomes too large they cannot be looked after in a satisfactory manner; and we have satisfied ourselves, both by looking over the officers' books and by attending at Relief Committees, that, in many Unions, the information obtained is quite inadequate to a proper understanding of the cases.^{6*} Our view practically coincides with that of the Royal Commission on the Aged Poor who report :—

“In urban districts there is no doubt that these (relieving) officers. . . have often far more work than they can properly perform, and this is especially the case where outdoor relief is freely given.”⁷

We recommend, therefore, that in any scheme or regulations for the administration of relief in local areas, the proportion of cases to officers be carefully and periodically revised.

131. The position is complicated by the difficult question of pay-stations. The best work is done when the relieving officer has time to take the money to the home each week, and so see for himself the position of the recipients; but owing to the large number of cases, and in country districts to their remoteness from the

* Although the population and the extent of the district are not the only factors which should be considered in this connection, they form a fairly reliable test of the adequacy of the staff employed, and we find that there are unions in which the relieving officers' districts have populations of 80,000 and upwards, and others in which the acreage extends to upwards of 100,000. A district in one Union has a population of 74,000 and an acreage of 35,000, and another Union which has but one relieving officer has a population of 18,000 and an acreage of 111,000.

(A) (26); Hincks, Vol. IV., App. cxxxiv. (29); *Vide also* James, 48454; Coulson, 52543. ⁶ Visits: urban, 2D, 13, 25A, 43A; rural, 53, 65B, 72, 75, 78, 82, 88. ⁷ Report of Royal Commission on the Aged Poor [Cd. 7684], 1895, p. xxii., par. 58.

centre, the custom has become almost universal of instituting pay-stations, to which the recipients of relief come or send for their allowances. The pay-stations were originally started in obedience to a suggestion from the Local Government Board in 1871,¹ and they conduce, no doubt, to a considerable saving of time; but there is evidence to show that they are open to abuse and lead to careless work.² To abolish the pay-stations would mean additional officers in many cases,³ but great stress is laid upon the need for their abolition by one witness of much experience:—

“Various complaints have been made against the system, as, for instance, that children are sent to the relief stations to receive the parish pay from the relieving officer. Then it is notorious that occasionally one of the paupers will act as a sort of commission agent and collect the pay of other paupers for a small sum. A graver objection to relief stations is that if you have relief stations, you have no certainty that the relieving officer really visits the home of the pauper . . . the abolition of relief stations, or their restriction to the smallest possible limit, would be the best check that the relieving officer discharged what is one of his primary duties, namely that of visiting the pauper. . . I think the importance of ensuring that the relief shall be paid to the pauper in his own house is so great that I would not hesitate to recommend any increase of the relieving officer staff which was necessary to that end. I put the suggestion forward as one of the most important ones which I am able to make for improving what I have already termed the business side of the present relief administration.”⁴

We recommend the abolition of the pay-station. We have ourselves noticed, in going round with relieving officers, sometimes that the people did not recognise the officers,⁵ sometimes that the officers did not know the addresses of the people they were visiting.⁶

132. Even more important than to have a sufficient number of relieving officers is to have the right type of man appointed. Generally speaking, the only personal influence which is brought to bear upon the poor in connection with outdoor relief is that of the relieving officer, and owing to his position that influence may be very great. It is right to record that the majority of the officers we have seen have shown a high sense of their responsibility in this regard, and that in visiting the homes of paupers we have seen that the officer is welcome as a valued friend.

133. But it is inevitable under the present system of appointment that officers should differ widely in capacity and that some should be much less suited to the difficult work than others. Mr. Preston-Thomas thinks that:—

“As a rule the relieving officers are a very good class, and that we get men who do their work surprisingly well.”⁷

Another witness, however, says:—

“As a matter of fact men are appointed relieving officers very often who know absolutely nothing about it. A relieving officer, as a rule, has to learn his work after he is appointed. It is very difficult to get at the motives which move individuals to appoint other individuals to certain Poor Law offices, but you will sometimes see a man appointed as a relieving officer simply because he has failed in everything else—I will not say very often—but not infrequently. He may have failed as a farmer; he may have failed as a contractor; he may have failed as a road surveyor; he may have failed in any sort of line of business to which he has devoted himself, but if he be well known and have a quantity of friends they will find something for him.”⁸

134. Later in the Report we shall propose very considerable changes in the relations between public and voluntary assistance. These would lead to many alterations that would affect the work of a relieving officer incidentally. An altogether higher standard of investigation in the individual case will be required with a more careful consideration of the possibilities of preventing distress; for we shall propose that all cases in which prevention may be possible shall be referred to a co-operating Committee of Voluntary Assistance. It will follow that instead of relieving officers endeavouring to fulfil the impossible task of dealing with hundreds of cases, they will have to expend much more care in individual cases, and at the same time much of the supervision of cases will be shared with voluntary workers. This will lead to an increase and concentration of their duties in one direction and to the reduction of their work in another. All our references to the work of relieving officers, and indeed to the character of existing administration generally, must, in any inferences which may be drawn from them in regard to the future, be qualified by this consideration. As we state later on, we are of opinion that in some places an

officer might be appointed who, like the Inspector of Poor in Scotland,* might fill the position both of Clerk and relieving officer with such assistance as is necessary. With a simplified Poor Law it should not be necessary in all circumstances to have a Clerk who is a Solicitor in charge of the official work of each local Committee. Thus the changes which we propose will affect the work and the relations of officers to the Authorities in many different ways.

135. Instances have also been brought to our notice where ex-Guardians have been appointed as relieving officers, having resigned their office as Guardians for the purpose of taking up a position as paid officer.¹ It has been pointed out to us that in such cases the Guardians, in making the appointment, are more likely to be moved by considerations of sympathy with their colleague than by an impartial estimate of his fitness for the post. And even if he be duly qualified, it must be difficult to make properly amenable to discipline an officer who has lately been the colleague and equal of those whom it is now his duty to obey. We recognise that it may be considered unjust that the experience gained by membership of a Local Authority should be a bar to appointment as an officer of that Authority, but we feel strongly that it would be little less than a national disaster to encourage a practice of seeking membership of Local Authorities with the ultimate purpose of obtaining paid offices. To do so would be to debase the tradition of local government in England which is founded on the principle of voluntary, unpaid service; and there would be a great danger of attracting a worse instead of, as we wish, a better class of volunteers to the State's service of local government. We think that it should be recognised that membership of a Local Authority is a bar to candidature for paid posts under that Authority.

136. To this end we recommend that a Local Authority should not be allowed to appoint an ex-member as a paid officer unless he or she has ceased to be a member of the Local Authority for a period of, say, twelve months before appointment. A rule of this kind is, we understand, actually enforced by the Registrar-General in the case of local appointments in connection with the registration of births and deaths.

137. At present the appointment of a relieving officer must be sanctioned by the Local Government Board.² The only prescribed qualifications are that the officer must be able to keep accounts, must be resident in his district, and, unless with the consent of the Guardians and of the Local Government Board, must not engage in any other trade, profession, or service.³ As in the case of other officers, it is obvious that these "qualifications" are by no means comprehensive of the qualities which are to be desired in a relieving officer. To a large extent those qualities are of a personal nature which it is difficult to test in any way but by actual experience. Mr. Baldwyn Fleming says:—

"For a relieving officer you want not only a man of good personal character, but you want a man of great sympathy and at the same time great firmness, you want a man who can be very gentle and at the same time very strong, you want a man who has the fullest sympathy with distress and at the same time who is determined to protect the ratepayers from fraud—a man who will find out imposition on the one hand and be very stern with it, and, who, on the other hand, will be most sympathetic with real suffering."⁴

Mr. Lockwood states:—

"A relieving officer is practically on duty the whole twenty-four hours through. He has frequently to act in difficult cases on his own responsibility; his duties take him into uncleanly houses and rough localities, he is on duty always and liable to be called up at any hour of the day or night."⁵

138. Under the present system a relieving officer generally approaches his work without any previous experience, and the Guardians, having once appointed him, cannot remove him except with the consent of the Local Government Board. It has been

* For definition of duties of Inspector of Poor *vide* Part IX. par. 19.

¹ Carryer, 46537; Frater, 52150. Visits: Rural, 65, 75; and recent questions to Mr. Burns in Parliament. ² Davy, 1874. ³ General Consolidated Order, 1847, Art. 164, 166; General Order, September 7th, 1899. ⁴ Fleming, 9021. ⁵ Lockwood, 12666.

suggested that relieving officers should always be appointed in the first instance as assistants, and only promoted to independent positions after having received training and shown definite capacity.¹ A further suggestion is that training should be combined with examination:—

“The work of the relieving officer is of such importance that he should be trained for the work and expected to obtain a certificate from a competent authority as to his knowledge of the law and the orders of the Local Government Board governing his duties.” The Metropolitan Relieving Officers’ Association, after due consideration, passed the following resolution on September 30th, 1903: “That the Metropolitan Relieving Officers’ Association agrees with the training and certification of relieving officers.”²

Some advance has already been made in this direction in connection with the School of Sociology:—

“Lectures and classes have been held, conducted by experts in Poor Law practice, and in March last an examination extending over nine hours was arranged. The examiners were well-known authorities upon the various subjects. Thirty-eight candidates entered, amongst them superintendent relieving officers, relieving officers and assistants, and others not in the service; twenty-eight candidates qualified for a certificate.”³

139. As we have stated no person should be appointed as a relieving officer who has not had some previous training as an assistant relieving officer or has not passed an examination and obtained a certificate of an examining authority recognised by the Local Government Board.

140. We have already referred, generally, to the present system of superannuation of Poor Law officers: one of its effects on a relieving officer is that he has little chance of promotion.⁴ The work is more difficult and the salary higher in some Unions than in others, but under the present arrangement there is little or no passing from the one to the other. And as, generally speaking, the officers are all of one grade, there is no promotion in the service of one Board. In large Unions, however, a change is taking place in this direction, and it is becoming more usual to appoint different grades of officers. In eleven of the London Unions and some provincial towns there are superintendent relieving officers who supervise the work of the staff,⁵ and to some extent train the officers in their work. Mr. Court says:—

“Some of their relieving officers who were appointed were not at all good men at the time of their appointment—they were people who had been attendants in lunatic asylums and so on; but I really think that all of them are turning out fairly well and that they are improving. That was one reason why we wanted a superintendent relieving officer, so as to educate these people first of all and then to supervise them.”⁶

At Nottingham, Mr. Herbert states:—

“Owing to the extra vigilance of the relieving officers, and the very careful inquiries that were made by the superintendent relieving officer, many cases of deception were shown up, as will be seen by the list of cases taken from the superintendent relieving officer’s reports.”⁷

141. In some Unions “cross-visitors” are appointed who perform somewhat the same functions as the superintendent⁸; while the “assistant” relieving officer is generally, as his name implies, of subordinate rank, and his appointment affords a good opportunity for training prior to promotion.⁹

142. There is one other point to which we desire to draw attention in this connection, and that is the excellence of the work which can be done by women as regards the outdoor poor. In some few Unions, women are already employed in visiting certain classes of cases. In Bradford, an experienced woman holding a certificate of the Sanitary Institute visits all out-relief cases, and makes an independent report as to circumstances and condition of the homes direct to the Committee.¹⁰ In Camberwell and Southwark “their visiting is understood to relate chiefly to children and lying-in cases,”¹¹ while at King’s Norton a woman is engaged chiefly in visiting widows and old people in receipt of out-

¹⁰ Lockwood, 13575.

relief.¹ It is obvious that there are many cases in which it is more suitable that a woman should visit the home, and in which her influence may be more effective. Amongst many of the poorest class the knowledge of housekeeping and child-management is very defective, and might be greatly improved by a sensible woman visiting regularly; while her care and supervision would bring comfort to many of the permanent aged cases.

143. For reasons suggested in previous pages and further developed in the Chapters on Indoor and Outdoor Relief we are of opinion that a Public Assistance Service should be set up which should include all officers concerned with the supervision, control, and disciplinary treatment of the poor—not only those who in the future will occupy positions analagous to that of the Inspector of Poor in Scotland, but also relieving officers both male and female, masters, matrons and superintendents of institutions of every grade, labour masters and mistresses. The service should be graded, and no person should be eligible for enrolment who had not received a certificate from a recognised Authority, showing that he possessed specific qualifications. Those qualifications should include some knowledge of the law and the principles on which it is based, and such intellectual acquirements as would enable him or her to discharge satisfactorily the duties to be performed. A system should be organised, whereby those who have been certified as eligible for service could give evidence of capacity, knowledge and interest in their work by obtaining higher certificates on lines similar to those which obtain in other services; in effect, every officer should realise in the earlier years of his career not only that he has to discharge certain formal duties, but that he is concerned with the moral training of those committed to his care. In our visits to the workhouses we have been impressed by the interest which the higher type of masters and matrons take in the moral recovery of inmates; with properly graded institutions, this type of officer would become far more common than at present. We think that there should be more opportunity of promotion from the lower to the higher ranks in the service, that opportunities of specialised training should be provided, and that no question of superannuation should hinder the transfer of efficient and promising officers from one Local Authority to another.

Proposed
Public
Assistance
Service.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 3.

(1) *When a Local Authority and the Local Government Board concur in the opinion that the retention of any officer is on general grounds detrimental to the administration, the Local Authority should have power to terminate that officer's appointment after proper notice.* (101.)

(2) *No person should be appointed as Clerk who has not some knowledge and experience of the Poor Law, no person as superintendent of an institution who has not had some experience in dealing with the classes which the institution contains, and no person as a relieving officer who has not had some previous training as an assistant relieving officer or has not passed an examination and obtained a certificate of an examining Authority recognised by the Local Government Board.* (106.)

(3) *There should be qualifying examinations for the higher officers. Once qualifications for each office are laid down, and the Local Government Board satisfied that they are fulfilled, the entire responsibility for the appointment of all officers might be left to the new Local Authorities.* (104 and 107.)

(4) *The Local Government Board might sanction a scale of officers' salaries for each local Authority, and so long as the salaries, or increases of salaries were in accordance with that scale, it should not be necessary for the Local Authority to require the sanction of the Local Government Board to individual salaries.* (107.)

(5) *A Central Superannuation Fund should be established for the whole service, and in the case of teachers transferring themselves from public elementary schools to the Poor Law service and vice versa, arrangements should be made by which any sacrifice of pension² is avoided.* (114.)

(6) *The Clerk of the future or any officer performing analogous duties to any Local Authority shall not, save under very exceptional circumstances, and subject to the consent of the Local Government Board, be a part-time officer.* (117.)

¹Hayward, 45922 (1).

(7) *If the general workhouse is abolished, each of the specialised institutions which takes its place, will require a superintendent, qualified by knowledge and experience, for its management. The salary offered must be sufficient to attract men not merely of organising power, but having the moral qualities necessary to develop the capacities of those under their charge.* (118.)

(8) *Highly trained officers will be required in what are now regarded as less important posts, as e.g., that of labour master.* (119.)

(9) *Provision should be made for inmates of all denominations receiving religious administration and instruction from the clergy of their respective churches.* (120.)

(10) *The indoor staff should be allowed to live out, where circumstances permit, and so far as is consistent with discipline and the proper discharge of their duties.* (121.)

(11) *Where adequate relief is offered and refused, the responsibility for the consequences arising from such refusal should not rest with the relieving officer.* (127–128.)

(12) *The relieving officer must not be burdened with too large a number of cases.* (129.)
In any scheme or regulations for the administration of relief in local areas, the proportion of cases to officers should be carefully and periodically revised. (130.)

(13) *Pay stations should be abolished.* (131.)

(14) *In some places an officer might be appointed who, like the Inspector of Poor in Scotland, might fill the position both of Clerk and relieving officer with such assistance as is necessary.*¹ (134.)

(15) *A Local Authority should not be allowed to appoint an ex-member as a paid officer, unless he or she has ceased to be a member of the Local Authority for a period of, say, twelve months before appointment.* (136.)

(16) *Women visitors might be employed for certain classes of out-relief cases* (142.)

(17) *A graded Public Assistance Service should be set up which should include all officers concerned with the supervision, control, and disciplinary treatment of the poor, including relieving officers, both male and female, masters, matrons and superintendents of institutions of every grade, labour masters and mistresses. In this service there should be more opportunity of promotion from the lower to the higher ranks, and no question of superannuation should hinder the transfer of efficient and promising officers from one Local Authority to another.* (143.)

¹ The designation and duties of the chief officers of the new Public Assistance Authorities will be found in Part IX.

Chapter 4.

AREAS OF ADMINISTRATION.

144. At the basis of the reforms introduced by the Act of 1834 lay the enlargement of the area of administration from the parish to the union of parishes. The intention of thus increasing the area of administration was partly, as we have seen, to avoid the difficulties arising out of the distribution of relief in small areas, where administrators and recipients were near neighbours. Partly also it was desired, by the creation of a common fund, to make it possible for officers of a higher standing to be employed.¹ But the primary object of the change was to facilitate the construction and “common use” of workhouses.² It was impossible that each parish should erect and maintain its own workhouse; but the abolition of parochial relief involved the alternative of maintenance in institutions, and it was for the purpose of facilitating institutional treatment that the 15,500 parishes were gradually grouped into the 643 Unions which form independent units of administration to-day. It is important to note, however, that the Royal Commission of 1832 did not contemplate the erection of large “general” workhouses, such as we know. Their suggestion was that the paupers of a district should be properly classified, that certain classes might be accommodated temporarily in ordinary dwelling-houses, and that the “poorhouse” should be reserved for the able-bodied. Ultimately, the different classes of paupers were to be distributed, one class to each house within an incorporated area. Stress is laid upon the economy to be effected by such an arrangement as compared with having all classes within one house, and their final recommendation is for classification *by* workhouses.³ This recommendation has never been completely carried out, although it was in a sense recognised by the Legislature which, in Section 26 of the Act of 1834, gave the Central Authority power to make Regulations for the “classification of the poor” in the “workhouse or workhouses” of parishes incorporated in a Union.⁴

Reasons for enlarging area of administration in 1834.

145. In view of the fact that we shall repeat and emphasise the recommendation made by the Royal Commission of 1832 of classification by institutions, it is important that we should consider somewhat closely why the Central Authority omitted, after 1834 to carry that policy into effect.

Policy of First Central Authority in regard to classification of indoor poor.

146. We are not aware of any official document setting out at length the policy pursued by the Poor Law Commissioners in this matter, but a perusal of their Annual Reports from 1835 to 1839, when the workhouse system was being initiated, makes it tolerably clear that from the outset the Central Authority was never very enthusiastic for the principle of classification *by* institutions, and that in a short time it frankly abandoned the principle in favour of the system of classification *in* institutions which the Royal Commission of 1832 had expressly condemned as being ineffectual.⁵ In the first year of their administration the Poor Law Commissioners evidently contemplated permitting the system of classification by institutions in some Unions. Thus, they say:—

“It has also been proved that the expense and loss of time in building new workhouses may, in many cases, be saved by . . . assigning one or two classes of the paupers to one of the separate workhouses within the district.”⁶

¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 326. ² *Ibid.*, p. 314. ³ *Ibid.*, pp. 313, 314.

⁴ 4 & 5 Will. IV., c. 76, Sec. 26. ⁵ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 306.

⁶ First Annual Report, Poor Law Commissioners, H.C. 500, 1835, p. 10.

And they instructed the Assistant Commissioners when making their inquiries as to the combination of parishes into Unions to ascertain, with regard to all workhouses :—

“if they could not be considered useful for all classes of inmates, whether they might not be made useful for only one class of paupers, and to what extent.”¹

147. On the other hand, whenever a new workhouse was built, the policy seems to have been to induce the Guardians to provide a building which should include all the classes which the Royal Commission of 1832 held ought to be provided for in separate institutions.² Both the Regulations and the plans for workhouses issued by the Central Authority, and very extensively adopted by the Local Authorities, provided for the accommodation in one institution of men and boys, women and girls, the able-bodied, the sick, and the infirm.³

148. Apparently classification by institutions was only recommended in Unions in which there were *already existing* several *suitable* workhouses belonging to the Union.* Thus, in the Instructional Letter to Boards of Guardians on their first formation, the Guardians are expressly told :—

“If there be several houses belonging to the Union, it will be found that much room may be gained by assigning one house to one or to two classes, instead of allowing paupers of all classes to remain together in each house,”

And, thereafter, it is explained how the expenses of management in such cases may be diminished.⁴

149. But, contrary to the expectation of the Royal Commission of 1832,⁵ the Central Authority did not find many Unions in which the existing workhouse accommodation was sufficient, and within only five years after the passing of the Act of 1834, new workhouses had apparently been built, or ordered to be built, in some 350 Unions.⁶ It, therefore, followed that a policy of allowing classification by institutions only in Unions where sufficient institutions were existing, would confine the realisation of the principle to fewer and fewer Unions, as the standard of “sufficiency” rose.

150. Moreover, the Commissioners seem soon to have arrived at the opinion that, in the existing state of workhouses and their administration, the expense of maintaining a number of workhouses in one Union was not justified by the results. Thus, in their Fifth Annual Report, they instance Halifax Union, where there were twelve separate workhouses :—

“Some of these houses were in a state unfit for human beings to inhabit, and the aggregate expense of their expenditure and management was very great and wholly disproportioned to the number of inmates maintained (231).”⁷

They go on to state that the building of a central workhouse at Halifax would be desirable both on the ground of economy and of proper administration. They cite other cases of Unions having more than one workhouse and quote with approval the reduction in their numbers. Finally, they say :—

“It is probable indeed that very few Unions will ultimately find it desirable to retain more than one establishment.”⁷

151. The case of Bristol was also quoted by one of the Assistant Commissioners where the alteration of the four or five existing workhouses had produced inadequate results at a cost exceeding what would have been required to build a new workhouse capable of maintaining all classes of paupers. These considerations seem finally to have entirely

* It is interesting, however, to note that the logic of events forced the Guardians to adopt the principle in some cases, *e.g.*, in Nottingham, where in order to find room for the able-bodied it became necessary to move the children, the old men, and the sick, into separate institutions.

¹ First Annual Report, Poor Law Commissioners, H.C. 500, 1835, p. 17. ² p. 60. ³ Second Annual Report, Poor Law Commissioners, H.C. 595, 1, 1836, p. 23. ⁴ Third Annual Report, Poor Law Commissioners, H.C. 546, 1, 1837, p. 7. ⁵ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 313. ⁶ Fifth Annual Report, Poor Law Commissioners, 78, 1839, p. 118. ⁷ *Ibid.*, p. 17.

converted the Commissioners to the plan of classification in institutions instead of classification by institutions, and it is interesting to note that whereas in 1834, as we have seen, classification by institutions was distinctly recognised as an alternative to classification in institutions, when the Commissioners in 1839 were engaged in introducing the Poor Law into Ireland, classification by institutions was recognised only as a temporary expedient until one workhouse for all classes could be built.

152. Thus, in the Instructions issued to the Assistant Commissioners in Ireland, we find the following passage :—

“ Instances will probably occur, in which buildings suitable for one or more classes of the destitute will be obtainable on very easy terms, and it may become a question whether it may not be expedient to purchase or hire such buildings instead of incurring the charge of erecting one sufficient workhouse, or in the aid of a smaller workhouse. *As a general rule, the Board has no doubt that one central workhouse of a size sufficient for the whole of the Union is the best and will in the end be the cheapest mode of providing for the relief of the destitute.*”¹

The Commissioners, we read further *in order to avoid large outlay at an early stage*, consider that it will be expedient for the Assistant Commissioners to avail themselves as far as they possibly can of existing buildings to be appropriated to different classes of inmates.¹

153. Apparently, therefore, the Commissioners had, by 1839, rejected the principle of classification by institutions for two reasons :—

(1) The paucity and unsuitability of existing workhouses made the building of new institutions a necessity, and it was more economical to build one workhouse to accommodate all classes than to build a number of workhouses.

(2) It considered that under the new *regime* classification could properly be carried out within the workhouse.

154. In view of the multiplicity of institutions now existing, it cannot be said that the first reason continues to have much weight. With regard to the second, we shall proceed to show how, under the present *regime*, the principle of classification is in many workhouses insufficiently carried out, and, even when properly carried out, has failed to result in a proper and satisfactory treatment of the various classes. Arguments against classification by workhouses now inapplicable.

155. It is true that, with regard to certain classes, especially the sick and the children, circumstances and public opinion have led to a very considerable reinstatement of the principle of classification by institution, and the latest figures show that 38 per cent. of the indoor poor (exclusive of casuals) are in special institutions in particular Unions.² But the disadvantages of attempting the classification and treatment of a heterogeneous population within one building still operates in the large majority of Unions.

156. As early as 1861 a Select Committee of the House of Commons found that the workhouses were in many cases insufficient for the proper classification of the inmates ; and they drew special attention to the evils arising from the lack of separation between respectable and dissolute females, and from the association of children with adults in the sick wards.³ At that time the failure to provide proper classification was attributed to the limitation of the amount which, under the Act of 1834, the Poor Law Board could compel a Union to spend upon alterations or additions to a workhouse. But an alteration of the Statute in question has not apparently remedied the two specific evils of which the Committee complained. The number of single female inmates seems to have largely increased since 1861, but it is only in a small minority of workhouses that there is any attempt to keep the better young women from contamination by the depraved. Both in the dining-hall and in the sick-wards of many workhouses, there is opportunity for the children to come in contact with the adults.⁴

157. Indeed, as a result of our evidence and our visits, we have been impressed, as the Royal Commission of 1832 was, with the great difficulty of proper classification and treatment by classes so long as the present general workhouse continues to exist. Impossibility of proper classification in existing workhouses.

¹ Fifth Annual Report, Poor Law Commissioners, 78, 1839, p. 28. ² Half-yearly Pauperism Return, January 1st, 1908, H. C. 130, 1908. ³ Report of Select Committee, 1864, p. 37. ⁴ Penrose Williams, Vol. VII., App. xci. (9) ; Visits : Urban 26 ; Rural 57, 70A., 72, 74, 77, 81, 82., etc.

158. It is beyond doubt that children suffer from being in the same institution with adult paupers; that where the aged and the able-bodied are together, either the former are treated too severely or the latter with too great leniency; and that it is a great hardship as well as a great danger for the respectable pauper to be forced to live with the worthless and depraved. Yet this is the case in most of the workhouses in the country. The growing demand at the present day for specialised treatment for various classes of the dependent poor,¹ in institutions adapted to their various needs, has made it clear that the Union itself is too small an area for institutional purposes; and that the intention of the Royal Commission of 1832 can be carried out only by means of a further extension of area. The average population of each Poor Law Union is (1908), about 55,000, but the population (1901) of more than two-thirds of the Unions is less than 50,000 each, and of eighty, it is less than 10,000 each.²

Enlargement
of area for
certain Poor
Law purposes.

159. For certain purposes and in certain places the necessity for an extension of the area has been recognised and acted upon.

160. Thus, as is well-known, provision for dangerous pauper lunatics is now made by the County and not by the Union. We find as early as 1838, the desire to keep children out of the workhouse making itself felt in the suggestion of district schools to which children might be sent from a number of Unions,³ and in 1844, the establishment of such schools was authorised by law;⁴ but the Guardians have never been very willing to combine for this or any other purpose,⁵ and such was the opposition raised to the exercise of the powers of the Central Authority in the matter that the number of district schools has never been more than ten.⁶

161. Owing, no doubt, to the concentration of population and the greater facility of communication in London, the Legislature has found it easier to pass comparatively effective measures for the compulsory combination of Metropolitan Unions for purposes of classification. Thus, under the Metropolitan Poor Act of 1867, a number of Metropolitan Boards were combined to form sick asylum districts for providing infirmaries for their sick poor.⁷ Two only of these districts survive and with a single exception every Union has now a separate infirmary. A more successful instance of combination under the same Act is afforded by the Metropolitan Asylums Board, which provides special treatment for certain classes of sick imbeciles and children in London. These instances of successful enlargement of the area for the purposes of classification apply, however, as will be seen, for the most part to London.

162. An attempt was made to meet the general difficulty in 1879. In its third Report 1873-4, the Local Government Board had laid stress upon it:—

“We attach the utmost importance to this improvement of the classification of indoor paupers, which we believe to be a necessary condition of the maintenance of that discipline which lies at the root of an effective administration of indoor relief.”

And it added that classification:—

“Cannot be effected, except at an enormous and almost prohibitory cost, otherwise than by the combination of several Boards of Guardians for this purpose. Their existing workhouses would, in that event, become available for the separate accommodation of various classes of indoor paupers chargeable to the several combined areas.”⁸

163. Accordingly, facilities were offered in the Poor Law Act (1879) to Boards of Guardians to enter into combinations “for any purpose connected with the administration of the relief of the poor.”⁹ Under this Act, Orders have been issued “for the erection and maintenance of special institutions for the reception of particular classes of paupers.”¹⁰ We instance the Joint Committee of Manchester and Chorlton for providing accommodation for able-bodied paupers (in a test-house) and casual paupers, and for imbeciles and

¹Jenner-Fust, 10830-3; Hervey, 11940-4; Stansfeld, Vol. I., App. xxvi. (a), (24); Thurnall, 15872-3; Millward, 18953-8; Elkerton and White, 26409-13. ²Statistical Appendix, Part X. ³Fourth Report, Poor Law Commissioners, 1838, p. 60. ⁴7 & 8 Vict., c. 101, Sec. 40. ⁵Davy, 2383. ⁶Davy, 3435-6. ⁷30 & 31 Vict., c. 6, Sec. 5 *et seq.* ⁸Third Annual Report, Local Government Board [Cd. 1071], 1874, pp. xxv.-xxvi.; *Vide also* Jenner-Fust, Vol. I., App. xxii. (a), (29). ⁹42 & 43 Vict., c. 54, Sec. 8. ¹⁰Adrian, 55.

epileptics;¹ the Joint Committee of the three Liverpool Unions for the treatment of tuberculosis;² and the Joint Committee of the three Birmingham Unions for providing accommodation for epileptics and feeble-minded not certified as insane.³

164. But the Act is permissive only, and has been used to a very small extent. Mr. Davy says:—

“There is nothing on which the average Guardian is more sensitive than any change in his area. He looks upon it as his right, and he does not like to be mixed up with the neighbours at all. It is quite impossible, except by general legislation, to get over that prejudice.”⁴

Again:—

“I think it is one of those things, which, if it were left to the Local Government Board would not be done; I mean to say, even if we had a recommendation in favour of it, I do not think we could do it.”⁵

165. The present situation then is this: that ever since 1834 the need for classification has been felt, and has become increasingly urgent as the possibilities of specialised treatment for various kinds of distress have been realised. Nevertheless, notwithstanding steady pressure on all sides, and notwithstanding the fact that for thirty years Boards of Guardians have had full facilities of combination, little advance has been made in this direction. We have seen for ourselves the evils which exist under the present system; in large workhouses the crowding together in one institution of old and young, infirm and able-bodied, imbeciles and epileptics; and in small workhouses the same evils on a smaller scale, complicated by the difficulty of affording proper attendance or nursing.

Disregard of existing facilities for combination.

166. A description of some of these workhouses will be found in a later Chapter, but the following evidence may be quoted here:—

Advantages of classification by workhouses.

“The practice of having a number of general workhouses, each receiving several classes of paupers, involves waste of accommodation, as a margin has to be left in each workhouse for every class, and difficulties of administration are increased. It is cheaper to assign a particular class to each workhouse and to keep it full. Administration is easier—experts can be placed in charge of each. Deserving inmates can be made more comfortable.”⁶

167. Great weight must be attached on this point to the evidence of the Workhouse Masters and Matrons Association. They state that:—

“With proper classification of, and in, workhouses, it would be possible to treat each class of inmates on its merits, in more detail, with the result that to the deserving an almshouse system would present itself, while the treatment of the undeserving would be deterrent.”⁷

“If you give us all classes to look after as we have at present, you want expert knowledge on every point and expert administration on every point, and it is impossible, in the one house, with the one staff of officials, to get it. That is one reason why we request so strongly classification by workhouses as well as in workhouses.”⁸

To this we would add that classification affords opportunities for curative and preventive treatment. The case for an extension of the area of administration is therefore a very strong one.

Extension of area will facilitate classification.

168. Against it must be weighed the objection to removing individuals outside the purview of their friends. To this objection we shall refer later (*vide*, Part IX., Par. 7). There is also the argument that local responsibility tends to economy; the more directly and obviously the burden of the rates falls upon those who are administering the Poor Law, the more reluctant they will be to spend. But there is no security that this reluctance will not take the form of an unwise parsimony, rather than of a wise economy. It is the small farmer who, feeling the direct incidence of the rate, is most opposed to any improvement in institutional treatment, and most prone to inadequate doles of out-relief. Moreover, the principle of local financial responsibility has been to a large extent abandoned already; that is to say, by various means the area of financial responsibility

¹ Jenner-Fust, Vol. I., App. xxii. (a), (30–2). ² *Ibid.*, (34). ³ Astbury, 43421 (10); Waite, 43391.

⁴ Davy, 2383. ⁵ Davy, 2385. ⁶ Jenner-Fust, Vol. I., App. xxii. (a), (54). ⁷ Elkerton and White, 26408 (5). ⁸ Elkerton and White, 26496.

has been widened beyond the area of administration. This has been especially the case in the Metropolis, but, throughout the country as a whole, the need for equalising the burden between one district and another has been felt to be irresistible.

Financial aspects
of enlargement
and provisions
of Act of 1834.

169. The Act of 1834, while grouping the parishes into Unions for purposes of administration, left their individual financial responsibility almost untouched. It is true that Section 34 of the Act gave Guardians optional powers of making the Union one area for rating purposes,¹ but the power was hardly ever exercised.² A common fund for certain items of indoor relief in each Union was indeed created³ by the Act, but, as the parochial contributions to this fund were assessed according to the poor relief expenditure incurred by the parishes calculated upon a three years' average, considerable inequality in the burden of the rate still remained between parishes in the same Union.

Union
Chargeability
Act, 1865.

170. A Parliamentary Return of 1850 shows that the rates in the £ required for relief of the poor in 1846-7 varied from 13s. 10d. to ¼d. in different parts of the country, while even within the same Union there were parishes with rates for this purpose varying from 11s. or 12s. to less than 3d. or 4d.⁴ In 1861 the basis of contribution to the common fund was altered so that the contributions became assessable according to the rateable value of the parishes.⁵ In 1865 a still more important step was taken towards equalising the burden: under the Union Chargeability Act of that year the entire expenditure of the Guardians and their officers in the relief of the poor was cast upon the common fund of the Union, each parish in the Union bearing its share according to its rateable value.⁶ Owing to certain technical details, however, minor parochial inequalities still exist.

Metropolitan
Common Poor
Fund.

171. In London this plan of widening the area of charge was further extended by the Metropolitan Poor Act of 1867.⁷ This Act and certain extending Statutes provided that certain expenses, incurred by all the Unions within the area which now forms the administrative County of London, should be repaid to the Guardians from a fund called the Metropolitan Common Poor Fund to which the several Unions contribute according to their rateable value. The Guardians receive from this fund a contribution of 5d. per head per day for the maintenance of indoor adult paupers;⁸ and there is repaid to them the expenditure they have incurred for the maintenance of insane poor in the recognised institutions other than the workhouse for the maintenance of patients in asylums, for cases of fever, smallpox, etc.,⁹ for the maintenance of pauper children in certain classes of schools¹⁰ or boarded out,¹¹ for the expenses of vagrants under the Houseless Poor Acts,¹² for medicines and medical and surgical appliances,¹³ and for paid officers.¹⁴

Exchequer
Contributions.

172. The principle of local financial responsibility has been still further abandoned in the system which has grown up of making annual grants from the Exchequer to Local Authorities for specific purposes. These grants were originally made with the object of encouraging improvements in particular branches of the local service, and they have no doubt been the occasion of increased expenditure in certain directions. The first was made in 1846-7, to aid Poor Law Authorities to meet the salaries of teachers and industrial trainers in Poor Law schools and institutions, and so "to contribute to an improvement in the character of" those schools and institutions.¹⁵ A similar grant was made in the same year to provide:—

(a) One-half of the sum required to pay the salaries of Poor Law Medical Officers; and

(b) One-half of the cost of drugs and medical appliances, and so "to contribute to an improvement . . . in the supply of medical relief to the poor."¹⁶

¹ 4 & 5 Will. IV., cap. 76, Sec. 34. ² Pitts, Vol. I., App. iii. (18). Footnote †. ³ 4 & Will. IV., cap. 76. Sec. 29 *et seq.* ⁴ Pitts, Vol. I., App. iii. (18). ⁵ 24 & 25 Vict., cap. 55, Sec. 9. ⁶ 28 & 29 Vict., cap. 79, Sec. 1 *et seq.* ⁷ 30 & 31 Vict., cap. 6. ⁸ 33 & 34 Vict., cap. 18, Sec. 1 (3). ⁹ 30 & 31 Vict., cap. 6, Sec. 69 (1-2). ¹⁰ *Ibid.*, Sec. 69 (8). ¹¹ 32 & 33 Vict., cap. 63, Sec. 21. ¹² 27 & 28 Vict., cap. 116; 28 & 29 Vict., cap. 34. ¹³ 30 & 31 Vict., cap. 6; Sec. 69 (3). ¹⁴ *Ibid.*, Sec. 69 (4). ¹⁵ Thirteenth Annual Report, Poor Law Commissioners, 816, 1847, pp. 16, 17. ¹⁶ *Ibid.*, p. 17.

173. In 1874-5 a grant was made of 4s. per head per week towards the cost of maintenance of pauper lunatics in recognised institutions other than the workhouse.¹

174. All these grants were made direct from the Exchequer to the Poor Law Authorities; but by the Local Government Act of 1888 and subsequent Finance Acts a new system has been introduced, whereby the grants have become payable from certain sums paid out of the Consolidated Fund into the Local Taxation Account, from which payment is made to the County and County Borough Councils by the Local Government Board. These payments are carried to the Exchequer contribution accounts of the Councils and the grants previously charged upon the Exchequer are paid from those accounts.² Under the Finance Act, 1908, certain local taxation licences will be collected by the Councils themselves and the sum paid out of the Consolidated Fund will be correspondingly reduced.

175. An extension of the Poor Law grants was also effected by the Act of 1888. The Councils were required to pay to the Guardians an additional grant for the school fees of pauper children sent from a workhouse to a public elementary school.³ The grant for salaries of Medical Officers and cost of drugs and medical appliances was, outside the Metropolis, merged in a larger grant towards the salaries and expenses of all Poor Law officers (other than teachers in Poor Law schools), and the cost of drugs and medical appliances.⁴ This grant was based on the amounts paid in the year 1887-8 and is not to vary until Parliament so directs.⁵ Within the Metropolis, the salaries of Poor Law officials were already charged upon the Metropolitan Common Poor Fund,⁶ and the new grant took the form of a payment by the County Council from its general revenues and not from its exchequer contribution account, of the cost of maintenance of indoor paupers to the extent of 4d. per head per day.⁷ The grant is a fixed grant calculated upon the average number of indoor paupers maintained during the five years ended March 25th, 1888.⁸ The grant of one-half of the salaries of Poor Law Medical Officers and of a moiety of the cost of drugs and medical appliances was continued in the Metropolis.⁹ Finally, there is a grant made to meet the deficiencies in the poor rate, caused by the exemption from rates of agricultural land to the extent of one-half under the Agricultural Rates Act of 1896. This is also a fixed grant.¹⁰

176. Boards of Guardians are now, therefore, receiving from the County and County Borough Councils an annual contribution to the cost of the Poor Law of a sum which in 1905-6 amounted in the aggregate to £2,211,000, apart from the grant of £466,000 under the Agricultural Rates Act, 1896.¹¹ Although a great part of the grants was originally intended by Parliament to "contribute to the improvement of particular services," and the grants are generally in fact still connected by name with particular Poor Law purposes, it is worthy of note, and we emphasise the fact, that these grants cannot be withheld by the Central Authority on account of any deficiency or default in the local administration. It follows therefore that this vast sum of money is practically an unconditional grant to the Local Authorities in aid of their Poor Law expenditure. We cannot think that large grants of money given thus unconditionally in aid of local expenditure can be conducive to maintaining good administration and a sense of responsibility on the part of the Local Authorities.

177. The net result of these grants, taking the country as a whole, has been that since 1846 the percentage of expenditure on poor relief which is not met from local sources has gradually risen to about 20 per cent.¹¹ * Nevertheless, as between different Unions, great inequalities remain in the proportion of expenditure which falls upon the rates. This is due partly to the character of the administration, partly to the varying degrees in which the Unions benefit by the grants, and partly to the varying extent to which they derive income from such sources as relatives' contributions, repayments of relief on loan, rents and sales of property, etc. Outside the Metropolis there were in 1903-4 some Unions in which the proportion of expenditure met out of the rates was as low as 38 per cent., and

* Exclusive of the sums charged on the Metropolitan Common Poor Fund.

others in which it was as high as 83 per cent. In some Unions more than one-half (58.5 per cent.) of the total expenditure was defrayed out of grants; in others little more than one-eighth (12.8 per cent.). The receipts from "other sources" sufficed in some Unions to meet nearly 25 per cent. of the expenditure, whilst in others they covered not much more than 2 per cent. And the rates in the £ levied for Poor Law purposes varied from 2d. to 2s. 5d.¹

178. In London the equalisation of the burden is carried much further, partly by the working of the County Council grant in respect of indoor paupers, partly by the Metropolitan Common Poor Fund, and partly by the transference of some of the Guardians' duties to the Metropolitan Asylums Board. The proportion of the poor relief expenditure from the rates which was "equalised" (*i.e.*, for which the whole of London, and not the particular Union, is responsible) was in 1903-4 as much as 59.4 per cent. of the whole.² Taking into consideration other sources of income, including Exchequer grants, we find:—

"That 70 per cent. of the total expenditure by Boards of Guardians (in London) is now borne by the grants made out of sums raised by Imperial Taxation or other receipts in aid, or by rates levied throughout London in the proportion of the rateable value of the Unions."³

Equalisation
of burden of
poor relief in
London.

Summary.

179. It will be seen from what has preceded that in recommending a wider area both for administration and for the incidence of expenditure, we are only systematising and completing a tendency which has long been making itself felt. An equalisation of the burden of pauperism might be obtained by enlarging the area of charge, but we do not think it wise to enlarge this area without also enlarging the area of control and administration. As we have shown, it has also been proved by the experience of three-quarters of a century that the Union is too small an area for the purposes of proper institutional treatment, and that no pressure from outside is sufficient to induce Guardians to combine. For this reason also an authority for a wider area seems clearly required which will co-ordinate the institutions in such a way that each class of inmate may be properly provided for, and the possibility opened up for a treatment really remedial in its nature. What these areas and institutions should be will be indicated in a future Chapter.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 4.

(1) *In view of the great difficulty of proper classification and treatment by classes so long as the present general workhouse continues to exist (157), the growing demand for specialised treatment for various classes of the dependent poor in institutions adapted to their various needs (158), and the advisability of equalising the burden of pauperism (168), the area of administration should be enlarged.*

(2) *The practice of making grants unconditionally from the Exchequer to Boards of Guardians is not conducive to maintaining good administration and a sense of responsibility on the part of the Local Authorities (176). (Vide also Part IV., Chapter I., Par. 47.)*

Chapter 5.

INDOOR RELIEF.

180. The generally accepted distinction between the methods of relief practised by Boards of Guardians is that between "indoor relief" and "outdoor relief," between maintenance supplied in an institution, and maintenance or part maintenance by means of an allowance. The significance of the distinction lies in the fact that, when the Guardians grant relief in an institution whether workhouse, infirmary, or school, they make themselves entirely responsible for the lives of the recipients. In so-called "out-relief cases," on the other hand, it is too often the case that the Guardians consider their responsibility fulfilled by the grant of a small allowance, and do not consider it incumbent upon them to ensure either that it is adequate, or that it is properly expended, or that the recipients are leading satisfactory lives. Before the reform of 1834 this distinction would not have held good, for the inmates of many workhouses were almost as free from supervision and control as many of the out-relief cases of to-day.¹ But since 1834, under steady pressure from the Central Authority, the Guardians have assumed responsibility for the inmates of their institution, down to the minutest details of dress, diet, and mode of life.

Control and supervision of indoor poor.

181. The advantages of this complete control and supervision are obvious. By means of it we can ensure that the children are properly fed, clothed, and educated; that the patients in the infirmaries are treated appropriately and made to carry out the doctors' instructions; and that the inmates of the workhouse lead a sober, clean, and orderly life. Some of its disadvantages are hardly less obvious. The loss of liberty may be keenly felt and greatly resented, more especially in the workhouse; the loss of family life is hardly less serious for the children, though they may not know what they miss; but most serious of all in its effects is the loss of the sense of responsibility when the inmates are still young and able-bodied.

182. In order to justify the policy of the Royal Commission of 1832 in connection with this last class, it is necessary to consider what they had in mind in substituting for partial outdoor relief the offer of total maintenance within a well-managed workhouse, where employment should be given under conditions less favourable than those of the independent labourers. They were certainly not influenced by any desire to "penalise poverty," or to prevent people from applying for necessary relief. On the contrary, they claimed that their policy was based upon that adopted by the working classes themselves as the only safe principle for the government of their Friendly Societies.²

Intention of 1832 Commission regarding work-houses.

"On this point, as on many others, the independent labourers may be our best teachers. We have seen that, in the administration of the funds of their friendly societies, they have long acted on the principle, of rendering the condition of a person receiving their relief less eligible than that of an independent labourer. We have now to add, that they also adopt and enforce most unrelentingly the principle that under no circumstances, and with no exceptions, shall any member of their societies receive relief while earning anything for himself."³

183. But the Commissioners, as we have seen, never intended that the workhouse should be the miscellaneous institution which we know under that name to-day. What they had chiefly in view was that there should be a place where the able-bodied might be set to work under conditions which should be the least harmful both to themselves and to the independent labourer; but there were to be institutions for others besides the able-bodied. If their principle of classification by institutions had been carried out, we should have been spared many of our present problems, and above all the problem of finding that in the large towns the workhouse is no longer deterrent, but is actually attractive to many of the able-bodied.

¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, pp. 51-4.

² *Ibid.*, p. 232.

³ *Ibid.*, p. 272.

The workhouses
of to-day.

184. But there is, perhaps, no point in Poor Law administration upon which it is more difficult and dangerous to generalise than the workhouse itself. We have visited many of these institutions, and find them differing from each other as light from darkness. So much depends upon the amount of interest taken by the Guardians, upon the temperament of the master and matron, upon the policy of the Board, and upon the nature of the district and of the building itself, that no one description will apply to all, although all alike may conform to the minutest details of the Local Government Board Regulations. A rough distinction may, however, be drawn between the workhouses in rural areas, in provincial towns, and in London.

Rural work-
houses.

185. In country workhouses administration is much simplified by the fact that there are for the most part no able-bodied inmates. In some districts there are many tramps, but they do not, as a rule, pass beyond the casual ward, and the workhouse itself is more in the nature of an almshouse for the aged and infirm and the children. Many of them, notably in the home Counties, are picturesque old buildings, with pleasant gardens, and generally with 10 to 20 acres of ground attached on which the inmates are employed, according to their physical condition, in raising vegetables for the use of the institution.¹ The old people who retire there towards the end of their lives do so gradually, going in through the winter, and coming out again in the summer when they can work a little in hay-fields or make long visits to friends.² Where the master and matron are kindly and genial, the inmates are well cared for and experience many little kindnesses. As their seclusion becomes more permanent, its monotony is sometimes cheered by the visits of the ladies who are working under the Brabazon scheme; and in the older buildings "classification" is made more easy by the fact that the wards are generally small and numerous. It may be doubted, however, whether classification needs to be carried very far amongst the aged; no doubt it is most desirable to keep apart the few who may make themselves noisy and disagreeable; but variety of experience and even of character does much to make the life tolerable.³ In one excellently managed workhouse the master's main scheme of classification was to put into one ward the deaf old men and those who snored.⁴ In the best of these rural workhouses the children, if not provided for in "scattered homes" or separate schools, are carefully separated from the adult paupers, and sent out to the village school for their education.

186. It must not, however, be supposed that all rural workhouses are of this type. Some of them are quite unsuited to their present purpose from the fact that they were originally built to accommodate very large numbers of the able-bodied, and are more like factories than dwelling places.⁵ Nothing can make such buildings other than forbidding in aspect, and a dreary refuge for the small numbers of aged and infirm who now occupy a corner of them. In others there is an obvious lack of interest on the part of the Guardians; no one visits the old people, and the children are not well cared for. Sometimes a mistaken economy prevents even necessary repairs from being carried out, or reduces the staff below what is essential for good management.

Urban work-
houses.

187. In small country towns the workhouses are of much the same type as those in rural districts, though the administration is perhaps more progressive. But in the larger provincial towns the conditions are apt to be very different. The number of inmates is larger, and they reflect the more mixed character of the town population from which they are drawn. If the town is growing and the workhouse old, the wards are often overcrowded, and the absence of land makes it difficult to occupy the inmates. A thousand or more inmates of all types may be gathered together in one of these large town workhouses, and the problem of organisation and discipline becomes one calling for great skill and strength of character on the part of the master. In the absence of these qualities the institution presents many painful features. The able-bodied are not occupied and spend their days in sullen idleness, and the old people suffer from the general atmosphere of repression and gloom. Nor is classification, even within the one institution, properly carried out. On the other hand we have found here and there a large workhouse where the very best is made of a most difficult situation; and the ingenuity of the governing spirit contrives to keep everyone occupied and contented. In such cases the workhouse tends to become a refuge where the fairly respectable but inefficient workman, or the man who can only keep sober under close supervision, may be made to contribute something

⁵ Visits: Rural, 68, 69, 74.

towards his maintenance. It is largely of these that the so-called "able-bodied" in the workhouses consist; and the best that their life there can do for them is to prevent them from falling still lower. Too often under less strenuous management, their deterioration is ensured when once they have adapted themselves to the routine of workhouse life.

188. It is in London, however, that the workhouse system has been developed to its fullest extent, and that its dangers also have become most apparent. Since the institution of the Metropolitan Common Poor Fund, there has been more inducement to London Guardians than to others to offer indoor rather than outdoor relief; and this has probably been responsible to some extent for a higher standard of comfort with which has gone a greater amount of liberty. This tendency to relaxation has been specially marked since the Reports of the Royal Commission on Aged Poor and the Select Committee on the Aged Deserving Poor; and, owing to the mixed character of the workhouse, the indulgent administration, intended primarily for the respectable aged, has been shared in more or less by all classes. At the same time there has appeared, more especially in London, a class of demoralised people for whom the workhouse under its present conditions has lost its deterrent effect, and who—

"regard it as a kind of clubhouse, in which they put up with a certain amount of inconvenience, but have very pleasant evenings."¹

A Committee of our members visited one of the London workhouses and reported that they—

"found about 100 men in two rooms; respectively described as the 'reading-room' and the 'smoke-room.' Some of these men were asleep, others were reading, others smoking, playing dominoes or bagatelle, and others were doing nothing. In another room there were twenty-eight aged men of a better class who have the room to themselves, but occupy the same dormitory as the others. In one dormitory (which had been cut off the chapel) there were no fewer than fifty beds. In one of the women's day-rooms about forty women were sitting listlessly, with nothing whatever to do but gossip and sleep. . . . But the most lamentable feature of the ——— Workhouse was the inadequacy of the work provided for the inmates. Three-fourths of the men found in the 'smoke-room' and 'reading-room' were equal to some work, and that they were occupied as they were at mid-afternoon was deplorable."²

189. The most recent of the workhouses in London has been built at a cost (inclusive of site) of £126,612, which represents a cost per bed of £286. A Committee of our members has recently visited it, and report in the following terms:—

"Seeing that this vast edifice was erected regardless of expense either in planning or fitting, a building should have been provided which could not be criticised from the point of view of administrative efficiency. But this is not the case. The principle of less eligibility could never have entered the minds of the Guardians, and it may safely be said that few, if any, of the inmates had ever before been so lavishly provided for.

"It seems improbable that the loss of freedom, which can be the only drawback to the acceptance of relief in this institution, will be sufficiently distasteful to the thriftless. There can be little doubt that the attractions of institutions of this kind are largely responsible for the considerable increase in indoor pauperism during the last few years, and that, in an increasing degree, they will continue to exercise a baneful influence on the improvident as their character becomes better known."³

190. The following instances, taken from descriptions of visits made by Committees of our number to workhouses in different parts of the country, are illustrative of the Disadvantages of conditions arising out of the present system of general workhouses:—

(1) "On the day of our visit there were eighty-seven inmates, fifty-one men, twenty-seven women, and nine children. There was no attempt at classification. Thus, young women, girls, infants, and old women were all using the same dormitory. The master and Guardians apparently considered that this was inevitable, but in one case in which a small sleeping-room had been allotted for six old women, the next dormitory thereto was occupied by old women, young women and girls, and as we pointed out, it would have been easy to have allotted the old women's room as a girls' dormitory. It seemed to us scandalous that local apathy should be allowed to condemn young girls to be put to sleep with women, admitted by the master to be frequently of bad character."⁴

(2) "We visited the workhouse, but being short of time, we could only visit those sections of the building which the master was least unwilling to show us. We were accompanied by the acting chairman, who seemed quite unfamiliar with the house. . . . In the infirmary there were ten beds for males, eight beds for females, and a lying-in ward which is but seldom used. The charge nurse was absent on holiday; there were no acute cases. The condition of the patients was unsatisfactory, and although (as we were informed) the doctor comes when sent for, the condition of the patients was such as to suggest reasonable ground for complaint. In the absence of the nurse, the patients were in charge of the assistant matron, who is quite ignorant of nursing. At night the patients, one of whom has fits of a somewhat serious kind, help one another. In the body of the house there were five imbeciles in charge of

¹ Morris, 16686.

² Visits: Met. 118.

³ Visits: Met. 117.

⁴ Visits: Rural, 87.

inmates. The children, eleven in number, are in the house; they mix with the other inmates; they go out to school; the two or three whom we saw seemed untidy and neglected. The Board is opposed to boarding-out. Our visit to the * * Union has left an unpleasant, if not painful impression in our memories."¹

(3) "The inmates were simply crowded together in ill-ventilated wards. With such overcrowding, classification is impossible. The beds in the infirm men's wards were so close together that it was scarcely possible to get between; clothing and utensils were lying about everywhere; nails were driven into the walls in many places, evidently by inmates, and garments of various kinds hung on them. Men were lying on the beds in their day clothes; others playing draughts around the fire in their shirt sleeves; whilst others were permanently bed-ridden in a state of senile decay. There was only one day attendant for a pavilion with 190 inmates. The overcrowding applies to all parts of the workhouse."²

(4) "Most of the people looked even more dejected than usual; hardly one seemed to have enough spirit to speak when spoken to."³

(5) "There is little or nothing to be said in praise of this house. Every place seemed dirty and the fullest use was not made of what resources there were. The sanitary arrangements were disgraceful, the laundry was in a state of chaos, and the accommodation in the tramp wards was primitive. The inmates were sitting round fires in small rooms with low ceilings, and seemed morose and indifferent to their surroundings. The children looked far from happy. They were huddled together in a small room with no attempt at brightness."⁴

(6) "The whole condition of the workhouse reflects great discredit on the Board of Guardians, it is over-crowded and ill-managed, and the staff is inadequate. Indeed, the detailed administration seemed so incompetent as to be almost cruel."⁵

191. One witness, for twelve years Chaplain at Holborn Workhouse, has given evidence as to the effect upon the inmates of life in a large general workhouse, which is a serious indictment of the system.

"After an experience of some twelve years there is," he says, "no doubt in my mind that life in the workhouse deteriorates mentally, morally, and physically the habitual inmates. Indeed, the life of these people is better described as more or less a miserable existence than a life. It must be admitted that the mental capacity of the average person who drifts into the workhouse, is of a low order, but nevertheless, I have seen in countless instances a gradual deterioration of intellect owing to the lack of almost all incentive to use the brain. The inmate finds at very least the necessities of life, and in many places far more than the necessities of life, provided for him with scarcely any thought or effort on his part, and in the majority of cases the sole ideas that fill the mind are to get as much to eat and as much sleep, and as large an amount of immunity from even the lightest task as possible. A large number of cases has come under my notice of young persons of both sexes who on their first admission to the workhouse have felt their position and surroundings most keenly, and yet in a very short space of time have found the life so congenial and free from responsibility and need of exertion that they made no effort to leave it, and after their discharge return to it as soon as possible. I have also seen many young people admitted who were at first bright and willing to perform their light duties, but who, under the influence of their associates, soon grew lazy and unwilling to do anything, though physically well able to work. Then follow short sentences for refusing to perform their tasks, and soon they become incorrigible rogues and vagabonds, and the result is—the habitual criminal. Again, the ill-effect of the increasing tendency to make the life easier and to increase the dietary and general comfort of the inmate is shown in the increasing number of admissions of those who, earning wages for a portion of the year outside, place their money in safe keeping and enter the workhouse regularly for periods of rest at the ratepayers' expense. I have come across many such cases; such people easily learn to complain of mysterious weaknesses, aches and pains which are hard to disprove, the supposed possession of which entitles them to the best of fare and medical comforts which the institution has to offer. In conclusion, the rapidly growing opinion amongst the poorer classes seems to be expressed by the remark of a man to me last week. 'So long as I can get sixteen ounces of pie for my dinner and my two children kept for life, and they don't ask me to do any more than polish the stair bannisters, I'm not going to work.'"⁶

192. The effect of the life upon the able-bodied women is not less deplorable. The matron of the Lambeth Workhouse says:—

"Physically they improve, mentally they degenerate, varied employment helps to keep them interested in life, but is not an absolute success. Married mothers will sometimes remain in the house for the good of their children, and after some years lose all desire to leave the workhouse, or they become mentally unfit to take up the duties of life again. . . . I consider that the older women have a bad influence upon the girls."⁷

193. A lady member of the Liverpool Select Vestry writes at length to the same effect:—

"The commonest faults of able-bodied workhouse women, as a body, are laziness and dishonesty. I have never yet seen a workhouse woman hurry. Every movement is taken in a leisurely way. Our best workers do not do in a day more than half of what a good charwoman outside would do. This is one of the difficulties in getting young women taken out of the workhouse, to stop in the situations found for them. They cannot understand why the mistress objects to their dawdling through their work, as they have always been used to do inside. I fear that nearly all our able-bodied women steal when they get the chance. . . . The views which workhouse habitués express from time to time

are interesting as showing their point of view. One woman said to the portress in my hearing: 'I live here; you are only a paid person.' Another said to a policeman: 'You're a beggar come over from Ireland to live out of the rates, that's what you are.' Another said to a gentleman holding an important post: 'You're only a servant; I want to see your masters.' A man told a group of our nurses: 'If it wasn't for the likes of us, the likes of you wouldn't be here.' . . . It is difficult to believe, but it is an actual fact that respectable young married women, who enter our 'class' and maternity wards, not infrequently declare themselves unmarried, so that their husbands shall not run any risk of being asked to pay on their account."¹

194. Further evidence as to the effect of workhouse life on the able-bodied will be given in the Chapter dealing with that class; but from what is here cited, it is obvious that a very serious problem has arisen which must be faced and dealt with. It is that, under the present conditions in London and other large towns, the workhouse has ceased to be a true test of destitution, and has become positively attractive to a certain class of able-bodied and even young people. What is still more serious is, that while the Guardians undertake the responsibility of maintaining these people, they have found themselves unable to exercise any regenerative influence over them. It is, of course, quite otherwise with the children, who can be subjected to systematic education under conditions which are physically and morally healthy. But the evidence cannot be resisted that, for those past childhood, workhouse life is liable to have an actually deteriorating effect. This is especially true of those who are still quite young when brought into association with degraded characters. It is partly the great size to which some of these institutions have grown which makes it impossible to deal with all classes of inmates in a suitable way. But the difficulty mainly arises out of the attempt to deal in one institution, under one master, with people requiring such very different treatment as the infirm and the able-bodied, the old and the young, the feeble-minded, epileptic, insane, and those of bad character. The difficulty can only be met by setting apart special institutions for special classes, as was intended by the Royal Commission of 1832; so that it may be possible to deal humanely with the aged, without thereby attracting the young; and so that the able-bodied loafer may be kept under strict discipline and not allowed to lose the power of work. It is mainly with a view to facilitating this specialisation of treatment that we have recommended the enlargement of areas.

The general
workhouse in
relation to the
able-bodied.

195. The workhouse is not the only form of indoor relief. Specialised treatment has already been introduced in so far as the sick, the children and, to some extent, the aged are concerned. But the infirmaries and schools and homes for the aged will be dealt with in subsequent Chapters. There is, however, one characteristic in which all the institutions share, and which must be noted here. It is their constantly increasing, and, in many cases, excessive costliness. This increasing costliness, which is to some extent inevitable, and to some extent also no more than a wise expenditure, bringing its return in a reduction of pauperism, shows itself in many ways. As early as 1870 Mr. Goschen, in the Annual Report of the Poor Law Board, called attention to the fact that expenditure had been increasing in a much larger ratio than the number of paupers—that the same number of paupers was costing very much more than twenty years previously:—

Increasing cost
of indoor relief.

"Several causes have contributed to this result. If may be generally said that in all establishments, both public and private, the scale of salaries has continuously increased for a long period and that more people are required to do the same work. But, apart from this general cause, it cannot be denied that the more humane views which have prevailed during the last few years as to the treatment of the sick poor have added most materially to Poor Law expenditure. . . . Generally it must be remembered that, apart from any increase in the number of paupers to be relieved, the expenditure may be enhanced:—

- (1) By a more liberal scale of relief in money or food.
- (2) By improved accommodation in workhouses, schools, infirmaries, and asylums.
- (3) By a rise in the prices paid for provisions, clothing, etc., and buildings.
- (4) By increased salaries to workhouse officials, medical officers, and the general staff employed in the administration of the law."²

196. This increased expenditure per pauper has progressed at an accelerating rate down to the present day; and we think that a consideration of the following facts will show that to some extent it cannot be justified.

197. The increase shows itself in the first place in the cost of maintenance, *i.e.*, the food and clothing of the inmates and the warming, cleaning, and lighting of the institutions. Taking first London alone, we find that in 1858–9 the cost per indoor pauper was about £10; in 1868–9, the cost had risen to £11 17s.; in 1898–9, it was £13; and in the next five years it rose to £15 11s.³ Taking the country as a whole, we find that in 1848–9, it was £7 17s. per head; it rose slowly till 1898–9, when it was £11 10s. per head, and in

¹ Thorburn, 35693 (46, 47, 48, 50).

² Twenty-second Annual Report, Poor Law Board [Cd. 123], 1870,

p. x. ³ Pitts, Vol. I., App. C (8)

1903-4, it amounted to £13 10s. per head, the last five years showing a very marked increase.¹ This increase would indeed be still greater if it were possible to omit from the amounts for the year 1898-9, as has been done for the year 1903-4, the cost of the patients in the Infectious Diseases Hospitals of the Metropolitan Asylums Board. By the year 1906-7 there had, however, been a slight decrease in the expenditure on maintenance, the amounts per head for that year being £13 12s. in London, and £12 3s. in England and Wales.² The total cost per head, including debt charges, salaries, maintenance, etc., has increased in a much larger proportion, especially in London, where it has risen from an estimated cost of £27 0s. 11½d. in 1873-4, to £39 12s. 4½d. in 1903-4. The corresponding figure for the rest of the country outside London is £25 14s. 10½d.²

198. A considerable portion of this increase is due to salaries, and this increase means a better paid and probably more efficient staff of officials; and a considerable part is due to the higher standard of maintenance, especially in the infirmaries. But a great part also consists of loan charges, and represents a very large investment in building. The expenditure on Poor Law buildings sanctioned by the Local Government Board for this purpose amounted in 1885-6 to £440,000; in 1897-8, it rose to £1,142,304; in 1900-1, it reached a maximum of £1,776,548 *; and in 1904-5, it fell again to £941,258.³ In all, since 1835 to the end of the year 1906, expenditure upon Poor Law institutions had been authorised to the amount of £40,000,000, and, at the end of the financial year 1905-6, loans to the amount of £13,360,000 were still outstanding.⁴

199. But the gravity of the position lies not so much in the amount of accommodation supplied as in its expensive nature. This is well brought out by a comparison made by Mr. Davy between the cost per bed in different institutions. He points out that whereas some of the infirmaries in or near London have cost as much as £325 to £377 per bed (exclusive of the site), in other places the cost has been much lower, ranging to £45 per bed; though all alike have to satisfy the requirements of the Local Government Board. In the same way, the cost of cottage homes for children has varied from £42 12s. per bed up to £289 per bed.

"This curious generalisation emerges from all these figures, that the larger the infirmary, the greater cost per bed. I think that is almost uniform, the reason being, I suppose, that in a large Union the Guardians are very anxious to have the best of everything; they feel that they can afford it, and indulge in, I might say, ornaments that the poor country Unions do not wish to indulge in."⁵

Mr. Davy points out that the tendency, though not quite new, has been greatly strengthened in late years.⁵

200. In 1870, Mr. Goschen, as President of the Poor Law Board, wrote in the Annual Report of the Board that the extreme parsimony developed by some Boards of Guardians had given way to a desire to conduct all the duties which devolved upon Guardians on somewhat more than a liberal scale. The Board were compelled to check expenditure in the more ornamental parts of workhouses, as, for instance, granite columns, terra-cotta mouldings, encaustic tile pavements, Portland stone decorations, and so on.⁶

Mr. Davy says :—

"That difficulty has been felt ever since, sometimes in a very acute form; and some years ago when Mr. Chaplin was President of the Board there was a Memorandum as to the cost of Poor Law buildings, in which he says he has observed 'with much concern the large and continuing increase in the cost of buildings erected in connection with Poor Law administration'; and exhorts the officers of the Board to check that excessive expenditure as far as they can. My experience in my present post has not been very long, but I can honestly say that we do make every effort to check the expenditure, though the results are, I think, a little startling."⁷

201. If it could be maintained that the higher rate of expenditure were essential to efficiency it would be difficult to urge that it should be checked. But we consider that in many instances expenditure has gone very far beyond what is necessary for efficiency, and is due to quite other causes. An urban workhouse of which the cost was £162 per bed was visited by a Committee of our members, and they report :—

"Little fault could be found with the workhouse and the infirmary except on the ground of expense. More modest buildings would have answered the purpose quite as efficiently. The two or three furlongs of corridors were sheer waste, and made effective supervision from headquarters unnecessarily difficult. Whether deterrence be right or wrong, it could not be held that these buildings would exercise any deterrent influence whatever. Discipline might be distasteful to some, but the staff was altogether inadequate for the purpose; it may safely be said that nine-tenths of the inmates had never before been so comfortably housed. The grounds are laid out with ornamental flower beds, and some of the London parks are not nearly so pleasant."⁸

* In 1900-1, a large amount of increased accommodation for children was needed in consequence of the breaking-up of district schools.

(2 *et seq.*). ⁶ Twenty-second Annual Report, Poor Law Board [Cd. 123] 1870, p. xv. ⁷ Davy, 1633. ⁸ Visits: Metropolitan, 116.

202. The small sense of financial responsibility in urban Unions, and the ease with which expenditure can be met by loans, make the Guardians very willing to spend.¹ The method by which architects are paid, being a percentage on expenditure, makes for extravagance. (It is significant that in the year 1900–1 the architects' fees amounted to £88,000.²) There is further the pressure from the expert, the medical man who wants his infirmary to have everything of the best and newest.³ And finally, the requirements of the general workhouse, as we have described it, do not tend to economy. If our recommendations as to classification are carried out it will be easier to deal with some of the inmates in very much cheaper institutions than at present. It has been found, for instance, by the Poplar Guardians that the able-bodied pauper can be housed at a cost of £14 per bed in their country workhouse at Laindon, as against £140 per bed, which is the lowest sum at which a workhouse for the able-bodied can be provided in London.⁴

“I think,” says Mr. Davy, “that what we have to do is to revise the requirements of the medical and architectural professions with regard to the housing of persons in workhouses, and I think we have to fight against the tendency which I have seen for so many years of requiring for the class that we will say is able-bodied exactly the same provisions as the requirements for the sick, that is to say, I think we want a better classification of demands.”⁵

203. Even as regards the sick we think that economy can be effected by a better classification, and that, for the cases of chronic infirmity which form so large a proportion of the inmates of Poor Law infirmaries, it is unnecessary to provide the same elaborate hospital accommodation as is required for the treatment of acute cases.

204. But we also think that the Local Government Board should exercise its authority more strictly in checking excessive expenditure. It has the machinery for doing this; all plans are submitted to its Architect, who can recommend that sanction be given or withheld, and without the sanction of the Local Government Board no loan can be raised.⁶ We agree with the Architect of the Local Government Board that a good deal more might be done in the way of advice and consultation between him and the Local Authorities⁷ prior to the preparation of the plans, and that after their adoption more care should be taken to secure that the erection is carried out in accordance with the approved plans, estimates, and quantities.

205. We think also that, on any proposal being made for building new institutions it should be considered

(1) Whether some part of the demand for institutional treatment could not be met by a greater and more systematic use of voluntary homes and hospitals;

(2) Whether the institution is necessary in view of the desirability of breaking up the existing workhouses into institutions specialised for different classes, and, if so, what the policy of the Local Authority should be in utilising the workhouse for a particular class or classes and not for applicants of all or many kinds;

(3) Whether the proposals for building do, or do not, exceed a recognised standard of cost per bed, which buildings for the particular class of applicant should in no circumstances be allowed to exceed; and

(4) Whether the land on which it is proposed to build is not, in view of modern facilities for movement, unduly near the large towns and unduly expensive considering the particular class of inmates for which the accommodation is desired.

206. Another characteristic common to all Poor Law institutions is the facility for “Ins-and-outs.” entering and leaving which is afforded. Reasonable notice of a pauper's intention to leave an institution must be given, and certain powers of detention are conferred on the Guardians by law. Thus, he may be detained for 24 hours if he has not previously discharged himself within a month, for 48 hours if he has discharged himself once or oftener within the month, for 72 hours if he has discharged himself more than twice within two months, and for 168 hours if he has in the opinion of the Guardians discharged himself frequently without sufficient reason.⁸ With these exceptions, destitute persons can both enter and leave the workhouse when they like, and as often as they like. Even where the destitution is the result of a pauper's wilful and persistent negligence or laziness the Guardians have no power to prevent him from either entering or leaving their institution. Thus, figuratively speaking, the door of the workhouse is always ajar, and the responsible authority have but little power to prevent it swinging outwards or inwards at the push of the pauper. In the West Derby Union out of 13,573 persons receiving indoor relief

¹ Davy, 1642. ² Davy, 1640. ³ Davy, 1642. ⁴ Lockwood, 4120. ⁵ Davy, 1644. ⁶ Davy, 1629–30. ⁷ Kitchin, 3660–8. ⁸ 34 & 35 Vict., Cap. 108., Sec. 4; 62 & 63 Vict., Cap. 37., Sec. 4.

in the year ended 30th September, 1907, no less than 2,401 were relieved on more than one occasion during the year, and 99 of these claimed admission more than four times during the year. And in this Union and eighteen others from which returns have been received, we find that, out of 68,318 persons receiving indoor relief in the same year, 11,105 were relieved twice or oftener, and, of these, 1,933 were admitted on five occasions or oftener.¹

207. Under such circumstances the curative treatment of pauperism becomes, in many cases, impossible. The worst characters may flock into the workhouse to recuperate from the effects of their evil lives, and as soon as they have, at the ratepayers' cost, partially recovered their physical condition, they can leave the workhouse and resume their degenerate careers. Their period of stay is not long enough to cure them of their evil courses, but it is long enough to give them fresh strength to pursue them. In this way has sprung up that crowd of prostitutes, drunkards, mendicants, loafers, and the like who are now known as the "ins-and-outs." These men and women form a hopeless problem under the existing Poor Law, and the case for sterner measures against them is aggravated by the penalties which their present mode of life imposes on their children. As Dr. McVail has forcibly pointed out, the children of the ins-and-outs are subjected to alternative régimes of vermin and soap, and the benefits of the "children's homes" are periodically obliterated in the beer-house and the slums, making any curative treatment of them impossible.²

208. But the evils of the almost unrestricted right to leave the workhouse do not end with the failure to cure individual paupers. The ratepayers' money spent on their maintenance contributes to producing future paupers which subsequent ratepayers will be called upon to maintain. Unmarried mothers, often mere feeble-minded girls, are tended at the public expense, and then allowed to go out and breed a future race of paupers, and probably feeble-minded children. Persons suffering from contagious diseases are allowed to depart uncured, and to infect another circle of cases, some or all of whom may ultimately come to the ratepayers for maintenance at the public cost. 'We feel very strongly that, both in the interest of the cure and of the prevention of certain forms of pauperism, some further powers are necessary. And in dealing subsequently with various classes of paupers, we shall make more definite suggestions for the giving of such powers of detention under proper safeguards.'³

Periodical
revision of indoor
cases.

209. But detention is useless, nay, cruel, if the result is not improvement but actual deterioration, and it is impossible to make treatment ameliorative unless the attention of the responsible authorities is from time to time directed to individual cases with a view to seeing what form of curative treatment is best for them and how that treatment is progressing.

210. Such a periodical revision of institutional cases is, however, in the large majority of Unions non-existent. It is true that in the case of indoor medical relief, the Guardians' responsibility for curative treatment is, to some extent, transferred to the Medical Officer, whose duty it is to reconsider from time to time the patient's condition, with reference to cure. But the supreme responsibility for the proper care of the sick remains with the Guardians, and, as will be seen from Dr. McVail's report, there is not always a satisfactory and periodical revision of cases with a view to seeing whether the best possible treatment is being applied.⁴ Even with regard to children there is nothing in the existing regulations to prevent an orphan being sent away to some certified institution in a distant town, and growing there from a child into an adult, without the Guardians who sent it having any report from the institution, or taking any further interest in the child's existence unless, or until, it dies, goes out to service, or is guilty of some gross misbehaviour.

211. But with regard to ordinary workhouses cases, the absence of revision is still more striking. An order for out-relief is invariably given for a particular period, at the end of which the case must, automatically, come up before the Guardians for revision if the relief is to be continued. But the necessity for assigning a period to an order for indoor relief is not generally recognised, except in rare instances, and, consequently, an order for the workhouse may, at the pauper's will, be an order for maintenance for life at the public cost. Wherever the expedient of a workhouse "call-over" has been undertaken by a Revision Committee, numbers of such cases have been discovered,⁵ and instances have been known where the call-over has resulted in the discovery that certain indoor paupers only existed as such in the workhouse books, having, in the body, long since departed from the institution.

¹ Statistical Appendix, Part IV., Section 2.

² Dr. McVail's Report, pp. 59-60.

³ Vide Part IX.

⁴ Dr. McVail's Report, p. 62. ⁵ North, Vol. IV., App. cxlv. (3); Williams, 45464 (8); Davies, Vol. V., App. lxx1 (8); Dearden, 41202-6.

212. We feel very strongly that, in future it should be part of the regulations of every institution that each case in that institution is periodically reconsidered by a responsible Committee, with a view to seeing whether the existing treatment is producing the desired results or whether it is desirable that the treatment should be altered. It is only by treating paupers as individuals that there is any chance of restoring to them their sense of individual responsibility for self-maintenance.

213. We may turn now to consider the extent to which advantage is taken of institutional treatment. Course of indoor pauperism since 1871-2.

It is shown in the Statistical Appendix to our Report that, arranging the figures in the cycles into which they naturally fall, the number of indoor paupers has shown a progressive increase since the year 1871-2, while the number of outdoor paupers shows a parallel decrease. But whereas, until 1895-6, the decrease in outdoor pauperism more than compensated for the increase in indoor pauperism, since that date the increase in the number of indoor paupers has been enormously in excess of the reduction in outdoor pauperism. Had this increase been due to a change in the economic position of the population, we should have expected to find it reflected in outdoor pauperism as well as in indoor pauperism. But, instead of an increase in outdoor pauperism, the decrease has continued though at a diminishing rate. Moreover, it is since 1895 that the expenditure has increased most rapidly, and we thus arrive at the conclusion that the increase in indoor pauperism is due to a change in policy of the Local Authorities rather than to any slackening in the moral and material progress of the people.¹

214. When attention is turned to London the position is still more serious. The increase in indoor pauperism is far greater proportionately than in the rest of the country, and more than counterbalances the reduction in outdoor pauperism at an earlier date. Indeed, since the cycle of 1880-1 to 1887-8 the number of indoor paupers in London has increased by no less than 29 per cent., whilst outdoor pauperism has remained almost stationary.²

215. The expenditure in London has also increased more rapidly than in the provinces. Between 1871-2 and 1891-2 there was little change in the amount of the extra-Metropolitan expenditure, but during the same period the London expenditure rose 40 per cent.³

216. It is true that the influence of the Metropolitan Common Poor Fund favours the indoor policy, but there is no reason why this influence should operate in a greater degree now than formerly, and the large increase in indoor pauperism in London must still, we think, be chiefly attributed to an alteration in the policy of the administrators of the Poor Laws. At any rate, it is clear that the people of London are using Poor Law institutions very much more freely, and in this connection it is important to consider whether they are being driven into them by a repressive policy or attracted to them by the advantages they offer.

217. In the first place, we may note that less than one half of the whole number of London indoor paupers* (39,802 out of 80,509) were in the workhouse on January 1st, 1908. The other half were in infirmaries, homes, schools, imbecile asylums, etc. Of those who are in the workhouse there is, as we have seen, a certain class—not as yet very large—to whom it has most unfortunately become attractive, the class of able-bodied loafers. Of the remainder, the great majority are there, not through any repressive policy of the Guardians in regard to out-relief, but owing to their own loneliness and helplessness, *i.e.*, it has been shown, on inquiry, that only a small percentage of the aged now in the workhouse could live outside on a pension or on out-relief.⁴ To these the workhouse is an asylum, and one which is certainly in London tending to become more attractive.⁵ Attractiveness and deterrence of workhouse to certain classes.

218. The next largest class to those in the workhouse are the inmates of the infirmaries, 14,202, and of those it has never, so far as we know, been suggested that they could be better dealt with by out-relief, or that they are “driven” there by any other cause than their own illness. It is mainly in connection with this class that the recent increase in expenditure on buildings has taken place; and in a subsequent Chapter it will be shown that in London the Poor Law infirmaries are proving increasingly attractive, both to the poorest, and to persons who might be considered above the destitute class.

¹ *Vide* Part II., pars. 648; Statistical Appendix, Part I., pars. 26-7. ² Statistical Appendix, Part I., par. 68. ³ Davy, Vol. I., App. v. (17). ⁴ Wethered, 5532-7: Vol. I. App. xi. (A), (87-8); Lockwood, 14022; Cheeseman, 73880-4. ⁵ Lockwood, 13439-40; Visits: Met. 112, 116, 117. * Excluding Casuals.

219. If we take the rest of the country we find that a much larger proportion of the inmates of institutions were in the workhouse, *i.e.*, 127,232 out of a total of 190,577 ; but this again can hardly be said to be due to a repressive policy, inasmuch as the proportion of the population who receive out-relief is much greater in the country at large than it is in London.

220. We do not think, therefore, that there is evidence to show that the existing system, even under strict administration, has forced into Poor Law institutions any considerable proportion of persons who could more properly have been dealt with by outdoor relief.

221. The question must here be raised as to how far relief afforded in an institution should be deterrent ; that is to say, how far it should be given under such conditions that the applicant would prefer, if it were in his power, to maintain himself outside without assistance from the Poor Law. This form of deterrence must be considered from two separate standpoints, *viz.*, the material discomfort and disability which institutional relief imposes, and the moral or social discredit which it inflicts upon its recipients.

222. The first is capable of more or less accurate measurement. The loafer, the in-and-out, and the work-shy are influenced as to whether or not they accept the offer of the workhouse by the amount of physical comfort, restraint, or inconvenience associated with the particular institution offered them. The more comfortable the house, the less is it a deterrent to this class. To the respectable poor the moral consideration is paramount ; many of them will for long periods subject themselves to material conditions far less eligible than those of a workhouse rather than accept comfort if it involves association with a number of persons of a degraded *status*. Thus, the modern mixed workhouse with its higher level of comfort works most unevenly as a deterrent. It attracts the very class it ought to repel, and it may act as a deterrent in the case of the aged and infirm to whom it might legitimately be a refuge. So long as an institution remains the receptacle for all classes needing relief, and good, bad, and indifferent characters are herded together, so long will the bad be indulged and the respectable suffer. At the same time we think it will be a great misfortune if the aged should be brought to prefer life in the workhouse (under whatever name it may in future be known) to an independent life amongst their own friends and relations, and we should deprecate any policy which aimed at or tended to this result.

223. On the other hand, we think that when once they have become inmates of such an institution their life should be made comfortable, and as far as possible cheerful.

224. There are, therefore, five preliminary essentials to making indoor relief in future rightly effective, both as a curative and a deterrent agency, *viz.* :—

- (1) The reorganisation and entire revision of the system of general workhouses
- (2) Classification by institutions.
- (3) Periodic revision of all indoor cases.
- (4) Properly safeguarded powers to remove to and detain in institutions certain classes of cases.
- (5) The provision of regenerative influences both personal and industrial.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 5.

(1) *For the treatment of cases of chronic infirmity, the same elaborate hospital accommodation should not be required as for the treatment of acute cases.* (203.)

(2) *The Local Government Board should exercise its authority more strictly in checking excessive expenditure :—*

(a) *Through the Architects' Department.*

(b) *By closer consideration of proposals made for building new institutions.* (204–5.)

(3) *Further powers of detention are necessary as regards certain cases, especially “ins-and-outs.”* (207–8.)

(4) *In every institution, each case should be periodically reconsidered by a responsible Committee, with a view to seeing whether the existing treatment is producing the desired results, or whether it is desirable that the treatment should be altered.* (212.)

(5) *The life of aged inmates should be made comfortable, and as far as possible, cheerful.* (222–3.)

Chapter 6.

OUTDOOR RELIEF.

225. It had been the original intention of those who framed the Poor Law Amendment Act of 1834 that all out-relief to the able-bodied should cease on July 1st, 1835, but it was ultimately left to the discretion of the Commissioners to introduce the prohibition gradually. In their Second Annual Report they write :—

Orders regulating outdoor relief to the able-bodied.

“No doubt can be entertained that it was the deliberate intention of Parliament . . . that all outdoor relief to the able-bodied should cease at the earliest period that it could safely, and with propriety, be put an end to; and the question which we have successively to decide as to each Union is, ‘Whether this time may be fairly deemed to have arrived?’”¹

226. Until parishes had been formed into Unions, and adequate workhouse accommodation provided as an alternative, it was felt to be impossible to prohibit the outdoor relief upon which so many had come to rely. For this reason the introduction of the new policy was not sudden, but gradual, and proceeded first by means of preparatory Rules,² and subsequently by Orders issued to particular Unions, which were afterwards generalised into the two Orders under one or the other of which outdoor relief is now administered. As has been said, the pauperism which presented itself to the Royal Commission of 1832 as most immediately pressing was that of the agricultural labourer, and the Outdoor Relief Prohibitory Order which was issued in 1844 was the culmination of the new policy as applied to the rural or less populous Unions. The main provision of this Order (of which the full text will be found in the Appendix to the First Volume of Minutes of Evidence), is that which prohibits relief to the able-bodied, male³ or female, and their families, except in the workhouse. There are important exceptions made in the case of

“sudden and urgent necessity; sickness, accident, or infirmity; burials; widows in the first six months of widowhood; widows with legitimate children as dependents, and with no illegitimate children since widowhood; imprisonment; family of soldiers, sailors or marines; and resident family of non-resident head.”³

The Order also prohibits non-resident relief with somewhat similar exceptions, and the payment of the paupers’ rent by the Guardians or their officers or by the Overseers. The Order allows the Guardians to depart from its provisions in particular cases if the Central Authority approve.⁴

227. For the more populous Unions a different form of Order was issued.

“In their Second Report the Poor Law Commissioners gave a form of Order specially intended for the requirements of a town Union. The chief point in this form of Order was the simplification of the requirements in the case of the able-bodied as compared with the preparatory rules applicable to rural Unions. The rule with regard to the able-bodied in a town Union provided that ‘the Guardians may, until accommodation can be obtained for the reception of such persons in the workhouse, give outdoor relief, one-half of which at least shall be in kind: but such relief shall only be given in return for labour at task-work.’”⁵

³ Adrian, Vol. I., App. i. (c).

⁴ Adrian, 196.

⁵ Adrian, 194.

228. It was not until 1852, under the Poor Law Board, that the rules for town Unions were codified into the general Outdoor Relief Regulation Order,¹ which is, as its name suggests, less stringent than the Outdoor Relief Prohibitory Order.² The main difference is that, under the Regulation Order, outdoor relief is not prohibited to able-bodied females, and is allowed to able-bodied males if set to work and kept employed by the Guardians while in receipt of it, provided that one-half at least of the relief is given in articles of food or fuel or in other articles of absolute necessity. It is noteworthy that, although relief is expressly prohibited to able-bodied males who are working for remuneration from any other source, no such restriction is applied to females; and this distinction has led to a great difference in practice. The prohibition aimed, of course, at putting an end to the system of paying a considerable portion of the labourer's maintenance from the rates, thus enabling the employer to pay wages below subsistence level. Another provision which has had serious practical results is contained in Article 10 of the Regulation Order, which permits the Guardians to depart from the Regulations, by making exceptions in special cases, provided they report to the Central Authority within twenty-one days the grounds of their action. Relief thus given before the Central Authority returns an answer to the report is legal, and its continuance is also legal if the Central Authority gives its approval, but not otherwise.³

229. These two Orders still in the main apply to rural and urban districts respectively, the Prohibitory Order being applicable to the larger part of England and Wales, and the Regulation Order to London and other populous centres,⁴ mostly in Lancashire and the West Riding of Yorkshire; though the distinction between urban and rural is less clear than formerly, owing to the increase and shifting of population. But a method of modifying the Prohibitory Order has been introduced by means of Outdoor Labour Test Orders, under which the Local Government Board approves of departure from that Order on conditions similar to those of the Regulation Order, *i.e.*, permitting out-relief to the able-bodied, provided they are kept at work.⁵ Thus a Union which is nominally under the Prohibitory Order may yet, under an Outdoor Labour Test Order, administer its relief quite as freely as if it were under the Regulation Order; indeed, one witness states that:—

“So far as statistics show, the actual administration is rather stricter under the Regulation Order than it is under the Prohibitory Order; that is to say, a greater proportion of the relief is institutional in London (for which there are special reasons, owing to the operation of the Metropolitan Poor Fund), and in Lancashire (where there is no Metropolitan Poor Fund) than is the case in the bulk of the Unions which are under the Prohibitory Order.”⁶

230. Having regard to the fact that the distribution of the population has so much altered during the last seventy years, and more especially to the fact that able-bodied pauperism is now almost entirely confined to the large towns, we think that there should be only one Order applicable throughout the whole country.

Policy as to
outdoor relief
to able-bodied.

231. The history of able-bodied pauperism under the new policy instituted by the Poor Law Commissioners will be told in detail in the chapter relating to that class, but we must emphasise here the point that the whole campaign of the reform was fought and won upon two main issues—that of making dependence less desirable than independence, and that of abolishing subsidised employment. One of the first acts of the Central Authority was to issue a Circular in which it was stated that the Poor Law Amendment Act had been passed, not for the purpose of abolishing necessary relief to the indigent, but for preventing certain illegal and injurious practices which had by degrees grown up in the administration of such relief.⁷ And the subsequent action of the Central Authority shows that, even in connection with the able-bodied, it is only as entailing specific evils that outdoor relief is condemned. When it could be used to restore the recipient to independence every facility was given for raising the necessary money. One of the original recommendations was to authorise the payment out of the rates of the expenses of migration of any person willing to migrate; and in the first year of their work the Commissioners were actively engaged in promoting the migration of agricultural labourers from the south to the manufacturing districts of the north, the expenses of this migration being defrayed out of the rates and considered as relief.⁸

¹ Adrian, 195. ² Adrian, 201. ³ Adrian, Vol. I., App. i. (D) (10). ⁴ Adrian, 202. ⁵ Adrian, 204. ⁶ Davy, 2392. ⁷ Memo. by Prof. Smart, “The Poor Law Board, 1847-71,” p. 4. ⁸ First Annual Report, Poor Law Commissioners, H.C. 500, 1835, pp. 21-3.

232. Outdoor relief to other classes than the able-bodied the Royal Commission of 1832 considered as a less pressing danger. Thus, they say :—

Outdoor relief
of non-able-
bodied.

“The outdoor relief to the impotent (using that word as comprehending all except the able-bodied and their families) is subject to less abuse . . . no use can be made of the labour of the aged and sick, and there is little room for jobbing if their pensions are paid in money. Accordingly we find, that even in places distinguished in general by the most wanton parochial profusion, the allowances to the aged and infirm are moderate.”¹

233. Nevertheless they indicate one danger, of a moral rather than an economic nature, which attends even the relief to the impotent. Though not fully convinced of the wisdom of legally enforcing the maintenance of the impotent by parents and children, they add :—

“But if the deficiencies of parental and filial affection are to be supplied by the parish, and the natural motives to the exercise of those virtues are thus to be withdrawn, it may be proper to endeavour to replace them, however imperfectly, by artificial stimulants, and to make fines, distress warrants, or imprisonment act as substitutes for gratitude and love.”²

234. It was probably because they considered the question of voluntary charity to be outside their sphere,³ that the Royal Commission of 1832 do not mention in their Report an interesting scheme submitted by two of the Assistant Commissioners.⁴ Their suggestion, supported by much evidence, was that the able-bodied should continue to be relieved by the Poor Law, but from a national fund, and under the strictest conditions. The impotent poor, on the other hand, were to continue to be relieved locally, and from funds obtained in the first instance by organising all the charitable resources of the district. A twofold object was to be attained, the more kindly and thorough treatment of those in need, and the prevention of the mischief done by miscellaneous almsgiving :—

“The experience we have had as Commissioners for inquiring into charities,” they say . . . “had convinced us, before we undertook to collect evidence for your Commission, that some constant superintendence is necessary to regulate and harmonise the proceedings of the trustees to whom the various benevolent founders have committed the management of charitable funds. But since our attention has been turned, in consequence of our connection with your Board, to the concerns of the poor in general, we have satisfied ourselves that all charities for the relief of the poor, as such, ought to be placed under the same superintendence as the general fund raised for that purpose.”⁵ . . . “It seems, then, clearly expedient that there should be in every district a public body, whose business it is to ascertain the real wants of the deserving poor, to receive and distribute the funds destined by the benevolent for their relief, and to give notice when those funds are insufficient for the purpose.”⁶

These local boards were to be elected by the ratepayers, and were to be in connection with a central board in London, which would authorise them to assess their constituents after due notice, when voluntary funds fall short.⁷

235. As early as 1840 it began to be felt that out-relief gave rise to serious difficulties even beyond the circle of the able-bodied. In the Annual Report of the Poor Law Commissioners for that year it is stated that investigations into the number of aged and infirm outdoor paupers relieved in the quarter ending Lady Day 1839 showed that, out of 236,000, no less than 87,000, or more than one-third, were partially able to work⁸ :—

Difficulties
arising from
outdoor relief.

“This large number of paupers,” said the Commissioners, “may be considered as receiving relief in aid of wages, and as injuring the independent labourers, by depressing the rate of wages.”

And they added :—

“We entertain no doubt that, if Boards of Guardians would resolutely require, as the condition of giving relief to these persons, that they should either come into the workhouse, or should be employed on account of the parish or Union, or should even, as in the case of persons receiving sick allowances from friendly societies, abstain from all employment, a large proportion of this

⁵ *Ibid.*, p. 161.

⁶ *Ibid.*, p. 162. ⁷ *Ibid.*, p. 163. ⁸ Sixth Annual Report, Poor Law Commissioners, 245, 1840, pp. 16–7.

87,000 would be found capable of supporting themselves, and would, by refusing relief on these conditions, relieve the country from a large expense with which it is now fraudulently burdened; and that (which is of far more importance) the independent poor, especially the able-bodied and their children, would be protected from the unfair competition to which they are now exposed from those who, deriving part of their support from the poor-rates, can afford to sell their labour for an inadequate remuneration.”¹

236. Another class which gave rise to difficulties was one which has always been regarded as privileged with respect to out-relief—viz.: widows. The Report of the Royal Commission of 1832 devotes a very brief section to this subject:—

“In all the cases which have been mentioned, relief is professed to be afforded on the ground of want of employment, or of insufficient wages; but a class of persons have, in many places, established a right to public support, independently of either of these claims. These are widows, who, in many places receive what are called pensions, of from 1s. to 3s. a week on their own account, without any reference to their age or strength, or powers of obtaining an independent subsistence, but simply as widows. In such places, they receive an additional allowance if they have children. The allowance for each child is generally about 1s. 6d. a week in rural districts, unless the child be illegitimate, in which case it is more frequently 2s. or more.”²

237. By 1840, matters had so far improved that the relief to widows was granted ostensibly at least on the ground of insufficient wages. During the quarter ended Lady Day, 1839, 28,880 widows were receiving out-relief for this reason, and in their Report the Commissioners remark that much of this relief is probably unnecessary.³ In Westhampnett Union (Sussex), the Guardians had taken the view that relief to the able-bodied of either sex should be given in the workhouse, with the result that in their thirty-seven parishes, only three widows and twelve children were obliged to accept this form of relief. They state in strong terms their belief that relief to able-bodied women does tend to reduce wages.⁴ Nevertheless in the Outdoor Relief Prohibitory Order which was issued in 1844, widows with one or more children are expressly exempted from the prohibition, while, as we have seen, the Regulation Order of 1852 confines its prohibition of relief in aid of wages to men.

Recurrent
interest in Poor
Law administra-
tion.

238. The next period in which we find the question of the policy of out-relief being seriously raised is nearly a generation later. It is noteworthy that public interest in Poor Law administration tends to move in cycles, determined in part by varying prosperity, and in part by the coming in of a new generation, which lacks the experience of its predecessors, and has ideas of its own. Difficulties recur, old abuses and old evils which were thought to have been buried reassert themselves, the scale of needs and of resources is greater, but the problems are fundamentally the same. It was in the late sixties that it became apparent that a careless administration of out-relief was once more threatening to become a social danger. For some years there had been a great and continuous increase in expenditure, which could not be entirely attributed to the rising standard of medical relief. In their Report for 1868–9, the Poor Law Board point out that the increase has taken place in every County in England and Wales; the relaxation of administration enforced by the disaster of the cotton famine had left a permanent increase in Lancashire of over £260,000, and the significant comment is made that: “Relief in aid of wages is given to a greater extent in Lancashire than in any other County.”⁵ The only attempt made by the Board to arrest the evil was by means of a Circular Letter on outdoor relief advocating the greater use of pay stations, in which they incidentally hope that this will not make the relieving officer neglectful of his duty of visiting the house of applicants for relief,⁶ and they conclude by desiring:—

“to impress upon Guardians generally, the importance of a strict compliance with the provisions of the Outdoor Relief Prohibitory Order, in all unions and parishes to which it has been issued.”⁷

239. In 1869, Mr. Goschen, then President of the Poor Law Board, issued an important Minute on “Relief to the Poor in the Metropolis,” which begins by pointing out that:—

“The published statements of Metropolitan pauperism have for some weeks past shown a considerable increase in the number of the outdoor poor, not only as compared with previous weeks, but as compared with the high totals of 1867 and 1868.”⁸

Mr. Goschen's
Minute of 1869.

¹ Sixth Annual Report, Poor Law Commissioners [C. 245] 1840, p. 17. ² Report of Poor Law Commission, 1832 [Cd. 2728], 1905, p. 42. ³ Sixth Annual Report, Poor Law Commissioners [Cd. 245], 1840, pp. 17–8; *Vide also* Mackay, pp. 301–2. ⁴ *Ibid.*, p. 18. ⁵ Twenty-first Annual Report, Poor Law Board, 4197, 1869, p. 14. ⁶ *Ibid.*, p. 77. ⁷ *Ibid.*, p. 78. ⁸ Twenty-second Annual Report, Poor Law Board, [C. 123], 1870, App., p. 9.

He urges once more the lesson learned at such a cost at the beginning of the century:—

“One of the most recognised principles in our Poor Law is, that relief should be given only to the actually destitute, and not in aid of wages. In the case of widows with families, where it is often manifestly impossible that the earnings of the woman can support the family, the rule is frequently departed from, but, as a general principle, it lies at the root, of the present system of relief. In innumerable cases its application appears to be harsh for the moment, and it might also be held to be an aggravation of an existing difficulty to insist that, so long as a person is in employment, and wages are earned, though such wages may be insufficient, the Poor Law authorities ought to hold aloof and refuse to supplement the receipts of the family, actually offering in preference to take upon themselves the entire cost of their maintenance. Still it is certain that no system could be more dangerous, both to the working classes and to the ratepayers, than to supplement insufficiency of wages by the expenditure of public money.”¹

240. But perhaps the main interest of the Minute lies in the fact that it is an urgent plea for co-operation between charity and the Poor Law, pointing out in great detail the necessary limitations imposed upon the Poor Law by a wise administration and the great good to be effected in preventive and curative work by properly regulated charity.²

241. The answers made to the Minute by some Boards of Guardians illustrate both the nature of the evils at which it was aimed, and the obstacles which the Local Authorities have so often opposed to reform, and especially to co-operation with other agencies.

242. The Holborn Board, for instance, argue the question at length, and state that:—

“According to the Return last week, . . . 6,374 persons were relieved, out of the work-houses at a cost of £384 15s. 10½d., or nearly 1s. 2½d. per head,—a sum obviously insufficient of itself to maintain “destitute” persons in a state of health, the more so as many of them are unfit to work, and others labouring under acute diseases. . . . The Guardians are therefore of opinion that it would be impossible in most cases to provide “adequate relief” to the extent and with the object proposed in the minute of the Poor Law Board.”³ . . . “The Guardians, however, do not wish to disguise the truth. They are convinced that it is by means of the relief afforded to the outdoor infirm and more or less disabled poor, that the competition in the lower forms of labour is increased to such an extent as to reduce the wages paid for it. The price of various forms of needlework could not be maintained at the present starvation standard, but that so much is done by persons in receipt of parochial relief.”⁴

They then point out that persons working in seasonal trades are relieved in slack times in aid of the wages earned in the busier periods of the year.⁴

243. Some few Boards, notably the “strictly administered” Unions in London, responded cordially, and an effort was made to organise local charities for the purpose, which developed into the Charity Organisation Society. But the City of London Board was probably more representative of the general attitude of the Guardians, in its reply that:—

“The Guardians have no need to refer applicants to charity for assistance, for they have not felt themselves bound by the restrictions laid down by the law.”⁵

244. Nor were the charities more eager to be drawn into co-operation, and the scheme contemplated by Mr. Goschen has never been to any great extent carried out. Except in so far as the Charity Organisation Society has attempted to mediate, the work of the Guardians and that of the voluntary charities has always been conducted on separate lines, and often without due regard to the needs of the poor. Among the members of most Boards there is an ignorance of voluntary charity which leads to an almost universal assumption of “unknown resources,” and is thus responsible for a great deal of very inadequate relief.

245. The general attitude of the administrators of relief finds its reflection in the statistics of pauperism. The number of outdoor paupers per thousand of population which stood at 35·3 in 1859–60, rose to 42·8 in 1862–3, fell again to 35·3 in 1865–7, and rose to 37·7 in 1869–70. Since that date there has been an almost continuous fall till the year 1900–1, when the lowest point of 15·3 was touched and the rate remained at that figure during the three succeeding years.⁶ This diminution must

The crusade against outdoor relief in the seventies.

¹ Twenty-second Annual Report, Poor Law Board, [C. 123] 1870, App., pp. 9–10. ² *Ibid.*, pp. 10 *et seq.*
³ *Ibid.*, p. 18. ⁴ *Ibid.* p. 21. ⁵ *Ibid.* pp. 25–26. ⁶ Thirtieth Annual Report, Local Government Board [Cd. 746], 1901, App. No. 75.

be attributed largely to the fact that, from 1869 onwards, a persistent effort was made, first by the Poor Law Board, and subsequently by the Local Government Board, and their Inspectors, to expose the evils consequent on a careless administration of out-relief, and to induce the Guardians to adopt a stricter policy.

246. With the Annual Report of the Poor Law Board for 1870-1 were published a series of Reports by the General Inspectors on the administration of out-relief in their districts. These are of great interest as indicating some of the ways in which carelessness had crept into local administration—carelessness which as we shall show is exactly repeated in the administration of to-day. For instance, Mr. Wodehouse, in writing of London, says :—

“I do not recollect that I met with a single case in the course of the inquiry in which total destitution was relieved out of the workhouse, and if such cases occur at all it is certain that they are extremely rare. In every case, therefore, the Guardians must be considered as supplementing an income derived by the applicant from sources other than the rates, and what struck me as most unsatisfactory was that in the large majority of cases they have no sufficient data for forming an opinion as to the amount of such income, or the sources from which it is derived. The headings of the various columns in the Relief Application and Report Book have indeed been so framed that if they could be accurately filled up the book would show at a glance the total means of subsistence of every applicant for parish relief. So difficult, however, is it to obtain information on this point that I believe the clerk to one of the Metropolitan Boards of Guardians was within the mark when he told me that that which the applicants represented as their entire income did not on the average amount to more than 50 per cent. of their actual means of subsistence. The Guardians in granting relief practically act upon the assumption that this is so. . . . This system is, I fear, attended with many evil consequences. . . . On the poor it cannot fail to have a very demoralising effect. They are constantly endeavouring to steer a middle course, fearing that if on the one hand they name too low a sum as their weekly income they will be told that the Guardians could not give them in the shape of out-relief an amount sufficient to maintain them, and that they must come into the workhouse, and that on the other, if they rate their means of subsistence too high, they will either be refused relief altogether, or that the relief given them will be below the usual scale.”¹

247. The results of these inquiries are summed up in a Circular Letter issued by the Local Government Board to the Inspectors in 1871,² in which stress is laid upon the great diversity of administration in different Unions, with the consequent diversity in the number of paupers and their cost to the ratepayers :—

“Variations in adjoining Unions, where the surrounding circumstances are similar and where the variations can be attributable, in the main, to no other cause than the different system of administration adopted by the Guardians.”³

It is pointed out that :—

“A certainty of obtaining outdoor relief in his own home, whenever he may ask for it, extinguishes in the mind of the labourer all motive for husbanding his resources, and induces him to rely exclusively upon the rates instead of upon his own savings for such relief as he may require. It removes every incentive to self reliance and prudent forethought on his part, and induces him, moreover, to apply for relief on occasions when the circumstances are not such as to render him absolutely in need of it.”⁴

248. The considerations which the Board thought most important to be borne in mind by the Guardians in the administration of outdoor relief are :—

“The application of an efficient workhouse test to all able-bodied applicants for relief, whether male or female, and the most strict and careful enquiries into the destitution and circumstances of all paupers to whom outdoor relief is granted at their own homes.”⁵

Great stress is laid upon the proper enforcement of the duties of the relieving officers, and it is suggested that inspectors of out-relief might be appointed, and that great care should be taken to ensure that the relief districts are not too large.⁶

249. This determined attitude of the Central Authority was accompanied by a very remarkable decrease in outdoor pauperism throughout the country. Between January 1st, 1871, and January 1st, 1877, the number of outdoor paupers fell from 881,000 to 531,000, without any corresponding increase in the number of indoor paupers.⁷

¹ Twenty-third Annual Report, Poor Law Board [C. 396] 1871, App., pp. 37-8. ² First Annual Report, Local Government Board [C. 516], 1872, pp. 63, *et seq.* ³ *Ibid.*, pp. 65-6. ⁴ *Ibid.*, p. 66. ⁵ *Ibid.*, p. 67. ⁶ *Ibid.*, pp. 67-8. ⁷ Thirtieth Annual Report, Local Government Board [Cd. 746], 1901, p. 357; Davy, 3297.

It is true that the greater part of this period was a time of great economic prosperity, which no doubt facilitated reform; but economic prosperity by itself has little or no tendency to reduce pauperism where administration remains careless. It will save those who are honest from the necessity of applying for relief, but it will not affect the cases in which the Guardians are being misled, and it is in these cases that the reduction mainly occurs under careful administration.

250. The statement is, of course, often made that, to reduce pauperism by careful administration, merely means to withhold the necessary means of subsistence from the poor, and to save the rates at the expense of their suffering. The fact that the number of indoor paupers did not increase during this period is strong presumptive evidence against this view; but a complete answer can only be given by a careful study of the facts in particular Unions. We have included amongst our evidence the particulars of two historical Unions which reformed their administration at this time, and we feel sure that a careful study of these will carry conviction that no one benefited more by the change than the working classes themselves.¹

251. These reforms were initiated gradually, so that those affected had time to adapt themselves to the change and make their own provision. That they did so, is proved by the increase of Friendly Societies and medical clubs. Further, by watching over the applicants to whom relief had been refused, and where necessary assisting them from private charity, care was taken to ensure that the system did not merely result in thrusting poverty underground. It is remarkable, however, how seldom the intervention of charity was necessary after the change had been established.

252. It was thus, then, that the generation of 1870 attacked its problem, as did that of 1834, by a determined effort to introduce wisdom and self-restraint in the administration of outdoor relief, and by a strenuous if not very successful attempt to bring about co-operation between the Poor Law and the charities. To this was added, as we shall see later on, work in dealing with the sick and with the children, which struck at the very roots of pauperism.

253. The present period of revived interest in the Poor Law reproduces many of the characteristics of its predecessors. Relief to the able-bodied and subsidised employment have re-appeared, and flourish as vigorously as ever, though for the most part they are carried on by agencies outside the Poor Law. By far the greater number of paupers receive out-relief, and notwithstanding the considerable reduction in the number of outdoor paupers since 1871 we still have approximately half-a-million on any given day, or two outdoor paupers to one indoor. In rural or mainly rural Unions, for every one indoor pauper there were on March 31st, 1906, 4·46 outdoor, while in urban or mainly urban Unions, excluding London, for every one indoor there were 2·45 outdoor. In London however, the number of indoor paupers exceeded the number of outdoor paupers by nearly 60 per cent., and the proportion of outdoor paupers was only ·63 to one indoor pauper. But the out-relief problem of to-day is for the most part a problem of the aged, and of women and children. Is this out-relief, the non-institutional work of the Poor Law, on a satisfactory basis?

254. In forming our judgment upon this important question we rely partly upon the evidence laid before us by witnesses, partly upon Reports made to us by our Investigators, but largely also upon our own experience, gathered by attending a large number of Board meetings and Relief Committees, and by visiting the recipients of the relief in their own homes. In the course of our inquiries we have found that in many places the same defects have crept into the administration as were reported in 1870, and we have again and again noticed upon what diverse and often conflicting principles out-relief is administered by different Boards of Guardians. In some Unions out-relief is not given unless there is a sufficient income to pay rent, under the mistaken idea that it is illegal to give relief sufficiently adequate to pay for shelter, thus encouraging applicants to overstate their incomes in order to qualify for relief. In other Unions a like amount would debar an applicant from getting outdoor relief, thus encouraging applicants to understate their income. In some Unions, in the case of a widow with children, no relief is given for the widow and one child, even though it may be impossible

¹ Willink, Vol. VII., App. cxi. ; Bury, 48031 (1-20).

for her to earn anything, owing either to her own condition, or to the number of children of tender years who need her constant attention. Whilst some Unions take into account the whole income of the household in computing the amount of relief, other Unions ignore entirely the income of those who are not legally liable to repay; and even, although there may be a sufficient income for all the members of the household, brought in by those who are legally liable, relief is not refused in case of aged people. Again, relief is given in some places on the same low and rigid scale both in case of assumed resources and in cases where there is no possible reason to believe there can be any other income. Some Boards endeavour to act upon the principle of sufficient inquiry and adequate relief; but the large majority still give wholly inadequate allowances, and rely upon the insufficiency of their inquiries for "unrevealed resources." If these resources happen to exist, all is well; if they do not, then the recipients inevitably suffer. Committees of our number have been present at many Relief Committees where hardly any inquiry had been made as to the means of the applicants, and where the Guardians habitually relied upon "unrevealed resources" in fixing the amount of relief.

255. The following extracts may be quoted from the reports of these visits :—

(1) "The practice of the Boards (six Unions) with respect to out-relief varies considerably. Most of them seem to work from a fixed standard, which varies from 2s. to 2s. 6d. per head for adults, and about 1s. 6d. for children. Cases are seldom discussed with reference to their needs: 'She will be content with that,' or 'That is what the other old women are getting,' or 'She is over eighty, give her another sixpence,' were the sort of considerations brought forward. Here and there the relieving officer had ascertained the income, but that was exceptional. Generally speaking, the relief given seemed on the face of it quite inadequate; but the assumption that there were undisclosed resources was probably justified in many cases."¹

(2) "Relief was apparently granted on the assumption that it was supplemented from other unascertained sources. Unless this assumption was correct, the scale of relief seemed inadequate."²

(3) "In cases of out-relief, undisclosed resources were nearly always assumed. The relieving officer would not even inquire to what extent applicants were being helped by charity, but he would content himself with the knowledge that Mr. or Mrs. So-and-so was looking after the case."³

(4) "I visited out-relief cases with the relieving officer. The relief given is on a fixed scale, without regard to circumstances, *i.e.*, 2s. 6d. for old people, 1s. 6d. for children. Resources are not known, but it is surmised that private charity and relations do what is necessary. . . . I afterwards examined some of the old people closely as to their resources, and am confident that some, at least, were much pinched."⁴

(5) "A widow, living alone, received 3s. 6d. a week, out of which 1s. was given to a girl for attending to her room, as she was helpless. She said that coals and rent cost her 1s. 4d., leaving her 1s. 2d. a week on which to live. She was trying to eat a dinner which she said was not cooked, and she could not finish it."⁵

(6) "Looking through the books, under the heading 'Other resources,' I found the entry to be invariably 'unknown!'"⁶

(7) "Enquiries as to resources are, I should say, practically not made at all. The first two cases I saw were an old groom and an old gardener, who had worked for good families, and were very comfortably housed. I asked whether their employers allowed them anything, and the relieving officer replied that he had never asked, as he made a point of not asking about private charity. Sons he may happen to see, but trusts to his general knowledge to judge whether they do or should contribute. I do not think there was a single case amongst those I visited, or amongst those we heard called over at the board meeting, in which he really knew what the children were doing for their parents; with one exception, the relief given was on the face of it glaringly inadequate, but the homes were comfortable, and there were no signs of extreme poverty."⁷

256. We have also received much evidence to the same effect, of which the following extracts may serve as examples :—

The West Derby Union is, next to West Ham, the most populous Union in England, having within its limits a population in 1901 of 529,000. We were struck by the inadequacy of the out-relief given in this vast district, and our opinion was endorsed by the following evidence of Mr. Cleaver, Clerk to the Union and an officer of great experience and ability.

"You would say, I suppose, speaking generally, that the scale of relief in West Derby is somewhat low?—Yes. I cannot speak too strongly on that matter. I think if out-relief is to be given it should be adequate. If out-relief is not to be given, then let them be dealt with by being

¹ Visits: Miscell., 108. ² Visits: Urban 1. ³ Visits: Rural 57. ⁴ Visits: Rural 69.

⁵ Visits: Rural 53. ⁶ Visits. ⁷ Visits: Rural 75.

sent into the house. I find that the average outdoor relief given in the West Derby Union—I am ashamed to own it—is 3s. per week. That, the guardians are of opinion, is granting adequate relief; but really it is only making up the deficiency that has been created by charitable people and others, and it is not dealing with a case as it should be dealt with.

“What do you put the rent of these cases at?—As a rule I should say that the relief of 2s. 6d. practically covers the rent, and I do not know what they are to live on after that.

“When this small sum is given rather as a sort of conscience salve, is not the result, from the judicial point of view, unsatisfactory, because the cases are not thoroughly gone into?—The difficulty is that the class of men granting relief do not see through the same spectacles as myself in this matter. They consider that as long as they can salve their consciences by giving out-relief of some sort they have dealt with the case; but whether that is satisfactory or not I think it is for others to decide. I consider there are numberless cases in the West Derby Union who ought to be receiving considerably more than they are receiving; but it is very difficult to get guardians to understand that it is better to have 500 on outdoor relief at 7s. 6d. than 1,500 at 2s. 6d.

“Do the relieving officers hold your view?—I think they hold my opinion. If I may allude to it, I find there is one case in the West Derby Union receiving 15s. a week and one receiving 10s. a week, but the average is 3s. per case.”¹

257. Mr. Baldwyn Fleming, one of the General Inspectors of the Local Government Board, states:—

“I constantly ask the question of the relieving officers: ‘What income has this man got?’ When he has had the 2s. 6d., the answer frequently is: ‘Nothing, that I know of,’ and yet ‘they give the 2s. 6d. . . . the whole of the facts in the case ought to be thoroughly ascertained. Then, if relief be given, it should be adequate; if it is not needed it should be refused. As a matter of fact, these half-crowns, eighteen-pences and shillings are given because the facts are not ascertained.’”²

258. Mr. Preston-Thomas is of opinion that:—

“One of the results of the extraordinarily large number of individual cases of outdoor paupers is that few of them are relieved adequately. Indeed, in some Unions, so little pains are taken to keep down numbers that it would be an intolerable burden on the rates to give each individual enough to keep him. It is thus left to chance to provide the difference between perhaps 2s. a week and the sum necessary for a bare subsistence.”³

259. The existence of this deplorable, though happily not universal practice of giving inadequate out-relief, is referred to again and again in the Reports of the Diocesan Inquiries as to poverty. A considerable number of incumbents report that outdoor relief in their parishes is so meagre as to cause positive suffering;⁴ and cases are cited where the Guardians’ allowance is alleged to leave only 6d. a week for the recipient to live on after the rent is paid.⁵ A still larger number of clergy say that it is necessary to supplement the Guardians’ allowances by charity, and it is pointed out that in this way much charity is expended in supplementing relief which otherwise might be more usefully employed to help the “second poor.” The inquiry also indicates how inadequate relief in some cases becomes a motive and excuse for begging, and thus tends to deteriorate morally the very cases it is supposed to help.⁶

260. We shall speak more fully in dealing with particular classes of the results of this widespread system of trying to compensate for inadequacy of knowledge by inadequacy of relief. Two points, however, seem quite obvious; first, that when the applicants are honest in their statements they must often suffer great privation; and, second, that when they are dishonest relief must often be given quite unnecessarily. The cases which touch the happy mean, where the resources which the Guardians assume are just those which the applicants conceal, must be comparatively very few.

Indiscriminate
and uncon-
ditional
outdoor relief.

261. The next point to which we desire to call attention is that in some districts this lack of proper discrimination and supervision occurs under conditions which call for the gravest consideration. Opinions may differ as to the degree of strictness desirable in Poor Law administration; but no possible justification can be advanced for the granting of out-relief in such a way as to perpetuate pauperism and the evil conditions which give rise to pauperism.

262. The following are some of the instances in which we have found that out-relief is being applied to subsidise dirt, disease, and immorality, and where the strictest enforcement of an indoor policy would have been not only far more humane but wiser.

(1) "An old Irishwoman, moving feebly about a room crowded with dirty lumber and herself in the last stages of dirt and decrepitude. She gets 3s. relief, pays 2s. 3d. rent, and has no other income except when she can get lodgers; she had two mill girls with her, one with a child, but the child was taken away with typhoid last week, and now she has no one. The place is hopelessly dirty and insanitary, and ought to be closed."¹

(2) "We visited several more cases in which the man was sick; always the same struggle, the wife trying to earn, the man refusing to stay in the hospital, the children more or less neglected. The last was the worst. A man more ill from starvation than from anything else, a great talker, could not say why he would not stay in the hospital, thought it was 'just his peculiarity.' He and a child about four were eating jam tart and brawn off a broken chair. He was thrown out of work two years ago . . . and cannot get anything to do. . . . He lost his home, and is now in a furnished room at 4s. 6d. a week. The room is unpapered; the ceiling not plastered; the furniture consists of a rickety bedstead, one chair, and an old wooden box for a table. A most squalid place."²

(3) "The worst case on the list was that of an old man, aged 65, living with prostitutes, who boarded and lodged him at 2s. 6d. a week. The Committee granted this man (although he did not appear) 2s. 6d. a week, but he was warned he must move into a more respectable neighbourhood."³

(4) "Widow with seven children, none working. Received 10s. per week relief. Rent, £5 10s. Said to be paid by friends. The relieving officer says the family can live on 10s. per week with care. I visited the home, and found it in a very dirty, I might say, filthy condition. The woman is a sloven. She went about the house in a dazed manner. I tried to get particulars of the way she spent her money, but found it impossible. Her memory could not serve her even for one week; one of the children was at home from school ill, but had not been seen by a doctor; although the relieving officer had called in she had not mentioned it to him. Some outside assistance is evidently given in this case. It is obvious, even with a few vegetables from the garden, that a family of eight persons could not live on 10s. per week, and pay £5 10s. per annum rent."⁴

(5) "Mrs. W., a widow with five children, receives 10s. per week. She is a notorious drunkard, and has lately been turned out of a house in a street where drunkards abound, because her drunken habits disturbed the whole street. When we called she refused to open the door; the relieving officer concluded she was drunk."⁵

(6) "T., married, with three children, is partly paralysed, and seems mentally deficient. His wife is crippled by rheumatism. The guardians allow 6s. per week for man and wife, and 6s. for the children. The tenement consists of two rooms . . . and there are living in the house in addition to the foregoing, Mrs. T.'s mother, one male lodger, about 40, and Mrs. T.'s sister with an illegitimate child. In these two rooms it will be observed there are five adults, three children and one baby. I was told by the relieving officer that the guardians do not attach importance either to cleanliness, sanitation, decency, or the ordinary standards of morality. As a result of my own observation, I am prepared to endorse the statement."⁶

(7) "Case of phthisis. Man been ill three years (56 years of age), been getting out-relief for three years. Has five children, youngest, 8 months, another expected. Wife, aged 41, getting 12s. 6d. from parish. The children are made up as follows:—A girl, 20, out of work, living at home; a son, 17, working as miner, earning 16s. a week; and three young children. The whole seven sleep in one filthy dirty room with a gable roof at the sides, about 3 feet high, running up to 8 feet in the middle. The room was about 14 feet by 8 feet."⁷

(8) "Case of phthisis. Man about 40, and wife same age; two children dependent; 5s. out-relief. Son, aged 19, earns 18s. a week. Man, wife, son and two children all in one room; filthy is a mild word to use to describe the condition of things here. . . . The boy is delicate already, and will, without doubt, follow his father. Never works a full week."⁸

(9) "A single woman lives with her sister and her husband in one room. She gets 4s. 6d. a week out-relief. It is a mystery where the single woman sleeps, as there is only one room and one bed. She makes up her living by making scones, which she retails; these are made under filthy conditions."⁹

263. We have been assisted in our investigations on this point by certain of the General Inspectors of the Local Government Board, and the following are extracts from their Reports :—

Mr. Baldwyn Fleming :—

“There were many cases receiving relief, where the circumstances from one cause or another were very undesirable. The relieving officers were well acquainted with the cases, and with these undesirable conditions, but the presence of those conditions affords further proof of the extreme difficulty of granting out-relief in ordinary cases with any degree of satisfaction. The amount given is insufficient to afford adequate relief, the accommodation is very poor, the bedding miserable, the food insufficient, the dirt too apparent. But in the lowest parts of the town all this is the normal state of the population.”¹

Mr. Wethered :—

“Some were clean and tidy, but in very many instances the rooms were dirty, ill-kept, and sometimes verminous.”²

Mr. Bagenal :—

“This class (Class C.) contains those concerning whom the present inquiry is made. Too frequently they represent the most demoralised and diseased of the population. They include some epileptics, imbeciles and cripples of the lowest class. Their homes are nearly always to be found in the poorest quarters where population is densest. Cleanliness and ventilation are not considered of any account. The furniture is always of the most dilapidated kind. The beds generally consist of dirty palliasses or mattresses with very scanty covering. The atmosphere is offensive, even fetid, and the clothing of the individuals, old and young, is ragged and filthy. Bankrupt in pocket and character, this class look to the rates to support them, and are never backward in making application. The children are neglected, furnish the complaints of the National Society of Prevention of Cruelty to Children inspectors, and fill the homes of the guardians. The men are drunkards, gamblers, workshy corner boys, and often criminals. The women are too often immoral, as well as unclean and neglectful. *Souteneurs* may be included in this class. . . . It is impossible with the present powers to deal satisfactorily with the various subsections of it which come before the guardians and the sanitary authorities. The guardians feel forced to give relief to bad cases because of the children, or for fear of some allegation of want of consideration to destitute ruffians or drunkards.”³ “It will be seen from the notes on each case that the conditions are very often bad indeed, and are quite incompatible with decent living for the adults, or with a respectable and healthful upbringing of the children where they exist.”⁴

Mr. Walsh :—

“Many of the homes which I visited, both in . . . and . . . of those in receipt of relief and of the neighbouring poor, were dirty, ill-kept and evil smelling.”⁵

Mr. A. B. Lowry :—

“In too many cases, however, where the house was structurally sanitary, I found the bedding and the house generally in a state of unnecessary and disgusting dirt.”⁶

Mr. Williams :—

“There is no doubt whatever that a large number of the outdoor paupers are living in an environment of filth and immorality, and in many cases I fear they are participants in, and abettors of these foul, insanitary and degrading conditions. . . . I found far too much intemperance and sometimes even drunkenness in cases to which relief was being granted. . . . Closely allied to it, and as a rule the fruits of it, were filth, both of person and surroundings, and sadder even was the neglect and resultant cruelty to children, who were ill-fed and ill-clad. . . . During the periodical visits of the relieving officer I consider that each room in a dwelling should be thoroughly inspected, for frequently I found that though the living-room might be fairly clean, the rest of the house was a mass of filth, the bedding dirty, a heap of ill-smelling rags for bed clothes and the atmosphere vile and vicious. In some instances even the living-room was a disgrace to humanity.” (See particular cases.)⁷

264. Stress is laid by the General Inspectors upon the point that these unhappy conditions are exceptional, and we are prepared from our own experience to corroborate this view. But the fact remains that they occur with sufficient frequency to be a very potent influence in perpetuating pauperism and propagating disease. From the point of view of phthisis alone there is harm being done which

⁶ *Ibid.*, Lowry, p. 2.

far outweighs any benefit to be derived from the dole of out-relief. And children who are brought up in the very midst of such conditions as we have seen, surrounded by disease and immorality and drunkenness, are almost doomed to pauperism. We are not urging here that the remedy is to give more relief: money alone cannot touch the evil. But we do urge that, if relief be given, it should be used to raise the recipients out of their deplorable condition, and to check the creation of another generation of paupers.

265. In this connection we may refer to the Report furnished to us from a Metropolitan Union showing the localities from which the cases of relief (both indoor and outdoor) came, and to the observations of the Medical Officer of Health for the Borough on that Report. It appears that the cases of relief in the Union chiefly come from four groups of streets, and that the domiciliary conditions prevailing in some of those streets leave much to be desired. In regard to some of the streets in which out-relief is given, the Medical Officer reports that:—

“The basement tenements which are in front 4 feet 2 inches below the level of the road, and at the back abut on a yard having a superficial area of only 180 feet, hemmed in by the houses in the other roads, are, owing to their want of proper light and ventilation, in my opinion, unfit to be occupied, and some years ago I endeavoured to get them closed, but was unsuccessful. . . . The arrangements, too, of the non-basement rooms are objectionable, as in many cases the water closet opens directly into the kitchen which is used as a living room. . . . On a very careful inspection of these basement houses made some two years ago, seventy-one of the rooms were found to be over-crowded. Subsequent to this the houses were put in good repair in compliance with the Council's notices, so far as their structural conditions would permit, but being, as I have said, occupied by a very rough class of people, very frequent inspections and overhauling are necessary if they are to be kept in decent condition. The death rate at all ages for these houses, and the infantile death rate are considerably above the average of the borough, the high mortality from phthisis and diarrhoea being especially marked.”¹

266. It is only fair to the Guardians of this Union, however, to say that they are apparently alive to the importance of refusing out-relief when the house is not clean and respectable, and we read with satisfaction that the granting of out-relief in certain streets:—

“is restricted as far as possible, and every effort is made by the Guardians to throw these people upon their own resources. No permanent out-relief is given in — Place, and in these cases where the Guardians deem it expedient to grant temporary out-relief in this (which is without question the most demoralised portion of the whole group), it is given, as far as possible, having regard to the needs of the case, in kind, and for short periods only.”¹

267. We consider that Mr. Court reaches the heart of the matter when he says:—

“Potent factors towards producing such a state of things as that suggested by the Commissioners are the views taken by a not inconsiderable proportion of guardians: First, that the disposal of the relief granted by them is a matter for which not they but the recipients are responsible; and, secondly, that however small the relief given to a person with little or no other apparent means of subsistence, it is no one's business to inquire further if the applicant is satisfied.” The first of these views . . . is almost an incitement to a careless parent to waste on drink money which should be devoted to the nourishment and clothing of the children, while the second may mean a bargain between a parsimonious Board of Guardians and liberty or licence-loving paupers for the lowest terms on which they will keep out of the workhouse.”²

268. We cannot admit that administrators are justified in this attitude of irresponsibility for the effect of the relief given; and we recommend that in future it should be a condition of out-relief that the recipients are leading respectable lives in decent houses. As a step towards this, and having regard to the fact that instances such as those described are generally to be found in certain quite limited and well-defined areas—often indeed single streets—we recommend that the relief Authority should proscribe such areas for the purpose of outdoor relief. That is to say, it should be understood that outdoor relief would not be given to anyone while inhabiting such a district, save in circumstances of sudden and urgent necessity. There would be no hardship in this, as rents tend to be higher in such streets than in more respectable areas; where it is not so, relief could, naturally, be given on a higher scale; and it would have the great advantage of removing the respectable poor from surroundings of degradation and misery. It is of special importance in the case of families of children and young persons. It would have the incidental advantage of discouraging the owner of slum property, and of calling public attention to insanitary areas, and—in certain places—to the insufficiency of working class housing accommodation. In

Proposed
conditions of
outdoor relief.

¹ Statistical Appendix, Part XVII.
Board, Court, pp. 2-3.

² Reports from General Inspectors of the Local Government

London it is the duty of the Relieving Officer in accordance with regulations which it is the duty of the Guardians to make, to give the Sanitary Authority information of nuisances liable to be dealt with summarily under the Act. Premises which are overcrowded or are in such a state as to be injurious or dangerous to health are nuisances within the meaning of the Act. It is desirable that this provision should be extended to the rest of the country and enforced, and that the Public Assistance Authority be required, if the Sanitary Authority refuses to take action, to report the fact to the Local Government Board.

269. We may add that in some places this policy of proscribing particular areas is already practised by Boards of Guardians. Mr. A. B. Lowry reports:—

“I gathered from nearly all the relieving officers that there were certain streets in their district of such a reputation that an application for outdoor relief from a resident therein could not meet with success.”¹

Mr. Court says:—

“In . . . there are a number of courts and yards of the slum type, but no persons on out-relief to be found in them, owing to the practice of the Guardians to refuse applications for out-relief from persons living in unsatisfactory surroundings. . . .”

“In . . . again, very few paupers live in the courts.”²

270. A policy such as this, gradually but steadily pursued until it was generally recognised, would, we are convinced, do much to diminish the evils of dirt, overcrowding and immorality, not only amongst the actual recipients of relief, but also amongst their neighbours. At present such evils are condoned by the action of the Guardians, and the mere insistence on a higher standard would be an influence for good both upon the people themselves, upon the owners of slum property, and upon the Sanitary Authorities. But we are aware that there are a certain small number of cases where something more is needed. Wherever we have gone we have heard of the one or two cases, generally of old people, who are living in a terrible state of neglect, and to whom the Guardians are forced to give out-relief, because they are powerless to remove them to an institution against their will.³ Very often they are senile, and incapable of taking a resolution on their own behalf. Their homes and persons become indescribably loathsome, so much so that there are cases in which even district nurses and undertakers have refused their services;⁴ and they are a source of constant danger to themselves and to their neighbours. We recommend that powers should be given to the relief Authority, under due precautions, to remove such cases to an institution. There are, no doubt, objections to such a course; but they are no greater than those which can be brought against the compulsory removal of infectious cases. And, as with infectious cases, so it would be here when once the removal has been effected, it would almost invariably cease to be felt as a hardship. We have had strong evidence from many witnesses as to the pressing need for this addition to the powers of the Guardians;⁵ and we think that those who oppose it can hardly have realised the evils which it is designed to meet.

271. We have seen that the question of out-relief to widows has always been one of difficulty in Poor Law administration; and it is certainly not less so at the present day. It is a question which has to be considered very largely, if not mainly, from the point of view of the children; but there are other issues involved which must be raised here.

272. In the reaction of the seventies against out-relief the Local Government Board took a stricter line than that of the Orders, and, in the Circular which it addressed to the Inspectors on 2nd December, 1871, it recommended that out-relief should not be granted to any able-bodied widow with one child only, and stated that, in the case of an able-bodied widow with more than one child, it may be desirable to take one or more children into the workhouse in preference to giving outdoor relief.¹ It is probable that the first recommendation is very generally observed; in many Unions the rule is that a widow is expected to maintain herself and one child, in some few it is held that she can maintain two children. In respect to the second recommendation there is much greater divergency, both in opinion and in practice. The general feeling is strongly in favour of leaving the children of widows with their mothers, on the twofold ground that the mother is the proper person to have charge of them, and that it is cheaper than either placing them in an institution or boarding them out. On the other hand it is maintained that, when deprived of her husband's help, it is by no means certain that a woman is capable of bringing up her children well, especially when she has to go out to work, or when there are boys in the family who need a strong control over them. With respect to the greater cheapness of out-relief, again, it is too often only another name for very inadequate relief, which does not permit of the children being properly clothed and nourished.

273. The extent to which the former view preponderates is shown by the fact that on January 1st, 1907, there were 34,749 widows, with 96,342 children, receiving out-relief, as against 1,240 widows with 2,998 children being relieved in the workhouse. The number of widows' children in schools and institutions would, however, be larger than this, though what proportion they form of the 60,421 indoor children is not known.

274. In some few places the evils of the mother going out to work have been felt so strongly that the experiment has been tried of making a sufficient allowance to enable her to stay at home altogether, and give her whole time to looking after the home and children.

275. At Glasgow the experiment has been working for some years on a considerable scale, and a detailed account will be found in Mr. Jones' Report on Wages and Out-Relief in Scotland.² The scheme was started in 1902, when, in accordance with a Circular from the Local Government Board for Scotland, a special roll was made for respectable widows with young children, the mothers being constituted guardians of their children, and paid as if the children were boarded-out with them. Up to May 15th, 1906, 461 widows had been placed on this roll, and 252 had been removed for various reasons. Of these, 148 were removed from the special roll because of improved circumstances; 48 married, were sent to hospital, or died; 8 were removed to the country; while the remaining 48 were removed on account of drink or immorality. As regards those who turned out badly, Mr. Motion, the Inspector of Poor, states:—

“The circular was well intended in every respect, if it had been carried out with sufficient discretion by our members; but some of them insisted upon giving the full aliment in every case, so that women who had no calling at their finger ends, who could neither knit, sew, nor do anything else, resorted to ‘close-mouth’ gossiping, tippling, and drinking, with the inevitable result that a considerable number of these widows fell into bad habits, becoming drunken, and otherwise unsatisfactory, and had to be struck off the roll. If a little more common-sense had been exercised, and the recommendations of the Lady Inspector and the ordinary Inspectors taken into account, these people would not have been ruined as they have been.”³

“The duty of supervising the widows in Glasgow on the Special Roll,” Mr. Jones reports, “has been assigned to a lady assistant inspector. . . . They are paid weekly. Those who receive from 15s. to 18s. a week are often better off financially than in the lifetime of their husbands. They are free of taxes, get free medical relief, medicine and clothes for their children. . . . Where the inspector is convinced that no harm will come to the children when the mother works at some gainful occupation, nothing is said. So many of the women are devoid of domestic and other interests that work for wages is a positive safeguard. How they are to be taught to care wisely for their homes and children and to spend their relief to the best advantage is a problem which this scheme has not solved, and which no single inspector, however efficient and helpful, can possibly solve without the co-operation of other social workers. Two hundred homes are far too many

¹ First Annual Report, Local Government Board, 516; 1872, p. 67. ² Interim Report of Inquiries into the Effect of Outdoor Relief on Wages and the Conditions of Employment in Scotland, Mr. Jones, p. 29. ³ Motion, 58087 (61).

thoroughly to be supervised and assisted in practical ways by one person. The other main drawback to the success of the scheme is the vacillating action of the councillors, and the effect this has in weakening the influence of the lady inspector. . . . Further insight into the types included on the 'special roll' can best be obtained from the following notes of visits made by us, usually in the forenoon, to the homes of a number of the widows. Five are reported as very clean or in good order, two as clean, four as fairly clean, one as dirty, three as very or indescribably dirty. Each group represents a number of others of like character to be found on the Roll. Two were out-workers, one ran a small shop, and a fourth had charge of a maternity case occasionally."¹

As regards the eight widows who were removed to the country, Mr. Jones reports:—

"An experiment in planting out widows in the country was begun in 1903. Eight widows with children were selected and distributed between two villages lying within twenty miles of Glasgow. The results have been considered so unsatisfactory that the scheme is at present in abeyance. Three of the cases are reported as satisfactory. A fourth was sent to a hospital and her children boarded-out. In the remaining four cases immorality wrecked the case. On the surface, one serious defect in the scheme would seem to be the choosing of villages so conveniently near Glasgow."²

276. The plan of granting complete maintenance, instead of subsidising the woman's earnings, has it is true the advantage of removing from the labour market some of the workers who are least able to stand against the conditions prevailing in the lower branches of women's industries. This question of the relation between out-relief and wages and the conditions of employment, especially in women's industries, has so much impressed us with its difficulty and importance, that it has been made the subject of a special investigation by Mr. Jones. From this investigation it does not appear that, to any considerable extent, employers deliberately pay lower wages because the workers are in receipt of out-relief, though such cases do occur. On the other hand, women are enabled by out-relief to continue doing work which otherwise they must abandon, either for the workhouse or for some better paid work. Again, if the question is raised whether certain industries are subsidised by out-relief to their workers, and whether they would not without this subsidy be forced under or obliged to reorganise on a better basis, we are met by the fact that those in receipt of out-relief form an exceedingly small proportion of the workers in any trade, while there is always a surplus of women waiting to be taken on. This is not, of course, quite conclusive; the removal of even a few competitors from a labour market may have a surprisingly large effect upon the standing of those who are left. But in London and many of the larger towns the supply of *unskilled* women's labour is still far beyond the demand for it. Unconsciously, no doubt, the employer relies upon the Poor Law, amongst other agencies, to keep his "hands" together for him in slack seasons, and so the irregularity of work is intensified.

Effects of outdoor relief on women's wages and conditions of employment.

"As a rule, the large employer has not the 'least idea' what becomes of his discharged workers. All he knows is that when he wants to take them on again, they will be on the steps in larger numbers than are required."³

277. It still remains true, however, that out-relief, by diminishing the mobility of the lowest and most unskilled labour, so far increases the competition of it in congested districts, and so far tends to force the rate lower for all concerned. It enables, and even induces, the recipients to continue working at wages far below subsistence level. In the section of Mr. Jones' Report on out-work and out-relief in a Metropolitan Union, will be found a table showing that the average earnings of forty-three out-workers in receipt of relief averaged 4s. 10d. a week, while the average earnings of 131 workers in the same trades *not* in receipt of relief were 7s. 3½d.⁴ Neither sum, of course, is a subsistence wage in London, even for a single person. But the paupers are not paid lower rates than the independent workers; they are merely enabled by the receipt of the relief to work less hard, while in many cases they are probably disabled from working so hard by old age, young children, etc. The Investigator concludes:—

" . . . since it is clear that the whole situation arises out of the exhaustion and stagnation of labour in . . . and clear also that the Poor Law administration in its attempt to relieve that condition has been unable to do anything but render it still more acute, a part of the responsibility for the labour being in that condition, or being there at all, must lie at the doors of the . . . Union. It seems, therefore, fair to say that out-relief is one element in a complicated

¹ Interim Report of Inquiries into the Effect of Outdoor Relief on Wages and the Conditions of Employment in Scotland, Mr. Jones, pp. 30–31. ² *Ibid.*, p. 30. ³ Report on Effect of Outdoor Relief on Wages and Conditions of Employment in London, Miss Williams and Mr. Jones, p. 58. ⁴ Mr. Jones' Report on Poplar, p. 6.

system, and to that extent has affected outwork and the earnings of outworkers; to what extent it is impossible to state, owing to the comparatively small number, and those naturally the older or less efficient workers, directly affected. But to affirm that out-relief created the situation, or is, indeed, primarily responsible for it, is quite unwarranted by the evidence. The question is far larger than the relation of outwork to out-relief.”¹

278. Glasgow is a city where there is much “sweated” women’s work and much out-relief; and the investigation leads to much the same results. Out-relief is contributory cause to an evil arising out of conditions which prevail far more widely than the area directly affected by Poor Law administration. Whatever effect it has in lowering wages is produced indirectly, by increasing the congestion of labour in the industries employed by the lowest class of workers.

Effects of
outdoor relief
on character.

279. Its effects upon the recipients themselves are more direct and often more detrimental. From the section of Mr. Jones’ Report on London we may take the following conclusions:—

“(1) It damages character by inadequate inquiry and haphazard relief. It mixes the dissolute and the decent to the detriment of the latter. If guardians think a woman is paying too much rent she is told to move to cheaper rooms. Sometimes this hastens deterioration by withdrawing the support of a respectable street and placing the women and children in an unfavourable environment.

“(2) The help it affords is frequently insufficient for proper maintenance when all other resources are included.

“(3) It deters women from entering ‘the world of self-support.’”²

280. Sometimes this effect is produced by the fear of the women that, if they earn too much, their relief will be reduced or stopped.

“We are convinced,” Mr. Jones says, “however, that some paupers conserve their energies so as to ensure the continuance of relief. This was brought home to us by the statement of a partner in Firm No. 15. His forewoman on offering an outworker more work, met with a refusal as the worker feared she might lose her out-relief if she earned more. Such cases are significant, and there are probably more than we have found.”³

281. Sometimes the same fear makes them refuse opportunities of independence when offered. The following instances are quoted from Leicester:—

(1) “A.B. Deserted by husband. A strong able-bodied woman in receipt of out-relief. Work was found for her by the Charity Organisation Society. She demurred: ‘What’s the use? I shall be no better off; my relief will be stopped.’ She has not been on relief long. Previously, for five years, she supported herself bravely, but grew tired.”

(2) “C.D., widow. Her father’s family are well-to-do. She has an awkward disposition and quarrelled with her people three years ago, and is still estranged from them. She declines to write to her father for help. ‘Not I; if he helps, I shall only have my out-relief stopped.’”

(3) “E.F., widow. Strong, rough woman. She is a good floor-scrubber and might have had a regular berth. She is very cantankerous and resents supervision. She gave up her work because ‘she can get a little from the parish.’”

(4) “G.H., widow. Ill. Has a daughter, nineteen. Relief was given because of the woman’s illness, and because the daughter was out of work. She hung on to the relief, and never would have got well had it not been stopped. Then she resumed work at once and has gone on well since.”⁴

282. London experience is similar. A trained social worker in Dulwich wrote to Mr. Jones and Miss Williams as follows:—

“There is no doubt that in this district many widows are deterred from trying to earn an independent living by the knowledge that they can obtain out-relief very readily for their children. The certainty of this is so strong among a certain class of the population that they look upon the help as a right, and a woman will be urged by her neighbours to apply for relief as a thing to which she is legally entitled, with no doubt whatever of the relief being granted. The relieving officers do their best to induce widows to become self-supporting, but their efforts appear to be rendered useless by the action of the guardians, who consider out-relief the most economical way of dealing with that class of the community.”⁵

¹ Mr. Jones’ Report on Poplar, p. 9.

² Report on London by Miss Williams and Mr. Jones, p. 63.

³ Mr. Jones’ Report on Scotland, p. 19.

⁴ Miss Williams and Mr. Jones’ Report on Leicester, p. 118.

Report on London, p. 13, also p. 18.

283. The question has been asked in some places what would happen if the out-relief were stopped. Mr. Jones and Miss Williams report :—

Effect of
abolishing
outdoor relief.

“Many officers agree that out-relief could be greatly reduced in their unions without causing hardship. In Leeds the clerk thought that given a sufficiency of relieving officers and a certain amount of expert knowledge on the part of the Guardians, 20 per cent. of the cases could safely be struck off. In Leicester the figure was put at 90 per cent. These are lax unions and many names have found their way to the roll through other avenues than destitution, and could be removed without destitution resulting. In the stricter Union matters are different. In Ipswich the superintendent relieving officer believed that some of the paupers would have been supported by friends and relations. He did not think their own earnings would have risen had relief ceased, nor could he point to current cases whose out-relief ought to be reduced because of high earnings. A more extreme view was put forward by a Taunton officer. He thought if no out-relief were given nobody would be any the worse.”¹

284. It has sometimes been suggested that, to stop out-relief to women who are engaged in the worst paid industries, is likely to drive them into an immoral life as a last resource. It is only fair to the working women of this class to say that there is no evidence whatever to show that they resort to such a life as an alternative to the hardest work and the poorest pay.

“Prostitution is sometimes suggested as the resource, but we could discover no *proof* of this and, in any case, prostitution is not to be explained on economic grounds alone. Cases where relief has been stopped because of immorality, or for keeping an immoral house, occur.”²

Again :—

“It is alleged that low wages of women are a direct cause of immorality. We do not find that this is sustained.”³

285. Admitting that little good and much harm are done by the present administration of out-relief to widows, the question still remains how far, with better discrimination and wiser supervision, it might be possible to utilise it in the better interests of mothers and children alike. To part the mother entirely from her children is an impossible policy, and, except in cases of grave misconduct, undesirable for both; to ask that some of the children should be sent to school, where there are good Poor Law schools, is to ask little more than a reasonable mother in every rank of life is prepared to yield for the sake of her children. To give the mother a sufficient maintenance without work in return is wise only in very carefully selected cases, and, as shown by the Glasgow experience, may in some cases easily lead to demoralisation. To give a partial maintenance only may lead to the neglect of the children and the home. Sometimes it may be possible to arrange for friends and relations to look after the children or contribute to their support. Every case seems to call for special and individual attention; and it is well worth considering whether, in towns of any size, the necessary help might not sometimes be best given by means of day boarding-schools, on the lines of the day industrial schools. Outdoor relief, administered on a fixed scale, regardless of other resources or of home conditions, stands condemned by its results.

Question of
future admini-
stration of
outdoor relief
to widows.

286. Analogous to the question of out-relief to widows, but in some ways even more difficult, is that of out-relief to deserted wives. One of the recommendations in the Circular issued by the Local Government Board is :—

Outdoor relief
to deserted
wives.

“That outdoor relief should not, except in special cases, be granted to any woman deserted by her husband during the first twelve months after desertion.”⁴

The object is, of course, to diminish the motives to desertion, and especially to guard against collusion between husband and wife; but the present practice of Guardians varies very much. At St. Pancras, we are told :—

“Of course, there is always a danger of collusion, and I have found that it has been advisable for the wife to be taken into the workhouse. . . . It prevents collusion, and, I think, it tests the case, and shows whether it is a *bona fide* desertion case.”⁵

¹ Miss Williams and Mr. Jones' Report on certain Unions in England, pp. 10-11. ² *Ibid.*, p. 10.

³ Final Report on Relation of Industrial and Sanitary Conditions of Pauperism, Mr. Steel-Maitland and Miss Squire, p. 122. ⁴ First Annual Report, Local Government Board [Cd. 516], 1872, p. 67, par. 2.

⁵ Craig, 19511.

On the other hand:—

“In the Bermondsey Parish, outdoor relief is granted to these cases. . . . I am of opinion that, so long as outdoor relief is continued to these women, there will always be a large number of desertion cases to deal with. It has been proved in several instances that the desertion has not only been brought about by these women themselves, but the latter have been known to be in collusion with their husbands, thus enabling the men to avoid arrest.”¹

In Camberwell:—

“There are a large number of desertions due, it is suggested, to the generosity of the guardians. The wives always receive out-relief. Hence in many cases collusion with husbands. The superintendent relieving officer has urged in vain that women should go to the workhouse for the first three months.”²

We therefore endorse the recommendation of the Local Government Board.

Effect of inadequate outdoor relief to aged women.

287. One of the most painful features of the present system of inadequate relief is the vast army of aged women, whom it keeps clinging to the skirts of industry at an age when they are quite unfit for work of any kind. Mr. Jones and Miss Williams report:—

“At Leicester in March, 1906, there were 2,008 women recipients in receipt of out-relief, the total being composed of 823* under sixty and 1,185* over sixty. . . . Special notice should be taken of the cases of the old women in receipt of out-relief who work at glove stitching. Their earnings are exceedingly low, working out at 1s. 4d. a week on the average; but it has to be pointed out that the average age of the women is 67·7 years.”³

288. The amount of relief given is 3s. 6d., except in the case of one veteran aged 88, who earns 1s. 6d. and receives 4s. 6d. relief. We are not told how long they work for their pittance; and if the hours were very few it might be argued that the stitching was merely a pleasant occupation. But this is not likely to be the case. Where infirmity is great long hours must be worked to earn even a few pence. Amongst the illustrative cases from London is that of a widow aged 79, who works from 5 a.m. till 10 p.m. to earn 2s. 11d. a week at steel-covering; she has 4s. from the parish and a loaf from the clergyman, and pays 2s. rent.⁴ From Glasgow we hear of women over sixty working ten hours a day at shirt-finishing, and earning 1s. 10d. a week; younger women can earn more at the same work, but the infirmity of the aged turns their work into slavery. Some women over sixty may be quite capable of earning a full living; others are incapacitated even earlier. Here again, what is needed is to replace a mechanical system of out-relief, which is superfluous for some and cruelly inadequate for others, by a discriminating treatment of each case.

Rural labourers' wages indirectly subsidised by outdoor relief.

289. We reserve to Chapter 9 the question of out-relief given directly to the able-bodied. The practice is happily confined to a few Unions. Perhaps more serious, as being both more general and less obvious, is the indirect subsidy to labourers' wages which prevails in most rural districts. There is no doubt that out-relief is freely given to old people living with single sons who are well able to maintain them; and we cannot disregard the fact that generally speaking, the Guardians who give this relief are the farmers who employ the labourers. They may have no definite policy in the matter, but:—

“Guardians, especially the older ones, hold the view that if pressure is put on the sons to keep their parents entirely they will leave the country in still greater numbers, and they can point to examples where this has taken place.”⁵

290. One of the instances quoted by Mr. Jones is that of a widower receiving 2s. 6d. out-relief, who has two single sons at home earning full wages as farm labourers. In South Wales, again, the relief is given with still less reason, owing to the higher wages earned by the sons:—

“It is practically certain that in the majority of these cases relief could be discontinued without hardship ensuing. This is especially true where the sons are colliers, and where the family income ranges from £2 to £4 per week. Lax administration is the reason why these cases are on the books.”⁶

* As regards these, it should be observed that a large proportion were engaged in “casual domestic service.”

¹ Dyson, 20117 (12). ² Miss Williams and Mr. Jones' Report on London, p. 13. ³ Miss Williams and Mr. Jones' Report on certain Unions in England, p. 115. ⁴ Miss Williams and Mr. Jones' Report on London, p. 48. ⁵ Mr. Jones' Report on Suffolk and Cambridge, p. 24. ⁶ Mr. Jones' Final Report, p. 19.

291. The Report by one of our number on Unions in North Wales shows that the practice is common there also.¹

292. We have dwelt at length upon the question of out-relief, believing it to be of the utmost importance that the evils connected with the system as now conducted should be fully exposed. If these evils were inherent in any system of outdoor relief, and could not be got rid of unless the system itself were abolished, we should feel ourselves bound to recommend the cessation of all outdoor relief after a certain date. But we think that this course, though it might be preferable to continuing the present system, would be attended with considerable hardship, that it would give rise to a feeling of harshness and injustice on the part of those who could not be expected to understand the reasons for the change, and moreover that it would deprive the administrators of the Poor Law of a method of assistance which may be turned to good account in skilful hands. At present, we believe that out-relief is largely instrumental in perpetuating pauperism; but we believe that this is due to bad administration, and, while we do not disguise the fact that we desire by the reforms we suggest to reduce the present number of cases by a wiser discrimination, we hope also to check the supply of future pauperism by a more constructive policy.

293. In the first place, we think that in every case there should be a complete knowledge of the facts, and the assistance given should be adequate and carefully adapted to its needs.

We mean that every family applying should be looked upon as unique, and a serious effort made to remedy the distress from which it is suffering. We recognise that in order to do this adequately it will be necessary to call in the assistance of other agencies, spiritual, moral, and charitable, but we regard as one of the worst features of the present administration its almost complete lack of co-operation with other agencies, and hope that our Report may lead to a great change in this respect. We think that, when application is made for relief, the question must be asked *in limine*: Is this a case which can be best treated by public assistance or in some other way, and by some other agency? Assuming it to be a case for public assistance treatment, we must ask what is the best method of treatment? And if outdoor relief is thought to be the best, "it is the plain duty of the Guardians to take precautions to ensure that the relief is adequate, and that the pauper is sufficiently fed, clothed and lodged."² If this principle be accepted and acted on, it will involve much closer supervision of cases than is now common, for it will mean frequent visits and a thorough knowledge of all the circumstances and their variations. This we think most desirable, and here again, we hope that the help of voluntary agencies will be enlisted.

294. It is generally assumed that cases which have once applied to the Poor Law for relief are "hopeless," and that the only use to which the relief can be put is to enable the recipients to drag on a miserable existence at the lowest level. That there are many such cases at present we are painfully aware, but we consider them a legacy from a mistaken policy in the past. It is probable that many of them, if they had been wisely dealt with in the earlier days of their distress, might have been raised into a position of independence. Miss Harlock, one of our Special Investigators, says:—

"I was much struck with the hopeless condition of some of the cases at the stage at which I visited them. With these an earlier common sense treatment would have prevented the development of destitution (and in some cases of degradation also) to its present acute form."³

295. The following case, described by Miss Harlock, will illustrate what we mean by the need for more constructive work:—

"A further reference to this case-paper will show that even in this Union where the administration is unquestionably able, leakages occur. There were possibilities of development in connection with this family which were not taken. James, a lad of 14, was, when his parents first applied to the board, allowed to remain untrained, and now at the age of 24, is selling flowers in the streets instead of being employed at a good trade. The relieving officer (November 3rd, 1903) calls the attention of the Guardians to the daughter, Margaret, a girl of 19 (a cripple), and suggests that she be taught some occupation by which she can earn

¹ Visits: Urban, 96; Rural 97, 98, 100, 101, 102, 103, 104, 105. ² Davy, 2433. ³ Report of an Inquiry in Six Unions into cases of Refusal of Outdoor Relief, Miss Harlock, p. 37.

her living, but nothing is done, and we now find her sometimes in the workhouse and sometimes living with her mother entirely untrained and incapable of supporting herself. In all probability she will be a source of expense to the State as long as she lives, and her happiness in life will be curtailed by her limitations. Yet when she first became chargeable, she was only a child of 11.”¹

296. Here, as also in the two following cases from our own experience, the relief given by the Guardians, in the absence of any constructive policy, is only helping to perpetuate pauperism.

(1) “A baker’s assistant out of work three years; about 50; does odd jobs. He and the woman who is now his wife, and three or four illegitimate children, were many years in the workhouse. They came out and married; there is another child, and they have intermittent relief in kind only. A miserable home.”

(2) “A bricklayer’s labourer, out of work constantly owing to quarrelsome temper. Wife was born and bred in the workhouse, and would be quite content to return there. Four little children, and a very bare home. Relief in kind only, no food unless they had it. Wife says she would gladly emigrate. Her sister and family are doing very well in Canada, but ‘they did not emigrate, they just went.’ Relieving officer thinks the man’s character too unsatisfactory. This family seems condemned to hopeless pauperism, unless the guardians adopt some different policy, and the relieving officer says he has several others like it.”²

297. We fully endorse the following paragraph in which Miss Harlock summarises the impression made upon her by her inquiry into cases which had been refused outdoor relief:—

“The method of dealing with cases should be much more elastic. The workhouse test is not enough (See Case No. 11.) There are many cases which cannot suitably be met either by the grant of a workhouse order or by out-relief. Some require curative treatment, some merely sound advice. No case which has ever touched the Poor Law should be left to drift unaided. There is evidently an urgent need for some organisation which would deal with cases where the offices of a friend are required. It should work in conjunction with the Poor Law officials, who would hand over suitable cases to its care. I have come across cases, *e.g.*, Nos. 46, 48, where it is likely that if a strong and wise friend could be found they might be placed upon an independent economic footing. It is so often not only financial aid that is needed but friendship and advice. It is sometimes thought that the religious and charitable agencies provide this, but in only one case have I discovered any attempt on the part of such agencies to build up the economic independence of the family. The need for effective encouragement of thrift in the case of those who are engaged in seasonal trades was very evident. Cases 35 and 36 illustrate this. The men earned good money in the summer, but instead of saving a proportion of it spent it all, and in winter they had nothing to fall back upon. The mere providing of facilities for saving is not enough. There should be persons visiting the families who will encourage them week by week during the summer to make provision for the period of seasonal unemployment.”³

298. That there is a large scope for work of this kind is suggested by the facts brought out by the year’s record of pauperism which has been taken by the Local Government Board at our suggestion. It shows, amongst other things, what proportion of cases are permanent, and how many are recurrent with intervals of independence:—

“It shows that 274,607 persons, or 16·1 per cent. of the total number, were relieved on more than one occasion during the year. Clearly then, the previous period of relief obtained by these people had failed to exercise any curative influence, and they returned to independent life, not more, but in all probability, much less, fitted for maintaining their independence. The figures show that there is much room for improvement and that capable administrators can find ample scope for their talent.”⁴

299. We have already indicated some of the changes which we consider as requisite to this improved administration, in addition to the fundamental change in the constitution of the Local Authority. Smaller relieving officers’ districts, more highly trained officials, greater powers of dealing with extreme cases, are some of them. To these we must now add another method which has frequently been suggested to us of improving the work of relief, and more especially of out-relief, *i.e.*, the adoption of what is known as the case-paper system.⁵ Under the ordinary system, no continuous record is kept of an applicant and his family; at every application he is entered afresh in the application and report book of the

Proposed
adoption of
“case-paper”
system.

¹ Report of an Inquiry in Six Unions into Cases of Refusal of Outdoor Relief, Miss Harlock, p. 6.
² Visits: Urban, 84. ³ Report of an Inquiry in Six Unions into Cases of Refusal of Outdoor Relief, Miss Harlock, p. 37. ⁴ Statistical Appendix, Part IV., section 2, par. 48. ⁵ Fleming, 9507; Lockwood, 13588-90; Briant, 14881, 14891; Thurnall, 15698-702; Morris, 16682-3; Peters, 20087-8; Dyson, 20254; British Medical Association, 39477-82; Dodd, 47190 (41b); Elms, 49887 (14); Heathcote, 70320 (21), etc.

relieving officer, and, where this book is not indexed, it depends entirely upon the memory of the relieving officer how much of the applicant's past history is brought before the Guardians. When a new relieving officer succeeds to the work, the cases to him are all new, and unless he goes through the application and report books of his predecessor he has no means of tracing their previous history. Under the case-paper system every application is recorded on the same set of papers, which thus constitute a running history of the case; every set of case-papers is indexed, and can be turned up by anyone who is dealing with the case; into whatever institution the applicant may be sent his history goes with him. The system takes some trouble to start, but once initiated it is generally acknowledged to be much more effective and more simple than the old.

300. For an account of how the case-paper system was introduced into a Union, and of the saving effected by it, see Appendix XV. (R) of the Appendix to the First Volume of Minutes of Evidence. A specimen case-paper is printed in the Statistical Appendix (Part XIX.), and further remarks on the subject will be found in Part VIII., Chapter 10.

301. It will be seen that what we are aiming at is, instead of a system of allowances, granted capriciously and irresponsibly to meet a constantly increasing demand, to substitute a system of careful and varied assistance, in which the "allowance" will be only one of many forms of help, and which will be directly designed to raise the recipients, or where that is impossible the children of the recipients, to a position of independence. And, as was urged in 1834, and again in 1870, so we once more urge the need of co-operation in this work between the help which is paid for out of the rates, and that which is rendered by voluntary charitable agencies. On these lines the Charity Organisation movement has worked consistently and the present moment seems to afford a peculiarly favourable opportunity for securing that co-operation on a wider and more permanent basis than has hitherto been found possible. One of the most striking features of the time is the creation in many of the larger towns of "Guilds of Help," or "Civic Societies," which have their origin in a very general conviction that, in its non-institutional work, the Poor Law is not effective, and needs to be supplemented by some other agency. The feeling seems to be justified; and it is a matter for earnest consideration how far the forces it has set in motion can be brought into line with Poor Law work, and made permanently available as a regenerative agency. Experience would seem to show that, unless such agencies are in some way officially recognised, and given a *status* at least as important and responsible as that of the Poor Law Authority, it is useless to hope for a real co-operation and co-ordination of work. In Germany the voluntary workers form an integral part of the official system of relief; and, though it may not be possible or desirable to introduce the German system in its entirety, it should be possible to bring into some one scheme of service the official system and the large resources of voluntary effort. We shall make recommendations elsewhere for the systematic co-operation of the Local Authorities with recognised Voluntary Aid Committees in the care and treatment of cases of distress, whether these are being supported by public relief or public assistance. We shall also recommend the adoption of the registration of cases, whether dealt with by the poor Law or by voluntary agencies, as a necessary part of the new organisation which we propose.

302. Some such co-operation becomes the more necessary in view of the limitations at present imposed by law upon those who can claim relief from a public authority administering the poor rate. They must be destitute in the sense defined by Mr. Adrian:—

"Destitution when used to describe the condition of a person as a subject for relief implies that he is for the time being without material resources: (i.) directly available; and (ii.) appropriate for satisfying his physical needs; (a) whether actually existing; or (b) likely to arise immediately. By physical needs in this definition are meant such needs as must be satisfied: (i.) in order to maintain life; or (ii.) in order to obviate, mitigate, or remove causes endangering life or likely to endanger life or impair health or bodily fitness for self-support."¹

303. Until this condition is reached no person can be legally helped out of the poor rate. Thus, much of the preventive work of arresting the decline of persons into the ranks of pauperism is outside the functions of the Poor Law Authority. The applicant must lack some essential of life before he can be assisted out of public funds. We do not recommend any change in the law in this respect; we are reluctant to enlarge the scope of public assistance for the needy in such a way as to lead to a sapping of the spirit of self-maintenance. But the fact that the public authorities are precluded from

¹ Adrian, 973.

helping other than destitute cases renders it the more imperative that the large charitable endowments and resources in the country should be organised and form, with the social workers and organisations now in existence, a first line of defence against impending pauperism or incipient indigence. Such an organisation should work in co-operation with but independently of, those entrusted with public funds for assistance. The two should be one service to combat a common social evil, but each branch should work in a separate and a distinct sphere of action. We shall expand this idea in a subsequent Chapter.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 6.

- (1) *There should be one uniform Order governing outdoor relief. (230.)*
- (2) *It should be a condition of out-relief that the recipients are living respectable lives in decent houses, and as a step towards this the Public Assistance Authority* should proscribe certain areas where the conditions of living are bad. (268.)*
- (3) *The provision which obtains in London that it is the duty of the relieving officer to inform the Sanitary Authority of overcrowded and insanitary premises, should be extended to the rest of the country and enforced, and the Public Assistance Authority* should be required, if the Sanitary Authority refuses to take action, to report the fact to the Local Government Board. (268.)*
- (4) *Power should be given to the Public Assistance Authority,* under due precautions, to remove persons living in a state of neglect to an institution. (270.)*
- (5) *Every case of out-relief to widows should have special and individual attention. (285.)*
- (6) *Outdoor relief should not, except in special cases, be granted to any woman deserted by her husband during the first twelve months after desertion. (286.)*
- (7) *In every case of outdoor relief there should be a complete knowledge of the facts, and the assistance given should be adequate and carefully adapted to its needs. (293.)*
- (8) *The case-paper system should be universally adopted. (299.)*
- (9) *There should be systematic co-operation between the Public Assistance Authorities* and recognised Voluntary Aid Committees in the care and treatment of cases of distress. (301.)*

* i.e. the Relief Authority of the future.

Chapter 7.

THE AGED.

304. The practice of considering the aged as a class by themselves for purposes of relief is one of modern growth. Throughout the history of the Poor Law we find old age regarded as one form of impotency; the distinction lay between the poor and impotent, on the one hand, and the able-bodied on the other. Sometimes the impotent and aged are mentioned together, but always as forming one class, to be dealt with in one and the same way. Modern growth of the practice of regarding the aged as a separate class.

305. The Royal Commission of 1832 accept the same classification, and out-relief to the sick, the aged, and the infirm is dealt with in one short section entitled "Outdoor Relief of the Impotent." Their view was that relief to this class was subject to comparatively little abuse:—

" . . . No use can be made of the labour of the aged and sick, and there is little room for jobbing if their pensions are paid in money. Accordingly, we find that even in places distinguished in general by the most wanton parochial profusion, the allowances to the aged and infirm are moderate."¹

306. With the development of medical relief, a distinct class has gradually been formed of those amenable to medical treatment, excluding those whose "impotency," whether due to age or to other causes, is irremediable. For these, the aged and "impotent in very deed," differential treatment has long been an implicit principle in Poor Law administration. The Royal Commission of 1832 considered that for them the workhouse should be a place where "the old might enjoy their indulgences without torment from the boisterous;"² and in the Continuance Report of 1840 the aged are expressly exempted from the restrictions therein placed upon outdoor relief. It is there stated:—

"We do not require aged and infirm paupers to be relieved only in the workhouse";

and this exemption by the Central Authority has been maintained down to the present day.

307. Except when the question is raised of subsidiary earnings we find singularly few references to the aged on the part of the Central Authority until we reach the last twenty years. Practically, it was left entirely to the discretion of the Local Authority to determine the form and amount of relief to be granted; and the Local Authority has nearly always accorded a different treatment to the impotent from that given to the able-bodied. Even those Boards which have aimed at the abolition of out-relief have done so with no idea that the aged should be forced into the workhouse, but rather as holding that their differential treatment would be best achieved outside the Poor Law altogether, and by more appropriate agencies. Favourable discrimination as regards the aged.

¹ Report of Poor Law Commission, 1832 [Cd. 2728], 1905, pp. 42-3.

² *Ibid.*, p. 307.

308. Within the workhouse, again, there has always been the possibility of granting at least a more generous diet to the aged. In 1836, the Commissioners published a set of dietaries, which, according to Mr. Davy :—

“Are very important from this point of view, that they are the first indication of the workhouse classification. In the dietaries for able-bodied men and women there is this footnote, which has had a very wide-reaching effect on the whole indoor administration of our Poor Law : ‘Old people of sixty years and upwards may be allowed something extra.’”¹

But a difference of diet has been the least of the “indulgences” allowed to the aged, and the attempt has generally been made, though not always very successfully, to render their life in the workhouse preferable to that of the able-bodied. Latterly, there has been a continual and increasing pressure from the Local Government Board on Local Authorities to carry out this policy.

“For instance, in 1885 there was,” says Mr. Davy, “a Circular as to married couples in workhouses, pointing out to the Guardians what the law was. I need not remind the Commission that the law is that if both husband and wife are above sixty years of age they have a right to live with one another, and that if one is above sixty they may live together with the permission of the Guardians. In 1891, there was a Circular addressed to the General Inspectors as to the supply of books in workhouses, and of toys for the children. In 1892 there was an Order permitting the Guardians to give the inmates of workhouses tobacco and snuff. In 1893, there was a very important Order which authorised the appointment of Ladies’ Visiting Committees, and which gave the right of visiting the workhouses to every individual Guardian. In 1894 there was an Order which allowed the Guardians to give dry tea, sugar and milk to the women, so that they might make their own tea. In 1896 there was a further Circular as to the classification of inmates. In 1897 came perhaps the most important Order of all, the Nursing Order. In 1900 there was a new dietary Order; I do not know whether I should class that with the other Orders as making a change for the better in the conditions of workhouse life. I rather prefer to look upon that Order as one of decentralisation and simplification, but I may as well include it in my list. Then, lastly, came the Circular of August, 1900, as to the treatment of the aged deserving poor, as they called them. You will notice how very rapidly all these Orders have come one after the other since the year 1890; that year forms a sort of epoch in Poor Law administration. The effect will have to be tested by statistics.”²

Effect of old-age pension question on the treatment of the aged.

309. Since 1890, the treatment of the aged has undoubtedly been greatly affected by the movement in favour of old-age pensions. Although that movement has been entirely for differential treatment *outside* the Poor Law, its most marked effect has been to increase and emphasise their differential treatment *within* the Poor Law. In 1893, a Royal Commission was appointed of which Lord Aberdare was Chairman :—

“To consider whether any alterations in the system of Poor Law relief are desirable, in the case of persons whose destitution is occasioned by incapacity for work, resulting from old age, or whether assistance could otherwise be afforded in those cases.”³

It is noteworthy that in this reference the inquiry is limited to the destitute, and the question of “desert” is not raised. Desert was, however, made the main feature of the recommendations of the Commission. The summary of their Majority Report states that no fundamental alterations are needed in the existing system of Poor Law relief, as affecting the aged, but that :—

“... we are convinced that there is a strong feeling that in the administration of relief there should be greater discrimination between the respectable aged who become destitute and those whose destitution is distinctly the consequence of their own misconduct; and we recommend that boards of guardians, in dealing with applications for relief, should inquire with special care into the antecedents of destitute persons whose physical faculties have failed by reason of age and infirmity; and that outdoor relief should in such cases be given to those who are shown to have been of good character, thrifty according to their opportunities, and generally independent in early life, and who are not living under conditions of health or surrounding circumstances which make it evident that the relief given should be indoor relief.”⁴

310. The great difficulty attaching to such an inquiry into character “which... could never be conclusively conducted, except on oath and by judicial procedure,” was pointed out in a separate memorandum by one of the signatories;⁵ nevertheless, it was this recommendation which has had most effect upon subsequent administration. With regard to classification within the workhouse, the Commission did not recommend any fresh Regulations, being aware of the difficulties pertaining to the question of classification by past character, and the greater importance for practical

¹ Davy, 2571.

² Davy, 2310.

³ Report of Royal Commission on Aged Poor [C. 7684], 1895, p. iv.

⁴ *Ibid.*, pp. lxxxiii–iv.

⁵ *Ibid.*, p. xc.

purposes of present behaviour.¹ Another recommendation which had some, but neither great nor lasting effect upon administration was:—

“That where out-door relief is given the amount should be adequate to meet fully the extent of the destitution, and that proper investigation and supervision should be ensured in all cases in which application is made for relief.”²

311. Finally, the majority report that they have carefully examined the various schemes for State assistance to the aged which have been submitted, but are unable to recommend the adoption of any of them.³

“Having regard, however,” they continue, “to the widespread expectation, in and out of Parliament, that some provision other than that made by the Poor Law should be devised for the assistance in old age of those among the poor who have led respectable and industrious lives, we do not desire that our inquiry should preclude the future consideration of any plan which may hereafter be proposed and be free from the objections which have prevented the adoption of the schemes submitted to us.”⁴

A minority disagree on the ground that the recommendations of the majority are inadequate, and recommend that a further inquiry by a better-constituted Commission should be undertaken at once.⁵

312. The immediate effect of this Report was that in 1896, the year after its publication, the Local Government Board issued two Circulars, in one of which attention was called to the views of the Commission with regard to outdoor relief, and the Guardians were pressed to appoint an adequate number of relieving officers; whilst the other urged better classification in the workhouse. Three points upon which this Report laid stress may be repeated here:—

(i.) “The view often held that the aged labourer has in general only the workhouse before him in which to end his days has been shown to be erroneous.”⁶

(ii.) “We have seen that the complaint often made of the compulsory separation of old couples is without foundation, and that aged married couples have a right to live together if they wish.”⁷

(iii.) “That the number of aged poor who seek public relief, while still very large, has much lessened in proportion in the last thirty years, although the rate of decrease has greatly diminished in the last decade.”⁸

313. In 1896, the suggestion of the minority of the Royal Commission was carried out by the appointment by the Lords of the Treasury of the Committee known as Lord Rothschild’s Committee on Old-Age Pensions. The reference is interesting as showing what importance was still attached to preserving the independence of the working class. The Committee was instructed:—

“To consider any schemes that may be submitted to them for encouraging the industrial population, by State aid or otherwise, to make provision for old age; and to report whether they can recommend the adoption of any proposals of the kind, either based upon, or independent of, such schemes; with special regard, in the case of any proposals of which they may approve, to their cost and probable financial results to the Exchequer, and to local rates; their effect in promoting habits of thrift and self-reliance; their influence on the prosperity of the Friendly Societies; and the possibility of securing the co-operation of these institutions in their practical working.”⁹

314. The Committee considered that by the terms of this reference they were precluded from considering either compulsory or non-contributory schemes, and devoted themselves, therefore, to schemes providing special facilities and encouragement to voluntary insurance against old age, with material assistance from the State.¹⁰ Considerable stress has been laid upon the financial nature of this inquiry; but although the Committee were largely concerned with the question of finance, they did not regard that as the sole or most important aspect:—

“Of the questions raised by the proposal to establish a State-aided pension system, that of its cost and administration is not the most serious. We do not question that the State could bear the necessary additional burthen if the welfare of the community really demanded it. But would such a pension system encourage thrift in the working-classes? Would it not affect the question of wages, and hand over to the employer rather than to the employed the benefit of the State contribution? Would the receipt of State aid be free from that taint of pauperism which makes Poor Law relief bitter to the self-respect and independence of the best of the working-classes?”¹¹

¹ Report of Royal Commission on the Aged Poor [Cd. 7684], 1895; Report pp. lxxxiv–v. ² *Ibid.*, p. xxxiv.
³ *Ibid.*, pp. lxxxvi–vii. ⁴ *Ibid.*, p. lxxxvii. ⁵ *Ibid.*, p. lxxxiv. ⁶ *Ibid.*, p. lxxxiii. ⁷ *Ibid.*, p. lxxxv.
⁸ *Ibid.*, p. lxxxvii. ⁹ Report of Committee on Old-Age Pensions [Cd. 8911], 1898, p. iii. ¹⁰ *Ibid.*, pp. 2–3.
¹¹ *Ibid.*, pp. 14–15.

Their answer to the last question is one which must always hold true, and needs to be constantly emphasised :

“Any discredit must depend, not on the form in which the relief is received, but on the causes which have led to it.”¹

315. The conclusion come to by the Committee was a negative one :—

“It is only very slowly, and with very great reluctance, that we have been forced to the conclusion that none of the schemes submitted to us would attain the objects which the Government had in view, and that we ourselves are unable, after repeated attempts, to devise any proposal free from grave inherent disadvantages.”²

They add :—

“One consideration which the course of our inquiry has strongly impressed upon us. It is that a large and constantly increasing number of the industrial population of this country do, already, by prudence, self-reliance, and self-denial make their old age independent and respected.”³

316. This Report was issued in 1898, and in 1899 a Committee was appointed by the House of Commons to report on a Bill for the introduction of cottage homes for the aged. This Committee reported in the same sense as the Royal Commission, though pressing leniency of administration still further, but rejected the actual proposals of the Bill.⁴ This was followed in the same year by the Select Committee on the “Aged Deserving Poor,” appointed :—

“To consider and report upon the best means of improving the condition of the aged deserving poor, and for providing for those of them who are helpless and infirm; and to inquire whether any of the Bills dealing with old-age pensions, and submitted to Parliament during the present session, can with advantage be adopted, either with or without amendment.”⁵

317. Seven Bills were submitted to the Committee, which decided, instead of adopting any of them, to formulate “the general principles upon which any measure dealing with the question might be framed.”⁶ These principles included non-receipt of poor relief (other than medical) during twenty years, and the endeavour on the part of the applicant to make provision for himself and those immediately dependent on him.⁷ The Committee also considered that there should be improved poor relief, as well as old-age pensions, and endorsed the recommendations of the Cottage Homes Committee.⁸

318. This Select Committee was appointed in April, 1899; it reported in July of the same year; and in August, a Departmental Committee was appointed to report on the financial aspects of their proposals. This Committee work out, with great elaboration, estimates of the cost of the scheme at different ages. They make no recommendation, but end by pointing out—

“Some of the incalculable, but, in our opinion, certain, results of the establishment of a pension scheme, which would all tend either to bring down to the pensionable level those who are now above it, or to raise up to it those who are now below it, and would thus swell the pensionable list from above, as well as from below.”⁹

319. In 1900, the Local Government Board issued a Circular explaining that : “This moment is not propitious for legislation,” but urging that Poor Law administration should be modified in the direction suggested by the various Reports alluded to :—

“With regard to the treatment of the aged deserving poor, it has been felt that persons who have habitually led decent and deserving lives should, if they require relief in their old age, receive different treatment from those whose previous habits and character have been unsatisfactory, and who have failed to exercise thrift in the bringing up of their families or otherwise. The Board consider that aged deserving persons should not be urged to enter the workhouse at all unless there is some cause which renders such a course necessary, such as infirmity of mind or body, the absence of house accommodation or of a suitable person to care for them, or some similar cause, but that they should be relieved by having adequate outdoor relief granted to them. The Board are happy to think that it is commonly the practice of boards of guardians to grant outdoor relief in such cases, but they are afraid that too frequently such relief is not adequate in amount. They are desirous of pressing upon the guardians that such relief should, when granted, be always adequate.”¹⁰

320. The Circular concludes by recommending that the Guardians should form a special class of inmates of the workhouse of sixty-five years of age and upwards with regard to whom the Guardians, after due inquiries, have satisfied themselves that by reason

Government Board [Cd. 746], 1901, App. A, pp. 18-19.

of their moral character, or behaviour, or previous habits, they are sufficiently deserving to be members of the class. As regards the members of this class one of the recommendations was :—

“That considerably increased liberty should be granted to them, and greater facilities for being visited by their friends.”¹

Of this Circular Mr. Davy says :—

“That is a Circular which, I submit to the Commission, is a necessary corollary to the reports which have been made to the House of Commons and to the Government by the Commission of 1895 and by the Committee of 1899.”²

321. In the movement so far, there are two points to be specially noted. The one is the introduction of a character test as determining the kind of relief to be given; the other, that the question of impotency and destitution has dropped out, and attention is concentrated on length of years in combination with desert.

322. In 1903 a Bill was introduced into Parliament :—

“To provide pensions for the aged deserving poor, through the existing machinery of the Poor Law administration, by empowering the pensions committee of the guardians, with the help of Parliament, to grant pensions which shall not involve any electoral disability, nor convey the reproach of pauperism.”

323. A Committee was appointed to report upon this Bill; they approved of it as a basis for legislation, but made several suggestions. One of these is that it would not seem

“fair or reasonable to leave to an elected body the duty of deciding upon the merits of large numbers of its constituents.”

Another interesting feature of the Report is the attention given to inquiry into the number of inmates of workhouses likely to benefit. It expresses the opinion :—

“That the reduction on Poor Law expenditure will be considerably less than has often been represented, inasmuch as the proportion of the aged poor who are now, or may in future be, in the workhouses, who could with advantage to themselves live outside with the help of a pension, will probably be found to be very small.”

324. The final step in the movement consists of the Act passed in 1908, and entitled simply : “An Act to provide for Old-Age Pensions.”³ In this Act, age, residence for twenty years in the United Kingdom, and limitation of yearly means are practically the sole qualifications prescribed, and the difficult question of desert is met by specifying definite disqualifications. Destitution is not to be a condition of the pension, and its amount is regulated by the amount of income. Persons whilst in receipt of relief (except in certain forms), and, until the end of 1910, persons who have received any such relief since January 1st, 1908, or who hereafter receive it, are disqualified. The question of impotency is not raised, though it may fairly be said that the advanced age—seventy—at which the pension is to be due, implies impotency on the part of the recipient. The case of those, however, who may be incapacitated long before reaching that age, is not met.

325. The movement for old-age pensions has had, directly and indirectly, so much influence upon Poor Law administration that it has been necessary to refer to it in some detail. We may summarise that influence by saying that the general tendency has been to concentrate attention upon the question of age, to throw into the background the questions of destitution and impotence (or disability), and to urge upon administrators the attempt to classify upon a basis of merit. In the description of the present condition of the aged under the Poor Law to which we shall now proceed, it will be seen that these considerations have led to very different results in different places according to the weight attached to them, or the interpretation put upon them, by different Boards of Guardians.

326. Taking first the condition of the aged in the workhouses we find that Boards of Improved treatment of the aged Guardians have shown considerable activity in carrying out the suggestions made to them, and in making experiments in classification. We ourselves, have seen a great variety of in workhouses. these experiments; the separation of the aged from the able-bodied and imbeciles in different wards of the same workhouse, or in separate workhouses, their classification into

¹ Thirtieth Annual Report for Local Government Board [Cd. 746], 1901, App. A, p. 19 (5). ² Davy 3344. ³ 8 Edw. VII., Cap. 40.

two, three, or four grades of more or less deserving, and the provision of cottage homes within the workhouse grounds or as separate institutions. On the whole, we have found that the comfort of the old people depends largely upon the system adopted, but quite as much on the kindness and consideration of the officers in charge. The following instances from among our visits may illustrate this point:—

(1) "In addition to the general air of cleanliness that pervades the workhouse the outstanding feature is the classification of the aged inmates according to character, each class having separate accommodation and being entirely separated from the others. The accommodation for the first and highest class provides for twenty-eight men and twenty-four women. Both the men and women have two dormitories and two sitting-rooms, the latter having linoleum or a canvas covering on the floor, and being furnished with arm-chairs, rocking chairs, tables and couches. Meals are served in the sitting-room that appears to be in daily use (the other being reserved for Sundays and for receiving friends). As regards food, the inmates get a loaf and a pot of jam for the cupboard (when-ever they require them). They are also allowed a cheap and wholesome currant cake to their tea. The inmates may, with consent of the master, go out any day after 'the performance of their small duties.' Friends, likewise, are admitted on any evening. The qualifications necessary to obtain these privileges are good character, twenty years' residence within the union area, freedom from connection with any crime and not having previously received relief within the period named. The accommodation for the second or middle class providing for thirty-six males and thirty-six females is not quite so luxurious as that provided for the first-class inmates; nor have they the same privileges. They have their meals in their sitting-rooms, but no jam. Their leave of absence is only one half-day a week. The qualifications for admission to the second class are ten years' residence and a slightly less unblemished character than that necessary for the first class. The rooms of the first and second classes are pleasantly situated, fronting the north and south quadrangles, which are laid out with ornamental flower beds, etc. Here the inmates can take exercise or sit when the weather is fine. Misbehaviour on the part of an inmate in the first or second class is punished by reduction of class, and this is found to be a very effective method of enforcing discipline. Third Class.—No special accommodation is granted for this third class, which is provided for in the general day rooms of the workhouse. Meals are partaken of in the general dining hall, and leave is allowed one half-day per fortnight."¹

(2) "I think most of the people looked even more dejected than usual: hardly one seemed to have enough spirit to speak when spoken to. There are some married couples' quarters which are never fully occupied; I am not surprised, as they are the very worst I have ever seen, and are really only an apology for supplying a need. There is also a scheme for classifying women. The basis for classification is previous character. Out of forty women, only two can be found who come up to the required standard, and so two old women each occupy a big room with five beds, and a plentiful supply of texts, etc. There is also a similar scheme for men, but I must confess I did not realise much difference in the rooms occupied. There is no privacy anywhere, however good a person may have been, and here again it seems to me it is only the letter and not the spirit of classification which has been followed."²

(3) "I saw the women's day wards in the workhouse. They are old, but bright and fairly comfortable. I was struck by the pleasant relations between the inmates and the matron, an exceptionally pleasant woman. I also saw four cottages built for married couples. There is no demand for these, one is occupied, one is empty, and the others converted into the female tramp wards."³

(4) "The Homes for the Aged and Deserving poor were erected to comply with the urgent recommendations of Mr. Chaplin's Circular. They may be described as adequately supported almshouses, under disciplinary conditions, such as obtain and are enforced among the passengers of a mail steamer. The swing gate of the institution is always open. The inmates go out when they please, but we understood that they seldom go beyond the garden: they prefer that their friends should come and see them and, we were told, not a few look in for a 'cup of tea.'"⁴

(5) "The building includes a number of cottage homes for aged couples. They were quite simple in character, but bright, and the inmates seemed very happy. The meals are served to them in their own rooms, and they make their own tea."⁵

(6) "A street of four cottages with gardens has been bought for £1,200, and converted by inmates' labour into cottage homes for four married couples, and thirty-two old men of good character; the cost thus being £30 a head. The inmates of these homes seemed very happy, and we understood were free from all the more irksome regulations of workhouse life."⁶

Character classi-
fication of
workhouse
inmates
at Sheffield.

327. At Sheffield there is an elaborate classification into four classes; and it is noticeable that here, as in some other cases, in constituting the highest class, recourse is had to length of residence without relief. It is clear that there must always be great difficulty in a classification based upon such an indeterminate factor as general merit, and the introduction of a measurable quantity, such as age or length of residence without relief, greatly simplifies the problem of the administrators. Mr. J. Wycliffe Wilson, Chairman of the Sheffield Board of Guardians states that:—

"By careful investigation of the antecedents of applicants for relief, through the relieving officers, such applicants are divided into four classes, A, B, C, and D—

¹ Visits: Urban, 20. ² Visits: Urban, 36. ³ Visits: Urban, 7. ⁴ Visits: Urban, 21.
⁵ Visits: Urban, 2 E. ⁶ Visits: Urban, 19.

"A.—Comprises those of unblemished character who have long been resident in the union without receiving relief.

"B.—All other persons of distinctly good character, but who are not equal to A.

"C.—Comprises those who are neither distinctly good nor distinctly bad, and also persons of whose character little or nothing is known.

"This may be called the normal class, or the residuum after sorting out those who are entitled to rank higher or lower respectively.

"D., which is unfortunately far the largest class, comprises all whose character is distinctly bad.

"The classification is reviewed by the Classification Committee from time to time, and individuals are put higher or lower as may appear desirable."¹

328. We are not prepared to recommend so detailed a scheme for general adoption. Whilst we are convinced that a system of classification mitigates the distress which the respectable poor feel when living in association, the effect upon those who are, so to say, condemned to the lowest class must not be overlooked. Again, neither Relief Committees nor even the best officials are infallible judges of desert, and any system of classification on that ground admits of favouritism. The inmates of an institution may be arranged in classes on the record of their lives previous to admission or on their behaviour after admission. We think that both considerations should be allowed weight.

329. What results however may follow from the absence of any system of classification may be seen from the following Reports of visits by our members :—

Dreariness of life in certain Poor Law Institutions for the aged.

(1) "The inmates, over 900 in number, were congregated in large rooms, without any attempt to employ their time or cheer their lives. There was a marked absence of any human interest, and though the superintendent and matron impressed us favourably it was impossible to avoid feeling that the lives of the inmates were not merely wanting in colour, but were aimless and listless. On more than one occasion there have been offers from outside to brighten the Sunday service, but they have been refused by the guardians owing to religious difficulties. It could not be better described than as a "human warehouse." The dormitories, which in some cases accommodated as many as sixty inmates, were so full of beds as to make it impossible to provide chairs, or to walk, except sideways, between them."²

(2) "The . . . "Home" which we visited in the afternoon seemed to us defective in every particular. It is rented by the . . . Union and used as an overflow house for the aged inmates from . . . The rooms were low, ill-lighted, and hopelessly overcrowded. The men were, in many cases, lounging, in the bedrooms, there being no chairs except in the dining hall, and there was a total absence of books or newspapers—as far as we saw—and it is impossible to conceive a more dismal and hopeless asylum for age. The administration consists of but two officers for 268 inmates. The officer in charge, however, stated that they had no difficulty in enforcing such discipline as was necessary. The only outdoor space available for the inmates was an asphalted roof-yard, some 35 feet by 25 feet, up so many flights of stairs that a large proportion of the inmates were unable to mount to it."³

330. One of the effective agencies in brightening the lives of the old people has been the Brabazon Scheme for the Employment of Workhouse Inmates. Under this scheme interesting handiwork is organised by ladies for the infirm and aged, with wonderful results on the happiness of the people engaged in it; those workhouses in which it is in force have an atmosphere of brightness and interest which is often quite lacking elsewhere.

The Brabazon Scheme.

331. If we turn now to the administration of out-relief to the aged we find even greater divergencies than in indoor relief. There is no doubt that in some places the practice of the Guardians was considerably influenced by the Circular of 1900, though not always in the way contemplated by the Local Government Board. As one witness expresses it, there was a general impression that Guardians were desired "to be more easy with the people."

Variety of practice as to outdoor relief to aged.

"You said, I think, that since 1900 the out-relief has increased in amount?—It was about then.

"That was the time Mr. Chaplin's circular was issued?—I would not be sure of the date; you no doubt know what I am referring to.

"The result was an increased number of applications?—Yes, after it got known about that they got more relief.

¹ Wilson, 40085 (3).

² Visits : Urban, 1 E.

³ Visits : Urban, 1 E.

"Was it supposed that the guardians would give relief more freely, not only in amount, but to persons to whom they previously would not give outdoor relief?—It was practically understood so by the board, that they were to be more easy with the people.

"Therefore, they were not merely confining themselves to giving more adequate out-relief, but extending the class to those to whom they would not give outdoor relief before?—I take it so, both.

"Has that been continued?—It is not done so much now as it was, not to a great extent."¹

The late Inspector for London says:—

"The effect of the Circular in London has been to occasion the belief in certain quarters that it was intended to encourage the giving of outdoor relief."²

Mr. Wethered quotes the case of Bath to the same effect:—

"There is a very good instance in the case of Bath, which shows the effect of that circular. The guardians decided after that circular was issued that more outdoor relief should be afforded to people over sixty-five years of age; and the clerk to the guardians prepared a 'special report, in which he said that the effect has been that this out-relief has not only been given to the aged and deserving but to others as well. They have lost sight of the word 'deserving,' and he says, 'The danger appears to be lest the term "deserving" should be overlooked and this "more adequate" relief be given to other cases.'"³

Mr. Baldwin Fleming thinks that the effect in raising the amount of relief was only temporary.

"I think now that that circular as regards the outdoor poor has ceased to produce any effect. I do not think to-day that the aged and deserving poor in the immense majority of cases receive 6d. more than they did before the circular was issued. For a time it did have a certain amount of effect; in the case of guardians who wished to give outdoor relief it has enabled them to turn to that circular as a recommendation in favour of outdoor relief; it has had some effect in that direction, an effect which I consider mischievous. With regard to the indoor relief, it has given a certain fillip to the improved classification of the aged indoor poor, and to that extent I am grateful for it."⁴

Inadequate out-relief to aged.

332. Our own experience is that the Unions in which the relief given to the aged is adequate, in the sense of being adapted to the needs of the case, are comparatively very few. In some London Unions, where there is an attempt to ascertain the whole resources of the applicant, relief is given to bring up the income to a sufficient amount:—

"The income aimed at for old people is 4s. 6d. above rent for a single person, 7s. for two."⁵

Out-relief to aged regarded practically as old-age pensions.

But throughout the country as a whole the practice is to ignore the resources of the applicant and to give according to a fixed scale. In the Chapter on Outdoor Relief, we have already pointed out the results of this, but we must note some of its more special effects in application to the aged. One is that in rural districts, in all parts of the country outdoor relief is practically regarded as an old-age pension. There is no reluctance in applying for relief, and it is not confined to destitute cases, but given to all comers of a certain age. Mr. Bagenal gives the following description of the out-relief in a Union in his district:—

"With two exceptions the general impression left on my mind was very favourable indeed. There was a general air and appearance of comfort and satisfaction. There was in thirteen cases no appearance of any destitution. In nearly all the cottages there was plenty of furniture, food and fire, and adequate accommodation. In a few cases there was more accommodation than was absolutely necessary. The cottages consisted chiefly of four rooms, two below and two above, and all were, I should say, old buildings. I give the rents below. The relieving officer said that the cases were the ordinary typical cases, of the aged poor relieved in the union. I do not think anyone could wish for better treatment."

"The recipients received us with great kindness and seemed on the best terms with the relieving officer, whose manner and treatment was all that could be desired. A few of the cases had a bit of garden attached to the cottage. It seemed to me that here you had practically a system of old-age pensions carried out at the expense of the ratepayers, on a scale and standard suited to the requirements of the population. But of course the remark must be made that this treatment puts the pauper in a better position than the independent labourer who has to work in order to attain the same scale and standard of comfort which his pauper neighbour enjoys. The relief given in some of the cases I describe may perhaps be said to be in aid of poverty rather than to prevent mere destitution."⁶

¹ Ball, 35679-84. ² Lockwood, 12676. ³ Wethered, 5405. ⁴ Fleming 9138.

Visits: Metropolitan, 113. ⁶ Bagenal, Vol. I., Appendix lv. (a) (118-9).

333. We have received a considerable amount of evidence to the same effect :—

“There are a large number of people in receipt of relief outside the workhouses who would be fit subjects for an old-age pension ?—They are practically getting it now.”¹

“In this Union no old people are offered the workhouse so long as they can take care of themselves or other people take care of them. When they do go into the house they are almost always infirm cases—our out-relief too is practically a pension list. It seems all nonsense to me about the difficulty of old-age pensions—our people have had it for years and it is just wonderful what a little people can live upon and reach a fine old age. There is no fear of any of the poor wanting the necessaries of life in the country places.”²

“You will find in the agricultural districts that every old servant of everybody in the neighbourhood is practically on outdoor relief at anything from 1s. 6d. to 2s. 6d. Of course, they ought to be pensioned as old servants, not as paupers: You cannot get at the motive; you never know why the outdoor relief is given. You see a most improper case come up, and you suggest that there is something wrong in the family, either there is drink or immorality, or something or another, and it is very undesirable that outdoor relief should be given; nevertheless it is given.”³

“In the case of old people, this payment is given, and, I suppose, almost admitted to be given, as a sort of old-age pension ?—Yes, outdoor relief has become a habit of the country in the rural districts, and if you could only get the administrators and the recipients out of that habit, you would do a very great deal to restore proper administration. I have heard cases where the Chairman will say: ‘Oh, what have you come for?’ and the man will say: ‘I have come for my allowance.’ It is a matter of course.”⁴

“Under this system in the rural districts, has the tendency been for the amount of outdoor relief to rise of recent years ?—I do not think so. I think it stands at very much the same level as it did when I first had to do with attending boards of guardians. I do not think any of them have increased their scale, except perhaps in the large towns.”⁵

334. In some places, *e.g.*, Bristol, an attempt has been made to classify the outdoor poor by character, and to give a higher scale of relief to the more deserving. More generally recourse is had to age or length of residence as a basis of classification. In Camberwell, *e.g.*, there is a classification into three classes, on a combined basis of age and residence. The following scale of relief from Shifnal is typical of general practice.⁶

“There is a practice of old standing here of allowing, as a general rule, relief according to the following scale :—

| | | | | | | | Per week. | |
|-------------------------------------|---|---|---|---|---|---|-----------|----|
| | | | | | | | s. | d. |
| Males, under 60 years of age | - | - | - | - | - | - | 2 | 0 |
| Males, over 60 years of age | - | - | - | - | - | - | 2 | 6 |
| Males, over 70 years of age | - | - | - | - | - | - | 3 | 0 |
| Females, under 60 years of age | - | - | - | - | - | - | 1 | 6 |
| Females, over 60 years of age | - | - | - | - | - | - | 2 | 0 |
| Females over 70 years of age | - | - | - | - | - | - | 2 | 6 |
| Widows | - | - | - | - | - | - | 1 | 6 |
| Widows with children—for each child | - | - | - | - | - | - | 1 | 6 |

335. We think that this method of determining the amount of relief given to the old people by any consideration other than that of their needs is much to be deprecated. An inadequate income is not made less inadequate by a man’s character, nor by the fact that he has not lived for a prescribed period in a particular parish. Greater length of years *may* mean greater needs, and when it does it should be taken into account, but it does not necessarily. And where a case is made unsuitable for outdoor relief for any reason, the difficulty is not met by diminishing the amount. The following cases illustrate what we consider to be a quite unjustifiable practice :—

“A man and wife, aged 78 and 61 respectively, in receipt of relief, 5s. a week. Both drink, and the woman had recently been found dead drunk. It was suggested that the best method of dealing with this case was that they should come into the house; but this was considered too costly, and ultimately the merits of the case were held to be met by reducing the relief to 2s. 6d. No other sources of income were known.”⁷

“Man, 79, lives with married daughter, who gives some food. The room is dirty and there is a suspicion of drink. The relief has been previously reduced from 4s. to 2s. on account of this. Question now is whether he has any income beside the parish relief. He says son John gives 2s. a week, but John says he only gives 6d. now and then.”⁸

¹ Wethered, 5743. ² Sharman, 74986 (2) (g). ³ Fleming, 8874. ⁴ Fleming, 8875. ⁵ Fleming, 8876. ⁶ Phillips, 70962 (10). ⁷ Visits: Rural, 28. ⁸ Visits: Metropolitan, 113.

“An old man of 73, who had a son at home neither working nor seeking for work, had his relief reduced from 3s. 6d. to 2s. 6d. to try to make son bestir himself.”¹

Variety of
practice as to out-
door relief to
aged.

336. As illustrating the great difference of practice on different Boards we may quote the following instances :—

(1) “It is a rule to give 2s. 6d. to an aged person, sometimes 6d. less, but rarely ever more than 2s. 6d. One case was that of a widow, 67 years of age, living alone; the rent was 2s. 6d.; they granted only 2s.; there was no other known income.”²

(2) “Old couples would be given 7s. 6d., 8s. or 10s., and single old people 4s. to 5s. where little or no rent was being paid, and other help was available.”³

(3) “Aged couple, three sons at home, earning 25s. 8d., 27s., 22s. 11d. respectively; total £3 13s. 7d. for five persons. Relief was continued.”

(4) “Couple, aged respectively 66 and 38, with two young children, 12 and 8. Son Edmund, not at home, earning 24s.

| | | | | | | | | | |
|-------------------------------------|---|---|---|---|---|---|---|----|----|
| | | | | | | | | s. | d. |
| Son Llewellyn, 19, at home, earning | - | - | - | - | - | - | - | 34 | 9 |
| Son B., 16, at home, earning | - | - | - | - | - | - | - | 8 | 6 |
| Daughter, M. G., at home, earning | - | - | - | - | - | - | - | 7 | 0 |
| Total - | | | | | | | | 50 | 3 |

Relief, 7s. 6d.; rent, 12s. 6d. per month.”⁴

337. In the last two of these cases, which are typical of many others, there is not only no destitution, there is not even poverty; and we consider it quite wrong that the ratepayers, many of whom must be less well off, should be taxed to supplement the income in such cases. In one provincial town we came across an incident which reminded us of the days before 1834—

“We were told that, before May, 1904, the increase of outdoor relief, due to several committees working independently, induced the board to take some measures to stop it. A central committee was then appointed, which reported that the ‘chief fact impressed upon the members by their investigation had been the inequalities of the orders made—inequalities not only between the orders of Committee and Committee, but between the orders of the same Committee.’ Rules were then adopted against the giving of outdoor relief in certain cases, and scales laid down for the others. The result was that the expenses fell so greatly that the board ‘actually became frightened.’ At the same time pressure was brought to bear from the aggrieved parties; e.g., it had been the custom that, when an aged mother was living with a married daughter, relief had been given even if the son-in-law was making as much as 40s. or 50s. The sons-in-law threatened to turn the old ladies on to the streets, if the relief were withdrawn, and—as we understood the clerk to say—the outdoor expenses had gone up to something like the old figure.”⁵

Question of
compulsorily
removing certain
aged persons to
institutions.

338. It is chiefly with reference to the aged that the powers of removal which we have recommended in a previous Chapter are asked for. The evidence in favour of such powers is very strong, and comes from all quarters. It is only in a small number of cases that the need arises; for the most part the old people who are too infirm to look after themselves, and have no friends to look after them, are glad to find a refuge in the infirmary or workhouse before their state becomes such as to call for active interference. But the difficulty is so great as to lead to very weighty evidence in favour of granting no outdoor relief at all to the aged. The representatives of the Association of Poor Law Medical Officers say :—

“The opinion of Poor Law medical officers is overwhelmingly in favour of provision in institutions. The replies are all to the same effect, that the aged are kept cleaner and in better health in institutions than if you give them outdoor relief, and that they really suffer in health and in every other way if they are left to provide for themselves outdoors.”

“And that opinion is given in face of the fact that it would tend to deprive the present district medical officers of their employment?—I take it so. There is no doubt as to the general tendency of the replies. These replies come from both workhouse officers and from district officers. Medical opinion seems quite clear in favour of institutional provision.”⁶

339. The British Medical Association give evidence to the same effect,⁷ and there is little doubt that from a medical point of view it is much more easy to deal with the aged in an institution than in their own homes. We think, however, that to a large

¹ Visits : Rural, 86. ² Visits : Urban, 33 B. ³ Visits : Urban, 45 B. ⁴ Visits : Rural, 47.
⁵ Visits : Urban, 7 B. ⁶ Poor Law Medical Officers' Association, 39411-2. ⁷ British Medical Association, 39013 (38).

extent, this difficulty might be met by a better supervision of the people on out-relief, and that the number of cases becoming so neglected as to require compulsory removal might be diminished if they were properly looked after from the first. Under the present arrangement it often, one might almost say, generally happens that many months elapse between one visit of the relieving officer to the home and another, and when the pauper is unable to come for the relief, he may not even be seen by any one in authority. We have come across cases where the relief is systematically conveyed by the paupers to each other, and believe that it is frequently done, though not always recognised:—

“The relief of the permanent out-relief cases was paid to such cases by other paupers in receipt of out-relief. No out-pauper being allowed to pay out-relief to more than six permanent cases.”¹

“An aged recipient of 3s. weekly, owing to illness paid 3d. each time the relief was brought for her. I have reason to believe there are other similar cases. These aged recipients cannot afford to pay in this manner, and I submit the relief should be delivered to them.”²

340. We consider that all old persons in receipt of out-relief should be periodically visited to ensure that they are not being neglected. In some places, the experiment has been tried of appointing a woman visitor,³ and we recommend the general adoption of this plan. (*Vide* Chapter on Outdoor Relief.) Need for more frequent visitation of the aged.

341. We have received considerable evidence to the effect that the number of aged people who apply both for indoor and outdoor relief has, in certain districts, been increasing in recent years:— Increase of the aged receiving relief.

“Another phase of the Poor Law is the increased number of aged people who apply for out-relief. Doubtless the increase of these applications is to some extent due to bad trade, when friends are less able to assist them, but another cause is the tendency of sons, daughters, and relatives to shirk their responsibilities and fasten the old people upon the Poor Law.”⁴

“Turning to London, have you considered the age of paupers in receipt of relief in London; whether the proportion of old people is exceptional?—I have here a statement of the number of paupers of sixty-five years and upwards, in which it shows that on the winter count in 1892 the percentage of the total indoors above sixty-five was 31·9; in 1900 on the same count, that number had grown in the eight years, to 36 per cent. Rather remarkably in the summer count the numbers for the corresponding years only go from 31·7 to 32·4, showing that the workhouse is largely used by old persons in the winter. There is a somewhat similar growth in the outdoor paupers, though not to the same extent, showing that pauperism is getting older and consequently more expensive.”⁵

342. We think that this increase may be definitely connected on the one hand with the improvement of institutions, on the other hand with the tendency we have noted to treat outdoor relief as pensions:—

“The proportion of old people in the workhouses has increased, I think, of recent years?—Yes, but it is principally amongst the aged sick and the sick that require skilled nursing, the bedridden, that the numbers coming into the workhouse are increasing.

“The inducement of better treatment and better accommodation has increased the number of occupants?—That is so.”⁶

343. One witness of great experience regards the increase as only temporary; and points out how small were the opportunities of our present generation of old people compared with those of our present generation of young:—

“Therefore the proportion of old paupers in the rural unions must be steadily increasing?—It is; but then there are very special reasons for that, and I doubt whether they are really appreciated as they should be. From my point of view old-age pauperism ought not to continue. We are living through a stratum of pauperism now which was a necessity of former years, but which ought not to continue in the future for this reason, that the people who are now the old paupers never had the opportunity of providing for themselves. Those who survived their wage-earning period, and the relations and others who were able to help them, had no alternative but to come upon the rates, because in the days when they were younger friendly societies were not sound, they had not the opportunities of thrift which the present generation have; and, from my point of view, I believe that old-age pauperism, unless it is perpetuated by unwise legislation, should become a thing of the past. I do not think that the present generation will have any excuse for being paupers in their old age, unless they have special inducements to rely on public support instead of their own independent exertions.

¹ Visits: Urban, 1 A. ² Skivington, 36262 (8). ³ Hayward, 45948–50. ⁴ Wethered, Vol. I., App. xi. (a) (116). ⁵ Davy, 3926. ⁶ Herbert, 8071–2.

“Do you apply that general observation to the urban districts as well as to the rural districts?—Yes.”¹

344. Although this tendency to an increase in aged pauperism is, to some extent, reflected in the statistics for recent years, such figures as are available for the years between 1870 and 1890 seem to indicate that, during that period, there was actually a decrease in the rate of aged pauperism to population. There were no comprehensive age statistics of pauperism until the year 1890, but from the Census of Paupers we obtained on 31st March, 1906, we find that four-fifths of the adult paupers returned as not able-bodied were over 60 years of age.² Assuming that this proportion was applicable in each of the previous 35 years it would appear that, though the number of the aged in receipt of poor relief tends to increase, the ratio to the total population has diminished. The rate of diminution is, however, decreasing :—³

| Cycles of Pauperism | Mean number of paupers classed as “not able-bodied.” | Mean of the annual rates per 1,000, calculated on the official estimates of the total population in the middle of each year. |
|-----------------------------|--|--|
| 1871-2 to 1879-80 - - - - - | 369,143 | 15·4 |
| 1880-1 to 1887-8 - - - - - | 351,358 | 13·1 |
| 1888-9 to 1895-6 - - - - - | 360,156 | 12·3 |
| 1896-7 to 1905-6 - - - - - | 397,194 | 12·2 |

345. An examination of the various returns as to ages which have been obtained since the year 1890 shows that the proportion of paupers over sixty-five years of age to the population of the same age was much the same in 1900 as it was in 1892, in both of which years pauperism was at a low level. In each of those years the proportion was 19·5 per cent. but in 1906, when pauperism was at a high level, the proportion had increased slightly, and stood at 19·9 per cent.⁴

In indoor pauperism at the higher ages there has, however, been a considerable increase in the ratio, as the following Table shows :—⁵

| RATE PER 1,000 OF POPULATION AT SAME AGE. | | | |
|---|-------|-------|-------|
| Age. | 1891. | 1901. | 1906. |
| Males : | | | |
| 65-75 | 49·4 | 58·5 | 70·3 |
| 75-85 | 76·8 | 90·7 | 97·3 |
| 85- | 91·4 | 113·0 | 139·9 |
| Females : | | | |
| 65-75 | 26·3 | 28·6 | 30·2 |
| 75-85 | 45·2 | 53·8 | 54·8 |
| 85- | 68·4 | 79·5 | 103·5 |

346. It will be seen that an increasing proportion of the aged have been entering the Poor Law institutions since 1891, and this table shows further what has constantly been brought before us in the course of our inquiry, that the old men have recourse to these institutions far more freely than the old women. This does not mean that the men are more infirm or more liable to illness than the women ; for we find from the Census of Pauperism that the surplus of old men is almost entirely in the wards of the workhouse not appropriated to the sick or infirm. Thus, on March 31st, 1906, there were in such wards 47,274 old men over sixty, as against 19,410 women over sixty, whereas the number of men over sixty in the infirm wards was only slightly in excess of the number of women over sixty in infirm wards, that is, 19,049 men as against 18,194 women.⁶ And the return of persons under medical treatment on April 13th, 1907, shows similar results.⁷ There are several causes which may conduce to this result. A woman is more adaptable, more ready to turn her hand to any

¹ Fleming, 8851-2. ² Statistical Appendix, Part II., par. 108. ³ *Ibid.*, Part I., Table II. ⁴ *Ibid.*, Part II., par. 64. ⁵ *Ibid.*, Part II., Table B. ⁶ *Ibid.*, Part II., Table 2. ⁷ *Ibid.*, Part III., par. 7.

way of earning which presents itself; she is more useful also in the home of her married children; and—perhaps most potent factor of all—the old woman without a husband can keep her little home together and do for herself on a small income, while the old man without a wife requires someone to look after him.

347. But the old people over sixty who are relieved in institutions form less than one-third of the whole number of persons over 60 in receipt of relief, 69·7 per cent. being relieved as outdoor paupers on March 31st, 1906, and on the outdoor lists the balance as between men and women is reversed, there being 188,656 old women as against 76,282 old men.¹

348. The distribution of old people in different Unions has a good deal to do with determining the rate of pauperism. In the rural parts of the country, as we have seen, out-relief has come to be regarded as a pension, and it is in the rural areas also that the greatest proportion of old age is found. The proportion of old-age pauperism is also higher in the rural areas than in the urban areas outside London. In London itself the rate appears to be higher than in rural areas, but it is probable that the rates for London and the urban areas would be considerably lower if the number of the aged population in 1906 were available for the calculation. The following table taken from the census of paupers in 1906 shows how much larger the proportion of old people is in the rural areas than in the towns.²

Ratio of aged paupers to total aged population in urban and rural districts.

| Groups. | Population (1901). | | | Paupers, 60 years of age and upwards (1906). | |
|-------------------------------|--------------------|------------------------------|--------------------------------|--|---------------------------------------|
| | Total. | 60 years of age and upwards. | | Number. | Per 1,000 of Population of same ages. |
| | | Number. | Per 1,000 of total Population. | | |
| London - - - - - | 4,536,541 | 303,539 | 66·9 | 56,805 | 187·1 |
| Unions wholly or mainly Urban | 21,591,910 | 1,452,100 | 67·3 | 214,393 | 147·6 |
| Unions wholly or mainly Rural | 6,399,392 | 652,787 | 102·0 | 108,704 | 166·5 |
| England and Wales - - - - | 32,527,843 | 2,408,426 | 74·0 | 379,902 | 157·7 |

349. One reason for the prevalence of outdoor relief in the country is, no doubt, the greater scope which agriculture affords for the work of men who are no longer young. As regards the high average age of persons applying for relief in rural districts a member of the Bridgwater Board of Guardians states :—

“The average age of those who apply for relief is noteworthy; in my parish of Catcott the average is just over sixty-eight years.”

“In your reference to the advanced age at which men are still able to do a good day’s work, are you speaking of men of seventy?—Men about seventy. I know men now of seventy or seventy-two who can work much harder than their sons.” ³

And a Clerk to a rural Union in another part of the country states :—

“Many people do not apply for relief at all in this Union until they are quite past work, numbers earn their own living and support a wife until they are between seventy and eighty years old.” ⁴

350. But more often it happens that the old people can find a light job or work only through the summer, and that the out-relief is given to supplement their earnings. In the town, on the other hand, where the worker who cannot earn full wages is apt to find no work at all, there are other resources which may be wanting in the country. In one London Union :—

“We sat with one of the committees, consisting of four gentlemen and a lady in the chair; the cases were reported on very fully by the relieving officer, and carefully considered. They were between thirty and forty in number, and all, without exception, old people having their incomes

¹ Statistical Appendix, Part II., Tables C. and D. (16), 68078.

² *Ibid.*, Part II., Table 13.

³ Henniker, 67906

⁴ Sharman, 75236.

supplemented with sums varying from 1s. to 7s. 6d. We were struck by the extent to which these old people were attached to ladies in the neighbourhood who gave them allowances in money or food, or both. A letter was read from one of these threatening to discontinue her 5s. unless the Guardians would help more liberally. Also a minister looked in to press the case of a member of his congregation. A considerable amount is given by sons and daughters, including married daughters, and details were given as to the means of each member of a family.”¹

351. The evidence just quoted as to the great age up to which countrymen are still able to earn their living illustrates our view that it is invalidity rather than old-age as such which should form the basis of any scheme of assistance. The man or woman who is permanently invalided or incapacitated for work (as distinct from the man or woman who is only temporarily sick), is practically on the same footing as the person who is incapacitated from work by age.

Effect of old-age
pensions on
indoor pauperism.

352. An important question, which has been constantly raised in connection with old-age pension schemes, is whether many of the old people at present in the workhouse would be enabled by an allowance to live outside. It is important both as affecting the question how far a pension system would diminish Poor Law expenditure, and as affecting the allegation that our present Poor Law system tends to break up homes and drive respectable old people into the house. A large amount of evidence has been accumulated by the various Commissions and Committees, and we cannot do better than quote the following summary, taken from the Memorandum prepared by the Local Government Board last year:—

“There appears to be a general agreement in the Reports of the various Committees, who have considered the question of old-age pensions, that the cost of indoor relief would be practically unaffected by the operation of a pension scheme. The Royal Commission on the Aged Poor observed that ‘except in crowded urban areas the great majority of aged poor in receipt of relief are given outdoor relief, while those receiving indoor relief are usually persons for whom it is necessary for substantial reasons.’ Mr Chaplin’s Committee reported that: ‘The evidence is clear that the majority of the inmates of the house are in that position because of sickness or infirmity which obliges them to accept the shelter of such an institution.’ From a Return obtained as to aged paupers in England and Wales on September 1st, 1903, it appeared that out of nearly 96,000 inmates of workhouse institutions over sixty years of age, about 61 per cent. were, in the opinion of the medical officers, unable, owing to physical or mental infirmity, to satisfactorily take care of themselves. Finally, inquiries instituted for the Committee on the Aged Pensioners Bill, 1903, in twenty-one Poor Law unions in England and Wales showed that (apart from those who, in the opinion of the workhouse medical officers, could not satisfactorily take care of themselves), only 14 per cent. of the total number of inmates over sixty-five years of age could live on a pension outside the workhouse with relatives having suitable accommodation for them, and only 10 per cent. were willing to do so. This Committee reported that ‘the reduction on Poor Law expenditure will be considerably less than has often been represented, inasmuch as the proportion of the aged poor who are now, or may in future be, in the workhouses, who could, with advantage to themselves, live outside with the aid of a pension will probably be found to be very small.’”

“If, of the present number of inmates aged sixty-five years and upwards of workhouse institutions in England and Wales (about 76,000) 10 per cent., or about 7,600, were assumed to leave the workhouse on satisfactory terms, the result would be that the workhouse population per union would be reduced on an average by only twelve persons, or thereabouts, the total average number per union of indoor paupers (all ages) in workhouses and workhouse infirmaries at the present time being about 359. The withdrawal of this small number of persons would leave the expenditure on indoor relief, except in respect of actual food and clothing, practically unaffected.”

Aged poor in
workhouses.

353. If the question of desert is taken into account, the number of inmates who would be affected by a pension would be still further reduced:—

“As regards the aged inmates of workhouses, I have, in various instances, gone through the list, name by name, with the master, and have found that they resolve themselves practically into two categories: (1) those who require medical attendance and nursing which could not be given to them at home, and (2) those who have been of drunken habits or of notoriously bad character. Perhaps a third, but much smaller, class might be added, viz., those who, owing to infirmity of temper or general disagreeableness, have wearied out all their relations and friends, whom no one will receive as boarders, and to whom the guardians do not like to give out-relief for fear that harm should happen to them when living by themselves.

“ Very few of them would be able to maintain themselves decently outside the workhouse on an allowance of 5s. a week. Nearly all are handicapped by some marked infirmity or defect of body or mind ; some while perfectly well-conducted in the workhouse, cannot resist the temptation to drink. Indeed one of the most pitiable things about them is that when they obtain a day's leave of absence, they so often return in the evening the worse for liquor. Many would not discharge themselves if 5s. a week were offered them. Some, no doubt, would accept it, and try to shift for themselves, but there is good reason to believe that if it were paid on Saturday, most of them would be destitute by Tuesday and would have to be maintained at the public expense for the rest of the week.”¹

“ Should you say, as a general rule, that they are what are called deserving cases ?—No, I should say there are very few deserving cases. There are two or three old women I can think of, who have practically come to an end of all their belongings and have no people to support them, and whom it is hard to make come in ; but they are quite exceptional.”²

354. We do not consider it at all desirable that old people who are given to drink, or are of dirty habits, should be enabled to remove themselves from control either by a pension, or by the granting of outdoor relief. But we think that if our recommendation of separating the aged and infirm from the able-bodied is carried out, it will be possible to make their life in an institution much more satisfactory. We do not think that this will be best achieved by the erection of large and expensive buildings, and when fresh accommodation is needed we think that something much simpler is desirable. At Kingston-upon-Hull, cottage homes were provided at a cost of £30 a head.³ At Woolwich a home for forty-two aged women has been provided at a cost of £51 10s. 11d. per bed, and the cost of salaries works out at £1 9s. 6d. per inmate per annum, as compared with £2 14s. 8d. at the workhouse. In both these instances, as in others which have been brought before us, the Guardians have bought existing property instead of building, and the Clerk to the Woolwich Board tells us :—

“ The experiment has proved a great success because, although the old people receive the workhouse diet and remain on the workhouse books, they have the advantage of being removed from many of its restrictions, and the surroundings are certainly pleasanter than they would be in a ward of the workhouse. It is also a very economical way of dealing with any class of person who can be separated and treated apart from the remainder of the inmates, and might easily be made to apply to old men and to any other class where the number would be sufficient to justify the purchase or hiring of a suitable home.”⁴

355. We would call attention to the contrast between the cost of provision such as this, and that of some recently built Metropolitan workhouses. At Hammersmith, for instance, the new workhouse has cost £286 per bed.⁵ We do not consider that the expensiveness of these large institutions adds at all to the happiness and comfort of the old people, whose life in them is apt to be much more monotonous and mechanical than in some of the smaller homes we have seen. On the other hand, we think that the conspicuousness and expensiveness of the Poor Law provision encourages the growing tendency to consider that the responsibility for maintaining the infirm may be safely neglected by their relations.

356. We have attempted to convey to our readers a picture of the condition of the aged under the Poor Law, as it has been presented to us by witnesses, and as we have ourselves seen it. It is impossible to generalise about it, owing to the great want of uniformity in administration. In some places it is thoroughly satisfactory, and the administration both wise and kindly ; in others it is unsatisfactory, and the administration either careless or stupid. Even in the same Union, owing to the application of a fixed scale, one pauper may be in a condition of want approaching to destitution, while another would be in comfortable circumstances without any relief at all. Conclusions.

357. We have noted also the increase in old-age pauperism which has shown itself since 1900, and have indicated the causes which we think have conduced to that increase. The chief of these we consider to be the growing attractiveness of Poor Law institutions, and the tendency, consequent upon the old-age pensions movement, to regard outdoor relief as a pension.

¹ Preston-Thomas, Vol. I., App. viii. (a), (45-6). ² Joseph, 69455. ³ Visits : Urban, 19. ⁴ Cutter 18993.

⁵ Visits : Metropolitan, 117.

358. It has been suggested that a cause may be found in the weakness of a sense of filial responsibility in the present generation—but in our opinion, the increase of aged pauperism, and the decrease in filial duty, are both alike, effects of a common cause, viz., the general feeling that the State is able and willing to make provision, and even lavish provision for parents whose sons fail to support them. We believe that if the position is clearly defined and a consistent policy laid down both as to pensions and Poor Law relief, the natural feeling between parents and children will again assert itself.

359. Meanwhile, we consider it important to remember that the proportion of those who actually receive Poor Law relief, even under its present conditions, is but small. According to our census for 1906, the paupers over sixty years of age (excluding casuals) were only 14·8 per cent. of the total population of that age, leaving 85·2 per cent. otherwise maintained.¹ We consider it of paramount importance that any steps which are taken with a view to assisting the 14·8 per cent. shall not be such as will diminish the resources by which the 85·2 per cent. are now maintained.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 7.

As regards institutional relief :—

(1) *The aged should have accommodation and treatment apart from the able-bodied, and be housed on a separate site, and be further sub-divided into classes as far as practicable with reference to their physical condition and their moral character. (354.)*

(2) *The system of small homes such as has been instituted at Kingston-on-Hull and Woolwich should be promoted and extended, both on the ground of economy to the ratepayer and increased happiness to the recipients. (328, 354.)*

As regards outdoor relief :—

(1) *Greater care should be taken to ensure adequacy of relief.*

(2) *The aged recipients of out-relief should be periodically visited both by officers of the Local Authority (who might be women), and by voluntary visitors, as may be arranged with a local committee for voluntary aid. (339–40.)*

As regards old persons given to drink, or of dirty habits, they should not be enabled to remove themselves from control either by a pension or by the granting of outdoor relief. (354.)

Chapter 8.

THE CHILDREN.

360. With regard to the children under the care of the Poor Law the policy since 1834 Early policy. has always been one of education to independence, although in the earlier days success was made difficult by defective machinery. But progress in the education of these children has gone step by step with the general educational progress of the country, and it is probable that the children in some at least of the present Poor Law schools are being better fitted for earning their living than those outside.

361. Prior to 1834 the children were, perhaps, the most neglected class under the Poor Law. In by far the greater number of workhouses outside London the young were merely trained in ignorance, idleness and vice, and according to Mr. Chadwick, not one-third of the children found any respectable employment. In their Fourth Annual Report the Commissioners describe the state of things existing previously to the formation of Unions as follows:—

“The children, who were for the most part orphans, bastards and deserted children, continued to remain inmates of the workhouse long after the period at which they might have earned their subsistence by their own exertions; and those who obtained situations, or were apprenticed by means of the parish funds, turned out as might be expected of children whose education was utterly neglected or at best confided to the superintendence of a pauper. They rarely remained long with their employer, but returned to the workhouse—which so far from being to them an object of dislike, they regarded as their home, and which they looked forward to as the ultimate asylum of their old age. In this manner the workhouse, instead of diminishing, increased pauperism by keeping up a constant supply of that class of persons who most frequently, and for the longest period became its inmates. Pauperism, however, was only one of the evils which resulted from the neglect to provide proper means of instruction for the children. Those who have ascertained the early history of persons who in a greater or less degree have offended against the laws, have found that a large proportion of these have passed their infancy and youth in the workhouse, and can trace the formation of the habits which have led them to the commission of crime to the entire want of moral training in these institutions.”¹

362. The Commissioners began their work of reform on the lines of a classification Classification, education, and employment of children. which should separate the children from the adult inmates of the workhouse, and an improvement of workhouse schools. In the first Orders and Regulations, issued in 1835,² for the management of a workhouse, provision was made for the appointment of a schoolmaster and a schoolmistress. In addition to this they impressed upon Guardians and officers the necessity of obtaining for the children independent employment outside the workhouse as soon as they were old enough; a matter of great importance while the means of separating them from adult inmates were still inadequate. But so long as the children were untaught and untrained the difficulty of finding situations for them was great; the “pauper taint” was in those days a reality. Apprenticeship had been a recognised method of dealing with pauper children since the introduction of the Elizabethan Poor Law; but a step fatal to the interests of the children had been taken when it was made obligatory upon masters to take the apprentices put upon them by the Overseers.³ The Guardians, having no other way of providing for children who were uneducated and undisciplined, made use of their powers to force apprentices upon masters

who were reluctant to receive them and glad of any pretext to get the indentures cancelled. The Assistant Commissioners had reported very strongly against the system; but it was not abolished until 1844.¹ Meanwhile, it became the object of the administrators to make the compulsory powers unnecessary, by giving the children an industrial training which should enable them to take their place in the world on equal terms with others.

Workhouse
schools.

363. The workhouse school was commonly the place where this training was given; and some of these schools were raised to a high level of efficiency, as at Atcham and Ludlow, where land was set apart for the training of boys, and girls were prepared for service. In one district nineteen Unions had provided land in the cultivation of which boys were employed, to the great benefit of their health, while their studies, so far from being retarded, were promoted. In the Report of 1850² it is remarked that there were workhouses in which the children received an education beyond all comparison better than was within the reach of the children of labourers in any part of the country.

364. But these cases were exceptional; the supply of qualified teachers was limited, and the best of them did not take up Poor Law work; and progress, especially in the smaller workhouses, was slow. The earliest grant made by Parliament towards Poor Law purposes was one of £15,000 in 1846³ towards teachers' salaries, its distribution being made to depend on the number of children under instruction and on the efficiency of the instruction. A suggestion had been already made in 1838 to meet the difficulties of the smaller workhouses by the establishment of district schools, in which the children from a number of Unions might be collected and brought up entirely away from the workhouse; and in 1844 the establishment of these schools was authorised by Act of Parliament.⁴ In 1849 six of these districts were formed, three in the Metropolis (their schools partly replacing private schools in which the children had been boarded-out), and three in the country.

District schools.

365. The history of the district schools movement is remarkable as showing the way in which public criticism of Poor Law administration has wavered and contradicted itself. In 1861 the Report of the Royal Commission on Education appeared, containing a sweeping denunciation of workhouse schools, and recommending the compulsory establishment all over the country of large district schools to hold about one thousand children each.⁵ In 1864 a Select Committee on poor relief reported that on the whole the education in the workhouse schools was satisfactory, but that, while the separate schools should be encouraged, they should not be enforced.⁶ Meanwhile, the attitude of the Guardians was one of passive resistance, the number of district schools never increased beyond ten, and six of these were formed before 1849.

366. Within the next ten years public opinion had veered round, and was strongly antagonistic to district, or as they were disparagingly called "barrack schools." There had been great difficulties with ophthalmia, and doubts were raised as to the effect of the education received in them. Mrs. Nassau Senior was asked in 1873 by the Local Government Board to report more especially with regard to the education and training of the girls. Her conclusions were: That the massing of girls together in large numbers was bad and must issue in failure; that their physical condition when in the schools and their moral condition on leaving them was disappointing and unsatisfactory; and that, while the scholastic training of both boys and girls in the Metropolitan pauper schools was first-rate, on all other points the system of education did not answer in the case of girls, even at the very best separate and district schools, and that many of them were, in general intelligence, below children of the same class educated at home. The alternative which she recommended was boarding out for orphans, and cottage homes for others. This was in 1874. Her criticisms were much disputed, great doubt was thrown upon the evidence on which they were based, and no steps were taken towards breaking up the district schools until twenty years later.

367. In 1894 a Departmental Committee was appointed to inquire into existing systems for the education and maintenance of Poor Law children from the Metropolis, and this Committee reported in 1896, strongly condemning the district schools. Their Report was the occasion of a heated controversy,*¹ but was strongly backed by public opinion, and led to the larger schools being broken up.² The Committee also recommended that the Poor Law children in the Metropolis should be removed from the care of the Guardians. This Report has had a certain amount of influence on the subsequent history of this department of Poor Law work. The number of children educated in district schools has fallen from 7,358, in 1895, to 3,591 in 1907.³ A strong public opinion has been formed in favour of boarding-out, and a great impetus given to the cottage and scattered homes systems. Moreover, although no new Central Authority, such as was suggested for supervising London Poor Law children, was ever formed, the Local Government Board in 1897 adopted the idea to some extent by an Order which laid upon the Metropolitan Asylums Board the duty of providing for certain classes of children requiring special treatment.

Departmental Committee of 1894 on the Care of Poor Law Children.

368. Without desiring to reopen the controversy as to whether the Committee of 1896 was justified in its Report, we have felt the importance of forming our own judgment as to the merits of the different types of school. Some of the evidence we have received is strongly in favour of the district or "associated" schools as compared with smaller schools and homes. Miss Stansfeld, who inspects for the Local Government Board, writes :—

Merits of different types of Poor Law Schools

District or "Associated" Schools.

"The children who come under the care of the Poor Law have, as a rule, been neglected and subjected to bad example in such moral faults as dishonesty, intemperance, idleness, lying and the like, and the re-shaping of their characters needs expert handling. This, as it seems to me, can best be secured from experienced teachers and attendants in the Associated Schools.

"The bedrooms of Cottage Homes are liable to be sources of moral contamination. Too much importance cannot be attached to the grave danger incurred by placing a few children alone in a bedroom. There cannot be proper supervision, and it is not within the power of the most watchful "Mother" so to classify her children as to guard against mischief. Many of the children in the Poor Law schools come from the lowest surroundings, where they have passed through experiences and witnessed scenes the description of which must be demoralising to the children who have been more carefully guarded. In the large dormitories of the Associated Schools such undesirable conversation is less likely. There are attendants about, and there is the feeling that out of so many one might tell."⁴

369. In Mr. Lockwood's evidence⁵ also there is high commendation of these associated schools and it is fully supported by the extracts which he gives from the Reports of the Inspectors of the Board of Education. So far, again, as any Returns can be got, the children from the large schools do as well as those from the small :—

"It depends entirely upon the way each system is administered. Of course in the very large schools, the very large numbers would tend to make them in some way mechanical, but at the same time they give them advantages which smaller numbers cannot have. In a very large school you can have a better staff and more selection. . . . There is one school which did very excellent work

* The Committee had assumed that ophthalmia prevailed practically to the same extent as in 1874, and they had largely based their conclusions on this. But a careful examination of the children in the Metropolitan schools made by expert ophthalmic surgeons in 1874 and 1896 made clear the true facts shown in the following table :—

| | 1874. | 1896. |
|-------------------------------------|-----------------|----------------|
| Total seen - - - - - | 8,798 | 13,047 |
| Discharging eyes - - - - - | 11·90 per cent. | 4·06 per cent. |
| Trachoma or "bad granular lids" - - | 42·00 " " | 4·91 " " |
| Ophthalmic corneal damages - - - | 9·10 " " | 1·28 " " |

"These figures," said Dr. Stevenson, who reported in 1897, "tell their own tale so plainly that they need scarcely a word of comment. They show that during the last twenty-two years a great improvement has taken place in the ophthalmic state of the Poor Law children. As to the main causes of the change, these may be looked for generally in : (a) The increased attention paid to ophthalmia, both inside and outside the schools ; and (b) the bettering of school environment." (Report by Sydney Stevenson, M.B., on . . . the Ophthalmic State of Poor Law Children in the Metropolis, c. 8597, p. 34.)

⁵ Lockwood, 13518.

which is now shut. . . . I have taken the case of ninety-nine girls, who came out ten years ago at the age of about fifteen as a rule, who are now therefore about twenty-five years of age. I made a special Report and it is wonderful how well some of those girls are doing, and how they have risen in the world.¹

A similar view is expressed by Mr. Davy :—

“There must be, I think, to anyone who looks at the evidence as to the dispauperisation of the children educated in the old schools, some little misgiving as to whether the children educated in the new schools are going to do quite as well as the old ones. There is just a doubt whether there may not be in small cottage homes where the children are mixed and not classified according to age, certain moral mischiefs which might well be guarded against in the larger schools ; and there may be a doubt, and a strong doubt too, whether the industrial training, which is to my mind the main consideration, will be as good in these small homes as it was in the large ones.”²

370. We are of opinion that the truth lies with those who hold that more depends upon the administration than upon the system :—

“There is no doubt that there are advantages peculiar to every way in which the Poor Law children can be maintained—boarding-out, ‘barrack’ schools, cottage homes, scattered homes—all have their various merits. The success or failure of any system must depend entirely on the people by whom it is administered.”³

The Association of Superintendents of Poor Law Schools agree :—

“With reference to the question of the different systems of arranging for the care of the Poor Law child, it is not a question of system, but of administration. The infallible test of assessing the value of any arrangement is the examination of those living under the arrangement. It is impossible for a badly ordered barrack, block or cottage to produce alert, cheerful, upstanding and responsive boys and girls.”⁴

371. The opinion of the Investigator whom we asked to report to us on the condition of children under the Poor Law is to the effect that the large school is more suitable for boys than for girls :—

“In a great school like Norwood the children are clean and well clothed ; they are doubtless well trained and educated, their physical condition is looked after and defects treated carefully. There can be a good deal of corporate life about such an institution ; there are bands, and clubs for games, and swimming, etc. Group photographs of school mates and class mates are taken, and all help to develop a feeling amongst the children of a common bond and a common interest. But for girls, at any rate, such a training is, I feel sure, not an effective one.”⁵

372. Finally, we may quote the opinion expressed in the Report on the educational work in Poor Law schools issued in July, 1908, by the Board of Education :—

“Whatever opinions we may have been disposed to form on the vexed question of cottage homes *v.* barracks schools as rival methods of boarding children, we are not able to detect in the schools of either class any general characteristic which can be held to be distinctive of the particular system adopted. Our principal conclusion on this point is that the success of the school depends almost entirely on the character of the supervision and the *personnel* of the staff.”⁶

Scattered Homes. 373. That the criticism of district schools has led to variations in the methods adopted for bringing up the children is, no doubt, a great gain. Schools of various types but all separate from the workhouse have steadily increased in number.⁷ About 1867, the plan of building small groups of cottages was introduced.⁸ In 1871 the Managers of the Asylum Districts in the Metropolis were empowered with the approval of the Local Government Board to establish training ships for boys ; and, although only one has been instituted under the Poor Law, Guardians make frequent use of ships provided by other agencies. The “scattered homes” system was started in Sheffield,⁹ nine such homes had been established in 1896, and the system is being increasingly adopted by other Unions. We have visited homes and schools of every type, and have found excellent work being done in all. Each type, however, has its own drawbacks and difficulties. Mr. Bagenal points out that the scattered homes system has the merit of involving very little, if any, capital expenditure, and thinks also that the home life is on the whole better than in the grouped cottage system, though the children may not get as good an industrial training.¹⁰ Miss Stansfield, on the other hand, thinks that the strain of managing thirteen children in a scattered

¹ Poole, 33911. ² Davy, 3458. ³ Poole, 33856 (30). ⁴ Dean, 28302 (8). ⁵ Report on the Condition of Children in Receipt of Relief, Miss Williams, p. 103. ⁶ Board of Education, Report on Poor Law Schools, 1908, p. 12. ⁷ Davy, 3459 ⁸ Davy, 3439. ⁹ Wilson, 40081 (10). ¹⁰ Bagenal, 6937

home is often too great for the “foster-mother,”¹ while the children lack the special advantages which they can have in “grouped cottage homes.”² Our Investigator reports :—

“Grouped cottage homes, such as those at Ponteland, and scattered homes both have special advantages and both can be very good. Scattered homes, if not too large (not more than eight or ten children) and especially if the sexes are mixed and the group made as permanent as possible, do give a certain sort of home life which for girls especially is worth while, but the value of the system depends entirely on the personality of the foster-mother.”³

374. In connection with the subject of cottage homes we feel bound to call attention to their increasing elaborateness, and the growing cost of maintenance in them. “The original idea of a cottage home was a real cottage, but the cottage has now become a villa.”⁴ In the Appendix to Vol. I., App. V. (4) will be found a Return showing the cost per bed (exclusive of site) in the cottage homes which have been built in the last twenty years. It is not easy to make comparisons of any value between Unions which are situate in different parts of the country and in which the conditions vary not a little, but the general impression conveyed by the Return is that the system is becoming more and more costly. Our own visits have confirmed this impression, and whilst we recognise and warmly appreciate all that is being done by Guardians and officers in these institutions for the children under their care, the question suggests itself—How far are similar advantages within the reach of the independent labourer and the small ratepayer? It is true that these considerations should not be paramount in deciding on the scale and equipment of cottage homes, but they should not be overlooked.

375. The same consideration from another point of view is suggested by the following :—

“It must be rather difficult for a girl who has spent her leisure time at school in playing hockey, croquet and organised games, who has been taught swimming and given a regular course of gymnastics, who has been taken on half-holidays to places of interest and has had free access to a library and recreation rooms, to settle down to an ordinary servant’s work. A child in its own home has between school hours to help in various ways and learns early the necessity of real work, and has experience of the cost of clothing and food. The clothing, food and recreation of a Poor Law child should not be better or more expensive than those which could be provided for it by good parents in its own rank of life.”⁵

376. We have ourselves seen homes which were of a much less costly type and quite as efficient :—

“We were much pleased with all we saw, and we think it may be affirmed that the homes are a great success and very well adapted for the purpose they serve. . . . We need scarcely add that they cannot, of course, compare with the modern homes that are thought necessary for city unions; they are on a wholly different scale and of a different type, less pretentious and much less costly, but we cannot say less efficient or useful as regards the future of the children whose wants they meet.”⁶

377. Mr. Bagenal further argues :—

“If we are going to have any progressive and continuous decrease of childhood pauperism, and if all the philanthropic and educational agencies of this country are going to work any good at all, it will be in the direction of improving the conditions of child-life and lessening the chance of their becoming paupers. If that is so, in process of time, this vast capital expenditure on children’s homes and grouped cottage homes will be, to a certain extent, thrown away.”⁷

378. Many difficulties in dealing with children are avoided where Guardians are able and willing to adopt the system of “boarding-out.” In this case the expense is comparatively small and involves no capital outlay; when the system is well-managed a real home life is secured for the children, and they enter into industrial life upon the same terms as the children of the independent working class. On the other hand, it is more difficult to be certain that they meet with kindly treatment; and they share in none of the special advantages enjoyed in Poor Law schools. Moreover, under the present Regulations of the Local Government Board, the class which can be dealt with in this way includes only children between the ages of two and ten, and upon whom there will be no rival claims to those of the foster-parent, *i.e.*, the orphans and deserted.⁸

379. In England a sharp distinction is made between “boarding-out within the Union,” and “boarding-out without the Union.” The first system has been of long standing under

¹ Stansfield, 14288. ² Stansfield, 14396. ³ Report on the Condition of Children in Receipt of Relief, Miss Williams, p. 103. ⁴ Davy, 1865. ⁵ Poole, 33856 (28). ⁶ Visits: Urban 52. ⁷ Bagenal, 6937. ⁸ Mason, 9587.

the form of out-relief. The first Order regulating it was that of the Local Government Board, September 10th, 1877, entitled "Out-relief within Unions to orphans and deserted children."¹ Under this Order the children were under the supervision of the relieving officer who had to visit and report upon each every six weeks, and of the Medical Officer, who had to visit and report once a quarter at the remuneration of 2s. 6d. per head per quarter.² In 1889, an Order was issued which authorised Committees of ladies and gentlemen to undertake the supervision of the children within the Union and enabled the Guardians to dispense with the visits of the relieving officers.³ Boarding-out without the Union was first sanctioned by the Poor Law Board in 1870,⁴ by an Order under which :—

"Committees of ladies and gentlemen, of no less than three in number, all voluntary and unpaid, were authorised to receive and place out in their 'neighbourhood' children chargeable to Unions other than those in which the places where the children were boarded-out were situated. A large number of children chargeable to London Unions, and others, were accordingly boarded-out in Westmorland, Devonshire, Buckinghamshire, and other distant counties. The order contained rules as to the visitation of the children by the committees, as to the character of the homes in which they were to be placed, and the number of children allowed in each home, etc."⁵

380. In 1885, an Inspector was appointed to visit and report upon the Committees, the children and their homes. Two more Inspectors have been appointed since, and a very complete system of inspection has been elaborated by them.⁶ It is this inspection, with the greater security which it affords to the children, which constitutes the main difference between the boarding-out within and without the Union. Within the Union Committees are optional, and there is no inspection from the Local Government Board; without the Union both Committees and inspections are compulsory.

381. Our Investigators have examined carefully into the working of both systems; and are of opinion that boarding-out within the Union is liable to be very unsatisfactory owing to lack of proper supervision. Full details of the children seen and the conditions under which they were living will be found in the Report of these Investigators; we quote their summary here :—

"It is clear from the accounts of these six unions that effective supervision of boarded-out children and their homes is not obtained under the ordinary Poor Law administration. This fact becomes still clearer on contrasting the conditions found in these unions with those prevailing amongst the groups of children boarded out under boarding-out committees without their unions. Supervision of homes and children by guardians and relieving officers was never found to be satisfactory."⁷

382. Exceptions are made in favour of one Union where supervision was exercised by a superintendent relieving officer of an unusually high standard,⁸ and of another where the work was done by a Committee of ladies.⁹

383. We think that the defects in this branch of boarding-out may be met to a large extent if our recommendations as to the better supervision of out-relief in general are carried into effect. More especially do we recommend that this work should be placed in the hands of competent women officers, and should be brought under Local Government Board inspection. We think also that special care should be taken when the boarding-out is with relatives. Too often in these cases the Guardians merely give out-relief on behalf of the child without sufficient consideration of the conditions under which it is to live. We think that all such cases should be specially notified to the Local Government Board.

384. Our Investigator reports much more favourably upon boarding-out without the Union, as carried on under Committees and Inspectors :—

"Taken as a whole the supervision of the boarding-out Committees visited in the course of this inquiry was wonderfully good and contrasted very favourably with supervision by guardians and relieving officers."¹⁰

Again :—

"Boarding-out, especially in country districts, is certainly the best method of dealing with the small minority of pauper children eligible and suitable for boarding-out, and especially for girls. I have never myself seen children from any sort of Poor Law home or institution making friends

with or playing with their schoolmates on terms of equality, though I was told they did so at Ponteland. Boarded-out children on the other hand can be just the ordinary children of the place sharing in all its life.”¹

“Boarding-out, when properly supervised and with an active and wise boarding-out committee is, I believe, the ideal system both for boys and girls, but especially for girls. Suitable homes, however, are not easy to find.”²

385. Our Medical Investigator, Dr. McVail, reports to the same effect :

“I am strongly of opinion that, as far as possible, the rearing of pauper children should be done in the country, not in the town; and the holding of that opinion is partly why I prefer boarding-out to scattered homes.”³

We gather from the recommendations which we have received, that a large number of Boards of Guardians are in favour of extending the boarding-out system; while many consider that the payments to the foster parents should be increased.

386. Notwithstanding the advantages of boarding-out, it is but little adopted in England. The number of children boarded-out without the Union has diminished during the last ten years, touching the lowest point three or four years ago, and on 1st January, 1908, stood at 1,876. The number of those within the Union, on the other hand, was slowly rising until the year 1907, when there was a slight decline, and on 1st January, 1908, the number stood at 6,689.⁴ As compared with the 46,251 orphans and children “relieved without parents”⁵ these numbers are very small, and contrast sharply with those in Scotland, where 92 per cent. of the orphan, deserted and “separated” children were boarded-out on 15th May, 1907.⁶ The reason for the difference is not very clear. The Chief Inspector, Miss Mason, says :—

“The supply of committees and homes is still quite unequal to the demand, and there is still need for fresh ones in places where none exist at present.”⁷

In Scotland there seems to be little difficulty in finding suitable homes. The difference is sometimes attributed to the different characteristics of the two nations. Sometimes again, it is said that there is too much inspection in England, and that it is resented by the foster parents. Having this in mind Committees of our number have gone round with one of the Inspectors and watched her at work; they failed to see, on the part of either foster parents or children any signs of resentment or dislike to a very minute inspection—a result attributable, no doubt, to the great tact with which it was carried out. We can appreciate the force of the criticism that such inspection must not be of an inquisitorial nature. Some confidence must be placed in the foster parents and in their good faith, and any ill-founded suggestion or suspicion that they have abused the trust reposed in them, presumably after full inquiry, may defeat its object and prevent suitable persons from undertaking such a charge.

387. Another possible reason for the scarcity of good homes, is the difficulty in many places of forming Committees of ladies; in Scotland there are no such Committees and the Commissioners have seen children boarded-out in places where it would have been impossible to form one.

388. Since the Report of the Departmental Committee in 1894 there has been strong public opinion in favour of extending boarding-out; and it is not sufficiently realised, firstly, that it is difficult to find suitable homes, and, secondly, that practically only orphan, deserted, and adopted children can be dealt with in this way. Miss Mason points out in her evidence :—

“Foster-parents constantly ask me if I know whether the child has parents, because they say ‘I will not have her if she has because I will not be interfered with.’”⁸

389. We cannot say that it is proved that the existing system of supervision adds appreciably to the difficulty of finding suitable homes in England, and whilst strongly advocating the extension of boarding-out as far as possible we do not recommend any relaxation in the care exercised. The present supervision within the Union we consider to be as a rule quite inadequate.

¹ Report on the Condition of Children in Receipt of Relief, Miss Williams, p. 95. ² *Ibid.*, p. 103.

³ Dr. McVail's Report, p. 88. ⁴ Thirty-Sixth Annual Report of the Local Government Board [Cd. 3665], 1907, p. cxxiv. Pauperism, England and Wales, half-yearly statement for 1st January, 1908., H.C. 130 of 1908, p. xiv. ⁵ Statistical Appendix, Part I., Table xvii. ⁶ Thirteenth Annual Report, Local Government Board for Scotland, 1907, p. viii. ⁷ Mason, Vol. I., App. (xx.) (a) (17). ⁸ Mason, 9701.

390. In our opinion it would be right that in all cases the fullest inquiry should be made into the character of the foster parents and the suitability of the home before, rather than after, the children are handed over. If this were systematically done it would greatly lighten the subsequent task of supervision, and not improbably tend to produce a better class of foster parents than can be found at present. We are of opinion that the principle followed in the Orders which regulate boarding-out, whereby it is laid down that no person is eligible as a foster parent who does not profess the same religious belief as is indicated on the creed register of the child, should be made applicable in cases in which persons receive Poor Law children for adoption.

Number and
condition of
children in
workhouses.

391. Notwithstanding all the efforts which have been made for the last seventy years, a very large number of children are still maintained in the workhouses. In the half-year ended at Lady Day, 1859, of an average number of 33,576* children under instruction in separate, district and workhouse schools in England and Wales, 26,513 were being educated in workhouse schools, 4,381 in nineteen separate schools, 2,682 in six district schools.¹ On January 1st, 1908, out of 62,426 indoor pauper children, 16,221 were maintained in workhouses, a considerable number of whom were under medical treatment.²

392. It will be noted that the proportion is much diminished, but the actual number is still large, and we have ourselves seen that the condition of such children is sometimes far from satisfactory. Where most of the children have been removed to schools, it would seem that the Guardians are apt to take less interest in the few that remain. In many Unions indeed, the children are treated with the utmost kindness and care, and in all Unions the majority now go out to the public elementary schools, only 565 being still taught in workhouse schools at the commencement of the year 1907.³ Elsewhere we have ourselves found children in surroundings so dreary that it seems strange that Guardians who have families of their own could acquiesce in them. The following are instances of some of the places visited by us:—

"(1) The nursery was bad, very messy, and the children looked miserable; some of the infants were being nursed by old women, some lay in cradles with wet bedding, and were provided with 'comforters.' . . . The infirm and children over three are in the same building, apart from the main body of the house. The children are under the care of a woman who has been there twenty-seven years and has two helpers. She is a fairly capable, roughish sort of woman, hardly fit for such a responsible position. She was reluctant to show anything, and I had to push my way in everywhere. The three-year-old children were in a bare and desolate room, sitting about on the floor and on wooden benches, and in dismal workhouse dress. The older ones had all gone out to school . . . except a cripple, and a dreary little girl who sat in a cold room with bare legs and her feet in a pail of water as a 'cure' for broken chilblains. The washing arrangements are unsatisfactory; the children have no tooth-brushes, and very few hairbrushes. They do not wear workhouse dress to go to school, but I saw some coming in from school in the rain who were not properly dressed for a wet day. Altogether there is great need for reform in the treatment of the children."⁴

"(2) The children (thirty-nine girls and twenty-three boys) are housed in the workhouse under the care of a male and a female industrial trainer, but they are not kept separate from the adult inmates. Indeed the children's wards left on our minds a marked impression of confusion and defective administration. . . . In appearance the children were dirty, untidy, ill-kept, and almost neglected. Their clothes might be described with very little exaggeration as ragged, and when the inspector told a group of children to take off their right boots large holes were displayed in six stockings out of thirteen. The eyes of some of the children seemed suspiciously 'weak,' and in two or three cases to be suffering from some serious inflammation."⁵

"(3.) In the nursery we found the babies of one to two years of age preparing for their afternoon sleep. They were seated in rows on wooden benches in front of a wooden table. On the table was a long narrow cushion, and when the babies were sufficiently exhausted they fell forward upon this to sleep. The position seemed most uncomfortable and likely to be injurious. We were told that the system was an invention of the matron's and had been in use for a long time."⁶

"(4) There are twenty children in the house: the girls and younger boys have a day room together, and sleep together in a room three stories up. This is the only room in which there is no second exit in case of fire. There are two older boys who go in with the old men. The babies are under the charge of the laundress, who also looks after the female tramps, and is responsible for the young women. This seemed to me a most unsatisfactory arrangement; the laundress was a much harassed young woman, and the babies inevitably neglected. One was in the steam and heat of the laundry, two tumbling in the yard, two in a small room next door to the laundry in charge

* This is not the total number of indoor pauper children. On 1st January, 1859, there were in the unions from which returns were received 46,518 pauper children, some of whom were attending the national or village schools; others do not appear to have been under instruction, whilst others were not of school age.

¹ Twelfth Annual Report, Poor Law Board, 2675, 1860, pp. 18, 290 *et seq.* ² Statistical Appendix Part I., Table xvii. ³ Thirty-Sixth Annual Report, Local Government Board [Cd. 3665], 1907, p. 388. ⁴ Visits: Urban 39. ⁵ Visits: Urban 27A. ⁶ Visits: Urban 24D.

of a disagreeable looking pauper; and two could not be found until we hunted them down in the young women's dormitory. This was very untidy, with the beds not made and in an unsatisfactory condition. Here, as elsewhere, the provision for children is quite bad."¹

"(5) The chief defect here, as in so many workhouses, is in the accommodation for the children. The boys' day-room is absolutely dreary and bare; and they share a yard and lavatories with the young men. There are two sleeping rooms, one over the day-room, the other over a carpenter's shop containing a large heap of shavings and other inflammable material. The windows of the sleeping rooms are barred, and escape in case of fire might be impossible. An old man sleeps with the boys. The girls use the sewing-room as a day-room. The older children go to school $1\frac{1}{2}$ miles distant, taking bread and butter or jam with them, and dining on their return when the other inmates have their tea. The dining-hall is used by all inmates at the same time. It may be noted that here, in contrast to most country workhouses, the girls have separate towels and brushes. No tooth brushes, however, and the matron says their teeth are bad."²

393. These are some of the most unsatisfactory cases seen by us, and as a rule the children in the workhouse are better cared for. But even then the conditions leave much to be desired. Our Investigator reports:—

"The retention of children in workhouses is always unsatisfactory. Even where they have special attendants they are never completely separated from the ordinary inmates. . . . The arrangements for their tendance and training are never as good as in an establishment wholly given up to them; the separation from the ordinary inmates of the workhouse was very incomplete in each case I saw. When sent out to school (as they were in both the unions under discussion) they did not enter into the play or out-of-school life of the other children. I have often felt as I have watched the little groups of workhouse children drawing off from the others that, to certain natures at any rate, this must painfully emphasise their position."³

394. We are strongly of opinion that effective steps should be taken to secure that the maintenance of children in the workhouse be no longer recognised as a legitimate way of dealing with them. We are aware that many of the children in question are the children of "ins-and-outs" (*vide* Chapter 9), and that under the law as it now stands there would be great difficulties in carrying out this recommendation. We think that this only strengthens the argument in favour of our recommendation that the Public Assistance Authority should have power to keep these children in institutions, while their parents are detained in a detention colony. Similar considerations apply to the present necessity of discharging (when the parents go out) a child while under treatment for ophthalmia or some chronic contagious ailment. In addition to the evidence already quoted on this subject we may add that of Major Skinner, Chairman of the Special Schools Sub-Committee of the Education Committee of the London County Council, with reference to children of this class who have ultimately been sent to industrial schools. He tells us that the parents of many of the children in their schools are

"thrifless, vagrant or dissolute persons who frequent workhouses and casual wards, and who are unfit to have the custody of children. Some of the parents are from time to time committed to prison for varying terms. While the parents are in prison or are the inmates of workhouses the children are placed under the care of the Poor Law guardians, and are usually sent to the parish schools; but when the parents are discharged from prison or when they choose to leave the workhouse, they have the power to claim their children, who are thereupon removed from the care of the guardians and are again subjected to evil influences and degrading surroundings. . . . When the children are removed by their parents from the care of the guardians it frequently happens that the parents have no homes, or are habitual beggars. In such cases the children often fall into the hands of the police."⁴

"In addition, moreover, to the children who fall into the hands of the police or the council's officers, it is evident that there are many others who escape the vigilance of both, chiefly because their parents are constantly moving from one common lodging-house or free shelter to another, or, without committing any offence which causes them to be taken into custody, are in and out of the workhouse. For such children there is no hope of any other career than that of vagrancy or criminality. It is therefore desirable that all children who are without proper guardianship should, immediately they fall for the first time into the hands of the guardians, be rescued from their evil surroundings and be dealt with in such a way as will ensure their being educated and trained to become self-supporting and respectable citizens."⁵

395. So far as the children are concerned it is probable that no further power would be needed, since the Guardians already have power, under the Poor Law Act, 1899, to adopt children until the age of eighteen where they are of opinion that, by reason of mental deficiency, or of vicious habits or mode of life, a parent of the child is unfit to have control of it. A Return made in 1902 showed that 352 out of 646 Unions had taken action under this law on 1st June, 1902, and that the number of children over whom the Guardians were then exercising the rights of parents was 7,724.⁶ On 1st January, 1908, the number of Boards exercising the rights of parents was 474 out of 640 making returns. and the number of children had risen to 12,417.⁷

(3)-(5). ⁵ *Ibid.*, pars. (7-8). ⁶ Thirty-second Annual Report, Local Government Board [Cd. 1700], 1903, p. lxii. ⁷ Statistical Appendix, Part V.

Adoption of
children by
Guardians.

396. We think that these powers should be more widely used, and that the Authority should retain supervision of adopted children up to the age of twenty-one. But we also think that, in view of the possible temptation thus offered to unworthy parents to relieve themselves of the care of their children, parental responsibility should be more strictly enforced in some cases by detention in an institution, and wherever practicable, by charging to the parents the whole or a part of the cost of maintenance of the children.

In all such cases we are of opinion that the children should become the wards of the Local Authority up to the age of twenty-one; that the children whether removed from their parents or left with them should be kept under supervision; and that one of the parents, if found worthy, or some other responsible person should, if willing to act in that capacity, be associated with the Local Authority as the official guardian. Every case in which a conviction is obtained should be reported to the Authority by the police.

397. In connection with the protection of children neglected by their parents, we may note that, under the Children Act, 1908, it is provided that a parent or guardian who neglects a child in a manner likely to cause injury to health is liable to a maximum penalty of £100 or two years' imprisonment with hard labour. Neglect under this Section includes failure to provide "adequate food, clothing, medical aid or lodging," or, in the event of the parent or guardian being unable to provide such food, etc., failure "to take steps to procure the same to be provided under the Acts relating to the relief of the poor."¹

Lack of systematic records as to after careers of Poor Law children.

398. One grave defect which we have noticed is the absence of systematic record as to what becomes of the children after passing from the care of the Guardians, generally at the early age of fourteen. In the few cases where such records are kept, it is shown that all but a very small minority do well, and become respectable independent men and women.² Corroborative evidence of this is found in returns showing that in selected Unions very few of the present inmates of workhouses and infirmaries have been brought up under the Poor Law. Again, the Metropolitan Association for Befriending Young Servants, which takes charge of the girls who leave the institutions of the London Unions, keeps careful records, and these also show good results; the visitors of this excellent society keep in touch with the girls until they are twenty, or in special cases twenty-five.³ Not less important than the after-care of the girl is that of the boy. The former almost invariably lives under continual supervision, the boy is usually left to shift for himself without guidance after work hours. Some admirable work for the care of this class has been commenced by the Association for Befriending Boys, chiefly in London but to some extent in the country also. There is also an association which does similar work for Southwark boys. But in the great majority of Unions the Guardians keep no record of their children, and it is a matter of chance whether some individual Guardian or official keeps in touch with a child sufficiently to know what becomes of it after the lapse of a year or two. In many of the schools we are glad to know that the superintendents have made themselves so trusted that the children will turn to them in times of difficulty; but we think that something more than this is needed. It is not sufficient to send a child of fourteen to a situation which may prove unsuitable, and leave it there to look after itself. Children of this age are greatly handicapped by having lost their natural guardians, and many suffer from the loss even more severely at this critical age than earlier in life. Dr. Williams in her Report, writes:—

After care of Poor Law children.

"When a pauper child goes out to work is the time when the need of this relation is most keenly felt, and I have had it very strongly borne in on me during the last few months that many of the children who fall under the influence of unsatisfactory relations when they go out from the Poor Law institution to a situation, do so because they want this very thing" (*i.e.*, a home tie).⁴

399. The evidence which we have heard convinces us that voluntary agencies may be relied on to co-operate in this work. We think that such agencies should be recognised by the Public Assistance Authority and should report to it, and such reports should be entered on a record. We have been struck by the comparatively small attention given to the after-care of boys, and we should welcome development on the lines of those societies which deal with girls.

400. It is not possible to compensate wholly for the loss of family life, and of parental care; but we think that much more might be done in the way of after-care. We have inquired what steps are taken in this direction for the children leaving the London County Council industrial schools and reformatories,⁵ and are informed: (i.) that for a period

¹ 8 Ed. VII. Cap. 67, Sec. 12. ² Davy, 3501. ³ Poole, 33855 (4). ⁴ Report as to the Condition of Children in Receipt of Relief, Miss Williams, p. 85. ⁵ L. C. C. Memo, Vol. IX., App. lxxiii.; Home Office Memo., Vol. IX., App. lxvi.

of three or four years after leaving school supervision is compulsory, and it is continued voluntarily for an indefinite time afterwards; and (ii.) that information as to each case must be furnished to the Council from the time a child is eligible for disposal until it attains the age of eighteen years. We think that a system of supervision and record should be applied to the children leaving the care of the Poor Law Authorities. The experience which would be gained in this way would be invaluable in testing the value of the education received by the children, and in enabling less successful Unions to adopt the methods of the more successful.

401. Some witnesses of great experience have urged upon us the necessity of providing homes for the boys when they first leave the schools, and until they become self-supporting. In view of the great difficulty of finding masters who are willing to board apprentices, it has been suggested that the Local Authority should provide homes in which boys who leave their schools to take up work should be boarded and lodged. In such homes after-care is made easier and more thorough, some discipline can be forced and a general supervision exercised, habits of cleanliness and order can be strengthened, and the demoralising effect of bad associates counteracted. But, whilst we recognise these advantages, we are of opinion that such provision falls within the sphere of private benevolence and should be left to it.

402. By far the greater number of children under the Poor Law are those of parents receiving out-relief, and it is only recently that the question has been explicitly raised whether the Guardians or the parents are primarily responsible for these. Sometimes the responsibility seems to be thrown upon the Guardians; *e.g.*, under what is known as Denison's Act :—

Children of
parents in receipt
of out-door relief.

"Boards of Guardians might at their option pay out of the poor-rates for the education of the children of outdoor paupers."¹

403. It appears, however, from the Report of the Select Committee on Poor Relief of 1864, that, at any rate up to that date, this power was only rarely used. Indeed the Committee reported against a proposal to make the Act compulsory, and also against a recommendation of the Royal Commission on Education that :—

"Guardians should insist on the education of the child as a condition of outdoor relief to the parents."²

Their reasons were

"inconsistent with the principles upon which the relief of the poor is established."³

404. But this view was not followed in the Education Acts. By Section 3 of the Elementary Education Act, 1873,⁴ it was made a condition for the continuance of outdoor relief by way of weekly or other continuing allowance to the parent of any child above the age of five, or to such child, that, unless the case came within certain exceptions, education in reading, writing and arithmetic should be provided for the child, and the Guardians were required to give such further relief, if any, as might be required for the purpose.

405. The Section was repealed by the Elementary Education Act, 1876,⁵ but it was re-enacted with some modifications by Section 40 of that Act. The effect of later legislation has been somewhat to modify the latter Section, but at the present time outdoor relief on the order of the Guardians by way of weekly or other continuing allowance is conditional, in the case of any child to whom the bye-laws of the Local Education Authority apply, on the attendance of the child at school to the extent required by the bye-laws. The Guardians must still give any further relief which may be necessary for the purpose, but since the introduction of free education this duty is limited to the case of children who can only attend a particular school on payment of a fee.

406. The immediate responsibility of providing education for the children of a parent in receipt of outdoor relief rests with the parent, the function of the Guardians being limited to seeing that, as a condition of the continuance of the relief, such education is provided, and to paying the school fees in the rare cases where the child attends a school at which a fee is charged.

407. But the question has now been definitely raised as to how far this divided responsibility has worked for the benefit of the children, and we have devoted special attention to the condition of those children who are being wholly or partially maintained by means of out-relief.

¹ 22 Geo. III. Cap 83.
⁴ 36 & 37 Vict., Cap 86.

² Select Committee on Poor Relief, 255, 1864, p. 35.
⁵ 39 & 40 Vict.

³ *Ibid.*, p. 36.

408. We have already drawn attention to the want of uniformity and to the frequent inadequacy of the allowances made by way of out-relief; and nowhere do we find these characteristics more marked than in the out-relief granted for the maintenance of children. The following instances were noted by us while attending Relief Committees in different parts of the country :—

“ Altogether seventeen cases were heard and the applicants seen. The majority of these cases were widows with children, the relief being on an unusually adequate scale. Thus a widow with three children dependent and earning 14s. a week and some food, was given 7s. a week relief, bringing her total weekly income up to 21s. and food. In another case a widow with four dependent children and one boy earning 15s. a week, with a total income to the family of 25s., received 7s. a week, bringing their total income up to 32s. a week for six persons. The rents mentioned were high, varying from 4s. to 6s. There was no fixed scale of relief, but it seemed to average out very uniformly at 5s. 6d. a head, including the mother and children.”¹

“ The following cases illustrate the methods of the guardians, *e.g.*, a man and his wife, aged twenty-four and twenty-two with two small children; man broke his collar bone, had been under treatment as out-patient in the general infirmary. Amount of relief which had been given during the previous month, 3s. and one loaf. The woman was looking after her husband and was earning nothing, and the rent was 2s. 6d. Thus leaving a family of four persons 6d. a week and a loaf to live upon.”²

“ Woman aged 33, with three children, aged respectively 7, 5, 2. Husband sent to Canada by public subscription six months ago. Earning 3s. Relief 2s. 6d. per week.”³

“ Woman with five children, aged respectively, 11, 9, 5, 2, $\frac{1}{2}$. Husband in prison (twenty-one days) for non-payment of rates. He had only been out of prison five weeks, having served twelve months for felony. Family relieved during that time with 4s. per week.”⁴

“ We were told that there was no scale of relief, but we found that in practice a widow was supposed to keep herself and one child, and would receive 1s. 6d. a week relief for every child in addition to one.”⁵

“ The scale as regards widows is 4s. for the mother, 2s. each for two children, and 1s. for the rest.”⁶

409. This attitude of the Guardians towards out-relief children we found painfully emphasised in one Union where the relief given in the case of a widow with a family was 1s. 6d. and a loaf per child, but nothing for the mother nor for her first child. This same Board is maintaining children in cottage homes at a cost of 17s. 6d. a week per child, exclusive of education for which a special grant is made to the public elementary school.⁷ Making every allowance for the fact that some of the mothers might be able to earn, or might be assisted by relations, we think that the discrepancy should have suggested to the Guardians that the amount per child was too low in the one case and too high in the other.

410. It is clear that, where the income of the family falls as low as in some of the cases we have cited, it is impossible that the children should be properly fed and clothed. The following, which may be considered as a fairly average country case, shows a very inadequate dietary :—

“ A widow with four young children, aged respectively, 13, 9, 6, 4. Also two elder girls in service, receiving £9 and £5 respectively. The relief given is 7s. 6d. per week. She earns some weeks as high as 4s. 6d. by charring, but does not average this amount. The rent is 2s. per week. There is a small kitchen garden, in a rather neglected condition; as she cannot do this work herself, it has to be paid for. With her slender means, a few shillings paid for gardening is a great sacrifice, although it would be well-spent money, and would give a very good return. Under present conditions the garden is a very great help. We asked her to give us some idea of the way in which she laid out her weekly income. This she readily gave, which is as follows :—

| | s. | d. |
|-------------------------|---------------|-----------------|
| Bread - - - - - | 3 | 2 |
| Groceries - - - - - | 2 | 6 |
| Butter - - - - - | 1 | 6 |
| Clothing Club - - - - - | | 6 |
| Milk - - - - - | | 3 |
| Bacon - - - - - | occasionally. | |
| Coal - - - - - | 1 | 4 |
| Sticks - - - - - | occasionally. | |
| Rent - - - - - | 2 | 0 |
| Total - - - - - | 11 | 3” ⁸ |

411. It is unlikely that children who are brought up with so little milk or meat in their diet can be properly nourished; nevertheless, they have a far better chance of doing well than the children who are left with bad parents, as in the following cases :—

¹ Visits: Urban 22 A. ² Visits: Rural 28. ³ Visits: Rural 61. ⁴ Visits: Rural 61. ⁵ Visits: Rural 57. ⁶ Visits: Urban 7. ⁷ Visits: Urban 15. ⁸ Visits: Rural 53; *Vide also* Dr McVail's Report, pp. 79-80.

"A widow with three children, a well-known drinking character, was relieved with 3s., one of her children earning 7s., making a total of 10s. It was urged by the relieving officer that it was no case for out-relief as it was encouraging drunkenness and immorality. On one occasion she struck the relieving officer when in the street drunk. It was held that the relief having been suspended for a month she had suffered sufficient punishment. The officer said: 'She still drinks,' and that 4s. relief was given on December 13th, 'to tide her over the holidays.' She had been before the police for drunkenness. It was considered to meet the disqualification of the case by reducing the relief to 3s. instead of 4s." ¹

Widow with seven children, none working. Received 10s. per week relief. Rent, £5 10s. Said to be paid by friends. The relieving officer says the family can live on 10s. per week with care. I visited the home, and found it in a very dirty, I might say, filthy condition. The woman is a sloven. She went about the house in a dazed manner. I tried to get particulars of the way she spent her money, but found it impossible. Her memory could not serve her even for one week; one of the children was at home from school ill, but had not been seen by a doctor; although the relieving officer had called in, she had not mentioned it to him. Some outside assistance is evidently given in this case. It is obvious, even with a few vegetables from the garden, that a family of eight persons could not live on 10s. per week, and pay £5 10s. per annum rent." ²

412. On this whole question of the condition of the children in receipt of out-relief, we call attention to the Reports of our Investigators. Dr. McVail writes in reference to such children:—

"Taking the facts as a whole, four conclusions were forced on me:—

(a) In many cases the amount allowed by the guardians for the maintenance of outdoor pauper children cannot possibly suffice to keep them even moderately well.

(b) Many mothers having to earn a livelihood as charwomen or washerwomen or otherwise cannot attend to their children at home, so that there is no proper cooking, the house is untidy and uncomfortable, and the living rooms and bedrooms unventilated and dirty. But there were exceptions to this rule—mothers who, though forced to go out to work, were yet able to keep their houses very clean and to give a surprising amount of attention to the feeding of their family.

(c) The mothers, even those who were not out working, were often too ignorant, and occasionally too indifferent, to make the best use of the money allowed them by the guardians.

(d) Throughout England and Wales there must be a very large sum of public money given for the maintenance of pauper children in their own homes without any control whatever being exercised over its expenditure. The money is handed to the widow, and, unless no doubt in cases of immorality or intemperance, she is practically allowed to do with it as she pleases. The amount given for the support of the children is often too little to begin with, and, such as it is, it is often wasted in bad or ignorant feeding." ³

413. We think that the closer supervision which is required in the case of the aged is even more imperatively needed in the case of the children, and we quote from Dr. Williams's Report in support of our suggestions for improvement:—

"Where little supervision is exercised to see that out-relief is wisely used, large numbers of the children are brought up in homes fronting on to filthy streets or courts, and spend most of their time out of school playing amongst garbage. In Liverpool 45 per cent. of the families were living on roads which were in a bad and dirty condition, while in the same proportion of cases the sanitary condition of the house itself was bad. In Bradford, where an effort is made to see that out-relief is expended wisely, 19 per cent. of the cases only are living on dirty streets or courts, while in only 14 per cent. the sanitary condition of the house is bad." ⁴

414. We think that where out-relief is given care should be taken to ensure that the total income from whatever source is sufficient to afford proper food, clothing, and housing conditions for the whole family:—

"The lowest income possessed by any family investigated is 2s., and belonged to a family of three persons in Liverpool, but incomes of 3s. for four persons, 4s. for three persons, 5s. for five persons are found in the tables. It does not need much consideration to see that not only are these incomes insufficient, they are impossible. The families possessing them do not live on them; they beg or borrow; they pawn their furniture and clothes; they do not pay rent, but move from place to place as landlords push them out. Such a life can be continued for a long time, and it is not necessary to emphasise the fact of how hopelessly demoralising it must be for children, and how small must be the chance children brought up in this fashion have of becoming decent and self-respecting citizens. Their schooling is often irregular owing to the frequent moves, and no regularity or order enters into their lives. . . . In the large urban unions we have particulars of many families whose income may be considered an impossible one. In Liverpool I saw a house into which out-relief was going, the whole household plenishing of which was a broken kettle, and another in which a heap of rags and an orange box represented the whole." ⁵

415. We think also that it should be the duty of the Public Assistance Authority to ascertain that the children are being properly nourished.

¹ Visits: Urban 12. ² Visits: Rural 61. ³ Dr. McVail's Report, p. 79. ⁴ Report as to the Condition of Children in Receipt of Relief: Miss Williams, p. 33. ⁵ *Ibid.*, pp. 38-9.

"A large number of the children are fed almost entirely on bread and tea. Very few, if any, children of families in receipt of out-relief get sufficient fresh milk, most get none at all. How many go absolutely short of food it is difficult to say, but the evidence given by the condition of nutrition and intelligence of the children examined leads one to the conclusion that large numbers are underfed as regards the essential food elements, though they may possibly have sufficient bulk."¹

416. We think that, unless satisfactory conditions in the home can be assured, the children should be maintained in a Poor Law institution or an industrial school; more especially we think that no children should be maintained by out-relief in immoral surroundings:—

"I saw in one instance out-relief children habitually sent out to pilfer in a small way, others to beg, some whose mothers were drunkards or living immoral lives. . . . These definitely bad mothers were but a small minority of the mothers whom we visited, but there were many of a negatively bad type, people without a standard, whining, colourless people, often with poor health. If out-relief is to be given at all, especially where children are concerned, those who give it must take the responsibility for its right use, and to do this there must be close supervision of the homes. The negatively bad mothers spoken of above might in a very large proportion of cases be guided and stimulated by kindly and wise supervision."²

417. Great stress has been laid by our Medical Investigator on the need for more medical supervision of all children under the Poor Law, both indoor and outdoor, and this opinion we endorse.³

Children of
mothers in receipt
of outdoor relief

418. We think that in the case of children of widows care should be taken that they get a fair start on leaving school:—

"No board of guardians, so far as my investigations go, takes any interest whatever about the placing and starting in life of boys who have had out-relief, nor does it try to help them to any technical training. In some unions the women guardians help to place the girls in domestic service, and the board generally tries to persuade mothers to send their girls to service. For a boy, out-relief stops at fourteen, and he turns to the first job at which he can earn. Most likely this job will be one that leads to nothing. It may be street selling of some kind, it may be an errand or van boy's job. When it is over he finds, or tries to find, another, probably also leading to nothing, and so he drifts on."⁴

419. With regard to the difficult question of the employment of mothers in receipt of out-relief, we do not recommend that in all cases this should be prohibited (*vide* the Glasgow experiment, Chapter VII). But we think that the circumstances in each case should be carefully considered and watched, and that the mothers should not be expected to earn unless satisfactory arrangements can be made for the children:—

"The proportion of mothers employed varies from 92 per cent. in Lambeth to 59 per cent. in Paddington. . . . The children as a rule do not get suitably fed unless special arrangements can be made for them. In 60 per cent. of the cases investigated in which women were employed four days or more away from home, some arrangement was made more or less suitable for the care of them. . . . The children in many cases, even when some provision is made, suffer from lack of care and control, become wild and undisciplined, or worried and anxious, according to their circumstances and temperaments."⁵

420. For many of these children we think that provision might be most satisfactorily made by means of day boarding schools on the model of the day industrial schools. The children at these schools are day boarders, and receive more care and personal supervision than is possible or perhaps desirable in the ordinary elementary school. We understand that in Liverpool and Glasgow such an arrangement is already in force with the day industrial schools⁶; a Committee of our members visited the school at Glasgow, where the children are given three meals a day and ample instruction, for a payment from the parents of 1s. a week. Any objection which might be felt on the ground that the name of the industrial school carries undesirable associations might be met by calling such a school a day boarding school. We think that where necessary schools should be provided at which these children could be taken as day boarders. The relief given to the children in these schools would take the place partly or wholly of the allowance made to the mother, who, if there were no children below school age, would be set free to earn without risk of the children being neglected. When the children are too young to go to school, we think that the mother should not go out to work,

where it is impossible to provide a sufficient substitute. In this connexion we would say a word on behalf of a class which has been hitherto neglected, the children of widowers. The circumstances make it almost impossible for a widower to engage the services of a housekeeper ; he may be averse to re-marriage ; and the problem of providing proper care and attention for his children is well-nigh insoluble. Among the many attempts to deal with social difficulties which we found in Glasgow we noticed a " family home " in which widowers could take rooms, and in which common meals and careful attention were provided for the children, whilst the parent was out at work : in the evening he returned and rejoined his family.

421. It will be seen that in this department we are advocating a system of complete supervision and adequate relief which will necessarily involve an increased staff. To some extent we think that the supervision may be carried out by enlisting the services of volunteer agencies ; the guilds of help district visiting societies, and health societies might furnish many visitors who would undertake the detailed supervision of out-relief families and report to the official Inspector. When these are not available, no doubt additional officials will have to be appointed, and these in many cases should be women capable of instructing and advising mothers. But we think that to a large extent the increased expenditure in this department should be met by a reduction of the extravagant expenditure at present incurred in many Poor Law schools and homes. A Report from Dr. Macnamara, Parliamentary Secretary to the Local Government Board, issued in 1908 includes a table showing the cost per child per week, including establishment and loan charges, in various Poor Law schools and cottage homes in the London District. It varies from 10s. 3d. in the Islington schools and the North Surrey district schools, to 20s. 1d. in the Bermondsey cottage homes. In some places the high cost is partly due to loan charges ; but we think that even when these are deducted such figures as 14s. 2d. at the Bermondsey cottage homes and 14s. at the Central London schools are unnecessarily high for maintenance and may be reduced.* Every effort should be made to return to a simpler though not less effective way of dealing with the children for whom an institution life is necessary. It will be long before the burden of debt already incurred in buildings disappears and the very extravagance of the buildings seems to bring with it a heavy maintenance cost ; but we do not doubt that, if it is understood the Central Authority is steadily opposed to unnecessary expenditure, the reform may be carried out.

422. Meanwhile, we cannot expect to carry out reforms of this character without some increased expenditure. Much might be said for a policy of complete non-intervention in such cases ; and we think that, but for the existence of the Poor Law, much of the responsibility might have been assumed by the charity of friends and relations. But there is nothing to be said in favour of a policy which accepts these cases as suitable for Poor Law relief and then neglects to see that any real help is afforded. To a very large extent the money now spent in small doles of out-relief is wasted by reason of its inadequacy ; and it will be good economy to spend more in doing effective work.

* The items included in these sums were—(See Report on Children under the Poor Law by T. J. Macnamara, Parliamentary Secretary to the Local Government Board, 1907, Cd. 3899, pp. 24-5).

Emigration of
orphan and
deserted children

423. Our attention has been directed to emigration as a method of dealing with certain classes of children chargeable to the Guardians. It may be well to state briefly the legal basis on which this method of treatment rests, the procedure adopted, the dangers and difficulties of the system, and the results in so far as they can be ascertained.

424. Under the Poor Law Amendment Act, 1850, Boards of Guardians are empowered to procure or assist in procuring the emigration of orphan or deserted children under the age of sixteen years, with the order and subject to the Regulations of the Local Government Board; but no emigration can take place until the child has consented before the Justices and the Justices have submitted to the Board a certificate showing that they as well as the child have consented to the proposal.¹ When these consents have been obtained, the Guardians make application to the Local Government Board stating that they propose to emigrate a certain child through the Roman Catholic Emigration Agency, the Waifs and Strays Society, Dr. Barnardo's Homes, Miss Macpherson's Home, or one of the various well-known emigration agencies. The Local Government Board cause careful inquiries to be made as to the child's physical and mental condition, and, if the case is found to be suitable, the Guardians are required to pay a fee of £10 to defray the cost of regular and systematic inspection by the immigration officers specially appointed for the purpose by the Dominion Government. The home in which the child is placed is chosen by the agency through which the child is emigrated. No payment other than the cost of travelling, etc., is made by the Guardians, and the child is practically adopted under a contract; at thirteen years, wages are paid varying in amount according to the child's usefulness and the generosity and prosperity of the foster-parent.²

425. The advantages of this method of treatment are as obvious as are its dangers. If the emigration agency succeeds in finding suitable foster-parents, the child grows up familiar with Colonial life, in healthy surroundings, and is absorbed in the ordinary population; on the other hand, if an unwise selection is made the child has no protection but that of the Inspector, and perhaps the interference of a neighbour, a school teacher, or some other official. Miss Mason, the chief lady Inspector for boarded-out children under the Local Government Board, has impressed on us the dangers involved in this system. In her opinion the Inspectors cannot visit as often as is necessary children scattered over so wide an area as the Dominion. The officers, moreover, are exclusively of the male sex, and are not, therefore, qualified to report as to the condition and treatment of the girls.³ As the result of her experience in England she urges strongly the need of Boarding-out Committees in Canada to safeguard the children's interests; but it is practically impossible to establish such an organisation.

426. A further objection has been raised by witnesses whose opinions are entitled to careful consideration. It is urged that only the most promising children are selected; that these children can easily find suitable employment at home; and that it is unfair to the least promising children, to the institutions, and to the home country, if only the least promising children remain.⁴ In answer to these criticisms, we are of opinion that inasmuch as the Guardians stand *in loco parentis*, they are bound to secure for the children such a start in life as will afford a reasonable prospect of prosperity. As we have already pointed out, Boards of Guardians are adopting in increasing numbers the children of neglectful and unworthy parents. If this well-intentioned effort is to be fruitful in result, the children should, if possible, be withdrawn beyond the reach of the degrading influence of relatives who, as is well-known, become actively concerned in the children's welfare on their attainment of a wage-earning age.⁵ In the case of such children, therefore, as well as that of orphan and deserted children, we are of opinion that Boards of Guardians are well advised in taking advantage of this method of treatment. At the same time it is essential that no pains should be spared to secure adequate inspection of the children. The Reports submitted by the immigration officers to the Local Government Board in 1908 shows that the system works fairly well, and whenever an unfavourable Report is received the Local Government Board requires the Board of Guardians which originally was responsible for the emigration of the child, to call upon the agency to provide a new home.

427. In this connection, our attention has been called to the Children's Farm Home Association farm, established by Mrs. Ellinor Close, situated 15 miles from St. John, New Brunswick. The holding consists of 185 acres, of which 90 acres are highly cultivated, with a good house, outbuildings, etc. Since April, 1903 thirteen boys and girls from six to thirteen years of age have been maintained under the care of two English ladies (one of whom is a trained nurse), and of a farmer and his wife who work the farm and instruct the children; the children attend a local elementary school, taking their place in the ordinary child-life of the district. Both children and farm are under the supervision of a local Committee. The Agent-General for New Brunswick, speaking on behalf of his Government, heartily approves of this institution, and if the supervision be adequate it is, undoubtedly, to the children's advantage to be brought up amid the healthy surroundings of Canadian life.¹

428. There is one Order in connection with the children to which we must call attention viz., the Relief (School Children) Order issued by the Local Government Board in 1905. The Order is intended to meet the case of underfed children attending public elementary schools. In such cases application may be made on behalf of the child to the Guardians, who, if they consider the case to be one of habitual neglect, are to feed the child and recover the cost from the parent.²

429. It would seem that this Order has been put in force in but few places. Where it has, the results have sometimes been striking:—

“At Birmingham they had 6,000 children who were fed daily during the winter months, but since the Feeding of School Children Order the number has dropped to about 2,000.

To what is that due?—The Birmingham Free Dinner Society, which had been feeding children daily for the past thirty years, ceased to exist after the Order came into force. The other voluntary source for feeding children (which was instituted by Mr. Hookham) is now confined by him to orphan and deserted children. Mr. Hookham is still feeding 1,600 daily, and the Birmingham Guardians 400, so that the number is reduced to about 2,000.

Then the process was this, that the charitable agencies were relieving, and when the order came in they referred their cases to the Poor Law, and when the Poor Law came in they made investigation, and the result was an enormous reduction in the number of children?—Yes. One of the parents of those children was getting nearly £4 a week, and many of them were receiving between £2 and 30s. a week.”³

Mr. Wethered, Inspector for the District including Gloucestershire, reports:—

“Up to the end of the year only fourteen cases of necessitous children were treated under the Order throughout the whole of my district, and, of the fourteen, twelve were at Bristol. I do not mean to say that at Bristol there was not a number of applications made. There was a considerable number of applications. I think there were seventy-four cases in the first instance and fifty-five cases came afterwards; up to the week before last no case has been received since January; but of the whole of the cases investigated in Bristol, referred to the Guardians from the education authority, after investigation only twelve were found to be necessitous.”⁴

430. It seems clear, from the small extent to which the Order has been put in force, that there is little desire amongst Local Authorities to make the feeding of school children a charge upon the rates.

431. When we turn to the other agencies for dealing with children which have come into operation since 1834 we find, in the first place, a large number of specialised charitable institutions which are intended to meet the needs of special classes of children; such are the training homes for boys and girls, homes for cripples, homes for the feeble-minded and epileptic, convalescent homes, etc. The question arises to what extent these should be utilised for Poor Law children, or how far they should be duplicated by Boards of Guardians amongst their own institutions. In 1862–3 the system was begun of sending children to such of these homes as were inspected and certified by the Local Government Board, and on 1st January, 1908, 7,967 pauper children were in institutions so certified. Another 1,402 were in uncertified institutions, sent by consent of the Board or by direction of the medical officer. Of the boys included in these totals many were on training ships, the total number on such ships, including those on the training ship provided by the Metropolitan Asylums Board, being 903 on 1st January, 1908.⁵

⁴ Wethered, 5795.

⁵ Half-yearly Statement of Pauperism, 1st January, 1908 (H.C. 130), p. xiv.

“There are also nine training ships, and the Local Government Board encourage the sending of the boys to the training ships very much.”¹

We have here a beginning of co-operation between Poor Law and voluntary charities which might form the basis of a much wider scheme.

432. But in addition to these specialised institutions there have also grown up very large charitable agencies for dealing with poor children generally. These institutions deal to a large extent with the same class of children as the Poor Law; but their work is not always safeguarded in the same way, and there is no attempt at co-operation or at dividing the field of work. The children in these institutions are practically without outside control, and the question arises whether all institutions dealing with children should not be subject to the same supervision, registered as we have proposed in Part VII., and required to co-operate with the public Authority.

Education of Poor
Law children.

433. The most important agency which has developed since 1834 is the system of national education, which frees the Guardians in many instances from the necessity of providing special educational facilities for the children under their care. Altogether some 17,785 of a total of 51,102 children in Poor Law institutions were attending the public elementary schools on 1st January, 1907,² and have the great advantage of mingling there on equal terms with the children of independent parents. On the other hand, they may miss the more specialised instruction given in some Poor Law institutions, and this objection is strengthened by the fact that children with whom the Guardians have to deal are often greatly handicapped by their antecedents, as well as by the fact that they may be without a parent's care at the critical period of beginning work.

434. The relation of the education of Poor Law children to the general elementary education of the country is a question which has often been discussed, and calls for some attention here. We are decidedly of opinion—and we believe that the same view has always been held by the Central Poor Law Authority—that the education of Poor Law children should be at least as good as that given in the elementary schools, and we believe that in the great majority of cases it is so. We are glad to be able to quote in corroboration of this view from the Board of Education's Report issued in 1908 :—

“The general estimate of their efficiency by the Board of Education's Inspectors amounts to this, that in rare instances Poor Law schools are as efficient as the best public elementary schools and that the average Poor Law schools on the whole compare fairly well with the average public elementary schools.”³

435. The relation of these schools to the educational authority has varied from time to time. In 1846, Inspectors were appointed by the Committee of Council on Education, who continued to inspect until 1863; after that date the schools were inspected by the educational Inspectors of the Local Government Board. In 1904, it was arranged that the duties of inspecting the educational work in the schools should be transferred to the Board of Education, while the Inspectors of the Local Government Board continue to be responsible for the inspection of the premises and of the general arrangements of the schools.⁴ The present position is therefore one of divided control, and no doubt may give rise to some difficulties. It is suggested in the Report quoted above :—

“That the educational part of the work, which is now done by guardians, would, in the majority of cases, be much more efficiently performed by the local bodies, whose primary function is to deal with schools, and which are, or might be, composed of persons who are interested in and conversant with educational matters.”⁵

This suggestion coincides to some extent with the scheme which has been brought before us for transferring the children entirely from the care of the Poor Law to the care of the Educational Authorities. We do not agree with the proposal in either form. We have received evidence from all parts of the country, and especially from the rural districts, as to the incompleteness and unsuitability of the education in public elementary schools in preparing children for their after life. The children under the care

¹ Davy, 3461. ² Thirty-sixth Annual Report: Local Government Board [Cd. 3665], 1907, p. 388; Statistical Appendix, Part I., Table xvii. ³ Annual Report of Board of Education, 1908, p. 14. ⁴ *Ibid.*, p. 5. ⁵ *Ibid.*, p. 7.

of the Poor Law need, and generally receive, much more care and training than is given in the elementary school; and even with it they are handicapped by their poor physique:—

“With both out-relief and institution children, we are dealing with children of very poor physique; they are under-grown, and a large proportion of them suffer from some pathological condition.”¹

But in spite of this we note that:—

“Teachers of public elementary schools which are attended by Poor Law children testify to their superior habits of cleanliness and obedience.”²

436. We recommend that there should be close co-operation between the Education and the Public Assistance Authorities, both central and local entrusted with supervision over Poor Law children. As regards the teachers in Poor Law schools we consider that they should have the same *status* as teachers in the public elementary schools, and that every facility, including pension, should be given them for passing from one class of schools to the other.

Proposed co-operation between Public Assistance and Education Authorities.

437. The transference of the children to the Education Authority is sometimes supported by the plea that it is desirable to remove from the children the “stigma of pauperism.” We wish to protest against the way in which this term is loosely applied by critics of the Poor Law, without consideration of its justice. It can only mean one of three things: (1) That the person to whom it is applied is disfranchised; (2) that some blame attaches to the person in the mind of the speaker; (3) that the person labours under some disadvantage as compared with others of his class outside the Poor Law. In the first two senses it should be obvious that the term has no possible application to children, and in the last sense it has ceased, as we have seen, in the great majority of cases to be true.

The “Stigma of Pauperism” as applied to Poor Law children.

438. Before we leave this branch of the subject we wish to put on record the impression which we have formed of the *esprit de corps*, which membership of these schools calls out. We have seen for instance photographs of groups of non-commissioned officers taken in India, all of whom were members of the same Poor Law school. We have seen and heard of annual gatherings of old pupils, which have been largely attended and greatly enjoyed. In short, abundant evidence is to hand that those educated in these schools carry away with them a memory of happy days spent there, and a real sense of gratitude to the officers, and that they find the membership of the school a bond of union of no mean strength. Results like these are the pride and glory of our great public schools, and it goes far to justify the Poor Law school system that it produces, in a smaller measure no doubt and in humbler form, results of the same kind.

Esprit de Corps in Poor Law schools.

439. We desire to call attention to the step taken towards placing the business of relief in the hands of the Education Authority by the Education (Provision of Meals) Act, 1906.³ By this Act the local education authority is empowered, not only to furnish the whole machinery of school feeding at the expense of the rates, but also, if voluntary funds are not forthcoming to provide the food, to obtain authority from the Board of Education to raise a rate not exceeding $\frac{1}{2}$ d. in the £ to pay for such food. We think it most undesirable that there should be more than one authority empowered to grant relief out of the rates; and we fear that the Act will have the effect of checking the voluntary work which was being done in this direction. We may quote from a Report, which the London County Council have issued on Underfed Children, the following passage with which we thoroughly agree:—

Education (Provision of Meals) Act, 1906.

“We have felt grave anxiety lest the provisions of this Act should be so worked as to encourage the demand for meals by the too lavish supply, and lest the sense of duty of parents towards their children should be weakened by this relief from a responsibility which belongs to them, and lest the voluntary contributions of a liberal and sympathetic public should be dried up by the prospect of the application of the ratepayers’ funds to meet the expenditure. We have repeated in this Report what we have always maintained, and assert to have been proved by our experience, that all the relief required by necessitous children can be met from voluntary contributions, provided that the organisation for enquiry into want, for collecting subscriptions, and for distributing food, is rendered effective.”⁴

¹ Report as to the Condition of Children in Receipt of Relief, Miss Williams, p. 122. ² Board of Education Report, p. 18. ³ 6 Edw. VII. Cap 57. ⁴ London County Council Report of Joint Committee on Underfed Children for the Season, 1906–7, p. 3.

440. We think that, if the failure of the parents to maintain their families calls for further intervention than can be afforded by voluntary charity, they should receive the necessary assistance through the same channel and under the same conditions as other necessitous persons. We have already pointed out how essential a factor in the relief of children is the supervision of the home; and the Education Authority has absolutely no machinery for effecting this. The fact that a child comes to school under-nourished, is a call for a careful and sympathetic inquiry at its home as to the causes of the difficulty. Careful diagnosis will indicate the nature of the treatment required for the removal of the causes of distress. To attempt to alleviate the symptoms without attempting to remove the real cause would be, as has been said, to play with misery and to neglect the child's best interests. We would recommend that the policy and terms of the Education (Provision of Meals) Act, 1906, be reconsidered in its relation to the relief of distress generally, and that, if relief for necessitous children is required and is not, and cannot be, met from voluntary sources it should become part of the duty of the Public Assistance Committees, which we propose to create, to provide such assistance as may be necessary by way of meals or otherwise. To establish separate relief centres in connection with education, health and sanitation and poor relief seems to us likely to lead to great confusion and much overlapping. It will duplicate and triplicate inquiry; it will prevent the immediate use of the information contained in case papers and available for reference in all matters of relief. It will hinder the introduction of any single and well directed system of friendly visiting and by an unnecessary interference with the work of caring for the poor in connection with one or another form of assistance or friendly visiting, it will frustrate even the best and most considerate attempts to aid those in distress and to prevent distress. The need of voluntary and skilful personal help in relief of all kinds and in many departments of work we fully recognise, and have advocated in a later Chapter of our Report. But to obtain and to utilise this help successfully it is necessary to concentrate and not to dissipate the force at the disposal of the community for such purposes.

Conclusions.

441. Our conclusions on this part of our inquiry may be thus summarised. We condemn the maintenance of children in workhouses, that is, in institutions where there are adult paupers. We believe that the other systems of training, namely, district schools, scattered homes, grouped cottages, boarding-out have given, and will continue to give, under proper supervision, good results. So far as we have been able to discover the children trained and educated under each of these systems do not relapse into pauperism in any appreciable number. Though the results of the grouped cottage system are satisfactory, the cost per unit educated is in many cases far too high and more than should be spent. Boarding-out, we believe, can be developed, and we strongly recommend it should be, but extreme care must be taken to associate adequate supervision with its extension and to ensure the sufficiency of the amount paid. We are of opinion that the children whose parents are in receipt of out-relief require much more careful watching than has hitherto been given to them, both as to the adequacy of their maintenance and the character of their surroundings. We recommend that steps be taken to secure that the children be medically inspected from time to time. We suggest that a system of day-boarding schools for some of these children might, in populous towns, be established much on the same plan as the existing day industrial schools, and that under proper safeguards emigration might be utilised by the Guardians as a method of treatment, in suitable cases, not only for orphan and deserted children, but also for children who have been adopted by the Guardians. We recommend that the power of Local Authorities to adopt and retain children of parents of proved vicious and vagrant habits be more commonly exercised than has been the practice in the past, and that systematic records of the subsequent occupations, calling and condition of all children trained in any of the above institutions be kept by the authority responsible for their training and education.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 8.

(1) *The supervision of children boarded-out within the Union should be placed in the hands of competent women officers, and should be brought under Local Government Board inspection. Special care should be taken when the boarding-out is with relatives, and all such cases should be specially notified to the Local Government Board.* (383.)

(2) *Whilst strongly advocating the extension of boarding-out as far as possible, we do not recommend any relaxation in the care exercised.* (389.)

(3) *In all cases the fullest inquiry should be made into the character of the foster-parents and the suitability of the home before, rather than after, the children are handed over.* (390.)

(4) *In all cases of adoption, no person should be eligible as a foster-parent who does not profess the same religious belief as is indicated on the creed register of the child.* (390.)

(5) *Effective steps should be taken to secure that the maintenance of children in the workhouse be no longer recognised as a legitimate way of dealing with them.* (394.)

(6) *The Public Assistance Authority should have power to keep the children of "ins-and-outs" in institutions, while their parents are detained in a Detention Colony.* (394.)

(7) *Children under treatment for ophthalmia, or some chronic contagious ailment, should not be discharged along with their parents.* (394.)

(8) *Guardians should have power to retain supervision of adopted children up to the age of twenty-one, and in such cases parental responsibility should be more strictly enforced, in some cases by detention in an institution, and, wherever practicable, by charging to the parents the whole or a part of the cost of maintenance of the children; such children, should become the Wards of the Local Authority up to the age of twenty-one; the children whether removed from their parents or left with them, should be kept under supervision; and one of the parents, if found worthy, or some other responsible person should, if willing to act in that capacity, be associated with the Local Authority as the official guardian. Every case in which a conviction is obtained should be reported to the authority by the police.* (396.)

(9) *Voluntary agencies should be recognised by the Public Assistance Authority as regards the after-care of Poor Law children, and should report to it; such reports to be entered on a record.* (399.)

(10) *A system of supervision and record such as prevails in the case of children leaving industrial schools and reformatories, should be applied to the children leaving the care of the Poor Law Authorities.* (400.)

(11) *The provision of Homes for boys who leave Poor Law schools to take up work should be undertaken by voluntary agencies.* (401.)

(12) *There should be closer supervision of the condition of children in receipt of out-relief.* (413.) *Care should be taken to ensure that the total income from whatever source is sufficient to afford proper food, clothing, and housing conditions for the whole family* (414), *and the Public Assistance Authority should ascertain that the children are being properly nourished.* (415.)

(13) *Unless satisfactory conditions in the home can be assured, the children should be maintained in a Poor Law institution or an industrial school, and no children should be maintained by out-relief in immoral surroundings.* (416.)

(14) *There should be more medical supervision of all children under the Poor Law, both indoor and outdoor* (417).

Care should be taken that the children of widows get a fair start on leaving school. (418.)

(15) *The employment of mothers in receipt of out-relief should not in all cases be prohibited. But the circumstances in each case should be carefully considered, and watched, and the mothers should not be expected to earn unless satisfactory arrangements can be made for the children* (419); *for many such children provision might be most satisfactorily made by means of day boarding schools. When the children are too young to go to school, the mother should not go out to work where it is impossible to provide a sufficient substitute. Special provision should, where necessary, be made for the children of widowers.* (420.)

(16) *Voluntary agencies should be enlisted for the supervision of out-relief children; when such are not available, additional officials—in many cases women—should be appointed.* (421.)

(17) *The increased expenditure in this Department should be accompanied by a strenuous effort to return to a simpler, though not less effective, way of dealing with the children for whom an institution life is necessary. (421.)*

(18) *In the case of children of neglectful and unworthy parents (adopted under the Poor Law Act, 1899) as well as in the case of orphan and deserted children, Boards of Guardians might take advantage of emigration, so long as adequate inspection is ensured. (426.)*

(19) *Consideration should be given to the question whether all voluntary charitable institutions dealing with children should not be registered and subject to the same supervision and be required to co-operate with the public authority. (432.)*

(20) *Children now under the Poor Law should not be transferred entirely to the care of the Local Educational Authorities. (435.)*

(21) *Teachers in Poor Law schools should have the same status as teachers in the public elementary schools, and every facility, including pension, should be given them for passing from one class of schools to the other. (436.)*

(22) *The policy and terms of the Education (Provision of Meals) Act, 1906, should be reconsidered in its relation to the relief of distress generally: if relief for necessitous children is required, and is not, and cannot be, met from voluntary sources, it should become part of the duty of the Public Assistance Committees to provide such assistance as may be necessary by way of meals or otherwise. (440.)*

Chapter 9.

THE ABLE-BODIED UNDER THE POOR LAW.

442. We have seen that the Royal Commission of 1832 considered the great problem before them to be the reduction of able-bodied pauperism. In this most difficult part of their task they were constantly confronted by a cry with which we have recently become very familiar—the cry of “surplus labour.” The argument is very plausible; there is only a certain amount of work to be done, and the fact that men are out of work shows that there are enough workers without them. There is a surplus of labour, and, since the surplus labourers cannot keep themselves, the community must keep them out of the rates. The line taken by the Commissioners was, that it depended very largely upon a man himself whether there is work for him to do or not; that if the services he offered were worthless to everyone, then he would be “surplus,” but that ability and industry were pretty certain to find a market, if not in one place, then in another.

443. The workhouse test was based upon the assumption that the first essential towards being useful is the desire to be useful, and that this desire was being extinguished, by a policy of relief which made life easier for the man whom it was unprofitable to employ than for the man whose services had a real market value. When placed between the alternative of steady work for an employer and a light job for the parish (or even relief without any work), the labourer had chosen the easier course. When placed between the alternative of steady work for an employer and maintenance in a workhouse under strict discipline, he again chose the easier course, and sought for the work he had before avoided. The Commissioners had no wish to drive the poor into the workhouse; had they done so their policy would have been an utter failure. The object was to prove to the country, and above all, to the labourer himself, that his labour still had a real value, and that it rested primarily with him to make that value appreciated.

444. No better confutation of the “surplus labour” theory as advanced in 1834 could be asked for than the plain statement of what happened in some of the parishes where out-relief to the able-bodied was stopped. The Union of Faringdon may be quoted as an instance; it was formed in 1835, the second under the new Act. ‘Eighty-seven labourers with families, who for years had been constantly dependent on the Poor Law, were refused outdoor relief in February and March. Not one-half availed themselves of the offer of the house, but immediately found means of providing for themselves. Those who accepted the offer stayed one, two or three days. Only two stayed more than four days.’¹

¹ First Annual Report Poor Law Commissioners, H.C. 500, 1835, App. (B) No. 3, p. 117.

The Assistant Commissioner, reporting five months later, said :—

“Being anxious to ascertain whether the application of this principle had inflicted hardship upon these men and their families, and whether the denial of outdoor relief had driven them from their own villages to seek an uncertain subsistence elsewhere, I devoted several days, in the parishes to which they belonged, to the purpose of ascertaining their real situations by visiting them at their own homes. I found that of the eighty-five men, seventy-eight were at work in their respective parishes, and two others in the immediate vicinity, and not one of them had his dwelling broken up.”¹

Most significant is the reason given for this apparently impossible absorption of “surplus labour.” On inquiry of some of the farmers who had previously represented to him that they had then no means of employing any additional labourers, he received for answer, that the additional employment was now given in consequence of the improved character of the labourers.²

445. The labourer, that is, was eager to give value in return for his wages when he could not otherwise obtain an easy maintenance without. Nor must it be thought that he was driven to sell his labour at a lower price; the better services at once commanded a better wage. In all the later reports from the dispauperised parishes, it was stated that wages had risen, and that the amount paid was greater than in the adjacent pauperised parishes.

Effect of the
workhouse test
on pauperism.

446. There seem to be no statistics available to show the immediate effect of the new policy upon able-bodied pauperism over the country as a whole, although the reports of the Assistant Commissioners afford many descriptions of the way in which pauper labour was absorbed in particular districts. In the Fifth Report there is a table for the Counties of Berks, Bucks, Cambridge, Huntingdon, Lincoln, Norfolk, Somerset, and Suffolk, whereby it appears that, in the year ended March, 1834, the number of able-bodied paupers amounted to 99,896. In the year ended March 25th, 1839, the number had fallen to 35,323. Other classes of pauperism amounted in 1834 to 231,761, as against 134,495 in 1839. The total decrease in the pauper population of these counties amounted to 161,839. The percentage of decrease was 65 per cent. in able-bodied pauperism, and 49 per cent. in pauperism of all kinds.³

447. Perhaps the strongest evidence that the reform did not consist in “thrusting poverty underground” and that the labouring classes were themselves the greatest gainers, found in the impulse which was given to saving among those classes. Already in their First Annual Report the Commissioners say that the number of Friendly Societies since the passing of the Bill had increased by double the number certified in any previous year, while the deposits in savings banks had increased very considerably. In their Fifth Report, they are informed by Mr. Tidd Pratt, that from November, 1837, to November, 1838, there had been an increase of more than 50,000 depositors, and of more than £1,800,000 in the deposits as compared with the year preceding. The proportion of this increase was greatest in the rural districts. The number also of Friendly Societies and loan societies had greatly increased, as had the purchase of Government annuities devised for the benefit of the labouring classes.⁴

448. More difficult of proof, but constantly alluded to, is the improvement in the labourer himself. The knowledge that he must rely upon himself, and his new desire for work, so far from producing subservience, resulted in real independence of spirit :—

“I have,” says Mr. Woolley, an assistant tithe-commissioner, “seen the effect on the poor rates, the character of the population, the improvement of the land—such a change! I have talked with all sorts of persons, of all sorts of opinion on other subjects, and have heard but one opinion on this—that the measure has saved the country.”

“I am sick of the pitiful cry attempted to be raised against the measure, and especially at the supposed inhumanity of it. Let any man see the straightforward walk, the upright look of the labourer, as contrasted with what was before seen at every step in those counties. The sturdy and idle nuisance has already become the useful and industrious member of society. No man who has not looked well into human nature, and the practical working of the wretched system of pauperism, can form an idea how different is 6d. earned by honest industry, and 6d. wrung from the pay-table of a parish officer.”⁵

⁵ Third Annual Report, Poor Law Commissioners, H.C. 546 I., 1837, p. 45.

449. We have described in a preceding Chapter how the Order prohibiting out-relief to the able-bodied was gradually applied to the rural Unions; while a less stringent policy was adopted in the towns. Though the great mass of pauperism was then in the country districts, the problem of town pauperism, as we know it now, was already making itself felt. Even the problem of casual labour at the docks was familiar, and it was subsidised by Poor Law relief then as it is now by charitable funds and Distress Committees.

Able-bodied pauperism in towns.

450. There was a very general feeling that, even if the new policy could be successfully applied in rural districts, it must break down in manufacturing towns where great numbers were liable to be thrown out of employment. It had been the custom in bad times to subsidise the earnings of the workers; this enabled the employer to lower wages, or to set men to work and sell their products at a loss, and this intensified the trade depression. The Commissioners maintained that, though pressure upon workhouse accommodation might occasionally necessitate a different form of treatment, nevertheless the essential principles of administration remained the same both in town and country. Mr. Chadwick gave interesting evidence on this point before a Select Committee appointed in 1838 to inquire into the working of the new law:—

“In a manufacturing district emergencies may arise in which the workhouse test cannot be applied, and then you will apply, carrying out the principle of the Poor Law Amendment Act, the next best test that can be applied, that being labour by task-work.”¹

451. Such a crisis had occurred early in the history of the new Poor Law at Nottingham. A Poor Law Union had been formed there in July, 1836, during a time of very good trade; the population being entirely manufacturing, and engaged chiefly in the manufacture of cotton, hosiery, and lace.² In December of the same year, commercial difficulty began, and gradually the pressure upon the workhouse accommodation became very great. After utilising outside buildings and reopening a workhouse which had been closed:—

“still the pressure went on increasing; our means were not equal to it, and we found that a great number of people towards October last were applying for relief that were not at all known as paupers; they were not of pauper habits; they were people who had effected some savings, but those savings having become exhausted, they were sunk down to the common level of pauperism. . . . The Commissioners, at once, on my suggestion, relaxed the rule, enabling the board of guardians of the Nottingham Union to give outdoor relief to able-bodied men in return for task-work; that task-work was digging. We obtained permission of the corporation to make a road through a property that had been very much hitherto inaccessible, and we set the men to digging under a surveyor.”³

Care was taken that the money earned should be less than that earned by the independent labourer:—

“Or we should have been swamped at once, and have had all the independent labourers upon us.”⁴

The distress subsided at the beginning of 1838, without leaving any permanent burden of able-bodied men on the rates.⁵

452. This expedient of meeting times of special distress by a relaxation of the administration has been continued to the present day, with results to which we shall allude subsequently.

Relief of able-bodied in times of “special distress.”

“The modern form of Outdoor Labour Test Order is” says Mr. Adrian, “designed to operate in Poor Law unions to which the Outdoor Relief Prohibitory Order applies, and in effect authorises a relaxation of that Order on the lines of the Outdoor Relief Regulation Order.”⁶

But in towns in which the Regulation Order is in force, it is always open to the Guardians, without any special relaxation, to grant out-relief to the able-bodied, provided that, in the case of males, half of it is given in kind and that the recipients are kept at work.

453. The history of the relief of the able-bodied outside the workhouse under these two Orders is full of interest, and for our present purpose very instructive. What we find (1) Labour yards.

¹ Select Committee, 1838, Chadwick, 67.

² *Ibid.*, 18.

³ *Ibid.*, 41.

⁴ *Ibid.*, 56.

⁵ *Ibid.*, 73.

⁶ Adrian, 203-4.

is that, where this form of relief with employment is given to meet a genuine and temporary crisis, and where the men are expected and made to give real work, it has answered its purpose well, and has enabled the recipients to tide over the difficult time until they could resume work under normal conditions.

454. But, unfortunately, after the first period of careful administration the tendency has always been for Guardians to allow this form of relief to become permanent, and even to keep a stoneyard always open as a rough-and-ready way of disposing of any able-bodied applicant. When this is the case there grows up a nucleus of loafers, who have found the stoneyard under lax supervision an easy way of earning a scanty living, and who act as a centre of corruption when the crisis does come and the respectable workers are forced to have recourse to the Poor Law.

455. We find this difficulty strongly emphasised in 1870–1, when Mr. Wodehouse reported that in the Metropolis the Guardians were giving orders for the labour-yard for indefinite periods, and that young able-bodied men were becoming permanent habitués of them.

“In the City of London Union a relieving officer informed me that two young men, perfectly able-bodied, had been working in the labour-yard for more than two years. In Mile End Old Town I was informed that a man, aged sixty-two, had not been absent from the labour yard for seven days in eighteen months. The class of men who are to be found in the labour-yards during the summer months are probably the least deserving class of paupers that could be named, and it is certain that in the case of many of them the labour-yard does not act as a sufficient test. In the Parish of Westminster, a week's notice was given a few months ago that after the expiration of that time no further relief in the labour-yard could be given to able-bodied men or women without families. Of the seventy paupers who were discharged under this order, only eight were found to have sought admission into the workhouse.”¹

456. Upon extending his investigations into the country, Mr. Wodehouse found that the labour-yard was being converted into a means of maintaining the farmer's labourers for him, much as in the days preceding 1834 :—

“In unions in which relief is habitually given during the winter under the Supplemental Outdoor Labour Test Order, the same individuals are, in many instances, found to apply for it winter after winter. In the Gravesend and Milton Union I asked an applicant for relief how he got his living during the summer, to which he replied that he worked for Mr. —, naming a farmer in the neighbourhood. I then enquired how he lived during the winter, to which he answered: ‘I work for the guardians here in Gravesend.’”

457. The difficulty has made itself felt even more strongly in our own time. According to Mr. Davy :—

“Under the Regulation Order, or under the Prohibitory Order where the guardians have an Outdoor Labour Test Order attached, the guardians may give outdoor relief to able-bodied men under what is known as the stone-yard system, that is to say, the men are given a certain number of days' work in the stone-yard, in lieu of being taken into the workhouse.”²

And Mr. Bagenal states that :—

“A labour yard is a thing that has to be very carefully guarded and watched, because there are certain classes of the community who are perfectly willing, for some curious reasons to live on the most ridiculously small wage, so long as it is regular. They can get a regular subsistence out of a labour yard as long as it is there and they can go to it. These sort of people become stereotyped, and unless you can deal with them in varied ways, they will be on top of you all the time.”³

458. This difficulty arises when the work in the labour-yard is less strenuous or continuous than work outside, and there is a great tendency in this direction :—

“I myself,” says Mr. Davy, “have known men who have been six or seven years in the stone-yard. The Order says that the man shall be kept on work during the time he is being relieved, which would mean he ought to be kept on work for six days a week. Now do what we can—and we have written some very forcible letters on the subject recently—we have the utmost difficulty in preventing boards of guardians giving a man one, or two, or three days a week in the yard.”⁴

¹ Twenty-third Annual Report, Poor Law Board [Cd. 396], 1871, p.33. ² Davy, 2443. ³ Bagenal, 7662.
⁴ Davy, 2443.

459. One of the most striking instances of mal-administration of a labour yard is that of Leicester:—

“An outdoor labour-yard has been opened in this parish for very many years. It certainly has never been closed since 1886.”¹

During the stress in the boot trade the numbers employed in the yard gradually increased:—

“Yet, in spite of such an increase in numbers this was” says Mr. Walsh “the moment chosen by the guardians to augment the scale of pay and do away with the tasks of oakum-picking and stone-breaking and to reduce the task of wood-sawing. From this date up to the present time the number on the out-door labour test has shown a constant increase as compared with the corresponding periods of the years before; and with the exception of the two weeks when the Leicester Unemployed marched to London, the number has never gone down to anything like so low as previous to the adoption of an increased scale of pay.”²

Unfortunately the relief was not confined to people of respectable characters, but was given to habitual drunkards and men who had frequently been convicted of crimes.

460. Another unfortunate instance occurred in the St. Olave's Union in 1895, regarding which Mr. Lockwood states:—

“Before the commencement of the frost, which really put an absolute stop to all riverside labour for nearly two months, they had already opened a stone-yard, and the consequence was that when the real distress came they had on their hands a certain number of undisciplined men in an overcrowded yard, and then on the top of those, they had those who were driven to relief by the severity of the weather. They got a number of persons whom they practically could not control.”⁴ . . . “It was stated before the Select Committee on Distress that, including supervision, rents, plant and materials, the guardians spent altogether £17,000, bringing the cost of the stone broken to £7 a ton, whereas 5s. or less per ton is the usual cost. It was further stated in evidence before the Committee that the experiment was a great failure, owing, among other things, to the class of men employed; some would have honestly tried to do as much as they could, but were deterred by others.”⁵

461. In 1905 a similar experiment was made at West Ham, with very similar results.⁶ Mr. Lockwood thus sums up:—

“If a stoneyard is opened you almost immediately get a considerable number of what one may call the undesirable class, who are quite content to earn just enough to keep them going for the week and no more; and you cause to be associated with them a more respectable class to whom, I think, association of that kind may be regarded as a hardship; in other words it is not deterrent to the class of persons whom you really wish to deter from receiving relief.”⁷

Again, Mr. Rusbridge, superintendent relieving officer, West Ham, states:—

“The effect of labour-yards when applied to such large numbers cannot fail to be demoralising to those who, through stress of circumstances, are driven for the first time to seek parochial relief, the breaking of stones and association with those whom, under any other circumstances they would shun, not being calculated to help them to retain their self-respect.”⁸

462. Nothing could be more typical than this history of the labour-yard, of the way in which a form of relief, originated for the benefit of the genuine worker in times of distress, is taken advantage of by the good-for-nothing loafer. When once this has happened (generally as a result of weak administration), either the genuine worker will have nothing more to do with it, or he himself, by forced association with worthless characters, is dragged down to their level. Exactly the same process may be traced in the history of employment relief outside the Poor Law. If this form of relief is to be available for the assistance of genuine workers in times of exceptional distress, it is quite essential that the discipline and standard of work should be kept so high as to exclude the lowest class, and this class must be dealt with in some other way.

463. Nor can the relation of the labour-yard to the industrial world be neglected. In a Return made to us by the Local Government Board, we find that at Crickhowell:—

“The relief acted to enable the prolongation of the strike which caused the distress.”⁹

⁹ Memo. by Local Government Board, Vol. IX., App. xciii.

At Leicester :—

“The certainty of obtaining relief at need in this way operates to prevent men from migrating. At least one market gardener is now reported to dismiss men to the Guardians’ farm till he should again require them.”¹

At Northampton :—

“Men actually gave up good outside work to enter the yard, and its closure did not cause distress.”²

464. But these are not the only difficulties arising out of the relation of the labour yard to the industrial world. There are special difficulties connected with those trades which are carried on by the aid either of the rates or of charitable subsidies. We have had striking evidence brought before us to show that one industry at least has been much affected in this way, and many of its workers driven to seek Poor Law or charitable relief. The Secretaries of the English Firewood Trade Association and of the Scottish Firewood Manufacturers’ Association have both given evidence to this effect;³ and our Investigators, Mr. Jackson and Mr. Pringle, report that :—

“In the matter of the Firewood Trade there seems little doubt that the competition of charitable societies and Poor Law Guardians is ruining the independent employer.”⁴

They quote specific instances, and state :—

“We also had the names of sixteen men who had been compelled to seek parish relief through the reduction of self-supporting employment by charitable trading.”⁵

In some places the Guardians are themselves the worst offenders in this way. In Mr. Dye’s evidence will be found the case of the Paddington Union, which has a relief-yard for “Unemployed,” where seven woodchoppers, who had become unemployed for the reasons complained of in this letter, were set to work at firewood making, and thus placed in the position of pauperising both their industry and themselves. Their employer had been driven out of the market by the competition of the Church Army and was unable to find them work, yet the Paddington Union put them to wood-chopping, sold the produce of their labour at a loss, and thus still further restricted the self-supporting employment of woodchoppers.⁶

465. We are not prepared to endorse all the opinions of those interested in a particular industry, but we think it advisable that, in organising the work of the able-bodied, the Public Assistance Authorities should aim at as great a variety of occupation as possible both in the interests of those relieved and also as minimising the disturbance to the labour market.

(2) Migration and emigration of paupers.

466. Though the labour-yard has been the method generally employed by the Guardians in dealing with the able-bodied outside the workhouse, it is by no means the only method available. As early as 1835 the Commissioners issued two Circulars, in the first of which they offered to migrate families from the congested districts of the South to the manufacturing districts of the North, and in the second called attention to the enactment contained in Section 62 of the Poor Law Amendment Act for promoting emigration.⁷ This power of emigration still remains with the Guardians; and, by the Local Government Act, 1888, power is given to County Councils to borrow money in aid of emigration.⁸

467. The largest number emigrated under the Poor Law would appear to have been in the year 1835–6, when 5,241 persons were sent out at a cost of £28,414. The next year the number fell to 1,112, and continued to decrease in subsequent years. In 1841, 1842, 1843 there is an increase, but the largest number sent is only 1,035.⁹ Of late years the Guardians have seldom exercised their powers to send out able-bodied men. A few London Unions have sent small groups of men, but for the most part the emigration undertaken by them is that of children. Even at West Ham, where the congestion of labour has been so great, the Guardians have only just begun to regard the remedy with favour,¹⁰ though this attitude on their part is not due to any reluctance on the part of the people, who indeed are said to be “willing and most anxious” to go. “They would go in swarms,” says one witness, “if they had the money.”¹¹

468. In the Report of the Local Government Board for 1906–7 a table is given from which we learn that the number of adults emigrated under the Poor Law, though still very small, is gradually increasing. The numbers emigrated to Canada for the ten years ended 1906 have been : 7, 7, 16, 15, 16, 26, 51, 70, 300, 479. The numbers emigrated to other countries are negligible.¹ It is a form of assistance which can be properly afforded only to men of good character and good physique ; if those qualities are wanting the emigrant is not likely to succeed even if he pass the health test generally required in the new country.

469. Migration was more favoured than emigration by the Poor Law Commissioners of 1834, owing to its lesser cost ; and the early years of their rule saw a large migration from the Southern Counties to the northern. Owing to a change in the law under the General Consolidated Order it seems doubtful whether Guardians now have the power to migrate applicants for relief for the sake of improving their position, although they may “remove” them for the sake of saving the rates even to the applicants’ own detriment. That excellent work can be done by assisting families to remove from places where there is no demand for their work is shown in the evidence given by Mr. Grisewood ;² and of late in some districts the Guardians have apparently taken the matter into their own hands.

470. The unsatisfactory features of work in a labour-yard have always been seen, (3) Work for and have led enterprising Boards to attempt something more healthy and more remunerative. The earliest experiment of which we have record is one made in 1839 by the Chorlton Board. The information given in the Ninth Annual Report³ of the Poor Law Commissioners is not very clear, but it seems to amount to this : that, in 1839, the Chorlton Board of Guardians, perceiving the increasing badness of the times, and anticipating that spinners and others would be thrown out of employment in large numbers, made an agreement with the proprietor of Chat Moss to let them put labourers to work in reclaiming some 9½ acres of the Moss. The principle on which this was based was not that of providing work at wages for the unemployed, nor yet economy in relief expenditure, but to afford an effective labour test to applicants : “It is the fact that we have work to offer—regular organised, and constant work—that deters the idle and worthless from applying for relief.” On this some sixty men were set to work, at a payment of 1s. 6d. per day, the Guardians giving as many days’ work as the necessities of the man and his family required, and leaving the men to take any other employment they could get on the other days. The result, as regards the Moss, was that, in two years time, bog which had not been worth 1s. an acre was covered with wheat, potatoes, and turnips not to be surpassed in the best managed farms in the best cultivated County in England, and was estimated as worth £50 an acre. As regards the paupers, the calculation was that, for £176 8s., being “the whole balance of outlay for which there is no apparent return,” 385 able-bodied persons had been maintained for a period of a year and three-quarters, “who must otherwise have been relieved at an enormously increased cost without requiring labour in return, to say nothing of 135 positive refusals to work, and the hundreds of idle persons who had been deterred from applying by the knowledge that work would be offered.”

471. This successful experiment is of special interest when compared with a similar experiment made by the Manchester Distress Committee in 1906. In Mr. Jackson’s Report, he writes :

“We understand that the large works which were carried out last year at Chat Moss by the Manchester unemployed will be entirely useless, as the land is to be allowed to revert again to its original state, which the peaty soil does very quickly. In the Manchester Distress Committee’s Report the amount spent on this experiment is not very clear. Sheds for the men were erected at a cost of £171 8s. 4d., and as 252 men in all worked there in two batches of 100 for periods up to sixteen weeks each, the wages must have been very considerable, possibly over £2,000. At Oldham some few acres of moor were cultivated, and will probably have to be abandoned. The result obtained for an expenditure of some hundreds of pounds will be the growth of £20 worth of potatoes.”⁴

¹ Thirty-sixth Annual Report, Local Government Board [Cd. 3665], 1907, p. 402. ² Grisewood, 37211–27 ; 37269–79. *Vide also* Abbott, 87178–90. ³ Ninth Annual Report, Poor Law Commissioners, 468, 1843, App. A., p. 49. ⁴ Report on the Effects of Employment or Assistance given to the Unemployed since 1886 as a means of Relieving Distress outside the Poor Law : Messrs. Jackson and Pringle, p. 124.

472. The greatest stress to which the Poor Law has ever been subjected in connection with the able-bodied, was during the cotton famine (1861-4); and the occasion is remarkable for the close co-operation which was effected between the Poor Law and voluntary charity. A fuller account of the measures then taken will be found in Part VI., Chapter 2 of our Report*.

473. There has, happily, been no recurrence of distress equal in extent or acuteness to that occasioned by the cotton famine; but there have been times of crisis in particular industries, such as those consequent upon the recent introduction of machinery in the boot trade, or on the discharges of men at Woolwich Arsenal; there have been recurrent periods of general depression when the number of regular workers out of employment has increased; and in almost every large town there are now a number of the irregularly employed, who tend to be more or less in distress each winter. In so far as the able-bodied have had recourse to the Poor Law under these circumstances, they have received assistance mainly under the labour test, and as we have seen this fails chiefly when, under lax administration, a class of chronic *habitués* is allowed to grow up.

(4) Farms and
Farm Colonies.

474. In several instances the Guardians have tried the experiment of taking a farm, and putting their able-bodied to work upon it. In so far as it is successful this plan has the merit of teaching the men something of work upon the land; but it has been found in practice that supervision is difficult, and that the men prefer it to taking up work under the ordinary conditions of the labour market. A member of the Leicester Board tells us:—

“We have opened a wood yard away from the workhouse, where we have sent from 60 to 120 men, being the lame and others physically unfit to work on the land, to saw, chop, and bundle firewood, at which work we have incurred a great loss, year by year, and have practically shut up all the private firewood dealers in the borough.”

“We have also 48 acres of heavy land a mile out of the town, where we have employed the able-bodied men in digging, planting, manuring, and attending to vegetables, tomatoes, etc. Here we have also incurred a very considerable loss.”¹

An attempt was made to draft off some of these men to outside work:—

“Eleven men were sent at various times between October 16th, 1905, and January, 1906, and of these only four retained their work. I advanced the money for their fares, which was to be repaid 1s. per week. Thirty-two shillings of this was never repaid, in addition to which three of them left their lodgings owing 16s. 6d. between them to the people with whom they had lodged.

The rate of pay was to be 6d. per hour, or 28s. per week of fifty-six hours.”

“In April and May, 1906, work was provided by the Water Committee of the Leicester Corporation for twenty men who were on the labour test (at 6d. per hour) laying a new main some miles out of the town. The men were taken out by brake each morning and brought back each evening. These were all picked men many of them general labourers. Two of them refused the work immediately and six were paid off because they were not satisfactory.”²

475. The Poplar Board has started a farm colony at Laindon to which able-bodied paupers are sent. A Committee of our members visited Laindon and Hadleigh last autumn, and reported as follows:—

“At Laindon the superintendent was away and we saw his deputy, an intelligent man, very outspoken, and with considerable experience at Poplar Workhouse. We were taken, after seeing a dormitory and some men loafing about in a small day-room, to a large field which was being slowly forked over by thirty men. The greater part of the farm is most unsuitable for the purpose, being a heavy, sticky clay, which is unworkable after rain, so that frequently the men cannot be employed on it, and it is difficult to find any work for them. Sometimes they are put to gathering stones, and a little mat-making is done. There are 150 of them to 100 acres; in summer, when numbers fall, non-able-bodied are sent down to fill up.

“It is a question whether the place should not be broken up at once and the men, so far as able-bodied sent to Hadleigh. The contrast between the two places and their management is very striking. At Laindon the men work an eight-hours’ day, and then go where they like: they frequent the public-house in the evening and ‘don’t often come back drunk.’ At Hadleigh discipline is much more severe; the men work ten hours, and are strictly prohibited from entering the public-house or touching alcohol in any form. At Laindon there is one ganger to thirty men;

* Vide also Memorandum on the Poor Law Board 1847-71, Professor Smart.

¹ Islip, 46914 (3 (a) (b)). ² Kemp, Vol. IV., App. xxv. (B), 1, 2.

at Hadleigh and Ockendon one to eight or ten. At Laindon the work is listless, the men dissatisfied, rebellious and hopeless. At Hadleigh, judging from the men who were seen, the work was done with an energy which was refreshing to observe. The deputy-superintendent at Laindon expected to have the men on and off for the rest of their lives; there were lads of eighteen and nineteen coming there, he said, who learned all the vices of the older men, and would never be permanently off the Poor Law. That alone seemed enough to condemn the place. At Hadleigh it is stated that every man is sent out to a situation either in England or Canada; he is not lost sight of, but is passed on from one branch of the Salvation Army to another. There are possibly more failures than one knows, but the principle of dealing with the individual man and not with 'the unemployed' in bulk is clearly the only hopeful one."¹

476. A considerable number of witnesses favour the treatment of the able-bodied in a farm colony, partly because of its deterrent effect :—

"Do you think the lot of these able-bodied men at Laindon was less comfortable than in the workhouse?—I do in a sense, from the point of view of the pauper. For instance, they detest being on the land. The greatest difficulty we had was to keep them on the land, they took their discharge and endeavoured to get back to the workhouse."

"I assume your experience is that a form of labour colony with strict regulations would be a real deterrent to this class?—It would, there is no doubt of it."²

477. We think that there are many advantages in getting the men away from the towns, not the least being the good effect upon their health. But, so far, the Guardians have had no marked success in this direction, largely from lack of sufficient discipline and supervision and the encouragement which reward gives. If the work is to be really regenerative, it will only be by an almost individual attention to each case; and we have been struck by the different spirit prevailing at voluntary institutions of this kind from that of those under the Poor Law. Discipline is much more strict, harder work is enforced, supervision is closer, but withal there is a spirit of hopefulness and energy.

478. We are aware that past experience does not greatly favour this course; and that the Salvation Army has shown no marked success in dealing with men sent by London Boards of Guardians. But it must be borne in mind that, in dealing with these cases hitherto, there have been no powers of detention, and that, as soon as the pauper began to weary of work, or to find discipline irksome, he was at liberty to take his discharge, and resume his life of loafing. He could even return to the workhouse, and force the Guardians to maintain him there, for although they have sometimes prosecuted such men for wilfully refusing to maintain themselves, the Magistrates have recently refused to convict. Mr. Jackson and Mr. Pringle in their Report³ quote the following summary from the 1906 Report of the Stepney Guardians :—

"Since 1903, thirteen men have been sent to the colony, with the following results :—

- *6 Absconded.
- 1 Found work.
- *2 Left.
- *2 Dismissed through drink.
- 1 Mentally deficient.
- 1 Still chargeable.

13

479. Another method of relieving the able-bodied outside the workhouse has been by (5) "Sudden and dealing with them as cases of sudden and urgent necessity. This is done sometimes urgent necessity" by the relieving officer acting on his own discretion, sometimes by the instructions relief. of the Guardians, acting under Article 10 of the Outdoor Relief Regulation Order, which permits them under special circumstances in any case, to depart from the Regulations, and report to the Local Government Board that they have done so. In this way a large number of able-bodied men have, during the last few winters, received relief in certain Unions without doing any work in return, or submitting to any test. A Return handed in by Mr. Lockwood, shows that in the half-year ending Lady-Day, 1906, the number of men so relieved in Camberwell was 781, relieved 2,847 times; in Bermondsey the number of men was 344; while in Poplar, the numbers varied from 172 to 534 per week.⁴ Very often the relief is repeated

* Of these 10 men, 6 returned to the workhouse. Of 3 who absconded and 1 dismissed through drink no more has been heard by the Stepney Guardians. The ages of the men who returned to the workhouse were 20, 25, 25, 35, 46 and 50.

¹ Visits: Miscell. ² Clarke and Barnes, 95363-4. ³ Messrs. Jackson and Pringle's Report, p. , cf. also Bailward 78905. ⁴ Lockwood, Vol. I., App. vii. (Q).

week after week until it becomes practically continuous. This, of course, is reverting to the allowance system, pure and simple. At Poplar in 1904 the Guardians passed a resolution that:—

“Relief should be given under Article 10 of the Outdoor Relief Regulation Order of 1852 to all applicants except those whom the Committee thought fit to exclude as habituals; that separate books be kept; that cases be reported fortnightly to the Local Government Board that relieving officers give interim relief in every case and that the power of offering the workhouse be taken from them and reserved to the Committee.”

“As might have been expected, as soon as the decision of the guardians to grant out-door relief to able-bodied men was known, the relieving officers were flooded by applications, and the weekly value of relief in kind rose in a few weeks from £88 at the beginning of the Christmas quarter, to over £300.”¹

480. It is quite clear that both the clause permitting relief in a case of sudden and urgent necessity, and Article 10, are intended to apply to exceptional cases only, and not to enable Guardians to avoid the use of a labour test.

(6) Modified
workhouse test.

481. In 1887, a temporary Order was formulated by the Local Government Board, which is known as the Modified Workhouse Test Order, and which enables Guardians to give out-relief to the family of an able-bodied man, if the man himself goes into the workhouse.

“It acts as an efficient test of distress, and as a lesson in providence to the man and his neighbour, yet without breaking up the home; that the relief is adequate to the wants of the whole family, and not, as in the case of labour-yard relief, given into the hands of a man who may or may not share it with his family; also, it withdraws from the market superfluous labour which is gradually absorbed again as the demand arises.”²

482. The suggestion of a modified workhouse test Order came originally from Whitechapel, in which Union, as also in St. George-in-the-East, the practice has been adopted of relieving by private charity the families of the able-bodied men who accepted the workhouse test.

483. That the system contemplated by the Order is capable of abuse was noticed by us in visiting a provincial Union. While attending a Relief Committee we noticed that it was the practice to admit able-bodied men to the workhouse and relieve the families outside, but that, as soon as the families had got the relief, the man would come out to share it.³

Difficulty of
defining “able-
bodied.”

484. In describing the methods of dealing with the able-bodied, we have in mind, of course, those who are not incapacitated from work by illness or physical defect. But in attempting to determine the number of these, we are met by the difficulty that there is no generally-accepted definition of the able-bodied, and that statistics are therefore difficult to interpret. The Pauperism Returns of able-bodied paupers include those who are relieved on account of temporary sickness, and it is only within twenty years or so that these classes have been separately distinguished. In the case of both indoor and outdoor male paupers, and of women relieved indoors, they form by far the larger proportion.⁴ It is probable that some part at least of the reduction in able-bodied pauperism after 1834 was due to diminution in epidemic sickness. Analysing this class of able-bodied, we find that on 1st January, 1908, there were receiving outdoor relief 16,213 “able-bodied” men. But of these, 12,999 were relieved on account of their own sickness or that of their family; 482 on account of “sudden and urgent necessity,” and 2,732 owing to “want of work, or other causes.”⁵ The figures do not suggest that the number to be dealt with by the Poor Law would be unmanageable under a definite, well-planned and firmly administered scheme.

485. The same difficulty of definition meets us in attempting to estimate the numbers of able-bodied in the workhouse. We can say confidently that the proportion of the inmates of the workhouse *classed* as able-bodied has fallen very much over a series of years:—

“The able-bodied pauper disappeared very rapidly; for instance in 1842, 38 per cent. of the population of the workhouses were able-bodied; in 1860 the figure had fallen to 15 per cent., and in 1890 to 13 per cent., but unfortunately, in 1905 there seems to be something like a recrudescence of the able-bodied paupers, for the percentage went up to 18.”⁶

* These proportions appear to include the able-bodied who are temporarily disabled.

¹ Report on Poplar Union [Cd. 3240], p. 23. ² Lockwood, 13571. ³ Visits: Urban 14 A.

⁴ Half-yearly Statement of Pauperism, 1st January, 1908 (H.C. 130), p. xi. ⁵ Statistical Appendix, Part I, par. 57. ⁶ Davy, 2305.

486. But we cannot say whether a man who was classed as able-bodied fifty years ago would be so now, nor, indeed, whether a man classed as able-bodied in one Union to-day would be so classed in another. The indoor paupers classed as able-bodied are practically those to whom the Medical Officer assigns a certain diet.

“What is an able-bodied pauper is still in doubt. We first of all exclude those who are sick but of the remnant, how many are men who actually are able to do a day's work and earn their own living we do not know.”¹

487. On 1st January, 1908, the number of indoor able-bodied male paupers in health was 11,413, and the number of healthy able-bodied women in receipt of indoor relief was 9,147.² On 1st July, 1907, the numbers were respectively 6,914 and 7,350.³

488. An interesting Return has been made by Mr. Wethered, Inspector for the West Midland Counties of England, of the number of males under sixty years of age in the workhouses of his district, able, mentally and physically, to earn their living. Out of 6,079 male inmates for the week ending December 11th, 1905, only 216 were able-bodied in this sense; more than half of these were in town workhouses.⁴ In country workhouses it is very exceptional to find any who are able-bodied in this sense.⁵ But some of the larger town workhouses show a growing tendency to attract able-bodied men, and are ceasing to have a deterrent effect. A Return obtained of the number of men in London workhouses on January 1st, 1906, considered by the masters to be able to do a full day's hard work showed 1,457 or 37·2 per cent. out of a total so-called able-bodied of 3,919.⁶

489. It is a condition of things which seems inevitably to arise in a large general workhouse. Mr. Lockwood says: Decreased deter-
rence.

“Particularly if it is an overcrowded workhouse, it is impossible to prevent the able-bodied class sharing in the comfort, and I may say the luxuries, of the older ones . . . you cannot prevent that class finding the condition of life in a mixed workhouse, such as, as a matter of fact, they are not entitled to, and which they ought not to share in.”⁷

Another witness, speaking of the Marylebone Workhouse, says:

“I do not think the present condition of things in the workhouse is satisfactory. The master tells me that the association in large numbers in the able-bodied blocks becomes an attraction; and it appears to me that some method of breaking up such associations, accompanied by systematic training under healthy conditions, would be advantageous.⁸ . . . The master feels very strongly that what the men require is to be given continuous work, which they are able to do, and to be separated the one from the other. He regards the workhouse as a kind of club-house, in which they put up with a certain amount of inconvenience, but have very pleasant evenings.”⁹

Another witness who has been in close contact with this class for many years, says:—

“The pauper in the workhouse intends to be there; he is either going to be there or in some other institution all the days of his life. My experience is that the average have been in from ten to twelve years, and some of them nineteen years, and they are young men now.”

“The workhouse is no deterrent to any man. The workhouse simply harbours them, and as long as the workhouses exist, these men will exist.

“That is your experience, not only from Poplar, but from elsewhere?—That is my experience of fourteen years, not only in Poplar, but in the provinces, in large provincial towns.”

“Would you say from your experience that that is one of the defects of the present system of Poor Law administration that the workhouse is not a deterrent?—It is not. I say my experience is that it does not matter whether trade is good or bad, it is immaterial. When trade was good, and there was the Boer War and the Coronation, we had the same class of men in the Poplar Workhouse; it makes no difference whether trade was good or bad, they were still there. It is simply a kind of thing that grows and gets into the bones, and it will take years to get it out; it wants a moral and mental instructor. It is like taking a child by the hand and teaching it to walk, to get those men to work properly and be independent.”¹⁰

490. It is probable that a certain number on their first entry into the workhouse were in bad health, and have been restored by the regular life and good food. But in a large workhouse, in the absence of any regular call over, an inmate once admitted is practically lost sight of; and if he has come to like the life may remain there undisturbed for as long as he chooses. Or he may, at his pleasure, go out for a time and return when he likes. In this connection we wish to draw attention Absence of
“call-over” of
inmates.

to the experience of a Metropolitan Board of Guardians, who have reported to us the result of a call-over of the inmates of their workhouse. The Committee appointed reported that there were fifty able-bodied men and fifty-three able-bodied women in the house; that:—

“In a large number of these cases there did not seem to be any tangible reason why they were in the workhouse at all.

“Every conceivable excuse was made as to the reason of becoming chargeable, but your Committee regret to say that the only opinion which could be formed, as the result of inquiries, was that many were in the workhouse simply through improvidence and drink.

“Many admitted they had done no work for years; in fact, could not give the date or place where they last worked—many of this class were so reduced in physique on admission that they could not be classed as able-bodied, but with the regular diet and absence of intoxicating liquors they rapidly recovered; but, unfortunately for the worst classes, the conditions of the house appear to be conducive to their disinclination to shift for themselves.

“Upon such cases again coming before the Committee it was found that several inmates, who appeared to be quietly settling down for the remainder of their lives, had awoke to the fact that the guardians were making investigations, and had taken their discharge; also several who had not been out for months had discharged themselves; but, failing to find work, had been re-admitted.

“That your Committee impressed on some of the inmates that the workhouse was not a home of rest, and that it was their duty, should they fail to find work on the first occasion of going out, to try again and again until they succeeded.

“That your Committee were very much struck with the number of men who, when their wives died, seemed to lose all energy for work, and came into the workhouse; also the number who, when their wives refused to keep them any longer, and, as some openly expressed it, ‘the wife turned me out,’ came to settle down in the house—in many cases drink and laziness were found to be the cause of the wives’ action.

“Although the Chairman of the Committee pointed out to these men that work was better than idling, it is very doubtful if the good advice will have any permanent effect.

“In connection with this matter your Committee think it might be of interest to the Board to know the result of accommodating homeless men who have evidently decided not to work for their living, but settle down in comfort in the workhouse—to the casual wards. . . . Of the forty-eight cases ordered to be transferred, twenty-six did not go, but preferred to look for work, and have not been heard of since. Of the remainder, the number of admissions to the wards since are given:

| | | | | | | | | | | | | | |
|----------------|---|---|---|---|---|---|---|---|---|---|---|---|----|
| Men | - | - | - | - | 8 | 5 | 3 | 1 | 1 | 1 | 1 | 1 | 1 |
| Times admitted | - | - | - | - | 1 | 2 | 3 | 4 | 5 | 6 | 8 | 9 | 22 |

thus showing that if the conditions under which these men are maintained are too comfortable there is no incentive to seek work, but the moment some of the comforts are withdrawn the effect is to make them dissatisfied, and they then think it is time they sought work.

“Before your Committee decide upon this mode of dealing with the able-bodied habitual inmate, they ascertained that the system had been in force for some years at Islington Parish and other places in the Metropolis, had been found to be a great deterrent, and from the statement above it would appear that the system has been a great success in this union, as many men who for years had regarded the workhouse as their home are not now chargeable.”

The Committee recommended:—

“That a call-over of the able-bodied inmates of the workhouse be held quarterly (in the same manner as the committee with reference to Parents in District Schools, etc.), so that inmates who, in the past, have quietly settled down in the workhouse may be frequently brought before the committee, with the view of inducing them to take their discharge and seek work.”¹

491. This periodical call-over is recommended by other witnesses,² and is, no doubt, essential to the proper administration of any institution, but having regard to the deteriorating effect of the workhouse upon its inmates we think also that every effort should be made to prevent them from entering in the first instance. Two of our members who visited a Relief Committee of this same Union report:—

“We were struck by the way in which young and able-bodied men and women, both with and without families, were admitted into the house as a matter of course, and with very little inquiry. The Chairman told us that there is nothing deterrent about their workhouse, and seemed to think the Guardians had no power to make it so. There is no test of work, and inmates are better off and more comfortable than outside. The consequence is that in every department they are overcrowded.”³

492. We gather from this that reference to the casual ward only takes place after inmates have already degenerated into habitual paupers, and we think that if, in the first instance, more trouble were taken to inquire fully into each case, some, at least, might be saved from entering at all: while the others should at once be referred to an institution specially adapted to them, and not to a “general” workhouse.

¹ Vol. XI., App. . ² Morris, 16837, c.f. par. 211. ³ Visits Met., 112.

493. It is to meet this problem that the institution of special test workhouses, to "Test" work-
which the able-bodied only shall be sent, is strongly recommended by some witnesses :¹ houses.

"I think," says Mr. Davy, "that in all large urban communities you must have a test house where you can have task work for the able-bodied loafer. . . . If you do not have a test house, you will have your workhouse crowded up with loafers, and you will have no means of keeping in check that class of the population who positively prefer an institutional life, if it is given under anything like tolerable conditions."²

One such workhouse was in use for London Unions at Poplar from 1871 to 1881, and one at Kensington from 1882 to 1905; since that date and until very recently there has been none for London, and there are not more than two or three in the provinces. Some few Boards, *e.g.*, Greenwich, have special workhouses for the able-bodied.

494. The following recent letter from a Metropolitan Board of Guardians to the Local Government Board is illustrative of the need of strict measures to be taken with the dangerous class which is growing up in the workhouses.

" . . . The Guardians desire to call your earnest attention to the state of things prevailing at the workhouse. In spite of leave of absence granted frequently and continuously to men with families chargeable, there are at present (summer time), a great many young vigorous men, who ought to be out at work, and maintaining their families. From the figures hereafter quoted, the Guardians doubt whether the privilege as to leave has had a beneficial result. It will be seen that the men returning to the workhouse and those absconding represent a greater percentage to those who found work. Further, in regard to some of the men, the Guardians cannot but observe that there is a spirit amongst them, which it is feared, at any time, might break out into open mutiny. A short time ago the porter at the workhouse was nearly killed in the street through a sudden attack made upon him, doubtless by someone who had been an inmate, and at the last meeting of the Committee another man was not only rude to them, but, in their opinion, refractory. But the magistrate, before whom he was charged, dismissed him with a caution. This man, on being refused further leave that day, defiantly said he would get it somehow. Under these circumstances the Guardians feel compelled to request your Board to take steps to provide some remedy, and they suggest that labour colonies or a workhouse test house should be provided for the class of men referred to, who, in their opinion, are lazy and quite satisfied if they can only get leave out of the workhouse without their families. A very great loss has been felt since the abolition of the test-workhouse at . . . and the Guardians have been placed at a further disadvantage in consequence of the Church Army having been unable to receive inmates for a considerable time. The Board are aware the workhouse is antiquated, and it is extremely difficult to maintain proper discipline, when it is overcrowded or even full up to its number."³

495. A Committee of the Commission visited this workhouse and report :—

"This house is too cramped for dealing effectively with the class of inmates sent there. More space and more work seem to be required, and space could only be secured at reasonable cost by going further afield. It is another example of the futility of attempting to deal with the able-bodied class in such an institution. They are not dealt with as able-bodied men should be; they are housed! The best is made of the accommodation and of such facilities for employment as exist, but the inmates cannot be said to be undergoing disciplinary treatment, nor training in industrious habits, nor are they engaged in useful employment, nor is the treatment deterrent. The inmates may find it convenient to go in and out at will—and this, we think, is the only advantage of an institution for this class in such a situation."⁴

496. A similar state of things was found by us in another able-bodied workhouse in London :—

"The most lamentable feature of the . . . workhouse was the inadequacy of the work provided for the inmates. Three-fourths of the men found in the 'smoke-room' and 'reading-room' were equal to some work, and that they were occupied as they were at mid-afternoon was deplorable. . . . The master prepared a remarkably interesting report for the guardians in April last on the provision and supervision of the work provided for the inmates. He made certain suggestions as to the provision of additional workshop and laundry accommodation and the strengthening of the supervising staff. From statistics he had prepared relating to sixteen workhouses in London it appears that the average number of men under sixty (exclusive of sick) to each officer is about thirty. In . . . the average is seventy-seven. The following extracts from this report condemn the existing system of administration at this house in such unmistakable terms that they are worth repetition :—

"The behaviour of the inmates on the whole is as satisfactory as can be expected under the circumstances, but the majority of men under sixty years of age do not miss an opportunity of shirking work and require more supervision in every respect than it is possible to give them with the present staff, and that is why so many prefer a comparatively easy life within the walls of the workhouse to earning, by honest labour, an honourable living outside. It is characteristic of many men to accept the thing that requires the least effort, no matter how loathsome and degrading it may appear in the first instance, and it is within the knowledge of every practical and observing workhouse official, and many guardians too, no doubt, that when a man enters the workhouse, no matter in what station of life he has previously been, or for what cause or forced

¹ Bushell, 23947-50; 23975-7, Scovell, 24700, Ingledew, Vol. v., App. xxvii (15); Lockwood, 4142, 13238. ² Davy, 2365. ³ Visits Metropolitan, No. 119. ⁴ Visits: Metropolitan, 119.

circumstances he may have been compelled to enter, in many cases, in fact, one fears the majority of cases, he seems to lose selfreliance and respect and, above all, that manly and independent spirit without which he is greatly handicapped. Especially does this occur as time goes on and he gets used to the new state of things. Every day he is in the workhouse his chance of again earning his living outside is less hopeful. Therefore, the only practical way, as well as being the greatest kindness to the man, is not to allow him to settle down in the first instance if it can possibly be avoided.”¹

Inquiry into physical condition of inmates in certain English workhouses and Scottish poor-houses.

497. We call attention here to an inquiry which we have caused to be made into the physical condition of the able-bodied male inmates of certain Scottish poorhouses, and English workhouses and labour-yards. The object of the inquiry was partly to enable us to compare the results of the different methods of dealing with applications from the able-bodied in the two countries, and partly to ascertain the actual physical condition of the able-bodied. With regard to the first point :—

“With very few exceptions in England the pauper is admitted on a provisional order signed by a relieving officer. In giving this order, the man’s physical condition is not considered, unless he applies for relief on the ground of illness. In Scotland, the pauper is admitted on an order signed by the Inspector of Poor, but this order is given only after a medical man has certified that the applicant is not in good health.”²

498. Once admitted into the workhouse in England, the pauper is usually left undisturbed, the Guardians seldom exercising their power of discharge. In Scotland, on the other hand, it is usual to have a more or less methodical revision of the inmates of poorhouses, and to discharge those whom the Medical Officer certifies to be healthy and able-bodied.² In England, again, the able-bodied inmate is worked harder ; while in Scotland the man who is discharged frequently returns after a few nights.³ In comparing the two systems, Dr. Parsons sums up :—

“(1) I am of opinion that the population of the ordinary Scottish poorhouses is in all respects exactly similar to the population of the ordinary English workhouse.

“(2) The class known as ‘turn-outs’ or ‘tests’ in the Scottish poorhouses is exactly similar to the able-bodied class in English workhouses.

“(3) The system of refusing admission to the poorhouse except on a certificate of ill-health and the system of discharging the able-bodied from the poorhouses probably has some effect in reducing the number of able-bodied relieved in the poorhouses. The English system of placing the able-bodied upon hard and unpleasant work has probably an equally deterrent effect.”⁴

499. With reference to the condition of the inmates, Dr. Parsons classified those whom he examined as follows :—

“Class A. includes all men physically and mentally capable of supporting themselves This class was sub divided into three :—

“Class A. (1).—Strong, healthy, and able-bodied men capable of doing a full day’s ordinary labouring work. ‘The proportion of these in the different institutions varied greatly. In Southampton labour-yard there were only three out of thirty-eight examined, while in Plymouth labour-yard there were twenty out of fifty. In Tame Street (Manchester) able-bodied workhouse there were forty-four out of eighty examined, and in Bradford General Workhouse seven out of ninety-six.’

“Class A. (2).—Men not so strong or robust as those in Class A (1), with occupations of a character not requiring much strength and capable of doing a full day’s work at such occupations. This class includes such men as clerks, shop-assistants, painters, etc.

“Class A. (3).—Men capable of doing a full day’s hard work, but suffering from some defect rendering it difficult for them to obtain work.

“Class B.—Men suffering from some deformity or physical or mental infirmity greatly interfering with their obtaining continuous employment, but capable of doing a great deal of work and of partly maintaining themselves.

“Class C.—Men suffering from some physical or mental defect rendering it impossible for them to support themselves.”⁵

500. Of the last three classes Dr. Parsons says that many of them

“are deserving of great sympathy, and one feels that the workhouse, as at present constituted, is not the right place for them. It is obvious that a man who is very deaf, or who is dwarfed in stature, may be willing and anxious to work, but experience very great difficulty in getting employment. Many of those classed under the head A. (3) complained bitterly of the difficulty they found in getting work because they looked old. These, together with many suffering from such physical defects as deafness, impaired eyesight, or slight lameness, blamed the Employers’ Liability Acts for the increasing difficulty they found in getting work.”⁶

¹ Visits : Metropolitan, 118. ² Report on the Physical Condition of the Able-bodied Male Inmates of certain Scottish Poorhouses and English Workhouses and Labour Yards ; Dr. Parsons, p. 8. ³ *Ibid.*, p. 9.
⁴ *Ibid.*, p. 14. ⁵ *Ibid.*, pp. 5-6. ⁶ *Ibid.*, p. 6.

501. One fact brought out by the examination, which has to be borne in mind, is the inferior physique of most of the workhouse inmates :—

“Although . . . all those classed in A. (1) were fully capable of doing laborious work, and mentally and physically able to maintain themselves, a comparison of the averages of the physical measurements taken with the standard averages of the 1883 Report of the Anthropometric Committee of the British Association reveals some very striking and serious facts . . . the best of the work-house inmates I examined, taken as a whole, are physically worse developed than the worst of the ordinary population. . . . Notwithstanding these results, however, the fact must not be lost sight of that every workhouse and every poorhouse visited contained a number of men in every way as well developed physically as the average of the general population.”¹

502. Perhaps the most difficult section of the able-bodied are those known as the “ins-and-outs.” It is not too much to say that this class has been created by our administration of the Poor Law, while the law itself affords no means of checking it now that it has come into existence. They are the men and women who frequent the workhouse for short periods, often taking families with them, and are constantly taking their discharge. They go out when they want more licence, and return when they need to recruit themselves after a debauch.² The mode in which we manufacture this class is graphically described by the master of the Bethnal Green Workhouse :—

“This class of man is well known to the master of every London workhouse as the able-bodied loafer. As a rule, he is a strong, healthy fellow, knowing no trade, evincing great dislike to work, and possessing all the attributes of the soft-shelled crab, willing to live upon the fruits of the labour of the worker, so long as he can avoid the sharing of responsibility himself.

There is no doubt that the moment this class of man becomes an inmate so surely does he deteriorate into a worse character still. Unless rigorously dealt with and made to work under strict supervision, he has a fairly good time in the House and after a month or so he has mastered every trick of the trade, and becomes a confirmed in and outer, taking his day’s pleasure by merely giving the necessary notice, returning the same evening more contented than ever with his lot in the House. Something for nothing is degrading the man, until all the manhood has left him and their remains for the ratepayers to keep an idle, dissolute remnant.”³

503. At the Marylebone Workhouse there are no less than 300 of these every week,⁴ and many Boards of Guardians have a list of paupers on “long notice,” i.e., paupers who, having discharged themselves frequently without sufficient reason, are liable to detention for a maximum period of 168 hours, after having given notice to quit the workhouse. We have already explained (*vide* Part IV., Chapter 5, par. 206) the powers of detention which the Guardians possess under the Pauper Inmates Discharge and Regulation Act, 1871, and the Amending Act of 1899. But that this power is not always exercised when it might be, is shown by the fact that many of these people are in and out far more than fifty-two times in the year; while those who are on the list make a practice of giving notice directly on admission, so as to be free to leave as soon as the week is up. Many of them are perfectly capable of earning a living when they refrain from drink. Mr. Bagenal says :—

“The able-bodied inmates of modern workhouses are, as a rule, very few. It is only in large centres of population where they appear in considerable numbers. The Sheffield Union is, perhaps, troubled more with this class than any other union in my district. I recently obtained from the master of this workhouse a Return showing all the admissions and discharges at the test house of the workhouse for the year 1903. The total number of admissions was 5,066, and the total number of discharges 5,072. The master states that this class gives infinite trouble. They have no fear of prison; in fact, many of them prefer it, and state that the work is not so hard and the food better. Many of them have got good trades, such as fitters, plumbers, puddlers, ironworkers, etc., and could earn from £3 to £4 a week if they chose. They prefer to go into the workhouse, where, however, they only work under compulsion, and give all the trouble they can to the officers. The master furnished me with a list of fifty-six men, ranging from the age of seventeen to fifty-two years, who are either now or have been frequently inmates of the workhouse test house, and have been sent to prison on various occasions.”⁵

504. In the Appendix to the First Volume of the Minutes of Evidence will be found a summary, giving the number of habitual “ins-and-outs” who are on the long-notice list in London; there are 908 adults and 217 children.⁶ Through these children the evil is being perpetuated to another generation, for they get no chance of education, while they become habituated to constant appeals to the Poor Law and lack the advantages of either home or school life. To make the position clear, it may be pointed out that, except in special circumstances, parents are not allowed to leave their families in the workhouse when they go out, as it is felt that many might otherwise take this means of getting

Children of “ins and outs.”

¹ Report on the Physical Condition of the Able-bodied Male Inmates of certain Scottish Poorhouses and English Workhouses and Labour Yards; Dr. Parsons, p. 13. ² Davy, 3956–9. ³ Bushell, 23944 (4-5). ⁴ Morris, 16622 (12), 16792. ⁵ Bagenal, Vol. I., App. xv. (A) (67). ⁶ Lockwood, Vol. I., App. vii. (T).

rid of the burden of maintaining them. Hence each time one of these “ins-and-outs” enters and discharges himself, it means that his children, if he has them, go with him.

505. The Wandsworth Guardians have submitted a memorandum on the subject in which they say:—

“From a Return prepared by the matron it would appear that during the last twelve months 422 children were sent to the school and 310 brought back, to be discharged to parents, etc., at a cost of £58 ls. 2d.; and the guardians feel that it is simply useless to try to educate children when parents have the power to claim them the moment they are sent to the district school.”¹

506. The Alton Board of Guardians cite the following case:—

“Marshall has recently been allowed out in search of work, leaving his wife in the union with some of the children, others being at the district school at Crondall. Marshall did obtain work, but the guardians could not get anything from him for the support of his family, and on the guardians calling on him to take his wife and family out he, Marshall, came into the union again. Marshall has now, and avowedly to spite the guardians, taken his discharge with his family on a certain day (and this has necessitated sending to Crondall for three of his children), and has on the following day come back with his wife and family and applied and obtained admission again to the union, and has stated that unless he is allowed to go out leaving his wife and family chargeable he will repeat this performance at frequent intervals.

“As the children have to be sent back to Crondall school and this, independently of other matters, puts the guardians to considerable expense besides being defied in the manner above mentioned by Marshall, and it is under these circumstances that I am directed to ask your Board to kindly advise the guardians as to what they can do under the circumstances.”²

507. Another case was cited in a Question asked in the House of Commons on November 5th, 1906:—

“Mr. Leif Jones: To ask the President of the Local Government Board whether his attention has been drawn to the case of an able-bodied pauper named Tasker, who, with his wife and three children is at present an inmate of the Malton Workhouse; whether he is aware that, in the last twenty-five years, Tasker has been twelve times convicted of various offences: that he and his wife were, in 1903, sentenced to four months imprisonment for cruelty to their children, and before that date they had drawn insurance money on the deaths of five of their children at the ages of fifteen months, twelve months, ten months, eleven months, and nine months respectively; that, since September, 1905, Tasker and his family have been in the Malton Workhouse for forty-three and a half weeks, and that, when not in prison or in the workhouse, Tasker and his wife wander about the country dragging their children with them; whether he is aware that the Malton Guardians are anxious to prevent the children from growing up into pauper vagrants like their parents, but are afraid to adopt them, because, if they do so, Tasker and his wife will leave the workhouse relieved of all responsibility for their maintenance; and whether in view of this and similar cases, he will introduce legislation to prevent parents from deriving profit from the death, through systematic neglect, of insured children, and also to confer upon boards of guardians greater powers of detaining and otherwise penalising parents who illtreat and neglect their children.

“Mr. John Burns: The Guardians of the Malton Union have written to me on this subject. They do not give all the particulars stated in the question respecting Tasker and his wife, but I should gather that the case is one in which in the interest of the children it is desirable that their care and control should be taken over by the Guardians. I may point out that where this course is adopted the parent is not thereby relieved from liability to contribute to the maintenance of the child. . . .”

508. The cost to the ratepayers is, of course, the least part of the evil. The injury done to the children is incalculable, and painful instances have been brought before us of young lives which have been ruined in this way.³ We have also had many opportunities, in visiting workhouses and schools, of seeing how terribly neglected and backward the children of this class are, and how impossible it is for teachers to make any lasting impression during the few days or weeks that the children are under their care. Nor is the evil confined to them only, for in the great majority of Unions there is no separate provision for them, and they act as a retarding influence upon the others.

509. This question of the children is, to our minds, the culminating argument in favour of much stronger methods in dealing with this class. It is a disgrace that they should be allowed to live such a life themselves at the public expense; it is far worse that they should be allowed to force such a life upon their children. It is clear that the Public Assistance Authorities should have power to retain these children under their care; but that they should, at the same time, have power to take proceedings

¹ Vol. XI., App.

² Vol. XI., App.

³ Poole, 33886-8.

to secure the detention and training of the parents in a suitable institution or colony until they are prepared to maintain themselves and their families outside.

510. We have received an overwhelming amount of evidence, from people of all shades of opinion, in favour of greater powers in respect to the treatment of the able-bodied loafer; and for the most part it is the power of detention which is asked for.¹ There are many reasons why this is needed. In the first place, it is the possibility of going in and out of the workhouse at his pleasure, treating it as his hotel, that forms the attraction to able-bodied loafers. We think that many of them, if they understood that they were liable to be detained, would cease at once to use it as a convenience, and find the means to live outside.

Proposed detention of "ins-and-outs."

511. A certain number of the "ins-and-outs" are well known to be feeble-minded; and in their own interest, as well as that of the community, it is essential that they should be detained in suitable institutions.

"In both England and Scotland the workhouse shelters a number of men whose mental capacity is below the average. These men are constantly taking their discharge from the workhouse and returning to it, managing to pick up a precarious livelihood outside for a few days at odd jobs. I find in my notes records of twenty such cases in Scotland, and twenty-three in England. It would be difficult to deal with most of these cases under the Lunacy Acts, and yet it is desirable both in their own interests and in the interests of the community that it should be possible to obtain powers of compulsory detention in their case. The life of some of them alternates between prison and workhouse with short intervals of liberty. One case which specially struck me was that of a man in an English workhouse who had just completed a twelve month's term of imprisonment for an unnatural offence. Most certainly this man's place was neither prison nor workhouse, but an imbecile asylum, though it would probably have been difficult to get a Justice of the Peace to sign the order for detention."²

512. These cases, both male and female, are fully dealt with by the Royal Commission on the Care and Control of the Feeble-minded, whose recommendations we hope will be carried into effect.

513. Some of the "able-bodied," again, are incapable of maintaining themselves permanently, owing to want of discipline, application or skill. For these some provision is necessary, by which they would labour according to their strength and support themselves as far as possible. We think that by better organisation more varied work might be furnished, and their labour made more productive in supplying the needs of the institution to which they are admitted.

514. A considerable number of those frequenting Public Assistance institutions are confirmed drunkards and persons leading immoral lives, who come to be cured of the diseases they have brought upon themselves, which return as often as they leave. For these also there should be power of detention after their incapacity to lead a decent life has been proved. We fully recognise that these powers must be very carefully guarded, and that they are open to abuse; but the evils to be met are so grave, and the impossibility of checking them at present so obvious, that we are convinced that the risk must be taken.

515. On the other hand there are certain cases, such as those quoted by Mr. Bagenal, of paupers well able to work if they choose. In all such cases we think that relief should be given in an institution only, and that cases of persistent idleness should be referred to a detention colony under the Home Office (*Vide* also Part VI.).

516. During the last twenty years, the prevailing tendency has been to attempt to deal with the able-bodied in some way outside the Poor Law. We deal at length under Part VI., Chapter 3, with these movements. They were started in the belief that the methods of the Poor Law are inadequate or unsuited to cope with distress of the able-bodied and need to be supplemented by other agencies. Whether such extra-neous help is necessary, is a question we will consider further, and answer in a subsequent Part of our Report.

Attempts to deal with able-bodied outside the Poor Law.

Conclusions.

517. We will now sum up the situation as it exists at present. Speaking broadly, what we find is a multiplicity of agencies dealing with a class which is sometimes called able-bodied, sometimes unemployed, regardless of the fact that this class is not really a class at all but a heterogeneous mass of men with no characteristic common to all of them. They are very far from being all of them able-bodied, as we have seen; they are not even all unemployed, in the sense that employment is a thing they want but cannot get. The honest, the criminal, the unfortunate, the strong, the weak, the industrious, the incorrigible loafer, the indifferent, all, in the prevailing confusion, are shifting about from one agency to another; with the result that each agency in turn tends to become the prey of the worthless and least hopeful; while the better men stand aloof. A similar confusion prevails amongst the agencies themselves, which aim more or less promiscuously at relief, deterrence, employment, training, the work of a convalescent home and of an emigration society, of a casual ward, and a labour-yard, and in the confusion of ends fail too often to attain any of them. We are convinced that the first step to be taken is to bring some order into this confusion, to simplify the problem by careful sifting and classification of those to be dealt with, and to assign to each agency its appropriate work.

518. It is self-evident that the treatment of each class, and even of individuals within each class, should be differentiated according to their antecedents, failings or needs. But the whole policy of the future treatment of the able-bodied under the Poor Law is so mixed up with the subject of unemployment and the unemployed, that we propose to deal with both in a separate Chapter further on in our Report.

519. In conclusion we think that recipients of relief, instead of being classified as able-bodied or not able-bodied, should be classified as able to work or not able to work. Ability to work may be tested by actual experiments; and the work may be of different kinds. Bodily ability is ultimately a medical question, and can only be determined by medical tests. To be able in body is not the same as to be able to work. The latter is the simpler and more useful point for discrimination.

SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN CHAPTER 9.

(1) *In organising the work of the able-bodied, the Public Assistance Authorities should aim at as great a variety of occupation as possible, both in the interests of those relieved and also as minimising the disturbance to the labour market. (465.)*

(2) *A periodical call-over of inmates should be recognised as essential to the proper administration of any Poor Law institution. (491.)*

(3) *Stronger methods—particularly detention—should be taken in dealing with “ins-and-outs.” Public Assistance Authorities should have power to retain the children of such under their care, and to take proceedings to secure the detention and training of the parents in a suitable institution or colony, until they are prepared to maintain themselves and their families outside. (509.)*

(4) *Feeble-minded “ins-and-outs” should be detained in suitable institutions according to the recommendations of the Royal Commission on the Feeble-minded. (511–2.)*

(5) *For able-bodied “ins-and-outs” who are incapable of maintaining themselves permanently owing to want of discipline, application, or skill, provision should be made by which they would labour according to their strength and support themselves as far as possible; more varied work might be furnished, and their labour made more productive in supplying the needs of the institution to which they are admitted. (513.)*

(6) *For those frequenting Public Assistance Institutions who are confirmed drunkards and persons leading immoral lives, there should be power of detention after their incapacity to lead a decent life has been proved. (514.)*

(7) *Paupers well able to work, i.e. cases of persistent idleness, should be referred to a Detention Colony under the Home Office. (515.)*

(8) *Recipients of relief, instead of being classified as “able-bodied” or “not able-bodied,” should be classified as “able to work,” or “not able to work.” (519.)*

Chapter 10.

THE CAUSES OF PAUPERISM.

520. We have had much evidence before us, from many various sources, as to the causes which lead to pauperism. We are aware that this is a difficult and to some extent a controversial subject, but we feel that the view we are taking as to future administration makes it incumbent upon us to report upon it. In so far as Guardians have aimed solely at relief, without regard to prevention or cure, they have naturally concerned themselves little with causes; but, as we hope that future administrators will constantly have in mind the preventive and curative side of the work, a close attention to causation becomes imperative. If they cannot themselves reach the causes, they can in annual and other reports draw attention to evils which come to light in the administration of relief and call for public discussion.

521. While there has been very general agreement in our evidence as to the principal causes assigned for pauperism, there has naturally been some difference as to the comparative weight to be attached to each. To a certain extent the difference follows the lines between urban and rural Unions. Life in the large towns runs the risk of temptations affecting it, both industrially and morally, that are hardly known in the country; while in the country a low rate of wage and a large proportion of old people are more general than in the town.

522. The difficulty of assigning any one cause in a particular case has often been urged. To some extent we agree. Old age, for instance, which is perhaps the most often assigned, is hardly in itself a "cause" of pauperism. But when combined with, or following upon, other causes, such as low earning power, drink, or thriftlessness, it becomes a very large factor in the situation. And when old age appears, it naturally tends to obscure the previous causes which have played their part and disappeared. Hence a considerable number of witnesses put old age at the head of their list.¹

523. There is, however, one connection in which "old age," or rather increasing age, has a special significance. We have found a very general opinion that the development of industry is such as to make increasing demands upon the worker, and thus to cause him to drop out of the industrial ranks at an earlier age. The evidence is not all to that effect. Some employers have told us that they prefer older

men, with their greater experience, to younger men with their greater strength.¹ Others maintain that they never discharge a man on account of age, but admit that they would not take on an elderly man.² But, speaking generally, wherever machinery is used there appears to be a speeding-up, and an increased tension, which tell hardly upon all who are past their prime. The movement is intensified in the first place by the necessity of earning the Trade Union minimum, since employers will not pay the standard wage to slow or inferior workers; and in the second place by the operation of the Employers Liability Act and Workmen's Compensation Acts. On this point a great number of witnesses from all parts of the country have laid stress, maintaining that the liability of the employer to pay compensation has made it much more difficult for elderly men to get employment. We may quote the following from a relieving officer as typical of a great mass of evidence to the same effect:—

Employers
Liability Act, and
Workmen's Com-
pensation Acts.

"From time to time a considerable number of middle-aged men have applied for assistance, who have stated that they have been unable to get work, employers giving the preference to younger men as being less likely to make any claims for compensation under the Act. These men have been mostly able-bodied, and, in my opinion, capable of doing a fair day's work."³

524. The following extract from the Report of the Peterborough Diocesan Conference is to the same effect:—

"Other causes mentioned are the effect of the Workmen's Compensation Acts (in parishes "A," "B," and "C" alike) in depriving men of employment who have the slightest defect of sight, hearing, or bodily infirmity; and of the "Team" system prevailing in the shoe trade in Northamptonshire, whereby men of advancing years are said to lose their positions because they are too slow to take their place in the "team," or to earn the minimum wage insisted on by the trade unions. These undoubtedly contribute to prevent men not fully efficient from getting employment, which many of them might otherwise do."

"The following is a sample statement from a very large factory parish (in Northamptonshire), which reveals what the Committee fear may be an increasing cause of unemployment as time goes on:—

"There are workmen who are willing to work, but who are not quite as quick, strong, or capable as others, and the manufacturers are willing to employ them, but they cannot, or will not, pay them the fixed minimum. I have known also of several cases of worthy men, with slight heart trouble or other defect, *discharged* since the 'Liability' Act came into force."⁴

525. The situation is well summarised by Professor Archibald Barr, himself an employer, as follows:—

"In the case of the skilled workman there is a progressive increase in skill and also in useful knowledge until he is past middle life, and hence he is unlikely to be displaced by a younger man. In the case of unskilled workers, whose labour demands strength and endurance, with but little skill, there may in some cases be such displacement. Advancing age is sometimes accompanied by irregularity of time-keeping, and makes it desirable to dismiss the workmen on that account. This, and the reduced efficiency of quite old men, when taken in conjunction with the action of some trade unions in prohibiting the employment of such men at a rate of pay proportional to this impaired efficiency, undoubtedly does lead to the displacement of such men, especially if they have, of their own choice or by force of circumstances, changed from one workshop to another; but employers of the best class are very willing, as a rule, to keep on old hands, though they may not be able economically to employ such men at the standard rates. Old men would no doubt much prefer to work at their own trades at reduced rates rather than be turned adrift into the unskilled class, and there is no valid reason why they should not be permitted to do so at rates of remuneration proportional to their productiveness."⁵

526. We think that this tendency for elderly men to be placed at a disadvantage in the labour market may be connected with the increase in male pauperism during the last ten or twelve years.

| Children | - | - | - | — | 16,305 | — 6·9 |
| Total | | | | | 24,350* | + 3·5 |

529. As illustrative of the causes which give rise to pauperism in large towns, we quote the following statement from a relieving officer at Leeds :— Causes of urban pauperism.

“The most important causes of pauperism are : (a) Old age ; (b) the early marriage of persons dependent upon casual labour. Large families are the rule. Owing to the low wages earned no provision can be made to meet such contingencies as non-employment, sickness, or of imprisonment for debt. The latter is a crying scandal, and I have had to relieve the families of hard-working respectable men who have been committed for long period on non-compliance of a county court judge’s order for a few shillings. . . (c) Imprisonment for criminal offences is a large factor in pauperism ; (d) venereal disease also contributes largely ; much of the misery entailed by this disease would be obviated if it were made notifiable. Its ramifications are appalling. (e) Intemperance is another contribution, and in this I find females to be the worst offenders. Many men are perforce paupers by the intemperance of their wives . . . (f) Indiscriminate relief by private persons and religious bodies also contributes largely to pauperism, and cases have occurred where relief has been in the first instance given in this manner and the recipients eventually become confirmed paupers. (g) Cases are not wanting to show that pauperism is hereditary—two generations being quite common, and third generations occasionally occur.”²

530. We have quoted this statement as showing the diversity of evils, which have to be combated before we can hope to diminish greatly the number of those who, sooner or later, will inevitably become dependents upon other people. We will now refer briefly to some of those evils which have been most forcibly impressed upon us.

531. A great weight of evidence indicates drink as the most potent and universal factor in bringing about pauperism.³ Some witnesses also indicate gambling as a serious and growing cause ;⁴ but gambling, though it wastes the resources of its victims, does not lead to such physical and moral degeneration as drink. Drink and gambling.

532. Mr. Wethered, Local Government Board Inspector, offered the following evidence :—

“The more that one inquires into the history of workhouse inmates, the more one is struck with the fact that drinking is one of the chief causes of pauperism. In support of this statement I have selected two workhouses, not because they are exceptional in the number of inmates addicted to inebriety, but rather because they are well administered workhouses, and the character of the inmates typical of paupers generally. I am indebted to the respective masters for the details.”

* * Workhouse.—“At the time the information was obtained, there were in the body of the workhouse, as apart from the infirmary, and excluding children and imbeciles, 170 men, and 109 women, total 279. Of these 279 persons, seventy-four men and thirty-six women were in the workhouse as the direct result of intemperance. Of the above, twenty-six men and twenty-seven women could not be allowed out for a day’s leave without fear of their returning the worse for drink. The master of the workhouse reports that twenty-nine of the latter inmates continually take their discharge and return to the workhouse inebriated.”

* Deducting the number counted twice in the numbers for men, women and children.

¹ Statistical Appendix, Part I., par. 33. ² Wright, 39979 (5). ³ James, 23573, 23790 ; Busheii, 24064 ; Baines, 39540 (13b) ; North, 41761 (19) ; Waite, 43246 (9) ; Turner, 43565 (3) ; Burnet, 44420 (1) ; Dodd, 47190 (33 and 34) ; Evans, 48529 (7a) ; Owen, 48809 (12a) ; Blud, 70831 (6) ; Hood, 71522 (6) ; Kevill-Davies, 72681 (10a) ; etc., etc. ⁴ Blackshaw, 41394 ; Daniels, 44749 (5) ; Llewelyn, 49309 (20) ; Manton, 43626 (33) ; Gray, 52168 (8) ; Hurworth, 52950 (14), etc., etc.

* * * *Workhouse*.—"Taking the same data as in the case of * * * Workhouse; there were in the body of this workhouse 258 men and 158 women, total 416. Of this number, there were 175 men and twenty women in the workhouse as the direct result of intemperance. The master also stated that of the 416 inmates in the body of the workhouse, 205 of these could not be allowed out for a day's leave without fear of their returning the worse for drink."

"I desire also to draw special attention to the number of inmates who cannot be allowed out without fear of their returning the worse for drink. This class of inmate are perhaps the most difficult to deal with. There is nothing to prevent them taking their discharge from time to time, and I cannot but think that such habitual drinkers should be dealt with under the criminal law rather than by the Poor Law. In this way they could be permanently detained for such time as may seem desirable, and rid the workhouses of their presence and, what is more, their influence." ¹

533. As an instance of the far-reaching effects of drink in creating pauperism we may quote the following case:—

"Widow, four children. Eldest boy, thirty-one, now in the union infirmary, an imbecile. Daughter, weak, bad eyes for years, and been sent to the Ophthalmia Hospital and partly recovered and now in service. Son living at home, carter, but drinks. Son aged ten at school. Father, dead some years, was a notorious drinker, constantly before the magistrates and fined. Was an invalid the last seven years, and he, or his wife and family, on out-relief list for sixteen or seventeen years. I estimate this one case has cost from £250 to £300, and is, in my opinion, due to the drinking habits of the father, though to anyone not knowing the history it would not be so classed. I believe this is typical of many." ²

534. Pages of evidence might be quoted to the same effect; but perhaps the most striking corroboration is to be found in the unanimity with which the replies we have received from the Diocesan Conferences lay stress upon drink as one of the chief causes, often as the chief cause of poverty. We may quote the following summary of replies from 445 parishes in the Diocese of Peterborough as typical:—

"The chief *moral* cause of poverty in town and country alike is said to be excessive drinking—want of thrift, and bad management often, early and improvident marriages or gambling sometimes, accompanying it; in fact, in many parishes the reply on this point is practically that what little poverty exists is almost solely due to the drinking habits of the few whose families suffer in consequence. Even when there is little actual drunkenness, the proportion of weekly wages regularly taken to the public house is said to keep many families always poor." ³

Sickness.

535. Of sickness as a cause of pauperism we have spoken in the Part of our Report dealing with Medical Relief;* but there is one form of disease in particular more directly and degradingly connected with pauperism than any other. Dr. James Allan gave striking evidence as to the extent to which venereal disease is a cause of pauperism, both directly, and indirectly, in its many after effects.⁴ Very much of the physical incapacity of many of the inhabitants of larger towns must be attributed to this cause.

536. Much sickness, especially phthisis, is due to the conditions under which people live and work, hence these too must be regarded as causes of pauperism. Mr. Bircham says:—

"The number of houses unfit for habitation occupied by paupers is very large in my district. I think a main cause of pauperism is the disgraceful state of the houses in which many of the paupers live." ⁵

537. We became impressed by the importance of this consideration very early in the course of our inquiry, and appointed two Investigators to report to us on the Relation of Industrial and Sanitary Conditions to Pauperism. Amongst those conditions they rank bad housing as one of the most important. The insanitary conditions of a house are so frequently due to the character of the people living in it, that it is sometimes difficult to disentangle cause and effect:—

"Housing conditions produce or aggravate certain illnesses. From persons sick with such illnesses many applications are received for relief. Again, housing conditions produce or aggravate certain demoralised types of character, as it is demoralised persons of such a kind who form

* See Part V. Chapter 3.

a large proportion of paupers. Beyond this it is difficult to go in the matter of direct proof. . . . At the same time our conviction as to the importance of housing remains unaltered.”¹

538. One point on which the Investigators lay emphasis is “the pressing need for Common further regulation of common-lodging-houses and furnished rooms.” The latter are a lodging-houses and furnished rooms. “conspicuous evil,” not only in London, but in many provincial towns :—

“We counted in the admission book sixty-four admissions (to the workhouse) from furnished rooms in Tabard Street in eight months. The same number in the street occurred over and over again.”

They are habitually overcrowded, and are used for immoral purposes :—

“The relieving officer for this district gave us a great deal of information about these furnished rooms, and from him we learnt that they are nearly always in a filthy state. They are occupied by one tenant after another without any cleansing, and the bedding is found in a shocking condition. The rent paid by the landlord is about 17s. a week, and he received from 28s. to 35s. a week from the occupiers of the rooms.”²

“Without further labouring the prejudicial effects of common lodging-houses and furnished rooms the two following quotations may be of interest. The first is the statement of the relieving officer in whose district the large common lodging-house, just mentioned, is situated :—

“We call it the ‘Six Hundred,’ but it really contains from 200 to 300 beds. I have had forty applications in a day from there.”

“The second is an extract from the Annual Report for 1902 by the former medical officer of health, and deals with the character of furnished rooms :—

“It is probably correct to say that the lowest class of the community resort to these sub-let houses—lower and more degraded than the habitues of our common lodging houses. In addition to the obvious liability to insanitary conditions, these houses offer convenient residences for those persons of the working-class who are absolutely careless and reckless as regards their rights of citizenship. Their only possessions are the clothes they wear ; not even the towels, cups or saucers, kettles or saucepans in the house belong to them. Men and women live together, only to separate on the slightest excuse ; indeed, in the majority of cases these houses harbour the profligate and most reckless class of our cities.”³

539. It is by offering the possibility of a life at a very low standard, and so encourag- “Shelters.” ing the lowest form of casual labour, that common lodging-houses contribute to pauperism. The same is true in a still more marked degree of “shelters,” and we have received a considerable amount of evidence on this point.⁴ They encourage and foster a life cut off from all natural relations, calling for the least possible amount of self-control and energy, and leading almost inevitably to the workhouse.

540. There is a very general consensus of opinion that amongst industrial causes Casual Labour. casual labour contributes more to pauperism than any other.⁵ From all the towns where casual labour is employed, and more especially from districts where there are docks, we have found witnesses emphatic on the evils of casual labour. Our Investigators lay special stress upon it :—

“In an analysis of application and Report books, the cases of pauperism among men which are the combined effect of casual work and drink are so numerous as to outweigh and obliterate altogether those caused by the most dangerous of occupations, unless the class of case to which they belong is carefully isolated and analysed. The same fact is revealed in the abundant testimony of relieving officers and others.”⁶

541. It must not be assumed that all the casual labourers who come to the Poor Law owe their downfall to the nature of their work, undesirable though it may be.

“A prominent Guardian said he believed that :—Of the able-bodied paupers the majority were drawn from unskilled casual labour, with a few men from the decaying skilled trades.

¹ Final Report on the Relation of Industrial and Sanitary Conditions to Pauperism : Mr. Steel-Maitland and Miss Squire, p. 127.

⁶ Mr. Steel-Maitland and Miss Squire's Final Report, p. 124.

Of the aged, some were brought to pauperism through lack of thrift and consequent absence of provision, while among the more able-bodied cases, consumption was accountable for a large proportion, but was not in his own mind connected with any particular trade. He believes that the casual trades do not more demoralise the people than that demoralised people go to the casual trades. There was a growing dislike of rules and regulations, and a feeling both against any need to think and against any regularity. He said he could not suggest any remedy under the specialised machinery, and lack of interest in work prevailing.”¹

542. There is, however, little doubt that to regularise casual labour would do more than any one remedy to diminish pauperism of the worst type :—

“Take away casual labour and drink and you can shut up three quarters of the workhouses,” is a sentence which typifies the opinion expressed by most officials of the Poor Law.”²

543. So far as casual labour is the result and not the cause of moral deterioration the Poor Law itself as affording a free maintenance is partly responsible. But far more so is the growing and regrettable tendency amongst the lowest class for the women of a family to become the principal wage earners :—

“Women’s work and girls’ work ruin the man’s responsibility until it becomes almost *nil*. Many men before the Distress Committee did not know what the rent was or what was owing. One did not even know the names of his children. The reason is that the wives will sometimes do anything to keep the home together while the husbands loaf.”³

544. We are glad to think that this tendency is confined to a particular and limited section of the community. For the most part there is a growing tendency for married women to leave wage-earning and devote themselves to domestic duties.⁴

Boy labour.

545. One point bearing upon the question of casual labour which strongly impressed us is the extent to which boys leaving the elementary schools are drafted into work which lasted only a few years, and then flung them out, unskilled and untrained, into the casual labour market. With a view to getting more exact information on this subject we appointed an Investigator :—

“To inquire and report on the main occupations followed by boys on leaving public elementary schools in certain typical towns; the opportunities of promotion in such occupations, or of training for other occupations; and the extent to which such boys subsequently obtain regular employment (skilled or unskilled) as adults.”⁵

546. The Report contains a great amount of valuable and suggestive information. We would refer also to the valuable evidence given by Professor M. E. Sadler, who sums up the situation in the following words :—

“Under the industrial and commercial conditions which now prevail, it is easy for a boy of thirteen or fourteen to find some kind of virtually unskilled work for which are offered wages that for the time seem high, and flatter his sense of being independent of school discipline and of home restraint. In this work there is often little mental or moral discipline, though it may involve long hours of deteriorating routine. The work lasts for a few years, but leaves the lad, at the very time when he begins to want a man’s subsistence, out of line for skilled employment and only too likely to recruit the ranks of unskilled labour. The same evil exists in the case of girls. Certain forms of industry which make large use of boys and girls who have recently left the elementary schools, are, in part (except where the employers make special efforts to meet their responsibilities) parasitic in character, and get more than they ought, and more than their promoters realise that they are getting, of the physical and moral capital of the rising generation. Many callings connected with transport and communication, and some branches of manufacture, use juvenile unskilled labour to a degree which, if no counteracting measures are taken, must cause grave and lasting injury to the national life. It should be added that in this matter some Government Departments are to blame. Evils resulting from such deteriorating forms of boy and girl labour are widely felt. But we have little statistical proof that these evils are increasing out of proportion to the growth of population. Such evidence, indeed, as is available points to the conclusion that in some callings the uneducative use of adolescent unskilled labour is rapidly extending; but part of the apparent increase may be due to a growing sense of the importance of the subject and to the consequently closer attention with which it is being observed.”⁶

547. In the course of his evidence, Professor Sadler makes valuable suggestions as to the improvement of elementary education, and, from the point of view which we have under consideration, we wish more especially to call attention to the following :—

¹ Mr. Steel-Maitland and Miss Squire’s Report on London, p. 43.
Squire’s Final Report, p. 130.

² Mr. Steel-Maitland and Miss Squire’s Report on London, p. 44.

⁴ Board of Trade, Vol. IX., App. xxi. (h), p. 698.

⁵ Report on Boy Labour, Mr. Cyril Jackson

⁶ Sadler, 93386 (3).

"E.—Ultimately, some form of compulsion to attend day or evening continuation classes, between fourteen and seventeen years of age, will be found desirable, not so much in the interests of exceptional individuals as in that of the rank and file. Some of the present evils of unemployment may be traced to the lack of educational care and of suitable technical training during the years of adolescence. Compulsory attendance at continuation schools should be accompanied by reduction in the hours of juvenile and adolescent labour where those are now excessive. Employers, including Government Departments, manufacturers, commercial firms, retail tradesmen and employers of young domestic servants, should be placed under statutory obligation to allow young persons of less than seventeen years of age who are in their employment, to attend courses of physical, technical and general instruction for four hours a week, at any rate, during the winter months, at times of day when the pupils are not too tired to profit by the teaching.

It is advisable that the Government should pay grants at a double rate to districts which may adopt a by-law making attendance at continuation classes (held in the day time or in the late afternoon wherever practicable) obligatory upon all boys and girls (if not otherwise at school) up to seventeen years of age. The attention of Government Departments should be drawn to the social evils resulting from the inconsiderate use of adolescent labour in callings which afford no hope of adult employment, and no preparation for a skilled trade. In the post offices, in large towns, classes should be organised (by co-operation with the local education authority) for the instruction of telegraph messengers, in shifts, during the hours of duty." ¹

548. We return to this subject in Part VI. With regard to unhealthy trades and Unhealthy insanitary conditions of work-places, our Investigators report that there is a definite trades and insanitary work-places but very small proportion of pauperism resulting from such conditions ² :—

"Even where such trades are prominent, it is only a small fraction of the whole. Of men engaged this is especially true. Among men over sixty practically no trace of such pauperism is discernible. In the case of men under sixty the influence of the occupation begins to be seen (in so far as statistics can be based on such small numbers) when the numbers of sick paupers are isolated from the rest and analysed. At the same time the unhealthiness of the trade means an early death. It is not, therefore, surprising that the clearest result of the effect of the occupation is seen when the class of younger widows and their dependents are considered." ³

549. To "earnings habitually below what are required for healthy subsistence," a Low wages. distinct degree of pauperism in certain occupations is assigned. ⁴ On the other hand :—

"we have been unable to trace any connection between long hours of work and pauperism ⁵ The great example of an occupation when long hours are worked is that of railway employes and they are pre-eminently not pauperised." ⁶

550. Our Investigators confine their conclusions to the case of men, and express their inability to unravel the complexity of the situation with respect to women :—

"The problems arising in the course of our inquiry from a consideration of the employment of women are too complex for us to attempt to offer any solution of them. Unhealthy conditions of work, excessive hours and low wages have been found in certain occupations, and that poverty and suffering are caused by them is indisputable. That pauperism directly results, except in individual instances, there is no evidence to show. Where any connection had been found it is dealt with in the sectional reports on towns visited, but no general conclusion can be drawn from these instances. Where industrial employment for women is plentiful the men tend to become parasitic. The laundry districts of London are only one such instance. It has been said to us on various occasions that the prevalence of female employment, by affording a supplementary wage, depresses the rate of the earnings of men in the locality, although there may be no direct competition of the sexes in the same industry. That this was the case did not appear on the face of the facts elicited by us and we have formed no conclusion on the point. Women's earnings are, rightly or wrongly, regarded for the most part by both employers and employed as merely supplementary to those of the head of the family and the rate of wages is fixed on this assumption. Women who are not dependent are paid on the same scale as others who are and on such a wage the single woman in lodgings and still more the widow with children can only exist in a state of poverty. In sickness or other emergency they must come for help to the Poor Law and in old age the workhouse is often inevitable. Home-work is especially badly paid and women undersell one another by accepting any rate that is offered. Such low-paid work however has come to our notice in this inquiry more frequently as a means whereby pauperism is postponed than as causing it. On the other hand the result of the absence of any industrial occupation for women in a district where the employment of men is dangerous to health is that widows left destitute come at once for poor relief and remain throughout their widowhood on the rates. Whether the conditions by which pauperism is postponed are preferable to those by which it is accelerated it is not in our province to offer an opinion." ⁷

Charitable relief.

551. With the question of charitable relief in general we deal in Part VII. As a cause of pauperism, however, it cannot be altogether omitted here. The Reports from Diocesan Committees lay stress upon this :—

“Another cause is the irresponsible giving of alms. It comes under both the economic and moral heads. The Ripon Diocesan Committee submits that this practice is a lazy way of avoiding responsibility, which puts a premium on professional begging and canting hypocrisy, to the detriment of the honestly unfortunate worker, and very rapidly causes widespread deterioration of character. The committee urges that every means—religious, moral, and legal—be used to stop this harmful Social evil, and that corporate responsibility for the cure of poverty be put forward strenuously as infinitely more beneficial than the temporary relief of individual distress by means of such a baneful habit. . . . A certain class of people both in the rural and urban parishes, look upon the alms from charity endowments as their right and count on such bequests in calculating their possible income; and it is more than probable that this form of charity—unless very rigidly and carefully administered—becomes enervating to the healthy self-reliance of many people.”¹

“(iv.) *Charity*.—The existence of endowed charities has a direct effect in creating paupers. In Nantwich the decline of the boot and tailoring trades is not alone responsible for the increase of pauperism. The report from the Rural Deanery says that Nantwich “is an old market town with one church, to which are attached a number of rich charities, and this fact has naturally concluded to a certain amount of pauperism.” Not infrequently cases of out-of-work destitution are traceable to the cruel kindness of individuals, especially visitors, who administer casual street charity.”²

“In attempting to arrive at the root cause of the poverty we are driven back again and again to the moral cause. The poverty is to be attributed to a failure in character rather than to any particular economic cause, making all allowance for the depression in certain trades which certainly exists in some of the towns. And we are obliged to record the fact that the expectation of relief appears to have contributed in no small degree to the encouragement of pauperism.”³

552. Our Investigators in writing of the dangers which accentuate the general effect of casual work in London, say :—

A similar demoralising effect was assigned to lax and indiscriminating charity. Extreme instances were narrated. Thus a lady after hearing a sermon on the conditions of life among the poor, drove down we were informed, in a carriage to a very poor street in the neighbourhood and there distributed promiscuously a dozen half bottles of champagne and a dozen half pound bunches of grapes. It was, however, from the multitude of less absurd acts that the great harm resulted in those unions where prosperous and poor districts were in juxtaposition.

A West End Union furnishes similar cases in point. One working family earned 30s. per week by steady work, and the wife said to our informant :—

“Can you expect us to go on doing this when last week the couple next door, doing no work but begging, brought home £2 in gold in one single day, together with a quantity of food?”⁴

Other causes of pauperism.

553. Amongst causes which are less prominent, but not, we believe, less real, we may note the following :—

- (1) The failure of unsound Friendly Societies or dividing clubs.⁵
- (2) Insufficiency of house accommodation, especially in rural districts.
- (3) The payment of pensions at long intervals.
- (4) Domestic ignorance and incapacity on the part of women.⁶

554. As regards (3), in the case of Army Pensioners, payment is as a rule, made quarterly, and the practice of Government offices is commonly the same. [Pensions granted by private persons or firms and from charitable endowments are sometimes paid at even longer intervals. Such a system is not conducive to the formation of regular or thrifty habits. It encourages the pensioners to live on credit with all the attendant evils, and, in some cases, to waste on drink a large part of the sum received. We have had instances brought before us of men who are habitually in a workhouse, but leave it at regular intervals to receive and squander a pension. We recommend that all pensions should, as far as is practicable, be paid weekly, and we suggest that the Post Office should be utilised for the purpose.

555. As regards (4), a witness stated :—

“Further there is urgent need to correct the idea in the minds of girls that because they are devoting themselves to the work of the factory, they may neglect the training of themselves for the duties of the home. Mothers who have spent years at the spinning frame or the loom are, as a rule, quite incompetent in the matter of choosing and preparing food, and in the other requisites of a healthy upbringing for children. Hence sickly appearances, which are too readily ascribed to want of food, and want of means to buy food, are often the result of wrong food—innutritious, badly cooked or combined—as well as of impure air, and generally mismanaged home surroundings. This better training of girls is the work of the schools but it is much impeded by the prevalent industrial conditions. No reform of the Poor Law will obviate the unhealthy, both physical and economic, that starts from ignorance and incapacity in the home.”¹

556. Other causes which have been urged upon us, but which we do not propose either to endorse or controvert, are :—

- (1) Capitalism.²
- (2) Free trade.³
- (3) The system of land tenure.⁴

557. We have left to the last the very difficult and controversial question as to Administration. how far the administration of the Poor Law is, or may be, itself a cause of pauperism. Technically, of course, if there were no Poor Law there would be no legal paupers ; and there are those who take the superficial view that, by abolishing the Poor Law and assigning its functions to other agencies, we could abolish pauperism. But we wish here to raise the question in a deeper sense, and to ask how far it is true that actual poverty and dependence may be increased or decreased by the way in which the Poor Law is administered. We have had much evidence offered to the effect that an unwisely administered Poor Law may be a true cause of pauperism in this sense,⁵ and, that it should be so is, we think, inevitable. It will be generally acknowledged that, in so far as people are induced or encouraged to receive from the Poor Law, for themselves or their dependants, what they are capable of providing by their own exertions, to that extent a pauperism is being manufactured which would not otherwise exist.⁶ And when the only qualification for relief is the absence of other means of subsistence, there are found to be many who will qualify by being without means. It is this which is meant by saying :—

“I am often asked what is the main cause of pauperism, and I am obliged to say that the main cause of pauperism is the Guardian. It is the Guardians whose administration makes pauperism.”⁷

558. The supporters of this view do not deny that much real poverty and distress exists, nor even that much of what exists is inevitable ; but they do maintain that where administration is careless, or guided by a wrong policy, a large amount of the poverty and distress is due to it. It has destroyed the qualities of independence and mutual helpfulness, and substituted the desire to make out a good case for the relieving officer :—

“We had an Inspector,” says one witness, “and he found that this relieving officer went to the village only once a week, it was eight miles from him, and he said : ‘What happens in that week if somebody is ill and wants relief?’ The relieving officer replied : ‘No one is ever ill, or wants relief, when I am not there.’”⁸

Doubtless this statement was not intended to be taken literally, but it contains the important truth that the mere presence of a relief agency excites people to qualify for its benefits.

559. We need not say that there are many to whom these considerations do not apply. There are some who are physically or morally incapable of independence under any administration ; and there are many who are not to be tempted from it by anything less

than sheer necessity. But there are also very many who simply follow the line of least resistance, who are quite capable of earning their living and will do so in the absence of any temptation to the contrary, but who are easily drawn into loafing and thriftlessness by the prospect of relief. It is to these people on the borderland that an unwise policy of relief on easy terms is fatal; they quickly lose the habits of energy and foresight, and become in the true sense of the word pauperised.

560. The difference between a pauperised and a non-pauperised community does not lie only in the number of persons who have lost their independence; it can be seen also in the extent to which mutual helpfulness has developed into such institutions as Friendly Societies and provident medical clubs. Where poor relief is given freely, without making any claims on the providence of the recipients, these institutions never flourish; where there is careful administration, on the other hand, there is no difficulty in attracting even low-paid workers into them. It cannot be argued that, because in any given community such institutions do not exist, therefore gratuitous relief is necessary to take their place. It must be accepted as an axiom of social administration that gratuitous relief and provident institutions cannot flourish within the same field, and that the first step to the encouragement of the latter is the restriction of the former.

561. We have considered it necessary to state this position with some care, because of the tendency to lose sight of it when confronted with the condition of a given Union at a given moment. We may take as an instance the Union of Poplar. Between January 1st, 1895, and January 1st, 1905, the number of paupers increased from 5,000 to 11,600. The administrators maintain sometimes that the increase is necessitated by the destitution of the people, and doubtless many when they apply appear to be in a condition of destitution. But the question which the Guardians fail to ask themselves is whether, but for their policy, these people would have been in a state of destitution.

562. Sometimes, on the other hand, the administrators maintain that, though the people they relieve are not destitute, yet they are poor and need to have their means supplemented from the rates. This, again, stereotypes poverty by removing the inducement to individual energy and enterprise, and by ignoring the possibility of those provident institutions by which an independent people makes a small income more effective.

563. A comparison may be made between the extent and changes in pauperism in half-a-dozen London Unions in which the increase has been greatest and in the remaining London Unions. We will take those years during the last twenty which have marked the highest points of pauperism in England and Wales. In the six Unions of Islington, Strand, Stepney, Poplar, Bermondsey, and Camberwell, which had an aggregate population in 1901 of 973,523, the total number relieved on January 1st, 1888, was 19,335 or 22·7 per 1,000 of the population in 1881. In 1896, the number had risen to 27,595, or 29·3 per 1,000, and in 1906 it had grown to 38,613 or 39·7 per 1,000. By January 1st, 1908, the number had fallen slightly and the rate per 1,000 was 38·2. In the remaining Unions in the County of London the numbers fell between 1888 and 1896, and rose again in 1906 and in 1908 to rather more than the number in 1888. But the rate per 1,000 fell from 27·4 per 1,000 in 1888 to 23·1 per 1,000 in 1896, and, though it has risen slightly since 1896, the rate was still below 24 per 1,000 in 1908. These latter Unions comprise many poor districts, including the whole of the East of London with the exception of Poplar and Stepney.¹

564. The increase in the numbers in the six Unions named occurred in both indoor and outdoor relief, but was relatively greater in outdoor relief. In the other Unions there was a much smaller increase in the number of indoor poor, and a considerable decrease in the number of outdoor poor. Of the increase of 17,817 between 1888 and 1908 in the numbers relieved in the six Unions, 10,790 were classed as adults not able-bodied, 2,729 as able-bodied adults, and 4,298 as children.¹ An analysis of the returns for July 1st, preceding the above dates, produces very similar results. We have not had evidence of any change for the worse in the conditions of the population of the six Unions sufficient to account for this growth. We are forced to the conclusion that a change in the principles on which relief is administered has been an important factor in bringing it about.

565. There are many other instances in which a relaxation of administrative caution has brought about a sudden accession of pauperism, but it generally happens that

¹ Statistical Appendix, Part I., Table xiv.

Guardians have not desired that result, and, when they have realised it, have endeavoured to check the evil. Bermondsey is a case in point. There was there a steady rise in the number of paupers from 4,274 in 1891, to 5,552 in 1896, and 6,416 in 1901, while, during the same period, the outdoor relief increased from £11,200 to £23,000.¹ In 1902 the Board appointed a superintendent relieving officer, since when :—

“there has been a gradual decrease in outdoor relief due principally to the diligent inquiries made by the relieving officers into the applications for relief, the aid of the case-paper system and the more efficient administration.”²

Owing to this improvement in administration the number of outdoor paupers diminished from 3,959 on January 1st, 1902, to 2,810 on January 1st, 1906; while the cost of the out-relief diminished from £23,677 in 1902 to £17,208 in 1906.³

566. The following statement was also made to us by Miss Baines, a member of the Leeds Board of Guardians :—

“Indiscriminate and careless giving of outdoor relief, *e.g.*, one ward in the Leeds Union doubled its outdoor relief during the first year after the present board came in. There was some exceptional distress, but not anything in proportion to the increase of outdoor relief. The same ward has gradually been diminishing its out-relief for the last two years, although worked by the same guardians—and they themselves have acknowledged that the policy of the first year was unwise.”⁴

567. Strong corroboration of the view that pauperism may be largely due to administration is to be found in instances where the adoption of a non-out-relief policy has resulted in almost abolishing pauperism. As an instance we quote the following account, given by Mr. Willink, of pauperism in the Bradfield Union :—

“The pauperism during the last thirty-five years has been as follows, viz. (January 1st) :—

| — | 1871. | 1881. | 1891. | 1901. | 1906. |
|---------------|-------|-------|-------|-------|-------|
| Indoor - - - | 259 | 151 | 120 | 107 | 123 |
| Outdoor - - - | 999 | 202 | 29 | 18 | 91 |
| Total - - - | 1,258 | 353 | 149 | 125 | 214 |

If on January 1st, 1906, the total pauperism, excluding lunatics and vagrants, of England and Wales had been in the same ratio to population as Bradfield on that date, it would have stood at 401,800 (or, taking the Bradfield, January 1st, 1901, basis at 235,538) instead of 802,068, its actual figure.

The remarkable reform thus indicated was effected gradually without interference with existing cases (except in extreme instances); and by the steady and consistent application of a clear and intelligible principle, *i.e.*, the strict limitation of out-door relief, which was confined to temporary cases of sickness or accident and to widows during the first month only of their widowhood. The administration can scarcely be said to have been universally popular—but it was eventually accepted. The poor shaped their lives to it; the natural resources, of all kinds, personal, family, and charitable were stimulated; good friendly societies were encouraged; the market values of labour were left undisturbed; and for years there was little or no open objection to the system. It was widely known, a constant subject of inquiry at home and abroad, and was approved by Local Government Board inspectors, by other practical administrators and by business men of all classes. If it met with only partial imitation locally this was probably because of the usual rarity of driving power or initiative. Still Reading did and Wallingford and Abingdon to some extent do, aim at reducing outdoor pauperism. There were no scandals, and no waves of indignation. The population figures show that no exodus can be said to have resulted, as has sometimes been suggested.”⁵

568. It is especially to be noted in the above table that, so long as the number of out-paupers were diminishing, the number of indoor paupers diminished also; *i.e.*, the poor were not driven into the house. In 1900, Mr. Chaplin’s Circular appeared; in April, 1901, the Bradfield Guardians resolved to give out-relief on the lines indicated in the Circular; the number of outdoor paupers rose, and simultaneously the number of indoor paupers rose also. The interpretation is obvious. The offer of relief on easy terms

¹ Dyson, 20184. ² Dyson, 20117. ³ Dyson, Vol. II., App. ix., B. and C. ⁴ Baines, 39540 (13e)
⁵ Willink, Vol. VII., App. cexi.
429. 2 H

tempted people away from their other resources and created more paupers than could be relieved on those terms. Those who proved to be ineligible for out-relief, were then forced to have recourse to the workhouse.

569. It has been adduced, as a proof of suffering entailed by careful administration, that the number of deaths attributed by coroners to starvation is higher in Whitechapel than in Poplar. We do not consider that the argument is a valid one. The deaths from starvation reported from Whitechapel occur amongst a floating population of the lowest class, attracted to that Union by the number of free shelters and low class lodging-houses, and unaffected by local administration. The comparison would only be fair if it could be shown that the same difficult conditions prevailed in Poplar, and no attempt has been made to do this.

570. We do not maintain that a strict administration may not in individual cases cause temporary hardship. As it is easier for a man to fall into dependence than to raise himself out of it; so, in the same proportion, it is easier to cause than to cure pauperism by administration. But the suffering caused by a lax administration is far more widespread and lasting than that to which a stricter discipline gives rise.

571. Such, then, are the causes of pauperism, so far as we have been able to analyse them, and as they have been presented to us in the course of our inquiry. It remains only to summarise our narrative with a view to indicating what has been the relation of the Poor Law to them in the past, and what we hope it may be in the future.

572. It would not be true to say that hitherto the Poor Law has been directed only towards mitigating the symptoms of the social disease of pauperism. As we have already noted, the Assistant-Commissioners in 1840 were definitely urged to avail themselves of the means at their disposal to investigate the causes of pauperism with a view to their removal. From time to time also, and in certain branches of work, the administration has struck vigorously at causes, with conspicuously successful results in the mitigation of distress. But it is true to say that local administrators have often, and perhaps for the greater part, lost sight of the fact that pauperism is a morbid and not a natural condition; with the result that there have been expended, in maintaining an army of paupers, great resources of time and money which might under better direction have reduced pauperism to a minimum. The changes which we have recommended all have in view the strengthening of the spirit of hopeful attack upon the problem, and the complete abandonment of the attitude of acquiescence. If we succeed in this object, then we have little doubt that, with the greater scientific resources now at the disposal of the administrator, and with the widespread interest now aroused in social problems, a campaign may be initiated against pauperism which will be quite as effective as, and perhaps more lasting in its results than, that begun in 1834.

573. We said at the beginning of this Part of our Report that the progress of the Poor Law had been constantly towards a clearer differentiation of the problem and a closer adaptation of treatment to the needs of different classes. At first, the strength of the administrators was necessarily directed towards breaking up the mass of able-bodied pauperism which was eating into the very heart of the people, under a corrupt and panic-stricken administration. It was inevitable that in this task opposition should be encountered, but it was an opposition of noise and abuse rather than of weight, and no real obstacle was placed in the way of reform. In response to complaints Committees of Inquiry were appointed; but the result was to show that, where circumstances of real hardship occurred, the Commissioners were willing and able to relax the workhouse test, and that their administration though strict was never harsh. By the fact that it took no action upon the Reports of these Committees, Parliament practically endorsed the new policy; and it is significant, as well as hopeful for the future, that the more careful administration of 1834 was subsequent upon the Reform Bill of 1832, just as, a generation later, the more careful administration initiated in 1870 was subsequent to the Reform Bill of 1867. The greater interest shown by a more democratic constituency in Poor Law problems has for the most part led to wiser as well as more humane administration.

574. The chief difficulty in initiating a firmer policy is always the righteous fear of intensifying real distress instead of diminishing a fictitious pauperism. In support of this view, it is sometimes urged that the reform of 1834 owed its success less to improved administration than to the fact that it was introduced at a peculiarly fortunate moment, when the development of railways was able to absorb all the surplus labour of the country. No doubt the development of railways did much to

ease the situation, but it could not have done so unless the reform in the Poor Law had loosened the ties which bound the labourer to his parish, and brought about the mobility which was so essential, both to his own welfare and to the economic development of the country. Moreover, like most industrial changes, the creation of the railway “navvy” brought its own contributions to pauperism with it. The Eighth Annual Report, after describing the type of migratory labourer, says of the railways:—

“They offer an almost imperceptible addition of employment to the resident labourers, which employment is of so demoralising a nature it would be better were it not offered at all; they bring heavy burdens on parishes by reason of the accidents they occasion; they increase bastardy; and they double, if not treble, the amount of crime.”¹

575. In other respects, a study of the condition of the people during the first decade of the administration of the Poor Law Commissioners shows that a more difficult time could hardly have been chosen for a reform of that particular nature. Only the first two years show any signs of prosperity, and even then agriculture was much depressed. It was, indeed, under conditions unparalleled in recent time for difficulty and distress that the new administration established itself, and approved itself to the country as wise and humane.

576. It is impossible not to recognise that in some ways the situation in 1834 was strikingly similar to that before us to-day. We have the same phenomenon of large numbers of able-bodied workers apparently incapable of earning a sufficient livelihood, and demanding to be maintained at the public expense; and we have the same result in a great congestion of labour in certain places. The fact that the maintenance provided is for the most part outside the Poor Law, complicates the problem, but makes no essential difference in its nature.

577. After 1842, industrial conditions improved, and it was in a year of comparative prosperity, 1844, that the opportunity was taken to issue the General Out-Relief Prohibitory Order.² Pauperism, which had been increasing under the stress of bad times, was checked for the time being; but it is characteristic of this earlier period that Poor Law returns are sensitive to every change in industrial and commercial prosperity, and, after the crisis of 1847, pauperism, vagrancy, and expenditure all increased. It was in this year that the duties of the Poor Law Commissioners were transferred to the Poor Law Board.³

578. The importance of the work done by the Commissioners in checking the evils of bad administration, is apt to overshadow the hardly less important work which they initiated in combating other causes of pauperism. From the first they recognised that sickness, more especially epidemic sickness, was constantly adding its victims to the ranks of the dependent, and it was due mainly to their exertions that the sanitary crusade was entered upon which has perhaps done more than any one movement to diminish pauperism.

579. If, on the other hand, their attitude towards medical relief was that of restricting it as far as possible to those already destitute, the difference is easily explicable. Sanitary measures for the most part lie beyond the reach of the individual, and are a common need which must be provided for in common; while medical treatment is essentially an individual need, and is for the most part easily attainable by the individual. Moreover, they saw before them the beginning of a provident medical system, and thought that this would be best encouraged by a policy of merely refraining from competition, without any active intervention to promote it.

580. From the very first, also, great stress was laid by the Commissioners upon the necessity of improving the condition of the children who were brought up by the Guardians. They found that neglect of these had been a constant source of renewed pauperism from generation to generation, and they took steps which resulted in cutting off that source altogether. It still remains to complete their work in this direction by extending it to those receiving out-relief.

581. The institution of the Poor Law Board marks a second period. With re-
viving prosperity from 1849 to 1853, the returns of pauperism show continuous
1847-70. Poor Law Board

² Adrian, 194.

³ 10 & Vict., c. 109.

improvement, and decrease in expenditure, and in 1852 the second of the great out-relief Orders, the Regulation Order, was issued.¹ Then came the Russian war, and expenditure greatly increased, owing to the almost unprecedented severity and duration of the winter, general depression, high taxation consequent on the war, and cost of maintenance of wives and families of men in the services. After the war, and up to the early sixties, Poor Law expenditure continues to fall, and in 1859 the Poor Law Board take occasion to point out that the average expenditure from 1835 to 1859 had been £5.1 millions, as compared with £6.5 millions from 1813 to 1834,² while the expenditure per head of the estimated population had fallen in the same years from 10s. 4d. to 6s. $\frac{1}{2}$ d., or 42 per cent.

582. The next decade was an eventful one for the history of Poor Law administration. In the first place, public attention was called to the question of medical relief in Poor Law institutions, and improvements were initiated which have culminated in what is practically a change of policy in this department. It is now generally recognised that the first consideration in the administration of Poor Law infirmaries is the cure of the patients where this is possible, and their adequate nursing and treatment where it is not. From one point of view, the change has been a source of constantly increasing expense, and is responsible for a large share of the growing burden of Poor Law expenditure in recent years. From another point of view, it must have resulted in a diminution of pauperism in so far as patients have been more speedily and in more instances restored to health; but it is not possible to measure to what extent this is the case.

583. In the second place, Poor Law administration was severely tested by the ordeal of the great Cotton Famine. It proved capable, when working during the latter phases of that calamity in co-operation with voluntary charity, of meeting the most acute and prolonged industrial crisis which has ever been known, and showed a power of resource, combined with firmness in the face of emergency, with which it is not often credited. But, although the distress of the Cotton Famine had subsided by 1864, Poor Law expenditure continued to increase, and the inquiries set on foot by the Central Authority showed clearly that local administration was mainly responsible. A new generation had grown up since the lax administration in the days before 1834 had flooded the country with pauperism; the lesson had been forgotten, and the need was now felt for its re-statement and re-inforcement. The Local Government Board marked its accession to office by a strenuous campaign in favour of more careful administration, with the result that, notwithstanding continuous improvements in institutional treatment, there was a diminution in expenditure between 1870 and 1875 from 6s. 11 $\frac{1}{2}$ d. per head of population to 6s. 3 $\frac{1}{4}$ d.³ This is practically the last time there is any diminution in the burden of pauperism upon the ratepayer. With the exception of a slight check in the years 1885-6 to 1889-90, there is a steady rise in the total expenditure in years of distress and of prosperity alike, until in 1906 the expenditure stands at 8s. 2 $\frac{3}{4}$ d. per head of population.⁴

584. While the rise in expenditure was accompanied by a diminution in pauperism it was possible to regard it with some degree of acquiescence. It is worth while to pay highly for the restoration of paupers to independence. But there are indications that the present administration has reached the limits of its remedial powers, and needs once more to be re-inforced. It must, we are convinced, still further extend its policy both of cure and of prevention, and it is in this sense that we have made our recommendations. More especially, it must extend its policy of making the giving of relief conditional upon the recipient accepting a way of life likely to restore him to independence. This is no new principle. It was the leading note of the 1834 administration, and has been so ever since, that one class—the able-bodied—should be relieved only under certain conditions. It is now necessary to apply the principle to other classes. It has proved, indeed, impossible to push a curative policy any further in its absence; sickness cannot be cured, either in institutions or at home, unless the patient will accept conditions; economic evils cannot be combated unless those who suffer from them will conform to conditions; moral weakness cannot be strengthened unless the authorities have power to impose conditions. And what those conditions are to be must become manifest through a careful and progressive study of the causes of pauperism.

PART V.

MEDICAL RELIEF.

Chapter 1.

DEVELOPMENT OF THE SYSTEM OF MEDICAL ASSISTANCE
TO THE POOR.

(a) INTRODUCTORY.

1. Of the services entrusted to the guardians, it is, perhaps, in connection with medical relief that the greatest development has taken place since 1834, and it is noteworthy that this development has been accompanied by a singular paucity of legislative reference to the care and treatment of the sick poor. Paucity of Statutory Enactments as to Medical Relief.

2. The Poor Law Commissioners seem to have considered medical relief to be “rather the outcome of practice than a creation of the law.”¹ The Act of Elizabeth provided *inter alia* for the “necessary relief” of the “impotent”² who, doubtless, included the sick, but beyond this it contained no provision for a system of medical relief, and subsequent Acts of Parliament down to 1834 are all equally silent on the subject.¹

3. Even the Act of 1834³ itself did not specifically provide for such a system, but presumably left it to be established by the Commissioners under their general powers of regulating the administration of relief throughout England and Wales. One section (54) continued the power of the Justices to order medical relief in cases of sudden and dangerous illness, but obviously this was to meet the exceptional rather than the ordinary case to be dealt with by boards of guardians in their daily administration of the Poor Laws.

4. The same may be said of the Poor Law Amendment Act of 1848,⁴ Section 2 of which provided for medical or other assistance on account of “accident, bodily casualty or sudden illness.” Another Act, the Poor Law Amendment Act, 1851⁵ (Section 4), enabled the guardians to subscribe to “any public hospital or infirmary for the reception of sick, diseased, disabled, or wounded persons, or of persons suffering from any permanent or natural infirmity.” But here again we have provision not for a general system of Poor Law medical relief but for something supplementary to it.

5. The absence of reference to Poor Law medical relief in the early statutes is due in great measure to the reliance placed on voluntary association for medical relief. The hospitals received patients from the parish at fixed charges, and patients generally were charged for indoor treatment.⁶ There was also a number of dispensaries in the Metropolis and elsewhere. London was practically divided into voluntary dispensary areas. The general dispensary, in the eighteenth century and later, was used as a centre of teaching. The physicians and surgeons attended daily: “To give advice to such out-patients as came properly recommended,” and they “afterwards visited the home patients at the places of their abode, as the case might require.” “No persons were deemed objects of the charity, but such as were really necessitous,” and the numbers treated were very large. This movement continued till about 1850, and many of the old dispensaries still exist.⁷ Thus the hospitals and the general dispensaries played a part in the general administration of medical relief, which was afterwards reduced, as the two branches of relief, the Poor Law relief and the voluntary relief, became more and more dissociated, as they did after 1834.

¹ Adrian, 231. ² The Royal Commission of 1834 expressly include the sick among “the impotent.”

⁶ Growth of medical charities, *Charity Organisation Review*, p. 245, Vol. IV., 1898.

⁷ Cf. Hints designed to promote Beneficence, Temperance and Medical Science. Lettson, 1801, pp. 206, 211, Vol. III., and Dr. Calvert's Report, App. C.; Report of Royal Commission on the Poor Laws, 1834.

6. It was not until 1867, when the Metropolitan Poor Act¹ established sick asylums and dispensaries in London, that the Legislature directly provided for a system of medical relief, and even then it did so only as regards London. In the following year, the Poor Law Amendment Act,² applicable to the whole of England and Wales, empowered the Central Authority *inter alia* to order, if necessary, the provision of surgical and medical appliances in a workhouse without the consent of the Board of Guardians or of the rate-payers. Since 1868 there have been no enactments extending the provision of medical relief by Poor Law authorities, and, generally speaking, it may be said that the system in existence is almost entirely based upon the orders of the Central Authority.

(i.) *Definition of Medical Relief.*

7. While, however, the Legislature has been so largely silent on the subject, there has, in practice, been a considerable broadening of the conception of what is implied in "medical relief." At first the term seems to have been limited to medical attendance³ and the usual bottle of medicine which accompanied a doctor's visit at that time.

8. The first definition of medical relief is to be found in the General Medical Order of 1842, which was embodied in the General Consolidated Order of 1847. In the latter, "medical relief" means "relief by surgical as well as by medical attendance"; "medical attendance" includes "surgical attendance"; and "medicines" comprise "all medical and surgical appliances."⁴

9. From time to time, the Central Authority appear to have been called on to interpret these definitions. Thus, it was decided that "bread for poultices" as being a "household article," and "cotton wool and calico used as dressings" as not being articles which "a medical man would furnish to a private patient," did not come within the meaning of the words "medical or surgical appliances."⁵ It should be observed, however, that these decisions were merely interpretations of the contracts between the Guardians and the Medical Officers who had to supply the articles in question out of their salaries; the decisions did not affect the duty of the Guardians to supply the articles as part of the "maintenance" of the pauper. At the same time, the decisions are useful as indicating the scope of "medical relief" as defined by the orders of the Central Authority and as understood by the local authorities administering the Poor Laws.

10. In 1885, the Medical Relief Disqualification Removal Act⁶ imported a much wider meaning into the expression "medical relief." Section 4 defines "medical or surgical assistance" as including "all medical and surgical attendance *and all matters and things supplied by or on the recommendation of the medical officer.*" That definition includes not only medical attendance and medicines, but, in the case of infirmary relief, it has been held to include food, lodging, nursing and all the other concomitants of treatment of the sick on a scale equal in many respects to the best equipped general hospitals in the country.⁷

(ii.) *Persons entitled to Medical Relief.*

11. Prior to 1834, the Overseers, "acting upon mere assumptions or conjectures as to the intention of the law,"⁸ had not infrequently provided medical relief for the "sick poor" of the parish, and in the highly pauperised districts medical assistance was therefore given at the expense of the rates to practically "the whole mass of the labouring population."⁹ This practice was put a stop to by the Poor Law

30 & 31, Vict. Cap. 6. ² 31 & 32 Vict., Cap. 122, Sec. 8. ³ This varied in different districts according as the medical officer possessed a degree in medicine, or in surgery, or in both. ⁴ Article 227, G. C. O., 1847. ⁵ Official Circular 102: 119. ⁶ 48 & 49 Vict., Cap. 46. ⁷ Cf. Adrian, 114; Davy, 2033; Lockwood, 4140; Bagenal, 6962. *Vide also* the Old-Age Pensions Act, 1908, which provides that "medical or surgical assistance (including food or comforts) supplied by or on the recommendation of a medical officer"; or "any relief given to any person by means of the maintenance of any dependant of that person in any . . . infirmary or hospital" shall not be considered as poor relief. (Section 3 (1) (a) (i) and (ii)). ⁸ Instructional letter addressed to various Boards of Guardians on their formation. Third Annual Report, Poor Law Commissioners, 1837, p. 49. ⁹ "It is," writes Dr. Rumsey, "no exaggeration to say that, before the Act of 1834, throughout four-fifths of England, the majority of the inhabitants of those parishes which had not the advantage of charitable infirmaries or dispensaries were attended under the parish medical contract."—*Essays on State Medicine*, by H. W. Rumsey, 1856, p.

Commissioners who pointed out that, “as the poor rates are by law confined to the relief of absolute destitution,”¹ medical relief should be provided only for such persons “as could properly be deemed paupers.” In this they effected a wide change in the administration of medical relief. Generally speaking, it may be said that medical relief was thereafter administered to the same classes as received ordinary relief, *i.e.*, it was confined to cases of “actual necessity or destitution” and was supplied under conditions which had as their ulterior object the dispauperisation of the labouring classes.² The opinion of the Select Committee of 1838 “that medical relief may with great propriety be given more extensively than any other kind of parochial assistance,”³ does not appear to have been received with much favour by the Poor Law Commissioners, for we find them in 1840 unhesitatingly avowing the objects of their system of medical relief to be as follows :—

“To provide medical aid for all persons who are really destitute, and to prevent medical relief from generating or encouraging pauperism; and with this view to withdraw from the labouring classes, the administrators of relief, and the medical officers, all motives for applying for or administering medical relief, unless where the circumstances render it absolutely necessary.”⁴

In this statement of policy the Commissioners appear to have had in view only the system of outdoor medical relief. Medical relief in the workhouse was still, and for long afterwards, a part of the ordinary “workhouse system,” administered under conditions sufficiently deterrent to prevent the encouragement of pauperism.

12. But, while the endeavour of the Commissioners was to restrict medical relief as far as possible, they had, even previous to 1840, been obliged to admit exceptions to their general policy. Thus, in 1837, they stated that the test of “absolute destitution” could not be applied to “cases of sudden and dangerous illness or accident.”⁵ Again, in 1840, the Commissioners decided that a sick member of a friendly society (who obviously is not destitute in the full meaning of the term) might be supplied with medical relief by the guardians if, in respect of his friendly society membership, he had not the right to medical relief and medicines.⁶

13. In practice, therefore, as we shall hereafter show, “destitution” as applied to medical relief has gradually come to mean no more than this, *viz.* :—inability to provide whatever medical treatment is necessary. As Dr. Downes has remarked to us :—

“The Poor Law, therefore, has been obliged to provide for the sick on a scale continually advancing with the standard of care of the sick, and as, with medical progress, this provision becomes more complete, the more unequal, in the absence of effective organisation, is the condition of the man who tries to provide it for himself.”⁷

The development of operative surgery has enormously widened the range of what may be regarded as being “absolutely necessary” for the cure of a patient. A man in fair circumstances may find himself called upon to undergo an operation the cost of which is beyond his means to defray. If, therefore, he is unable to gain admission to a general hospital he may apparently get the benefit of the operation in the form of medical relief, subject to the power of the guardians to recover from him part or all of the cost. The progress in medical science, and the growth of public opinion, have, therefore, imported into the expressions “actual necessity” and “absolutely necessary” a meaning which was unknown to the Commissioners of 1834. This applies more particularly to the indoor branch of medical relief.

(b) POOR LAW INDOOR MEDICAL RELIEF.

14. The Report of 1834 contains no specific recommendation on the subject of medical relief in workhouses. At first sight this omission seems somewhat remarkable,

¹ It is admitted that if the sick were contemplated at all under the Act of Queen Eliz., they were included among the “impotent.” The Royal Commission of 1834 do not argue that they were so included, but insert the word “sick” in a short argument on outdoor relief to the impotent. If “medical relief” came under this clause, it was for the necessary relief of the poor who were not able to work.

⁷ Downes, 22925.

because, from the Commissioners' graphic description of the deplorable state of the workhouses in the small pauperised parishes, it is clear that the condition of the sick therein must have left much to be desired. The sick were housed with prostitutes, ex-gaolbirds, tramps, and other characters of the worst description, and their sufferings were not infrequently aggravated by "the incessant ravings of some neglected lunatic."¹ "In such receptacles," said the Royal Commissioners, "the sick poor are often immured." The explanation of the apparent omission is perhaps to be found in the fact that the Commissioners proposed to set up a system of "well-regulated workhouses" with improved classification of the inmates, in the benefits of which the sick would be sure to participate.² On the other hand, we must point out that the report did not specify the sick among the classes for whom it was deemed necessary to provide separate accommodation. There is, however, specific mention of sick wards in the workhouse rules published in the first Report of the Poor Law Commissioners,³ and, in their model plans for some of the larger workhouses, the midwifery cases were accommodated separately. Two classes of lying-in wards, "first" and "second" class,⁴ were provided, thus anticipating apparently what has often been urged, viz. the separation of the more respectable from the vicious.

15. For thirty years subsequent to 1834, attention was chiefly directed to the question of outdoor medical relief, and little progress was made in the arrangements for the treatment of the sick in workhouses. Indeed, although a relieving officer was empowered to send an outdoor pauper to the workhouse for treatment, it seems clear that the sick wards "were originally provided for the cases of paupers in the Workhouse who might be attacked by illness,"⁵ and that, even as regards such cases, the equipment was not always sufficient for their treatment. For example, in 1842, we find the Commissioners discouraging the performance of important surgical operations in Workhouses, and recommending that cases which require surgical treatment, or which have "long been the subject of medical treatment in the workhouse," should, if possible, be removed to an infirmary or hospital where they would enjoy "the practised skill and combined judgment of the medical men usually connected with such establishments."⁶

16. From time to time Select Committees⁷ enquired into the subject of medical relief, and evidence was occasionally submitted showing ill-treatment of patients in the sick wards of the workhouse. The cases had, it appears, usually been investigated by the Poor Law Commissioners, and the delinquent officials dismissed or reprimanded prior to the cases being brought under the notice of the Committees. The Committees may also have regarded them as isolated instances rather than as typical of the prevailing conditions. But, at all events, their reports contain no recommendation for the improvement of the lot of the sick pauper in the workhouse. The Select Committee of 1864, after an inquiry extending over three or four sessions of Parliament, reported that "the poor were never so promptly attended to, or so effectually relieved during sickness, as they are at the present time," and that there were "no sufficient grounds for materially interfering with the present system of medical relief" which "appears to be administered with general advantage."⁸ The tone of the Committee's Report, it will be observed, is extremely reassuring, and, in the light of the events which were so soon to follow, is significant of the general ignorance or indifference as to the condition of the sick poor in workhouses, which had generally prevailed up to this time.

17. The Report is dated May 31st, 1864; in the beginning of 1865, however, the circumstances attending the deaths of two paupers in London workhouses led to official inquiries into the treatment which they had received during their illness. "These inquiries disclosed serious defects in the state and management of the sick wards, and the publicity given to them led to further complaints, and attracted general notice."⁹ The matter was taken up and investigated by the *Lancet*; and deputations were sent to the Poor Law Board, who finally ordered "a full and searching inquiry into the state of the infirmaries and sick wards of every workhouse" in the Metropolis.¹⁰

¹ Report of Royal Commission of 1832 Report, p. 303. ² *Ibid.*, p. 306. ³ First Report of Poor Law Commissioners, 1835, p. 59. ⁴ *Ibid.*, App. A., No. 10. ⁵ Twentieth Annual Report, Poor Law Board, 1867-8, p. 28. ⁶ Explanatory Circular accompanying General Medical Order, 1842, *Vide* App. to Eighth Annual Report, Poor Law Commissioners, 1842, p. 82. ⁷ Select Committees on Medical Relief, 1844 and 1854, and Select Committee on Poor Relief, 1864. ⁸ Report of Select Committee on Poor Relief, 1864, p. 16. The only recommendation for the improvement of medical relief made by the Committee was that certain expensive medicines should be provided at the expense of the guardians instead of by the medical officer out of his salary. ⁹ Nineteenth Annual Report of Poor Law Board, 1866-7, pp. 15-16. ¹⁰ *Ibid.*

18. Mr. Farnall's Report on the Metropolitan Workhouses¹ showed that the sick wards were badly constructed, imperfectly ventilated, and frequently insanitary; that the beds were insufficient, and, being filled with flock, were generally in a lumpy condition; that the eating and drinking vessels were in many instances unclean; that there was a deficiency of easy chairs, bed rests, wash-hand basins, and even of combs, brushes and towels; that, generally speaking, the food for the patients was cooked (often badly) by paupers, and was frequently served nearly cold; that, although the medical officers did their duty to the best of their ability, the attendance given and the salaries paid were inadequate to the needs of the sick; and that the patients, frequently during the day and almost entirely during the night, were nursed by paupers, many of whom could neither read nor write, whose love of drink often drove them to rob the sick of the stimulants which they should have given them, and whose treatment of the poor was, generally speaking, characterised neither by judgment nor by gentleness.

(i) *Establishment of Separate Infirmaries.*

19. The immediate effect of these revelations was the passing of the Metropolitan Poor Act, 1867, which has been described by Dr. Downes as "the starting point of the modern development of Poor Law medical relief."² Under the Act, which applied to London only, the whole of the unions and parishes in the Metropolis were formed by an Order³ of the Poor Law Board into one district, called the Metropolitan Asylums District, for the treatment of insane, fever, and small-pox cases,⁴ which had hitherto been generally dealt with in the workhouse.⁵

20. A number of the Metropolitan unions and parishes were also grouped together and formed into sick asylum districts with a view to providing separate infirmaries for the non-infectious sick. Almost within a year of the passing of the Act, the Board were able to report that six sick asylum districts had been formed, and that seventeen unions had been asked to "provide infirmaries on sites detached from the workhouse."

21. But the erection of separate infirmaries to supply the needs of the Metropolis, each estimated to cost from £45,000 to £50,000, involved an enormous capital expenditure, and the Board, in 1868-9, considered it expedient to modify their policy to a slight extent. They found, after inquiry, that, by appropriating existing workhouses to separate classes of inmates, they could, without involving "so serious an outlay," provide the requisite accommodation for the sick poor.⁶ The sick asylum districts were thereupon reduced from six to two, at which number they still continue. This slight change of policy does not appear, however, to have been accompanied by any re-action on the part of either the Central or the local authorities in favour of abandoning the principle of separate infirmary treatment for the indoor sick. On the contrary, for many years subsequent to 1867, the reports of the Central Authority present an annual chronicle of steady progress; and in 1883-4 they were able to announce that the provision of hospital accommodation for the sick poor of the Metropolis, authorised by the legislation of 1867, was "nearly complete."⁷

22. It may be convenient to pause here for a moment to consider the nature of the infirmaries that were thus being provided. Though Poor Law establishments, they were quite separate from the workhouse. The cubic space per inmate, following upon the recommendations of the Committee of 1867,⁸ was on a greatly improved standard. Instead of discouraging operations, it was impressed on the guardians that the infirmaries should be supplied with "all reasonable and proper appliances for the treatment of diseases of every kind," and that everything should be provided which might "tend to

¹ H. C. 387, 1866. ² Downes, 22989. ³ Metropolitan Asylum District Order, dated 15th May, 1867. ⁴ By an Order issued in 1897 the Managers have also to provide for certain classes of children suffering from various contagious diseases, more particularly ophthalmia or ringworm; for convalescent and mentally or physically defective children; and for children remanded by a Magistrate under the Industrial Schools Act. A recent Order (dated 11th September, 1903) enables the Managers to provide hospital accommodation for sick poor children generally. Since 1876 the Managers have also trained boys for the sea service. ⁵ On several occasions the Board pointed out the need for separate accommodation for infectious cases. In 1869-70 they remark that "the absence of such accommodation has in many cases led to deplorable results." (Twenty-second Annual Report, Poor Law Board, 1869-70, p. xxxiv.)

⁶ Twenty-first Report, Poor Law Board, 1868-9, p. 16. ⁷ Thirteenth Annual Report of Local Government Board, 1883-4, p. xxxi. ⁸ Report of Committee on Cubic Space of Metropolitan Workhouses, 1867. [H.C. 3786-1867.]

promote a cure or alleviate suffering.”¹ Circulars² were issued containing “points to be attended to” in the construction of workhouses, and making suggestions as to fittings and medical appliances. The fittings of the sick wards were to be such as were “usually provided in the wards of general hospitals.”³ In addition to these improvements in the structure and equipment of the infirmaries, various measures were taken to improve their internal administration. The infirmaries were under separate administration, that is, they were placed under a resident medical superintendent with a resident doctor, or doctors, to assist him. The nursing staff was greatly augmented. To ensure that a higher standard of administration was maintained, the visiting committees were exhorted to perform their duties strictly and punctually,⁴ and the workhouses and infirmaries were inspected by the medical inspectors of the Central Authority, two inspectors having been appointed, one for the Metropolis and one for the provinces.

23. Concurrently with the erection of the new infirmaries in London, the Central Authority, acting presumably under their general powers which had been reinforced in 1866⁵ and again in 1868,⁶ carried out an active campaign of reform in the provinces. The enquiry into the London workhouses was extended to provincial workhouses and the reports of the inspectors showed that, while the great majority of the workhouses provided adequately for the due relief of the classes of inmates for whom they were intended: “In some instances, and particularly in parts of the manufacturing district, defects and abuses of a serious kind . . . existed.”⁷ Following upon these reports, the Central Authority took measures to induce Boards of Guardians to improve their workhouses, these improvements to include the supply of proper accommodation for the sick and infirm. Where the Guardians refused or neglected to improve workhouses which were inadequate or unfit, orders were issued by the Central Authority directing the closing of the buildings after a certain day. Recalcitrant unions were even threatened with dissolution.⁸

24. The effect of this campaign was to give a great stimulus to the immediate improvement of workhouse accommodation. Indeed, the extreme parsimony displayed by Boards of Guardians of the older school had given way to extravagance. There was now a danger that the infirmaries would be regarded as “State hospitals into which all the sick poor of the country might be received for medical treatment and care.”⁹ In many cases the Board were compelled “to intervene in order to check the outlay which the Guardians would be willing to incur in the more ornamental part of the various structures,” which they proposed to erect, and mention is made of a greenhouse for the supply of flowers to “one of the best infirmaries in the Kingdom” which had been erected by a Lancashire union.¹⁰

25. The progress thus initiated has continued. A number of the large provincial unions have provided infirmaries under management distinct from that of the workhouse, and in these the provision made for the indoor sick has been brought up to practically the same level as that obtaining in the Metropolis. In many other unions—rural as well as urban—the workhouse sick wards have been correspondingly improved.

(ii.) *Trained Nursing in Workhouses and Workhouse Infirmaries.*

26. As exemplifying the improvement in the indoor treatment of the sick, it will be convenient to outline briefly the great development that has taken place in regard to trained nursing. Under the General Consolidated Order of 1847 the only qualification prescribed for the paid nurse in a workhouse was that she should be able “to read written directions upon medicines.”¹¹ For the rest, prior to 1865 the indoor poor were chiefly nursed by paupers who, as indicated above, were often illiterate, drunken, and altogether unsuited for such work. Immediately following upon the disclosures of that year the Board issued a circular¹² which had for its object the promotion of “a better system of nursing in the hospitals and sick wards throughout the country.” The Board pointed out to the Guardians the expediency of providing a sufficient number of competent paid nurses, and recommended the discontinuance, as far as possible, of the practice of employing pauper inmates as assistant nurses.

¹ Twentieth Annual Report, Poor Law Board, 1867-8, p. 28. ² Circulars dated 13th and 15th June, 1868, *vide* Twenty-first Annual Report, Poor Law Board, p. 44 and 47. ³ *Ibid.*, p. 46. ⁴ Circular dated 6th July, 1868, *vide* Twenty-first Annual Report, Poor Law Board, 1868-9, p. 51. ⁵ 29 & 30 Vict., Cap. 113, Sec. 8. ⁶ 31 & 32 Vict., Cap. 122, Sec. 8. ⁷ Twentieth Annual Report, Poor Law Board, 1867-8, p. 27. ⁸ Twenty-second Annual Report, Poor Law Board, 1869-70, p. xxxv. ⁹ Twentieth Annual Report, Poor Law Board, 1867-8, p. 28. ¹⁰ Twenty-second Annual Report of Poor Law Board, 1868-9, p. xv. ¹¹ Art. 165 Gen. Consd. Order, 1847. ¹² Circular dated 5th May, 1865, *vide* Eighteenth Annual Report, Poor Law Board, 1865-6, p. 24.

Visiting Committees throughout England and Wales were, in 1869, reminded that night-nursing should be provided in the sick wards of the larger workhouses. Meanwhile, in London, definite action had been taken under the Metropolitan Poor Act. In each of the separate infirmaries the nursing was now altogether performed by paid nurses, and in the sick asylums a beginning was made with the training of probationer nurses. In 1874-5 we find the Board expressing the hope "that ultimately the system will extend so that each of the separate infirmaries now rising in the Metropolis may be able to train and supply its own nurses as they may be required."¹

27. By 1878-9 the Board were able to report that "in all the sick asylums and separate infirmaries" the system of employing pauper inmates as nurses had been "entirely superseded by the employment of paid nurses,"² and in 1891-2 further progress—more especially in the Metropolis and some of the larger provincial towns—was again reported "both as regards the number of nurses employed and their qualifications for the office."³

28. But public opinion as to the standard of care of the sick advanced rapidly, and, in 1895, the Local Government Board found it necessary to urge Guardians generally to improve their nursing arrangements where these fell short of modern requirements. A Circular was issued to Boards of Guardians enclosing a Memorandum by the Board's medical inspector, Dr. Downes, on the subject of the employment of paupers as nurses, which set out the reasons for discontinuing such a practice.⁴ In 1897 the Local Government Board took the further step of issuing an Order prohibiting such employment.⁵ No pauper inmate of a workhouse may now be employed "to perform the duties of a nurse in the sick or lying-in wards of the workhouse,"⁶ and no pauper inmate may be employed "as an attendant in the sick or lying-in wards of the workhouse, or upon any pauper in the workhouse who requires nursing, unless such inmate shall be approved by the medical officer of the workhouse for the purpose, or shall act under the immediate supervision of a paid officer of the guardians."⁷ With regard to the construction of the Order, the Local Government Board have stated that they consider that a pauper assistant may be employed in keeping the wards clean and in good order, in moving patients, in helping the nurse in changing wet and dirty cases, and in assisting in the distribution of food at meal times, but not in the actual feeding of the patients. The Order prescribed that nurses and assistant nurses should have "practical experience in nursing."⁸ It required, in every workhouse having a nursing staff of three or more persons, the appointment of a superintendent nurse with a qualification of at least three years' training in a recognised school.⁹ It also provided for the employment of a temporary nurse in the case of an emergency.¹⁰ "The result of the issue of that Order," says Sir Hugh Owen, "has been to effect one of the most marked revolutions in Poor Law administration in the last quarter of a century."¹¹

29. In 1902, a Departmental Committee of the Local Government Board inquired into the question of the nursing of sick poor in workhouses, and made recommendations as to :—

(1) The difficulties in obtaining an adequate supply of properly qualified nurses ;

(2) the qualifications and training of probationers and the qualification of superintendent nurses ; and

(3) the duties of the master and matron and of the superintendent nurse.

No general action appears to have been taken by the Board on the Report¹² of Committee.

¹ Fourth Annual Report, Local Government Board, 1874-5, p. xxviii. ² Eighth Annual Report, Local Government Board, 1878-9, p. xxxviii. ³ Twenty-first Annual Report, Local Government Board, 1891-2, p. lxxxvi. ⁴ Circular dated 29th Jan., 1895; *Vide* Twenty-fifth Annual Report, Local Government Board, 1895-6, p. 107. ⁵ Order dated 6th Aug., 1897. ⁶ *Ibid.*, Art. I. (1). ⁷ *Ibid.*, Art. (2). ⁸ *Ibid.*, Art. II. ⁹ *Ibid.*, Art. III. ¹⁰ *Ibid.*, Art. V. ¹¹ Fuller, Vol. I., Minutes of Evidence, App. xxi. (A) par. 47. ¹² [Cd. 1366], 1902.

30. By comparing the number of nurses employed at different dates, an approximate idea may be formed of the development that has taken place in trained nursing since 1866, when, as has been stated, the sick were mainly under the care of pauper nurses. At that time there were only 111 paid nurses in the whole of the Metropolitan workhouses. In 1883-4 the Metropolitan nursing staff had risen to 610 nurses in Poor Law infirmaries and 174 in workhouses.¹ According to the latest published statistics,² the number of trained nurses employed in the workhouses or workhouse infirmaries of England and Wales in 1901 was as follows:—

| | | | | | | | | |
|-----------------------------------|---|---|---|---|---|---|---|-------|
| In the Metropolis | - | - | - | - | - | - | - | 1,246 |
| In the rest of England and Wales, | - | - | - | - | - | - | - | 1,924 |

In addition, over 2,000 probationer nurses were employed.

“ Nothing is more striking in the recent history of Poor Law nursing than the enormous increase in the number of probationer nurses.”³

These figures denotes a great improvement in the quality of the treatment of the indoor sick.

31. The improvement may be further exemplified by particulars as to :—

- (a) The increase in the cost of indoor medical relief.
- (b) The provision made for surgical operations and treatment.
- (c) The improvement in the class of patients treated and a widening of the scope of medical relief.

(iii.) *Increase in the Cost of Indoor Medical Relief.*

32. There are no statistics showing the cost of treatment of the indoor sick prior to the passing of the Metropolitan Poor Act, 1867, so that it is impossible to ascertain precisely the effect which that Act had on the expenditure; but, as will be seen from the following table,⁴ there has been a large and progressive increase in the cost of infirmary treatment since 1878 :—

COST PER HEAD PER ANNUM IN METROPOLITAN INFIRMARIES.

| Years ended Lady Day. | Average. | Ranging from :— |
|-----------------------|----------|---|
| 1878 ⁵ | £37 | £28 to £54 (exclusive of loan charges). |
| 1888 ⁶ | £36 | £21 to £69 |
| 1897 ⁷ | £48 | £36 to £77 (inclusive of loan charges). |
| 1906 ⁸ | £60 | £43 to £95 (inclusive of loan charges). |
| | £50 | £36 to £75 (exclusive of loan charges). |

33. Evidence as to the increased capital expenditure ⁸ incurred in the erection of buildings for the sick between 1885 and 1904 was supplied to us by Mr. Davy, to whose evidence and statistical table we refer.⁹ According to his table the cost varies, we find, not only from year to year and in different districts, but also as between different infirmaries in the same district. As an example of the latter, we may cite the Bethnal Green Infirmary and the Central London Sick Asylum at Hendon—both erected in the same year—the cost of the former exclusive of site being £274 per bed and the cost of the latter £377.

¹ Thirteenth Annual Report, Local Government Board, 1883-4, p. xxxii and xxxiii. ² Report of Departmental Committee on Workhouse Nursing, Part II., App. iv., p. 156 [Cd. 1367], 1902. ³ *Ibid.*, Part I., p. 5 [Cd. 1366], 1902. ⁴ The figures have not all been compiled on the same basis, and they are not, therefore, strictly comparable. The difference in the method of compilation is not, however, sufficiently great to vitiate entirely their comparative value. The figures for 1877-8 are calculated from the number of days of maintenance, those for 1887-8 from the certified accommodation, and those for 1896-7 and 1905-6 from the number of occupied beds. The “average” of £48 per occupied bed given for 1896-7 is, however, merely the mean of the rates for 23 separate Institutions. ⁵ Eighth Annual Report, Local Government Board, 1878-9, p. 339. ⁶ Second Report of Select Committee on Metropolitan Hospitals (H.C. 457-1891), p. 776. ⁷ Paper handed in by Dr. Downes, Vol. II., Appendix xiii. (B). ⁸ Exclusive of the cost of the site. ⁹ Paper handed in by Mr. Davy, Vol. I., Appendix v. (3)

34. The average cost in the country appears to be about £150. It is somewhat higher (about £250) in London, partly owing to the operation of the Metropolitan Building Act,¹ partly to the fact that the Central Authority have prescribed 850 cubic feet per bed in London as against only 600 in the provinces, and partly also to the higher cost of labour in London than in the provinces. Our attention has been drawn to the rise in the cost of materials and wages during the last twenty years as affecting the expenditure on workhouse infirmaries throughout the country,² but this in itself would account, we think, for only a small proportion of the increase. As Mr. Kitchin, the architect of the Local Government Board, has stated, the cost of hospital accommodation is a moveable and rising standard, and Guardians are allowed "to put in things now, which . . . ten or twenty years ago were not invented, very likely."³

35. In spite of their increased expenditure, however, the Poor Law infirmaries are, on the whole, much less costly than the general hospitals, both as regards current and capital expenditure. This does not, of course, imply extravagance on the part of the latter, but is mainly accounted for by the more acute type of cases treated, and the greater amount of surgical work done, which necessitate a larger nursing and general administrative staff than are required in an infirmary. Especially is this the case where the hospital is also a medical school. The standard of bed space and the style of building are also frequently better in the general hospitals than in the infirmaries.⁴ On the other hand, as we shall hereafter show, we have received evidence to the effect that many Poor Law infirmaries are equal in these respects to the general hospitals.

(iv.) *The Provision made for Surgical Operations and Treatment.*

36. The Poor Law Commissioners, as we have shown, recommended that paupers requiring important surgical treatment should not be operated on in the workhouse but should be sent for that purpose to a general hospital. In the rural workhouses, and also in some of the urban infirmaries, this practice is still followed,⁵ but in a number of the larger infirmaries the most delicate surgical operations are now performed by the medical staff.

37. About 3,000 operations, some of them of a most serious and important character, are annually performed in the London infirmaries.⁶ We have no corresponding figures for the rest of England, but Dr. Fuller stated in evidence that, in some of the provincial Poor Law infirmaries, the percentage of recoveries from operations is higher than in the general hospitals.⁷ At Sheffield Infirmary the equipment of the operating room cost £500.⁸ Several of the London infirmaries have Röntgen ray apparatus, and Camberwell Infirmary has elaborate equipment for electrical treatment.⁹ These examples indicate that a great development has taken place in the character of the institutions in which large numbers of the sick poor now receive treatment. The growth of aseptic surgery and a public demand for improved methods have doubtless contributed to this result. But, as our evidence shows, two other causes, one internal and the other external, have been equally potent. In the first place, the guardians have been obliged to train their own nurses in order to maintain an adequate nursing staff, which alone has necessitated a certain amount of surgical work; and, in the second place, the pressure on the accommodation of the voluntary hospitals has driven into the workhouse infirmaries many persons needing surgical treatment.

(v.) *Improvement in the class of Patients treated in Workhouse Infirmaries, and widening of the scope of Medical Relief.*

38. The evils of the unreformed treatment of the indoor sick mainly arose from "the workhouse management—which must to a great extent be of a deterrent character—having been applied to the sick, who are not proper objects for such a system."¹⁰ Since 1867, however, the treatment of the indoor sick has been conducted "on an entirely different system," and the bulk of our evidence clearly shows that the poor now gladly accept the benefits of treatment in the infirmaries, notwithstanding

Decreased
deterrence of
Indoor Medical
Relief.

ing the investigation into their circumstances which the Poor Law requires. This is especially the case where the infirmary is separated from the workhouse, and where, as not infrequently happens, patients are directly admitted to and discharged from the infirmary without having to go through the workhouse.¹

39. District medical officers make more use of the infirmaries than formerly. They find less difficulty in inducing patients to enter for treatment which could not be properly given in the home.¹ The relatives of poor persons sometimes persuade them to go to the infirmary "as if it were a private nursing home,"² by telling them "how comfortable it is."³ Guardians and relieving officers, Mr. Bagenal informs us, are always impressing on the applicants for relief that the infirmary is not like the workhouse.⁴ Indëed, the deterrence has disappeared so completely in some districts, we are told, that poor persons are actually attracted from the country to the towns in order to obtain treatment in the infirmaries.⁵

Class of persons
using Poor Law
Infirmaries.

40. We have received a large body of evidence showing that, both in London and in the provinces, the infirmaries attract persons of a higher social position than formerly.

Thus, Mr. Davy says :—

"We are . . . tapping a social stratum which was not formerly accustomed to yield pauperism, and a great many people go into sick asylums now who would not have gone into them in the old days."⁶

And again :—

"The whole character of the administration has changed . . . and a class of sick come into the Poor Law Infirmaries now that never did come before."⁷

Mr. Lockwood says :—

"The improved conditions of infirmary relief have had the effect of inducing an increased number of persons ordinarily above a *status* of poverty approaching destitution, to make use of them."⁸

And again :—

"The evidence that a better class than formerly resort to the Poor Law infirmaries is to be found in the appearance of relatives and other visitors to patients, the number of cases where payments are recovered by guardians, and of those where funerals are conducted and paid for by friends or relatives."⁹

Mr. Lockwood also mentioned that domestic servants when sick are not infrequently, in certain parts of London, sent to the infirmary on the recommendation of a private practitioner :—

"So excellent is the treatment and the provision for patients in Poor Law institutions that the family doctor says : 'Send them away to the infirmary.'"¹⁰

Mr. Court says :—

"Many fairly well-to-do people go to the Edmonton Infirmary."¹¹

Mr. Thurnall, Lambeth, says :—

"They are a better class than they were. I recollect thirty years ago, and I should say that the class has improved steadily."¹²

Mr. Thompson, President of the Metropolitan Relieving Officers' Association, says :—

"A large number of persons apply for admission to the infirmary who would not otherwise do so, or who do not need to do so. The standard of a union infirmary has been so improved that, generally speaking, it equals, if it does not surpass, that of the general hospitals, many people preferring the infirmary to the hospital. People now seek admission to the Infirmary who, formerly, never dreamt of doing so."¹³

Dr. McVail reports :—

"In one district [Camberwell], a very large addition was made in 1903, yet the whole building [the infirmary] is again fully occupied, to some extent by a better class than had previously received

¹Davy, 2858; Fleming, Vol. I., App. xix. (A), par. 28; Downes, 23105; Raw, 38177-8; Kemp, 46720-1. Report by Dr. McVail, p. 146. ²Spurrell, 23387. ³Herbert, 8179. ⁴Bagenal, 7120. ⁵Herbert 8184, 8255; Morris, 16641. ⁶Davy, 2342. ⁷Davy, 3100. ⁸Lockwood, 13437. ⁹Lockwood, 13442. ¹⁰Lockwood, 13608. ¹¹Court, 6604. ¹²Thurnall, 15774. ¹³Thompson, 22615.

Poor Law relief.¹ . . . In Camberwell it is alleged that the ordinary 'infirm' cases have been largely driven out of it [the infirmary], and drafted into a workhouse, in order to make room for better off patients, and there seems a good deal of foundation for the statement.² . . . The infirmary has attracted to itself many patients somewhat above the average level of pauperism, so that its wards are kept well filled, and many sick paupers of the ordinary class have to be retained in or sent to the workhouse."³

And again:—

"I was interested to learn that in some large cities the advantages of these maternity departments are coming to be so much appreciated that various underhand expedients are adopted to secure admission to the wards. A married woman will demand to get in on the ground that she is not married, or that her husband has deserted her. When this latter plea is advanced, if the application is made early enough to permit inquiry, a relieving officer usually visits the house, and, to meet this contingency, the husband, it is said, actually does go away to live elsewhere for a few days."⁴

A Committee of our number report:—

"Co-operation between the workhouse infirmary and the voluntary hospital is very complete, but poor people prefer the workhouse infirmary, as in larger towns direct admission to the infirmary is becoming common."⁵

Sir William Chance says:—

"As regards the Poor Law Infirmaries, there is not the same reluctance as formerly to enter their doors, and they are actually used by a class of people who, thirty years ago, would never have done so."⁶

Dr. Nathan Raw, Liverpool, says:—

"A very large number of people who are not destitute, and are not by any means paupers, do not hesitate to use them" [the Poor Law infirmaries].⁷

And again:—

"The great majority of people who apply for Poor Law relief in consequence of acute sickness are not paupers."⁸

41. The rise in the social condition of the patients may further be illustrated by the payments for treatment made either by the patients themselves or by their relatives. Thus, Mr. Kemp, Leicester, informed us that, so far from there being any reluctance to come into the infirmary, he has actually had applications from persons to come in as paying patients.⁹

Mr. Cleaver, West Derby, Liverpool, says:—

"Mill Road has become now a general hospital, and is no longer a Poor Law hospital. You will understand that when I tell you that we collect from relatives over £5,000 a year. You will see from that the class of people that unfortunately come to us."¹⁰

Mr. Waite, King's Norton, Birmingham, says:—

"The advantages of the infirmary treatment are so obvious to some people that the more sensible of them will put their repugnance to its being a Poor Law institution altogether on one side; I have known cases where people come in for the sake of getting the treatment which they cannot get otherwise, and then a return is offered."¹¹

Dr. Spurrell, Poplar and Stepney Sick Asylum, says:—

"Many medical practitioners, too, avail themselves of the presence of a Poor Law infirmary to recommend for admission such of their patients as, either by reason of their limited means or the nature of their illness, are unable to receive proper treatment in their own homes: in such cases the guardians making proportionate charges."¹²

(Q.) "And they would admit the patient on the understanding that so much per week was to be paid for the patient?"—(A.) "Yes."¹³

A Committee of our number, in a report on their visit to a Midland workhouse infirmary, say:—

"The matron, a very capable person, showed us part of the infirmary. They are very full, and building constantly new wards. Some paying patients are admitted, paying anything up to 10s. 6d., which is the maximum charge."¹⁴

¹ Dr. McVail's report, p. 43. ² *Ibid.*, p. 42. ³ *Ibid.*, p. 50. ⁴ *Ibid.*, p. 57. Cf. also Stansfeld, Vol. I. App. xxvi. Another committee report :—

“The infirmary is practically a general hospital, and caters for a class slightly better than the ordinary *habitués* of a workhouse. A considerable sum is recovered each year from relatives, as much as 10s. a week being paid in some cases. One patient, a paralytic, was mentioned as being the brother-in-law of one of the richest men in * * *, who repaid the whole cost of treatment, etc., to the guardians.”¹

42. An instance of a further provision made for sick persons of social position above the usual pauper class is furnished by the Bradford Union. Mr. Crowther, the clerk, says :—

“The guardians have provided for the phthisical sick in the incipient stages a sanatorium on a suitable site in the country, and all persons resident in the union found to be in that stage of the disease, whose income does not allow them to reside at a private sanatorium, are accepted on the recommendation of their private medical attendant.”²

43. On the other hand, we must not fail to observe that indoor medical relief, where still given in the workhouse, is strongly deterrent to certain, and perhaps often the poorer and more self-respecting, members of the community, especially in country districts. For instance, there are the numerous cases of rural paupers that would be much better treated in the sick wards than at home, by whom “the workhouse sick wards . . . are . . . abhorred.” To them, the sick wards are “distinctly and strongly repellent.”³ Even in towns there is, it appears, a strong prejudice in the minds of many poor people against entering the workhouse sick wards.⁴ Again a respectable married woman, we are informed, is sometimes deterred from taking advantage of the maternity wards⁵ because her child would be registered as having been born in the workhouse.⁶ To overcome this objection it is said that resort is sometimes had to the expedient of registering the address under the number of the street in which the workhouse is situated, or by some other designation which will not connect it with the Poor Law. On the whole, however, we think there is no doubt that the great improvements in indoor medical relief—taken perhaps in conjunction with the operation of the Medical Relief Disqualification Removal Act—have done much to encourage poor persons to enter the workhouse sick wards and infirmaries.

44. The tendency to increased use of the Poor Law infirmaries has been augmented by other forces working silently but none the less powerfully. In the first place, the activities of the Sanitary Authorities have emphasised the importance of institutional or segregative treatment of infectious diseases. By educating public opinion in this respect a demand has been created for such treatment, but, except in a few places, the Sanitary Authorities have not provided isolation hospitals for any but the very highly infectious diseases. Accordingly, as Dr. Spurrell points out :—

“The infirmaries are the only institutions to which such infectious diseases as erysipelas, puerperal fever, measles, whooping cough and chicken-pox can be sent for treatment.”⁷

Such cases are, therefore, frequently treated in the workhouse infirmaries. And the same may be said of a large number of venereal cases which are unable to gain admission to the very few voluntary lock hospitals in existence.⁸

45. In the second place, the great advance in medical science during the latter half of the nineteenth century has led to increased pressure upon the accommodation of the general hospitals which, although extended from time to time, are insufficient to provide for all who seek to enter them. One of the effects of this pressure has been a transference, both directly and indirectly, of cases from such hospitals to the Poor Law—a matter to which we shall again have occasion to refer.

46. In the third place, in some parts of London and in certain provincial districts, e.g., Camberwell, Woolwich, Bedwelty, etc., general hospitals are either non-existent or are too inaccessible. Accordingly, when an accident occurs, it is, as a matter of course, removed for treatment to the Poor Law infirmary, as the only place available. In such districts “absolute destitution,” as implying an inability to provide the necessary medical or surgical treatment, acquires a new significance and may, as regards accident

¹ Visits: Provincial Urban Unions, No. 25. ² Crowther, Vol. IV., App. lxiii., par. 9 (f).

cases at least, include within its scope the whole population of the district, rich and poor. The Poor Law infirmary here becomes *de facto* if not *de jure* a general hospital for the community.

47. As showing the tendency of the infirmaries to fill the place of general hospitals, the following selections from our evidence may be quoted.

Poor Law In-
firmaries as
General Hospitals

Mr. Foster, Camberwell, says :—

"We are unfortunately placed, and that makes it necessary for Camberwell to make such medical provision for the poor as it does. . . . We are right in the middle of a very large district, with nothing but the medical provision that the guardians make to meet necessitous cases of sickness. Then it is rather alarming to some of us that we have to make provision out of our poor rate for so many cases of accident and urgent cases that we have to bring in. In the year ending Lady-Day, 1906, the police brought into our infirmary no less than 170 cases, and specially urgent cases had to be admitted to the number of 142, so that we admitted even with our limited accommodation of 800 odd beds . . . 312 cases from outside that would, if there had been hospitals, have been treated in hospitals rather than in a Poor Law infirmary. Of course, that makes our expenses for the infirmary go up very considerably, and deprives us of beds that the poor themselves should occupy." ¹

Mr. Cutter, Woolwich says :—

"An accident case is simply put upon an ambulance and brought to us, and the medical officer must admit it; he cannot be inhumane. Afterwards we recover, if we can, but as a rule from these street accidents we do not get very much." ²

And again :—

(Q.) "Your infirmary serves to a large extent as a hospital?"—(A.) "It does to a large extent." (Q.) "You get casualty cases coming?" (A.) "A very large number." ³

Dr. Spurrell, Poplar and Stepney Sick Asylum, says :—

"Cases of urgent sickness occurring in the streets, and those taken ill while in custody are brought by the police to the infirmary for admission." ⁴

And again :—

"In some parts of London there is no general hospital anywhere near the infirmary." (Q.) "And so the infirmary takes the accidents?"—(A.) "Yes, and those cases that would otherwise go to the general hospital, if there were one in the neighbourhood." ⁵

Mr. Cleaver, West Derby, Liverpool, says :—

"Unfortunately, there are more beds in the Mill Road Infirmary than in all the voluntary hospitals in Liverpool combined, and these hospitals have no beds at their disposal. The consequence is that the voluntary hospitals are continually refusing cases and sending them to Mill Road. Mill Road has become now a general hospital, and is no longer a Poor Law hospital." ⁶

Dr. Brown, Bedwelty, says :—

"The workhouse infirmary has in this and similar districts come to be looked upon as the general hospital for the district, and cases of urgent illness and accident occurring to those on the border lines of pauperism have found admission and treatment there." ⁷

And again :—

(Q.) "Does that bring cases under the Poor Law which, if there was an available general hospital, would not come under the Poor Law?"—(A.) "Yes, it does, and in certain cases the guardians have taken notice of these matters when compensation has been paid; where compensation has been paid to an injured patient, they have recouped themselves, or made him recoup them." ⁸

Mr. Manton, Birmingham, says :—

"It [the infirmary] is a casualty hospital, for in the midst of great works and street risks casualties cannot be refused admittance, though the interests of ratepayers are safeguarded as much as may be." ⁹

And again :—

"Our doors are not closed to anyone. A lady was thrown from her cycle a few months ago, and she was [in the infirmary] for three weeks, although it was not a Poor Law case at all. In that instance, I believe, the husband paid something to our treasury in acknowledgment of the services rendered." ¹⁰

¹ Foster, 16343. Cf. also Downes, 23211-2. ² Cutter, 19033. ³ Cutter, 19365-6. ⁴ Spurrell, 23303 (6). ⁵ Spurrell, 23311-2. ⁶ Cleaver, 36142. ⁷ Brown, 34233(9). ⁸ Brown, 34352. ⁹ Manton, 43626 (11). ¹⁰ Manton, 43734.

In a report by one of our number on his visit to a country union, he says :—

“The matron is a trained nurse. She had recently the pleasure of nursing the local Member of Parliament, who happened to have an accident of a serious nature whilst motoring in the district. He was exceedingly well pleased with the attentions he received. He sent a cheque to the clerk for his maintenance and £10 to the master to be spent on the inmates at the master’s discretion.”¹

And in his report on another rural workhouse, the same member mentions :—

“A serious accident occurred to a shunter of the railway on the day of my visit ; the man was removed to and nursed in the sick ward of the workhouse, it being the only institution for treating such a case.”²

Another member reports :—

“There is no large local hospital. Accidents are often brought to the infirmary, but relations are summoned to remove them as soon as possible. Paying patients allowed only under exceptional circumstances.”³

48. It should, perhaps, be observed that our remarks as to the tendency for the infirmaries to become general hospitals and to attract persons of higher social standing than the ordinary pauper apply in the main to the Metropolitan and large provincial unions. In the majority of unions the workhouse sick wards—although greatly improved both structurally and otherwise—still form part of the general mixed workhouse and are occupied chiefly by workhouse inmates who may fall sick.

(c) POOR LAW OUTDOOR MEDICAL RELIEF.

49. Prior to 1834 arrangements, “almost infinitely various,”⁴ had been made by the Overseers for providing the outdoor sick with medical attendance, which the Royal Commissioners found to be generally adequate if “only the price and the amount of attendance” be considered.⁵ Beyond giving their approval, therefore, to certain attempts that were being made to promote the establishment of provident dispensaries, their Report contains no proposal for the improvement of outdoor medical relief.

50. In their administration of outdoor medical relief, the Poor Law Commissioners had in view the restoration of the labouring classes to a position of independence. The Commissioners early realised that medical relief might be a more popular form of relief than ordinary relief, and that its development might perpetuate the evils of dependence on parochial aid in districts where ordinary outdoor relief to the able-bodied had been abolished.⁶ Applications for medical relief were therefore to be closely scrutinised⁷. It was to be given only in cases of actual destitution, and every endeavour was to be made to induce the labouring classes to join sick clubs or friendly societies.⁸

51. The system of outdoor medical relief set up by the Commissioners is, with a few exceptions the system now in force. Briefly, it is as follows :—The guardians were to divide the union into districts and to contract with a doctor, or doctors, to supply medical attendance and medicines. A poor person in need of medical relief might obtain it by an order from the guardians, their relieving officer, or an overseer. Permanently disabled aged and infirm paupers were to be entered on a list and supplied with a ticket entitling them to medical relief at any time without a special order. This list came to be described as the “permanent list.”⁹

(i.) Medical Officers’ Districts.

52. The sub-division of unions into medical relief districts, originally left to the Guardians as being “the most competent judges on the subject,”¹⁰ gave rise to much complaint on the part of the medical profession, and the Select Committee of 1838 reported that “in many instances” the districts “were inconveniently large.”¹¹ Following upon that Report, the General Medical Order, 1842, and subsequently the General Consolidated Order, 1847, still in force, ordained that a medical officer’s district should not exceed 15,000 acres in extent, or contain a population of more

than 15,000 persons,¹ unless in the case of Wales, or such other exceptional cases as the Commissioners might approve.² An Order of 1871³ exempted the whole of the medical officers' districts in the Metropolis from the operation of the rule, the circumstances of the Metropolis being "so exceptional that . . . the limit referred to is not required."⁴ In practice it appears that the exceptions allowed by the Central Authority are fairly numerous.

(ii.) *Remuneration of Medical Officers.*

53. Originally the remuneration of medical officers was fixed by open competitive tender. This practice, adopted by the Poor Law Commissioners as an expedient for ascertaining what the medical profession themselves would regard as fitting remuneration for their attendance,⁵ gave rise to loud and general complaint, and it was abolished by the General Medical Order of 1842. The chief difficulty of the Commissioners was to find a method of remuneration which, whilst securing sufficient and proper treatment for every pauper, would tend to check indiscriminate medical relief. It was felt that, if the medical officer were paid by a fixed salary, the guardians and relieving officers would have no inducement to restrict the granting of medical orders, inasmuch as an increase in their numbers would not cause a direct or immediate increase of the rates. On the other hand, it was feared that if the medical officer were paid by a fixed fee per case, it might operate in an exactly opposite direction, and that poor persons might not get the medical relief to which they were entitled.⁶

54. The Commissioners accordingly recommended a combination of both methods of payment, viz.:—a fixed salary for attending paupers on the "permanent list," and a fee per case for all other persons whom the medical officer might be called upon to attend. Among other advantages claimed for the combined method of payment, were these:—it enabled medical relief to be given on loan, and it secured prompt and effective treatment for aged, infirm, and helpless persons, on whom medical officers could attend without any specific order from the Guardians or their relieving officer. It does not appear that the combined method of remuneration ever came to be generally adopted. Medical officers were for the most part paid by fixed salary—a practice which largely prevails at the day.

55. In addition to his salary a district medical officer is, however, allowed special fees for surgical operations and obstetrical work, in terms of a scale originally fixed by the General Medical Order, 1842.⁷ Special fees are also paid for work under the Lunacy and Vaccination Acts, and the Guardians may, with the approval of the Central Authority, award a gratuity to a medical officer for exceptional services, or to recoup him for necessary assistance.

(iii.) *Medicines.*

56. For about thirty years, all medicines which might be required were, as a rule, provided by the medical officer out of his salary. But, following upon the Report of the Select Committee of 1864,⁸ the Poor Law Board advised the guardians to exclude such medicines as cod-liver oil and quinine from the medical officer's contract, and to make other arrangements for their supply.⁹ Apart from these, it may generally be said that medicines are still supplied by medical officers out of their salaries—except in unions which have established dispensaries, where a different system is followed.

(iv.) *Poor Law Dispensaries.*

57. The Metropolitan Poor Act, 1867, which revolutionised the system of indoor medical relief in London, also provided for the establishment of dispensaries throughout the Metropolis.¹⁰ These dispensaries were a great advance on the previously existing arrangements for the supply of outdoor medical relief. Thus, instead of the medical officer having to supply medicines out of his salary, they were now provided by the Guardians, and dispensed by a dispenser, giving his whole time to the work. The dispensary was conveniently situated. The poor who were able to go to the dispensary

¹ General Consolidated Order, 1847, Art. 159. ² *Ibid.*, Arts. 160 and 161. ³ Medical Officers (Metropolis) Order dated 13th Dec. 1871. ⁴ Circular dated 19th Dec., 1871, *vide* First Report, Local Government Board, 1871-2, p. 69. ⁵ First Annual Report, Poor Law Commissioners, 1835, p. 30. ⁶ "Continuous Report" of Poor Law Commissioners, 1840; also Seventh (1841) and Eighth (1842) Annual Reports of Poor Law Commissioners. ⁷ The scale of fees now in operation is prescribed by the General Consolidated Order, 1847, Art. 177. ⁸ Report, p. 45. ⁹ Circular dated 12th April, 1865, *vide* Eighteenth Annual Report of Poor Law Board, 1865-6, p. 23. ¹⁰ 3031 Vict., Cap. 6, Sec. 38.

were now certain of seeing the medical officer at a fixed hour every day. The system provided a better check on the medical officer's treatment of cases and secured a more effective control over the whole administration of outdoor medical relief.¹ The Central Authority also claimed that the appointment of a medical officer to a dispensary gave him greater publicity, heightened his responsibility, and stimulated his energies.²

58. Contrary to expectation, the cost of providing a dispensary was found to be "extremely small"; in many cases the dispensary was simply an ordinary dwelling house, with a waiting room for patients built on the ground behind; or it was sometimes combined with other buildings, such as an infirmary, relief office, or labour yard.³ From time to time the Central Authority reported that the dispensary system had been followed by satisfactory results, and that it had "raised the standard and increased the efficiency of medical out-relief in the Metropolis."⁴

59. Incidentally, it may be mentioned that the establishment of dispensaries was followed by a great reduction in the number of medical orders. Better organisation contributed, no doubt, to this result. But the decrease was, it appears, partly due to district medical officers sending "the great majority of serious cases" to the Poor Law infirmaries instead of treating them at home.⁵ The crusade against out-relief, which commenced soon after the dispensary system was established, may also have caused a diminution in the number of orders.

60. Although the Metropolitan dispensaries were established under Statute, the Central Authority, acting presumably under their general powers for the regulation of poor relief, appear to have authorised the establishment of dispensaries in a number of the large urban centres, *e.g.*, at Birmingham, Leeds, Wolverhampton, Nottingham, Derby, Sheffield, Cardiff, and Plymouth.⁶ Some of the provincial dispensaries were merely for the supply of medicines to the workhouse; but, in other cases, an organisation of outdoor medical relief was set up on parallel lines with that of the Metropolis.

61. On different occasions the Central Authority have considered proposals for the establishment of "medicine chests" or dispensaries in rural districts; but the practical difficulties of storing and dispensing the medicines and of keeping them fresh were regarded as fatal objections to the proposals. Indeed, on one occasion (1840), the Poor Law Commissioners indicated that the difficulty of obtaining medicines in a scattered union might be best obviated by reducing the size of the medical officer's district.⁷ By 1878, the policy of the Central Authority had, however, undergone some modification. For, in reply to a *Lancet* Memorial, we find it stated that—

"Where . . . the circumstances of the union admit of the Guardians establishing a dispensary or arranging for a supply of drugs to be kept at the workhouse, or elsewhere, to be dispensed by the medical officers under proper restrictions, it is already the practice of the Board to encourage such an arrangement."⁸

This implied considerable improvement in the arrangements for the supply of drugs to the outdoor sick, but, as has been mentioned, medicines are still provided by the medical officer in the great majority of unions.

(v.) *Nourishment.*

62. The Central Authority decided that a medical officer had power to recommend, but could not order, extra nourishment (*e.g.*, milk, or beef tea,) to be supplied to a sick person under his charge.⁹ If the Guardians doubted the propriety of supplying such nourishment at the expense of the rates, they were to require the medical officer to state in writing the grounds on which he made the recommendation, and to obtain from the relieving officer a report on the circumstances of the patient and his ability to supply the nourishment in question.¹⁰ It was

¹ Twenty-second Annual Report of Poor Law Board, 1869-70, p. xlvii. ² First Annual Report of Local Government Board, 1871-2, p. xxviii. ³ Fifth Annual Report of Local Government Board, 1875-6, p. xxix; *cf. also* Sixteenth Annual Report, 1886-7, p. xlv. ⁴ Sixteenth Annual Report of Local Government Board, 1886-7, p. xlv; *cf. also* Twenty-first (1868-9) and Twenty-second (1869-70) Reports of Poor Law Board; and First (1871-2), Second (1872-3) and Fifth (1875-6) Annual Reports of Local Government Board. ⁵ Sixteenth Annual Report of Local Government Board, 1886-7, App. B, p. 91. ⁶ Fuller, 10541; Bagenal, 7448; Twenty-third Annual Report of Poor Law Board, 1870-1; Twelfth (1882-3) and Fourteenth (1884-5) Annual Reports of Local Government Board. ⁷ "Continuance Report" of Poor Law Commissioners, 1840, p. 46. ⁸ Eighth Annual Report, Local Government Board, 1878-9, App. A, p. 90. ⁹ Seventh Annual Report, Poor Law Commissioners, 1841, p. 10. ¹⁰ "Official Circular," Vol. 9, p. 134.

suggested, however, that, in emergency cases, the medical officer's recommendation should be considered by the relieving officer or the overseer as an order to be obeyed until the matter could be brought before the Guardians at their next meeting.¹

63. The supply of extra nourishment has always been a matter of considerable difficulty. On the one hand, great responsibility rested on the Guardians and their relieving officers if, after refusing the nourishment, anything untoward happened to the patient. On the other hand, it was found that poor persons frequently applied for medical relief, not so much because they needed it as because they desired the nourishment which often accompanied it, and in this way it was frequently a cause of pauperism. The evidence which we have received on this latter point is practically to the same effect.²

64. Realising that any laxity in the administration of extra nourishment might lead to increased pauperism, the Central Authority took precautions to ensure that such nourishment should be administered with care and discrimination. Thus, in their instructions to the Poor Law inspectors in 1871 they stated :—

“That, as the recommendations of Medical Officers for meat and stimulants are regarded as equivalent to orders for additional relief, they should, in all cases, be accompanied by a report from the Medical Officer in a prescribed form, setting forth the particulars of each case ascertained by personal inquiry.”³

In 1878 a memorial from the *Lancet* on “Poor Law Medical Relief Reform” pointed out that—

“Medical ‘treatment’ consists quite as much in the administration of a sufficient and appropriate diet as in the exhibition of drugs, and the object of the medical officer and guardians alike is to cure.”⁴

The memorialists recommended, therefore, that the supply of “necessaries” for the sick should be under the control of the medical officers without the intervention of the relieving officer.⁵ To this, Mr. Selater Booth replied that—

“The effect of substituting the authority of the medical officer for that of the relieving officer as proposed, would be practically to withdraw from the control of the guardians, a description of relief which, as it has a constant tendency to increase, requires to be most carefully watched.”⁶

And he added that there were no just grounds for believing that the “reasonable recommendations of the medical officer in this respect” were not duly attended to by the Guardians and their officers.⁷ Generally speaking, that reply may be said to represent the views of the Central Authority at the present day.

65. Our evidence shows that, as a rule, the Guardians give effect to the medical officer's recommendations for extra nourishment⁸ but that they sometimes decline to supply alcohol on the ground that it cannot be safely administered in the pauper's own home, and that, if the medical officer thinks that alcohol is necessary, the pauper should come into the workhouse to receive it.⁹ There is, however, sometimes, an undesirable delay in supplying sick paupers with extra nourishment.¹⁰

66. “There is,” Mr. Davy says, “a continual struggle on the part of medical officers and others to give medical comforts, or what are called medical extras as a part of relief. . . .”¹¹ The expenditure on medical extras is said to be growing, probably because “sagacious paupers” seek medical relief for the sake of the medical extras and make a “fine art” of the practice.¹² It appears however that pressure is sometimes put upon medical officers to avoid giving medical comforts as far as possible,¹³ but it is obvious that treatment at home is difficult unless the additional requisites and nourishment are found.

(vi.) *Nursing of Outdoor Sick Poor.*

67. Although, as Mr. Sclater Booth informed the *Lancet* Memorialists in 1878, there was nothing to prevent the Guardians supplying a paid nurse to assist the medical officer in the domiciliary treatment of a sick person,¹ it was not until 1892 that the Central Authority issued an order empowering the Guardians to appoint district nurses.² This power has not been largely used. As a matter of fact, only the Guardians of a few urban unions have appointed nurses. But, as Dr. Downes has informed us, the Order has "had the indirect effect of stimulating subscriptions to nursing associations."³ By means of these subscriptions, sometimes liberal but more frequently only nominal in amount, the Guardians in many unions now secure a certain amount of nursing for the outdoor sick.

68. There has been, during recent years, a remarkable expansion of voluntary effort for the provision of district nurses. As an instance of the voluntary associations we may quote the following from the evidence of Mr. Baldwyn Fleming:—

"In Dorsetshire, the Dorset Health Society have a system of nursing which it was intended should cover the county, and which, if it is not already doing so, I hope in course of time will do so. Their head-quarters are at Dorchester, and they are, I believe, more or less in connection with the county hospital. They have certain centres. . . . At these centres they keep one or two trained nurses who have some knowledge of midwifery. . . . Then under them they have what they call cottage nurses, and they are what you want so much in the country districts. They are not trained nurses, but they work under the supervision of a trained nurse. They do not do the trained nursing work, but they do the general work of getting the patient in a condition to benefit by trained nursing—that is, they clean the cottage, they are willing to live in the cottage, they will do the cooking, they will keep the windows open, they will take the sack of straw out of the chimney, and clean out the accumulation from under the bed, they will wash the people, and see that the beds are properly made and properly sheeted, and that the patients are properly dressed, washed, and kept clean."⁴

From a Memorandum sent in by the Queen Victoria Jubilee Institute for nurses we learn that:—

"The total number of nurses in England and Wales on August 1st, 1907, in connection with the institute, including Queen's nurses and probationers, village nurses and midwives, was 1,803. . . . The total number of nurses in Scotland and Ireland on January 1st, 1907, in connection with the institute, including Queen's nurses and probationers and midwives, was 456." . . .
 . . . Of the nursing associations in England and Wales affiliated to the institute, 242 have received annual grants from Boards of Guardians, amounting to £3,632 15s. . . . In the same way, of the associations affiliated to county associations (employing about 493 village nurses) 144 have received grants from Boards of Guardians amounting to £386 11s."⁵

69. In two unions (Chichester and Merthyr Tydfil) the plan of making the nursing staff of the workhouse available also for district nursing among the Poor Law patients, has been tried with success, and it is thought by some witnesses that this system could be extended with great benefit.⁶

(vii.) *Medical Relief on Loan.*

70. Chief among the methods adopted for rendering the condition of the recipient of outdoor medical relief less eligible than that of the independent labourer, was the practice, recommended by the Poor Law Commissioners, of giving medical relief by way of loan. Apart, however, from the disinclination shown by local authorities to restrict the granting of medical relief, there was a practical difficulty in giving effect to the recommendation. Where the medical officer was paid a fixed salary, it was impossible to determine the proportion that might be charged in respect of any particular case. The suggestion of the Poor Law Commissioners, that the difficulty might be overcome by paying the doctor partly by fees, was not, as we have indicated, adopted by Boards of Guardians to any appreciable extent. Accordingly, in many parts of the country medical relief is not given on loan, or is limited to certain classes of persons, *e.g.*, as at St. Pancras,⁷ to those having over 20s.

¹ Eighth Annual Report, Local Government Board, 1878-9, App. A, p. 91. ² Order dated 27th Jan., 1892. ³ Downes, 22986. ⁴ Fleming, 9337; *cf. also* Evidence by Mrs. Hudson and Miss Walsh, Salop County Nursing Federation, Qs. 72406 *et seq.* ⁵ Vol. IX., Minutes of Evidence, App. lv. ⁶ Fuller, 10377; Lowry, 12140; Bagenal, Vol. I., App. xv., par. 130; Fleming, 9340; James, 4834 (24); Biddle, 48888 (6). ⁷ Craig, 19466 (19).

a week. Further, in some Unions where medical relief is given on loan, no attempt is made to recover the cost, while in others only a small proportion is recovered. For example, it appears from a return as to loan medical relief in London, that, in 1904—

“The greatest amount that was recovered by any union was recovered by Camberwell; they got £6 2s. for midwifery and 19s. 6d. for ordinary medical relief. A great many unions recovered nothing; Lambeth recovered 2s. 6d.”¹

The amounts recovered in London are, it seems, paid into the Metropolitan Common Poor Fund, so that there is not much inducement to an individual Board of Guardians to collect the cost of relief which they may have given on loan.²

On the other hand it appears that in Stow Union about two-thirds,³ in St. Neots 10 per cent.,⁴ and in another district about one-half of the loan relief is recovered.⁵ In Yeovil, where recovery is successfully carried out, the relieving officer collects the money in small instalments.⁶

71. But although no portion, or only a small portion, of loan relief may be recovered, it is claimed that the mere granting it on loan has a tendency to prevent persons from applying for medical relief a second time.⁷ If this be so, the practical result would appear to be that medical relief is made deterrent to the honest who would wish to pay, but not to those who easily repudiate their obligations.

72. The objection to free medical relief, forcibly put to us by Mr. Davy, is that it “will interfere with provident societies, and efforts of that kind to induce the poor to provide for themselves.”⁸ Indeed, a number of witnesses have recommended that all medical relief should be given on loan.⁹ One witness said, however, that, in some districts, the poverty of the inhabitants would make it impossible to insist on this being done and that, to fix a small rate of repayment is objectionable on the ground that it would induce persons to apply for medical relief if they found that they could get it so cheaply.¹⁰ Besides, any such system is apt to create an erroneous impression that the entire cost is being repaid.

(viii.) *Deterrence of Outdoor Medical Relief.*

73. In addition to granting medical relief on loan, various other expedients have been adopted for the purpose of restricting medical relief, or of making it deterrent. Thus, in some Unions, the “permanent list” of paupers has been abolished, and all medical relief must be obtained on the order of the relieving officer.¹¹ Again, there is frequently a rule that all applicants for medical relief must appear before the Guardians,¹²—a method which is made still more effective by limiting the duration of the order to, say, two weeks or a month, so that the cases come up periodically for review.¹³ All of these expedients tend to keep the labouring classes from applying for medical relief in sickness. In one Union, indeed, outdoor medical relief, unaccompanied by other relief, has been entirely abolished.¹⁴

74. In the opinion of a number of witnesses, one of the greatest deterrents of outdoor medical relief lies in the mere fact that it is associated with the Poor Law and that the person who receives it is classed as a pauper. They have told us that sick persons often wait to the very last rather than apply; that aged persons living with married children are too proud to call in a Poor Law doctor; that amongst the wage-earning classes there is a deadly hostility to the acceptance of Poor Law relief; and that the decent poor prefer to suffer in silence rather than undergo the ban of pauperism.¹⁵

75. On the other hand there is a good deal of evidence to show that outdoor medical relief is decreasing in its deterrence; that less disgrace is felt or less reluctance is exhibited in applying for it than for ordinary relief; that the old-fashioned steady

abhorrence of the "parish" is a thing of the past; and that the fact of medical relief being associated with the Poor Law is not itself a deterrent because the Poor Law has lost its terrors.¹

76. This decline in deterrence is, doubtless, partly due to the operation of certain outside influences, in principle contrary to any purely restrictive or deterrent system of outdoor medical relief, which have tended to undermine the policy consistently pursued by the Central Authority since 1834. As early as 1838, as we have already stated, a Select Committee of the House of Commons expressed the opinion "that medical relief may, with great propriety, be given more extensively than any other kind of assistance;"² in 1854 another Committee reported in favour of persons receiving medical assistance without being placed on the list of paupers;³ in 1860 a Bill for securing more efficient medical relief to the poorer classes, provided *inter alia* that medical relief should not be deemed "parochial relief, alms, or charitable allowance;"⁴ in 1885 the Medical Relief Disqualification Removal Act did away with the disfranchisement of the recipients of medical relief for all elections except that of a Board of Guardians;⁵ and, still more recently, the preferential treatment of the sick has received additional emphasis under the Old Age Pensions Act, 1908, which provides that, while the receipt of poor relief is a disqualification for a pension, medical relief "shall not be considered as poor relief."⁶

77. We have no statistics showing the effect of the Medical Relief Disqualification Removal Act on the number of persons applying for medical relief throughout England and Wales. Mr. Ball, superintendent relieving officer, informed us that in Liverpool medical relief "rushed up" after the passing of the Act.⁷ In London, after an almost steady decline in the number of dispensary orders from 1877 to 1885, there was an immediate and continued rise down to 1895. There is, however, no evidence that this increase was directly attributable to the passing of the Act. Sickness due to "severe weather" and an "epidemic of influenza" are mentioned by the Central Authority on different occasions as having been responsible for increasing the number of Orders, but no reference is made to the Act itself.⁸ Moreover, the figures again commenced to fall after 1895, and have since reached a point below the previous low-water mark.

(d) AGENCIES FOR SUPPLYING POOR PERSONS WITH MEDICAL ASSISTANCE OUTSIDE THE POOR LAW.

78. At an early stage in our inquiry we were impressed with the magnitude and importance of the agencies for supplying the labouring and the poorer classes generally with medical assistance outside the Poor Law. We have, therefore, received much evidence on the subject, and we now proceed to give a short account of the work of the chief of these agencies.

(i.) *Voluntary Hospitals.*

79. As with the Poor Law infirmaries, so with the voluntary hospitals, great developments have taken place since 1834. The growth of operative surgery has increased the demand for hospital treatment, and, in spite of frequent extensions of the hospitals, the demand is still in excess of the accommodation.⁹

80. We do not propose to trace the history of voluntary hospitals since 1834, but we think it essential to show the relations which have always existed between such hospitals and the Poor Law. From 1834 down to 1867, during which period indoor medical relief was administered as part of the ordinary workhouse system it was to the voluntary hospitals that paupers were sent for surgical operations or special treatment, and in 1851 the Legislature emphasised the interest of the Poor Law in such institutions by empowering the Guardians to subscribe to them.¹⁰ The sick poor themselves, without going to the Poor Law, also sought admission to the voluntary hospitals as being the only institutions equipped in a manner fitted for the treatment of their diseases. At the present day, especially in country districts and in Unions where no separate infirmary has been provided, Boards of Guardians are still in the habit of sending paupers to the hospitals.¹¹ But wherever a fully equipped separate infirmary has been erected this practice has diminished, and in some cases it has entirely ceased. Moreover, as has been indicated, the poor are now in many cases glad to seek the refuge of the Poor Law infirmary.

¹ Thompson, 22896; Brown, 34364; Herbert 8394; Edwards, Vol. VII., App. cxiii., par. 4; Ainsley, 52845; Blackshaw, 41381; Raw, 37927 (47); Hogg, Vol. VIII., App. xxxvii., par. 4; Pochin, 74771 (3); Culross, Vol. VII., App. xxix., par. 3; Edwards, 51146; Lang, Vol. VII., App. lvi., par. 10; *cf. also* Fuller, Vol. I., App. xxi. (A), par. 30; Fust, 11158. ² Report of Select Committee on the Poor Law Amendment Act (1838), p. 25. ³ Report of Select Committee on Medical Relief, 1854, p. iii. ⁴ Poor Law (Medical Relief) Bill, Clause xxxii. (Bill No. 87-1860). The Bill did not become law. ⁵ 48 & 49 Vict. cap. 46, Sec. II. ⁶ 8 Edw. VII., cap. 40, Sec. 3 (1) (a). ⁷ Ball, 35657; *cf. also* Fuller, 10640; Thompson, 22901. ⁸ Twentieth (1890-1) and Twenty-fifth (1895-6) Annual Reports of Local Government Board, pp. lxxxvii. and lxxxii. respectively. ⁹ *Cf.* Holland, 32526 (26). ¹⁰ 14 & 15 Vict. cap. 105, Sec. 4. ¹¹ *Cf.* pars. 36-7 *ante*.

81. Although the voluntary hospitals have been greatly extended, their growth, measured by the number of beds, has been quite outstripped by that of the Poor Law infirmaries—which in the form of separately administered institutions were practically unknown until 1867. At the present time the number of beds in the London Poor Law infirmaries greatly exceeds the number in the voluntary hospitals in London, and is only about three or four thousand below the total number of beds provided by voluntary hospitals in all England and Wales.¹ Liverpool, Manchester, Birmingham, and other large provincial towns have likewise more Poor Law infirmary beds than hospital beds.

82. The following table gives roughly, for certain of the large towns, the number of beds in Poor Law infirmaries and in voluntary hospitals for the year 1906 :—

| | Beds in Voluntary Hospitals. ² | Beds in Poor Law Infirmaries. ³ |

83. Voluntary hospital accommodation being of necessity dependent upon private generosity its extent is regulated by impulse rather than by actual requirements. There is no recognised standard of accommodation ; nor is there, outside of London, any public body or authority whose duty it is to guide the charitable public in applying their beneficence in districts where it is most needed, or where the best results are likely to be obtained. As a matter of fact, the voluntary hospitals are chiefly confined to London and some of the large provincial towns. London, as a whole, has more hospital accommodation in proportion to population than any of the provincial towns. This may be partly accounted for by the greater volume of charity in London, but, doubtless, it is also due to the fact that the London hospitals attract persons from a much wider area than London itself. In some respects the London hospitals, like the Edinburgh Royal Infirmary, may be partially regarded as national institutions. The London hospitals are not, however, evenly distributed over its area, but are mostly located in the central districts where population is diminishing. Some districts, *e.g.*, Camberwell, have no voluntary hospitals. Again, some provincial towns are better provided with voluntary hospitals than other towns.

84. But whether there be no voluntary hospital in a town, or whether the accommodation be insufficient for the needs of its inhabitants, as is generally the case, one fact clearly brought out by our inquiry is that the absence or the deficiency is gradually, but surely, being supplied by the Poor Law infirmary.

85. At the same time, there is no doubt that the voluntary hospitals supply gratuitous medical assistance of the very highest quality—both indoor and by means of their out-patient departments⁴—to a very large number of persons of the same social *status* as those who apply to the Poor Law. For example, according to a census of the 709 patients in the London Hospital on November 28th, 1906, which the Hon. Sydney Holland, Chairman of the Hospital, was good enough to undertake at our request, it appears that 27 per cent. of the patients might be considered to be “ to all intents and purposes paupers, *i.e.*, no money coming in, no savings, no club, and generally with wife and children to support,” while another 13 per cent. were “ on the very verge of pauperism, if not already paupers,” altogether 40 per cent.⁵ This figure, which relates to in-patients,

¹ Cf. Milson Rhodes, 38898 (2); Davy, 2387. ² From Burdett's Hospitals and Charities, 1908, except as to London. The figure for London is taken from “London Statistics,” compiled by the Statistical Officer of the London County Council, 1907–8, Vol. XVIII., p. 128; cf. also Ford-Anderson, 39238. ³ Exclusive of beds in Metropolitan Asylums Board hospitals, which provide the following accommodation :—
Fever hospitals - - - - - 7,878 beds.
Small-pox hospitals - - - - - 2,040 „
Ringworm and Ophthalmia Schools for Children - - - - - 1,020 „
(Annual Report of Metropolitan Asylums Board for the year 1907.)

⁴ In Manchester the hospitals also provide domiciliary treatment ; [12,569 persons were thus visited in their homes in 1905. [Niven, 33,380 (12)]. ⁵ Holland, Minutes of evidence, Vol. III., App. xvii. (A).

corresponds very closely with the out-patient results obtained by our Special Investigator Miss Roberts, who estimates that 38 per cent. of the out-patients attending certain London hospitals inquired into by her “may be said to be of similar class as applicants for medical relief from the parish.”¹

86. The following figures will show the extent to which medical assistance was during the year 1906, provided by voluntary hospitals in England and Wales² :—

| | In-Patients. | Out-Patients. ³ |
|-------------------------------|--------------|----------------------------|
| London ⁴ - - - - - | 114,261 | 1,607,945 |
| Provinces - - - - - | 131,292 | 884,478 |

87. Accordingly, if the percentages above mentioned be generally applicable throughout the country, it would appear that, in the aggregate, much assistance is rendered by the voluntary hospitals to the class of persons who apply to the Poor Law. In addition they assist many persons just above the pauper class. The voluntary hospitals are, therefore doing a great work which, if they did not exist, would have to be performed by the Poor Law authorities, or by some other public authorities charged with the provision of hospital accommodation or of other medical assistance for the suffering poor. On the other hand, as we have shown, the voluntary hospitals have been unable to meet the demand for institutional treatment, and their work has *ex necessitate* been taken up and supplemented by the Poor Law.

88. It will be observed from the above figures that much greater use is made of out-patient departments in London than in the Provinces. It would, further, appear from a return supplied by Lieut.-Col. Montefiore that the number of “out-patients and casualties” treated at the London hospitals has shown a marked increase of late years. Thus, according to that return the numbers increased 76 per cent. between 1887 and 1905, and 17 per cent. between 1900 and 1905.⁵

89. The benefits of the voluntary hospitals, ostensibly provided for the poor and necessitous, are, it appears, largely taken advantage of by the well-to-do. Instead of confining their work to the poor (“objects of charity”) as was originally intended, the voluntary hospitals, Dr. Nathan Raw states :—

“are now treating within their walls a class of the community very much higher in the social scale, who can in a very great number of instances, well afford to pay for medical advice.”⁶

Some of the voluntary hospitals, *e.g.*, Guy’s and St. Thomas’s Hospitals have started “paying wards” for the more affluent patients, and Guy’s and the London Hospital charge out-patients a small fee.⁷

90. Again, as regards their out-patient departments, a few of the hospitals have appointed almoners. “The broad aim of the almoner’s work,” says Miss Nussey, Almoner of the Westminster Hospital,⁸ “is that of better organisation and an increased usefulness of the out-patients department of a hospital.” Her endeavour is to “ascertain the home conditions of the patients with a view to :—

- (a) Eliminating those who could afford to pay privately for advice ; and
- (b) Ensuring, as far as might be, a fair chance to those who [are] eligible for treatment, of profiting by it.”

As regards the first, Miss Nussey finds that “the proportion of patients attending Westminster Hospital during the years 1903–4–5, who might have arranged for their own treatment through a provident dispensary or friendly society, was 15·6 per cent., 13·6 per cent. and 17·2 per cent. respectively.” As regards the second, “she teaches the patients the simple rules of hygiene, and explains to them how they can co-operate

¹ Report by Miss Norah B. Roberts on “The overlapping of the work of the Voluntary General Hospitals with that of Poor Law Medical Relief,” p. 15. ² Burdett’s “Hospitals and Charities,” 1908 ; *cf. also* Holland, 32530–1. ³ These figures probably over-state the true number of out-patients as the system of registering cases seldom provides for the elimination of duplicates.—*cf.* Montefiore, 35015 (36).

⁴ According to a return handed in by Lieut.-Col. Montefiore, the numbers of in-patients and out-patients for the year 1905 were 119,099 and 1,859,809, respectively. (Vol. III. of Minutes of Evidence, App. No. xxii. (C). The figures given in Burdett’s “Hospitals and Charities” do not appear to include the smaller voluntary hospitals. ⁵ *Ibid.* ⁶ Raw, 37927 (15) ; *cf. also* Theodore Thompson, Vol. IX., App. li.

⁷ *Cf.* Report of Select Committee on Metropolitan Hospitals, 1892 ; Montefiore, 35015 (32), 35043, 35305 ; Holland, 32538. ⁸ Nussey, 32917 (1), (2) and (12).

with the doctor in the treatment of such cases as phthisis, anæmia, rickets, etc. A large proportion of patients attend with preventable diseases; she points out to them how they can avoid a future application to the hospital by ordinary care.”¹

In her work she co-operates with the local doctors, the Education Authorities and the various charitable agencies whose object is “the improvement of the condition of the poor.”²

(ii.) *Provident Dispensaries and Medical Clubs.*

91. Provident dispensaries existed prior to 1834, and reference is made to them by the Royal Commission in their Report.

“It appears,” they say, “that great good has already been effected by these dispensaries, and that much more might be effected by them; but we are not prepared to suggest any legislative measures for their encouragement.”³

The Poor Law Act did not provide for the establishment of provident dispensaries, but, as has been shown, the Commissioners appointed under the Act endeavoured to administer medical relief under such conditions as would tend to promote the formation of “independent sick clubs” or other habits of thrift among the labouring classes. In addition to this indirect encouragement of sick clubs, whose leading principles were that they should be “self-supporting and independent of parochial aid,” the Commissioners, in 1836, issued a circular to Boards of Guardians urging them “collectively and individually” to give all the aid in their power to the establishment of such clubs in their district. A model set of rules was also enclosed with the circular, ignorance of the rules for starting a club having been given as one of the reasons why clubs had not become general.⁴ As a result of this appeal, medical clubs were established in many parts of the country.⁵

92. The Commissioners had, however, no statutory duties or powers in connection with the establishment of sick clubs, and it was therefore difficult for them to pursue an active propaganda or line of policy in the matter. Occasional references to such clubs are to be found in a few reports subsequent to 1836, but after that the Commissioners do not appear to have pursued the subject. We are not aware of any statistics showing the progress made since 1834 in the provision of medical attendance for the working classes on a self-supporting basis, but our evidence makes it clear that, at the present time, large numbers of the population provide for such attendance in one form or another, *e.g.*, by joining a provident dispensary, a medical aid society, a works’ club, a friendly society, a tontine club, or a medical club.

93. As regards Friendly and other Provident Societies, it should be observed that the direct provision of medical attendance forms only a subsidiary part of their functions. The main object of a Friendly Society is the payment of sick benefit for the maintenance of members during illness; the additional contributions for medical attendance are not usually obligatory. Out of nearly £20,000,000 of benefits paid to the members of the Ancient Order of Foresters during the thirty years 1876–1905, 72 per cent. was devoted to sick pay, 16 per cent. to funeral allowances, and only 12 per cent. to medical aid.⁶

In the Foresters’ Society about 95 per cent. of the members are insured for medical aid.⁷ In the Hearts of Oak Benefit Society, on the other hand, the majority of members do not insure.⁸

94. In London there are forty-three provident dispensaries issuing over 60,000 cards, representing about 116,650 individuals;⁹ in Leicester there are two provident dispensaries with about 60,000 members, or 1 in 4 of the population;¹⁰ in Reading there are 17,578 members,⁹ or 1 in 5 of the population; in Northampton there are 18,000 members, or 1 in 5 of the population;¹¹ in Shrewsbury there are 6,000 members, or about 1 in 5 of the population;¹² and in Salisbury there are 9,190 members, or 1 in 2 of the population.⁹ Provident dispensaries exist also in some of the smaller towns, *e.g.*, Market Drayton and Leominster; but in rural districts the “medical club” is more prevalent. These medical clubs may include several medical men, in which case they differ little from the provident dispensary, or they may be organised by one doctor only. There are many varieties, but in one form or another they are almost universal and

¹ Nussey, 32917 (8). ² *Ibid.*, par. 10. ³ Report of Royal Commission, 1834, p. 43.

Annual Report, Poor Law Commissioners, 1836, p. 45. *Ibid.*, p. 21. ⁶ Stead, 77468 (1). ⁷ Stead, 77480. ⁸ Bunn, 77651. ⁹ Charity Organisation Review, July, 1907, pp. 4 and 5. ¹⁰ Hewlings, 47501 (12), (14); Gibbons, Vol. IV., App. cxxxii., pars. 37 and 40. ¹¹ Becke, 48224 (5). ¹² Cooper, Vol. VII., App. cvi., par. 2.

within the reach of almost everyone. Of the rural district of Hardingsstone we are told:—

“Medical clubs have become so common in this district that it is only in exceptional cases that recourse is had to the Poor Law.”¹

And again:

“They are almost universal in Northamptonshire. I do not know any village without a club.”⁴

In Suffolk, the county medical club has 9,000 members, though a rule limits membership to persons whose earnings *per family* are under 20s. a week.³ At Bosmere and Claydon “a very great many” belong to medical clubs outside the county club.⁴ In the neighbourhood of Bury St. Edmunds, says Dr. Stork:—

“There is only one [doctor] that I can think of who has not got a private medical club of his own.”⁵

In towns also medical clubs are very common, and in certain districts, *e.g.*, South Wales, the “works’ clubs” include almost the whole of the male working population, while medical clubs provide for the remainder.⁶ In seven towns—Coventry, Eastbourne, Hartlepool, Kidderminster, Norwich, Southampton and Taunton a “public medical service” has been organised amongst the doctors for treating the poorer working class on a provident basis.⁷

95. During the past forty years a movement has been developed in many provincial towns for the combination of the advantages of a provident dispensary with those of the sick benefit society. There are now medical associations with a total membership of 250,000. The members of the various registered benefit societies in one of these towns meet together and agree to lease a house, provide their own drugs, and appoint and sometimes house their own medical officer, who devotes his whole time to the association. The introduction of the co-operative element into the work of these benefit societies appears on the whole to have been successful. But it is one of their incidental rules which lends to their operations a special interest. The members’ families are allowed to join. Instead of joining a benefit society for himself and a provident dispensary for himself and his family, a man can thus avoid paying twice over for his own medical attendance, whilst his children, brought under the direct influence of the friendly society movement, will probably become members of some friendly society themselves.⁸

96. Perhaps the best measure of the progress made towards independence during the last century is got by comparing the membership of friendly societies with the number of paupers. A Parliamentary Return in 1803 states the number of societies in England and Wales to be 9,672, with 704,350 members, while the numbers relieved by the Poor rate in the same year were 1,039,716. A similar Return in 1815 gives the membership of friendly societies as 925,439, which exceeded the number of paupers by 29,446.⁹ “On December 31st, 1904, the number of members in the ordinary friendly societies, and societies having branches, was 5,700,000,”¹⁰ while the total number of paupers of all classes on January 1st, 1905, was 932,000¹¹—an excess of friendly society members over paupers of nearly 5,000,000.

97. It is interesting to note the efforts of some Boards of Guardians towards inducing applicants for medical relief to form provident habits. The Paddington and St. Pancras Boards issue handbills with particulars as to provident dispensaries, and these are given by the relieving officers to applicants for medical relief.¹² The Reading Guardians paid the entrance fee of applicants to the provident dispensary, until the practice was stopped by the Local Government Board.¹³ At Brixworth the Guardians started a medical club which superseded parish relief and developed into clubs for each parish in the Union.¹⁴ At Frimley a medical club was started by a Guardian as an alternative to Poor Law relief, and now practically all the people except the members of friendly societies belong to it.¹⁵ At Ipswich the district medical officer has a club, and the Guardians bring pressure to bear on applicants to join it wherever possible.¹⁶ While from Risbridge comes the suggestion that medical officers should be required to start clubs at such rates as the Guardians may approve as being within the reach of the wage-earning classes in the district.¹⁷

98. The fees for membership of a provident dispensary, or medical club vary slightly in different parts of the country; but it may be said that the members generally obtain medical assistance at lower rates than if they went as ordinary patients to a doctor. The weekly charge for an adult runs from about 1d. at Leicester¹ and Manchester² to 1½d. at London³ and Northampton.⁴ Children are admitted at about ½d. per week, a reduction being usually made if the whole family are members. Thus, in the Metropolitan Provident Dispensary Association not more than four,⁵ and in the Suffolk County Club⁶ not more than five, children are charged for; while in Northampton⁴ and Leicester¹ a weekly payment of 3d. and 3½d. respectively entitles a whole family (including the father and mother) to membership of the provident dispensary. The above fees do not always include midwifery attendance, for which special charges are made. Generally a maximum income limit for members, varying from about 14s. to 50s. per week, is fixed with a view to excluding the well-to-do, who are, it appears, not above taking advantage of the medical attendance at the cheap rates offered by the dispensaries and medical clubs.⁶

99. As a rule, members of a provident dispensary have a choice of doctors.⁷ The remuneration of the doctor is sometimes based on the number of visits paid, and sometimes it represents a fixed annual payment (from about 2s. to 5s.) per member under his care. Special fees are allowed for midwifery cases and surgical operations. Representations have been made to us, not, we think, without justification, that the doctors of provident dispensaries and friendly societies are frequently underpaid.⁸ But, while this may be so, we consider it right to point out that the low rates of remuneration are partly due to competition among the doctors themselves. As Mr. Lister Stead, of the Ancient Order of Foresters, has stated:—

“These rates are not fixed by us, but they are the prices suggested by the medical men themselves. In my experience in some of the larger towns, I find, I am sorry to say, that medical men are offering privately to do the work at a less figure than the medical men already appointed are doing it at.”⁹

And again:—

“We do not want in our societies to raise any idea that this medical benefit is in the form of a charity. We are quite content in the society to pay a reasonable sum for the service, and we do not want the man to feel that he is under any stigma because he happens to go to the club doctor.”¹⁰

100. In addition to the large number who make provision on the insurance system, there are many also, even among the poorer working class, who prefer to pay as private patients and appear well able to do so. The Medical Officer of Health for Manchester, in reply to the question:—

“Does it follow that medical relief for those below 30s. a week is, as a rule, gratuitous in Manchester?” says:—

“No, not at all. I have made a special inquiry into a large number of individual cases with a view to see what actually does occur, and, as a matter of fact, I find that a large proportion of people earning far below that amount go to private practitioners.”¹¹

In some rural districts even the agricultural labourers prefer to pay fees:—

“In Kent every agricultural labourer paid . . . private fees, but the wages were very good there.”¹²

In two rural districts in the eastern counties, Committees of our number were told, when visiting, that, though the men were in clubs themselves, they preferred to pay private fees for their families.¹³

101. It is true, no doubt, that sometimes poor people pay absurdly small fees for very indifferent treatment, but the incompetent doctor is the exception and not the rule. In rural districts it is generally the case that both rich and poor are treated by the same doctor, who is also the district medical officer. In the towns, the general practitioner in a working class neighbourhood may be quite as competent, if not so wealthy, as the practitioners at the other end of the town.

“I know,” says Dr. Stonham, “a good many doctors in the East End; many of them are very good men indeed, I think.”¹⁴

¹ Hewlings, 47501 (12). ² Niven, 38380 (47). ³ Warren, 33487 (17). ⁴ Becke, Vol. IV., App. xxvi. (A). ⁵ Waters, Vol. VII., App. x. ⁶ Stork, 75619; Waters, 73476 (2); Craig, Vol. II. App. vii. That their fees are unduly low is more often due to the unfair competition of charitable agencies and the competition among the doctors themselves than to the low value of their services.

A medical officer in the Potteries says :—

“There is absolutely no difference, except in individual character, between the man who comes to me as a private patient and who comes through the Poor Law. One puts into a dispensary, or saves money and pays the doctor; the other finds it leaves more for drink if he sends to the relieving officer. They find it so easy to get medical relief, why should they bother to provide in any other way.”¹

(iii.) *Free Dispensaries.*

102. One striking feature brought out as the result of our inquiries into the methods of providing poor persons with medical assistance is the existence, in certain large urban centres, of extensive free dispensaries, while in other centres, with not dissimilar industrial conditions, such dispensaries are practically, if not entirely, absent.² Thus, on the one hand, we have such towns as Birmingham, Leeds and Newcastle with flourishing free dispensaries. The Newcastle Dispensary, we are informed, does the greater part of the outdoor medical work for the poor of the city. It has seven whole-time doctors; it treats about 12,000 patients per annum; and, as compared with the Poor Law, it does ten or twenty times as much work among the poor.³ On the other hand, Sheffield has no free dispensary,⁴ and Leicester is mainly served by provident dispensaries. There are, it may be observed, a number of free dispensaries in London.

103. Many of the free dispensaries are old endowed institutions, established before the hospitals had out-patient departments. Some of the dispensaries date from the latter half of the eighteenth century; others are comparatively recent in their origin.⁵ All are dependent more or less on charitable subscribers, and Boards of Guardians and town councils sometimes contribute to the funds.⁶ The object of these dispensaries is to provide medical attendance and medicines to poor people who cannot afford to pay for a doctor. At Oxford, however, a witness informs us, the reason for starting a free dispensary was to prevent people being disqualified from voting.⁷ Occasionally a free dispensary forms part of a “medical mission.”

104. In some cases the patients are treated only at the dispensary, but in others domiciliary visits are also paid by the doctors to patients who are unable to attend at the dispensary.⁸ At Birmingham, in addition to medical attendance and medicines, patients are sometimes supplied with milk, bovril, cod-liver oil, and other medical extras.⁹

105. The quality of the treatment at the dispensaries is said to be of a high order, and this, together with the fact that it is free, attracts large numbers of persons to apply.¹⁰ In some dispensaries treatment is mainly confined to persons who produce a subscriber's ticket, but in others no tickets are necessary.

While the beneficiaries of the dispensaries consist chiefly of those who are “only a step removed from pauperism,”¹¹ or may even comprise “the very poor to the superior artisan,”¹² our evidence clearly shows that the benefits of the free dispensaries are abused by many who could well afford to pay ordinary fees to a doctor, and by still more who are in a position to join a provident dispensary.¹³ Thus, Dr. Trout, Birmingham, informs us :—

“A person attending a Bible Class or P.S.A., on payment of $\frac{1}{4}$ d. or 1d. per month can obtain a subscriber's ticket, entitling him to six weeks' continuous medical advice, attendance, and medicine, and also extras in the shape of food, notwithstanding that the person may be in full work, and the recipient of a wage up to £6 per week.”¹⁴

Mr. Stableforth, Newcastle :—

“I get a big number of tickets to give away every year; if I gave them to everybody that applied, I should be giving them to men with £2 10s. and £3 a week wages who come and apply, not isolated cases, but weekly.”¹⁵

¹ Final Report on the Relation of Industrial Conditions to Pauperism by Mr. A. D. Steel-Maitland and Miss Rose E. Squire, p. 101. ² Cf. Davy, 2442. ³ Parkin, 51466 (12), 51495. ⁴ Smith, 43153. ⁵ Montefiore, 35015 (29); Warren 33593; Forrest, Vol. IV., App. cxxix., par. 4; Stephens, Vol. V., App. cx., par. 4. ⁶ Parkin, 51466 (5); Stonham, 21597. ⁷ Thompson, 34147. ⁸ Forrest, Vol. IV., App. cxxix., par. 6; Lupton, Vol. IV., App. lxxxv., par. 1 (5); Barlow, 38656; Parkins, 51466 (13) (18); Stephens, Vol. V., App. cx., par. 4; Pinchard, Vol. IV., cxlvii., par. 5. ⁹ Forrest, Vol. IV., App. cxxix., par. 8; Tillyard, Vol. 4., App. clvii., par. 6. ¹⁰ Warren, 33593; Bygott, 44006. ¹¹ Hudson, Vol. IV., App. lxxx. par. 7. ¹² Forrest, Vol. IV., App. cxxix., par. 14; Cameron, 41554. ¹³ Thompson, 34170; Warren, 33591; Alford, 31977; Pinchard, Vol. IV., App. cxlvii., par. 5; Bygott, 44006; Armstrong, Vol. V., App. lxvi., par. 3; Russell, Vol. V., App. civ., par. 9; Armstrong, Vol. V., App. lxviii., par. 6. ¹⁴ Trout, Vol. IV., App. clix., par. 6. ¹⁵ Stableforth, 51317.

From a table handed in by Miss Simey, Newcastle, giving the results of an investigation by the Charity Organisation Society into the circumstances of forty-nine applications to the Newcastle Dispensary on a given day (February, 1902), it appears that seventeen applications were from families in receipt of £1 6s. to £2 17s. a week, while other eight "should, it was thought, have been independent of charitable medical treatment."¹

106. Where a free dispensary provides medical aid to thousands of the poorer classes in the course of a year, it must inevitably keep many persons from having recourse to the Poor Law.² But, when the dispensary also admits to its benefits those who should be self-dependent, there is little doubt that, by destroying their incentives to thrift, it has a distinctly pauperising tendency. Witnesses have told us that the free dispensaries are powerful and successful competitors of the provident dispensaries and the medical clubs, and operate with hardship on the medical profession.³

107. The Report of an Inquiry by a Committee of the British Medical Association into the Economic Conditions of Contract Medical Practice in the United Kingdom, states that: "Provident dispensaries appear to have been established originally as public charities,"⁴ and several witnesses have given instances of free dispensaries having been transformed into provident dispensaries. One of the largest provident dispensaries in the country, the Leicester Provident Dispensary with 50,000 members, began as a free dispensary,⁵ and in London two free dispensaries have recently adopted provident principles.⁶ The latter, being endowed dispensaries, were converted under schemes of the Charity Commissioners, which retained a portion of the income for the use of a certain number of free patients.⁷ Such a change is wholly beneficial. A free dispensary on a scale equal to that obtaining in some towns does not appear to be essential to the welfare of the inhabitants, nor would much hardship be inflicted on many of the beneficiaries if they were obliged to provide for their medical assistance by means of some form of insurance against sickness.⁸ Moreover, the fact that a dispensary is endowed may not be an insuperable obstacle in the way of transforming it into a provident institution.

(iv.) *Sanitary Authorities.*

108. Soon after 1834 we find the Poor Law Commissioners impressing on the Government the economical need for legislative action with a view to improving the sanitary condition of the country. All infectious disease, it was pointed out, was accompanied by "immediate and ultimate" charges on the poor rates.⁹ The labourer was suddenly reduced to a state of destitution necessitating immediate relief, and, if he died, his widow and children had to be cared for at the expense of the parish. The Commissioners thereupon recommended that Boards of Guardians should be empowered to act as an authority for the removal of nuisances. For years, sanitation meant little more than this, and it may be said that it was not until after the passing of the Sanitary Act of 1866 that the modern system of preventive medicine commenced.

109. It is, perhaps, not quite germane to our Report to trace in detail the development of sanitation in England since 1834, or to estimate its effect on pauperism. But we think it essential to a proper understanding of the problem of medical assistance of the poor at the present time, that we should outline briefly the chief functions now exercised by Sanitary Authorities in regard to the prevention and treatment of diseases in individuals. By so doing, we shall also be able to form a general idea of the extent to which the medical functions of the Poor Law and Sanitary Authorities at present overlap.

110. A number of witnesses, chiefly medical officers of health, have described what is being done by the Sanitary Authorities in their respective districts. From a Memorandum

dated 11th March, 1908, on the Unification of the Official Medical Services for the Poor, prepared by the Medical Officer of the Local Government Board, we take the following enumeration of some details of the work performed by Sanitary Authorities throughout the country:—

“They have hospitals for the treatment of cases of the more serious acute infectious diseases, and occasionally they lend out nurses for the home treatment of cases of these diseases, especially of puerperal fever, erysipelas and enteric fever. They provide, in many instances, antitoxic serum for the gratuitous treatment of diphtheria, both for prophylactic and for curative purposes. The medical officer of health acts both in consultation with practitioners and independently in diagnosing doubtful cases of these diseases; and either he or his medical assistant visits infected or suspected houses, with a view to the detection of ‘contact’ cases and ‘missed’ or overlooked cases. A large proportion of sanitary authorities also provide gratuitously for the diagnosis of doubtful cases of diphtheria, enteric fever, and phthisis by bacteriological means. A few sanitary authorities pay doctors’ fees when they have been sent for by midwives in difficult cases. Much work is also being done by sanitary authorities in the treatment of phthisis (consumption). Free examination of sputum is provided. Voluntary or compulsory notification of cases is followed, to some extent, by action beneficial both to the patient and his family. The patient’s room is disinfected and cleansed; spit-bottles and handkerchiefs are supplied; sanatorium training and treatment may be, and is sometimes, provided (in Brighton half the total notified cases have been treated and trained in the sanatorium). Similar instructions as to the management of the patient’s illness and the prevention of infection are given to the patient at home. Any relatives found to be flagging in health are encouraged to secure medical aid or helped by its provision. The new work opened up by the compulsory medical inspection of scholars under the Education (Administrative Provisions) Act, 1907, will lead to the detection of much disease, advice being given to parents as to the appropriate medical aid. School clinics have been begun in some towns for the treatment of certain diseases, especially the neglected chronic communicable diseases of the scalp and skin. The school nurse and health visitors are following up this work by school and domiciliary visits. The responsibility for lunacy is divided, the guardians paying for most of the patients in asylums, with the help of a capitation allowance from the Government, while county councils and county boroughs administer the asylums.

“This statement is incomplete, but it discloses the facts that the line has never been strictly drawn between the prevention and the treatment of disease, and that sanitary authorities are already responsible for the treatment of a very high proportion of the total acute sickness among the poor. If lunacy be included under this head, sanitary authorities, including county councils, probably treat more than half of the total sickness institutionally treated at the expense of rates and taxes.”¹

111. In addition to these varied activities, mention should be made of the powers possessed by Sanitary Authorities under the Public Health Act, 1875,² and the Public Health (London) Act, 1891,³ of providing general hospitals for the sick inhabitants of their district.¹ The Sanitary Authority may either build a hospital, or contract for the use of one, or combine with another Sanitary Authority in providing a common hospital. There is no limitation either to the diseases which may be treated in such hospitals, or to the classes of persons who may participate in their benefits.⁴ Accordingly, a town council, may, at any time erect a general hospital for the use of the inhabitants of the borough, no matter from what disease they may be suffering.

No London borough appears to have made use of these powers, but in the provinces the Urban District Councils of Widnes and Barry have each provided accident hospitals.⁵ Diseases such as strangulated hernia and laryngitis are treated in the Barry Hospital, which Dr. McVail informs us is a very popular institution and is about to be extended.⁶

It also appears that the town council of Portsmouth have been contemplating the establishment of a maternity hospital “for the express purpose of preventing women from having to go to the Poor Law.”⁷

Liverpool Municipal Hospital, although provided nominally for the treatment of cases of infectious diseases, admits cases which are not ordinarily regarded as falling within that category, *e.g.*, bronchitis, cystitis, abdominal tumour, appendicitis, and poisoning.⁸ And, as was mentioned by Dr. Newsholme,⁹ some towns, *e.g.*, Brighton,

¹ Vol. IX., Minutes of Evidence App. liv. ² 38 & 39 Vict., Cap. 55, Sec. 131. ³ 54 & 55 Vict., Cap. 76, Sec. 75. ⁴ Downes, 22940. ⁵ Downes, 22942; Neale, 49232. ⁶ Report by Dr. McVail, p. 43. ⁷ Downes, 22946. ⁸ Report of Medical Officer of Health, Liverpool, 1905, pp. 202–9. ⁹ Newsholme, 92534 (4).

are now making institutional provision for the sanatorium treatment of phthisis, a disease which, until recently, was not considered to be one of the infectious diseases within the scope of the Sanitary Authorities.

Town councils may also subscribe to the funds of a general hospital, *e.g.*, the town council of Newcastle contribute £315 annually to the Royal Infirmary,¹ and in Liverpool the corporation have made a grant of £5,000 to the children's infirmary.²

112. But, in addition to these powers of providing for the institutional treatment of disease, Sanitary Authorities may, with the sanction of the Local Government Board, also provide or contract with any person to provide a temporary supply of medicine and medical assistance for the poorer inhabitants of their district.³ In this connection it may be mentioned that the Manchester Town Council distribute medicine during the diarrhoea season,⁴ and a number of towns supply anti-toxin serum. Manchester Town Council also pay the fees of a medical man called in to assist a midwife.⁵ Medical extras are sometimes provided by the Sanitary Authority in cases of violent epidemic.⁶ In actual practice the distribution of medicine is mainly confined to cases of infectious diseases, but the Statute has placed no limit, other than the sanction of the Local Government Board, to the types of diseases for the cure of which medicine and even medical attendance may be provided by the Sanitary Authorities.

113. In London power is given to recover the cost of treatment of any patient who is not a pauper and is not suffering from an infectious disease: in the provinces, the cost may also be recovered in respect of infectious cases.⁷ In practice, however, the treatment of patients by the Sanitary Authorities is usually gratuitous.

114. The two essential differences between the Sanitary Authority and the Poor Law medical service are that the function of the first is preventive and of the second curative. The one acts, as it were, in the interests of the community in its work of prevention, and is, therefore, almost invariably gratuitous: the other in the interests of the individual who may be called upon for payment. These characteristics must not be forgotten, for they are inherent in the nature of the services rendered and constitute a difference which is not infrequently lost sight of in schemes of suggested reform.⁸

(v.) *Education Authorities.*

115. Mention should be made of the work of the Education Authorities in connection with diseases among school children, especially as their sphere of activity promises to extend in the near future. Under the Education (Administrative Provisions) Act, 1907, Sec. 13, they have power:—

(1) To provide for the systematic medical inspection and supervision of school children; and

(2) To make "such arrangements as may be sanctioned by the Board of Education for attending to the health and physical condition of the children."

116. As a means of ameliorating "the evils revealed by medical inspection," the Board of Education indicate, in a Memorandum dated November 22nd, 1907, that "the establishment of school surgeries or clinics," "in centres where it appears desirable," may ultimately be necessary. The subject of specific medical treatment being, however, one for "subsequent consideration in the light of findings of medical inspection and the collateral issues raised thereby," the Board have, meantime, only called upon the Education Authorities to apply measures of amelioration to what "are commonly, though in a sense erroneously, regarded as minor ailments." At the same time the Board point out that, "properly administered, the Act must become something more than a mere record of disabilities and defects," and that it "lays upon Education Committees duties involving 'treatment' in a broad conception of the term."⁹

¹ The Town Council also subscribe £105 annually to the Newcastle Dispensary. Parkin, 51466 (5).

² Raw, 38137. ³ Sec. 77, Public Health (London) Act, 1891; and Sec. 133, Public Health Act, 1875.

⁴ Niven, 38380 (40). ⁵ *Ibid.* (42). ⁶ Stonham, 21680. ⁷ Sec. 76, Public Health (London) Act, 1891; and Sec. 132, Public Health Act, 1875. ⁸ Cf. Niven, 38380 (33). ⁹ Memorandum, pars. 14 and 15.

117. The Education Authorities are also required to send blind and deaf children to special institutions and pay the cost of their maintenance therein, or they may themselves provide a school for such children. They are further empowered to provide special classes or special schools for physically or mentally defective children and for epileptics.¹

(e) CONCLUSIONS.

Indoor Medical Relief.

1. We have seen that indoor medical relief, administered under the purely deterrent principle of the workhouse system, ended in failure and was abandoned in 1867 in favour of a system in which "curative treatment" became the dominant principle. That principle, inculcated by the Central Authority, adopted by the Local Authorities, nurtured by the influence of public opinion, and developed by the logic of circumstances, has gradually revolutionised the treatment of the indoor sick poor in those unions which have established infirmaries under separate management. These separate infirmaries are now fulfilling functions far beyond those for which they were originally intended; they constitute a useful adjunct to the voluntary hospitals; and in some cases they even supply the want of a voluntary hospital. The anomalous situation that has arisen may be said to represent the effect of the unsatisfied demand on the part of the community for hospital treatment. In short, the separate infirmaries are practically "State" or rate-aided hospitals.

2. That there still exists in the minds of certain of the respectable poor a prejudice against entering the Poor Law Infirmary, is undeniable, but it is equally true that the prejudice is fast disappearing. On the other hand, in spite of great improvements, medical relief, when administered in the workhouse, is still repellent to large numbers of the sick poor.

Outdoor Medical Relief.

3. The chief improvement in the system of outdoor medical relief has been the establishment of dispensaries in the Metropolis and in a few large urban centres. A beginning has also been made towards providing a system of trained nursing for the sick outdoor poor.

4. It has been the aim of the Central Authority in their administration of outdoor medical relief to leave the independence of the labouring classes unimpaired and, in this respect, the administration has had a fair measure of success, for, as we have shown, large numbers do now make provision for medical aid in sickness by some form of insurance.

5. As regards those who have not made such provision, outdoor medical relief is an attraction to many who are quite able to join a medical club or a provident dispensary. On the other hand, the stigma which still accompanies the receipt of that relief deters many poor persons—probably the most respectable of the poor—from seeking medical aid at times when they are sorely in need of it.

Agencies for Supplying Poor Persons with Medical Assistance outside the Poor Law.

Voluntary
Hospitals.

6. While the voluntary hospitals provide gratuitous medical assistance (both indoor and by means of their out-patient departments) to a large and increasing number of persons of the same social *status* as the pauper classes, the relation of these hospitals to the community has been materially changed by the establishment and rapid growth of the infirmaries under the Poor Law. Originally, the voluntary hospitals provided, practically, the only means of dealing with sick paupers in need of medical or surgical treatment in an institution; at the present time, the accommodation provided by the Poor Law Infirmary far exceeds in extent that provided by the voluntary hospitals.

7. Generally speaking, the accommodation provided in the voluntary hospitals is insufficient; different districts are unevenly supplied with such hospitals; while some districts are without them altogether.

8. The benefits of the voluntary hospitals are largely taken advantage of by the well-to-do classes.

¹ Elementary Education (Blind and Deaf Children) Act, 1893; and Elementary Education (Defective and Epileptic Children) Act, 1899.

9. Great progress has been made since 1834 in the provision of medical assistance for the working classes on a self-supporting basis. In certain towns and rural districts large numbers of the wage-earning classes make such provision by some form of thrift, *e.g.*, by becoming members of a provident dispensary or a medical club. Provident dispensaries, medical clubs, etc.

10. On the other hand, in certain other towns, free dispensaries flourish on a large scale. The benefits of these dispensaries are, it appears, abused by many who might become members of provident dispensaries. Free dispensaries.

11. The Sanitary Authorities, in addition to their functions connected with the prevention and treatment of infectious diseases, have been empowered to provide out of the rates :— Sanitary Authorities.

(a) General hospitals for the sick ;

(b) Medicine and medical assistance for the “poorer inhabitants.”

So far, these powers have only been very slightly used. The range of infectious diseases dealt with by the Sanitary Authorities and the methods of preventing and treating such diseases would appear however, to be widening.

12. The Education Authorities, in addition to their educational functions, have recently been empowered to provide a system of medical inspection and supervision of school children, and they may arrange for the treatment of diseases revealed by such inspection. They have also power to make provision in institutions, or in special schools, for children afflicted with certain diseases. Education Authorities.

13. The public provision of medical assistance, which, in 1834, was entirely in the hands of the Poor Law Authorities is now shared between these authorities, the Sanitary Authorities and the Education Authorities.

Chapter 2.

REVIEW OF THE SYSTEM OF MEDICAL ASSISTANCE TO THE POOR.

118. Having outlined the historical development of Poor Law medical relief since 1834, we have now to consider its present position, not only as an independent organisation but also in relation to the larger question of the methods adopted for supplying the poorer classes generally with medical assistance.

We have shown that great advances have been made since 1834. We can say that the sick poor were probably never so well looked after as they are at the present day. But, at the same time, we have received much evidence to the effect that the system of Poor Law medical relief suffers from palpable defects, and requires recasting and enlargement. To these considerations we now devote our attention.

(a) INSPECTION OF MEDICAL RELIEF BY CENTRAL AUTHORITY.

119. For the whole of England and Wales the Local Government Board have two Poor Law medical inspectors, a senior inspector, whose work is chiefly confined to London, and a junior inspector for the provinces.

120. The senior medical inspector is one of the general inspectors for the Metropolis. He makes such inspections and reports as may be requisite from time to time. He also advises the Board on any questions of Poor Law administration in the Metropolis, or in the provinces, which may be referred to him.¹

121. The duties of the junior inspector are somewhat more circumscribed. His primary duty is to visit annually six workhouse infirmaries or sick wards, or Poor Law schools, etc., in each of the thirteen Poor Law districts into which England and Wales (excluding London) is divided.² The institutions to be visited are chosen by the general inspectors as being institutions which they consider "may with most advantage be visited . . . in the course of the year."³ The medical inspector usually visits these institutions in company with the general inspectors. Reports on the joint inspections are not made "unless specially requested by the Board." But, during the last five years, the general inspectors and the medical inspector have, in practice, made a report whenever they considered it desirable to do so. On the whole the arrangement is said to work harmoniously.⁴

In addition to the routine inspection of institutions, the provincial medical inspector, on requisition to the Department, is available "for any particular inspection which [the general inspectors] may require to be made," even if this latter work should involve the sacrifice of some of the routine inspections.⁵ The policy of the Board being to maintain the responsible supremacy of the general inspector in his own particular district, the medical inspector practically acts in the capacity of an assessor at inquiries held by the general inspector. The medical inspector for the provinces also advises the Board as to plans for infirmaries, etc., submitted for their approval, and, generally, as to questions involving medical knowledge.⁶

122. Looking to the fact that there are some thousand Poor Law institutions in England and Wales, and only two medical inspectors, it is obvious that a very large proportion of the institutions cannot receive any medical inspection on behalf of the Central Authority except at long intervals. Indeed, it would appear that the medical inspector for the Metropolis has "not had much time of late years to make systematic routine inspection"; his inspections "have been practically inspections for a particular purpose."⁷ The Poor Law institutions throughout England and Wales are, of course, regularly inspected by the general (lay) inspectors, and, were these institutions occupied only by healthy inmates, this might suffice. But, almost every workhouse contains some sick inmates, and a larger number on the border line between infirmity and sickness—all of whom are more or less in need of medical care. The children in the Poor Law schools are in a large measure physically or mentally backward, and in addition, each school

¹ Davy, 1790; Downes, 22909. ² Davy, 1790; Fuller, Vol. I., App. xxi. (A) par. 2. ³ Minute of Local Government Board, dated 10th June, 1889; Fuller, Vol. I., App. xxi. (B). ⁴ *Ibid.*, See also Fuller, Vol. I., App. xxi. (A), pars. 6, 7 and 10. ⁵ Fuller, 10243. ⁶ Fuller, Vol. I., App. xxi. (A), par. 12. ⁷ Downes, 22910.

has its own infirmary. And Poor Law infirmaries, when separated from the general workhouse, are entirely devoted to medical work upon which a lay inspector cannot pass an expert opinion.

123. Yet, notwithstanding these considerations, the medical inspection of a particular institution primarily depends upon whether the general inspector considers it to be of advantage that it should be so inspected. We have no reason to suppose that the general inspectors do not supervise, to the best of their ability, the medical arrangements in the various institutions in their respective districts, or that they do not make a judicious selection of the institutions to be inspected by the medical inspector. But it must be remembered that the general inspectors have had no training which would qualify them to detect shortcomings in an institution of so special a character as a workhouse infirmary. The Local Government Board, it is true, directs the local medical officers to report from time to time on the condition of the institutions under their charge, and guarantees the independence of their judgment by giving them security of tenure. From our knowledge and observation of the zeal and ability of these officers, we feel sure that this trust is not misplaced, but we have it in evidence that their reports are sometimes of a perfunctory character.¹ An officer can hardly be expected to invite criticism of an institution for the good management of which he is primarily responsible.

124. Dr. McVail informs us that every one of the institutions visited by him “would be the better of a rigid examination at not very infrequent intervals,” and we agree with his recommendation that there should be on behalf of the Local Government Board “systematic medical visitation of all Poor Law institutions.”²

125. As in this section we shall largely quote from Dr. McVail's Report, it may be well to state now the circumstances which gave rise to his appointment as an Investigator. Certain complaints having been made to us as to the system of Poor Law medical relief in England and Wales, we felt that it was very desirable that an outside and independent medical authority should give us his views upon the efficacy of the system, and we selected Dr. McVail for that purpose. Dr. McVail has established a high reputation in the discharge of his duties as medical officer of health for the counties of Stirling and Dumbarton, and is an acknowledged authority on hospital treatment. His instructions were: “To inquire into and report on the methods and results of the present system of administering indoor and outdoor Poor Law medical relief in certain unions to be selected from a list drawn up by the Commission.” His Report, which is printed in the Appendix, is a thorough and close examination of the various localities and institutions that he visited.

126. Except in London, the arrangements for outdoor medical relief have not been subjected to central inspection either lay or medical. The need for such inspection was strongly urged upon us by medical officers;³ it is further borne out by Dr. McVail's Report⁴ and by our own observation of cases in receipt of out-relief.

The inspection of out-relief cases, as we have seen, has not been considered to be part of the ordinary duties of the general inspectors. It has never been accepted as part of the duty of the Poor Law authorities to treat the recipients of outdoor relief as being within their tutelage and guardianship in the same sense as are the inmates of institutions. The result has been in many localities to exempt the treatment of outdoor patients from any supervision whatever.

127. The primary responsibility of the Public Assistance Authorities* for adequate inspection and supervision of the medical relief arrangements should, we think, be clearly recognised and carefully maintained. With the extension of the administrative area it should be the policy of the Central Authority to establish this responsibility still further. But, meanwhile, we recommend that the Local Government Board's staff of medical inspectors should be increased, and that the arrangements for outdoor and indoor medical relief throughout the country should be periodically submitted to medical inspection on behalf of the Board.

* *i.e.*, the new proposed Poor Law Authorities.

⁴ Report by Dr. McVail, p. 149

(b) REMUNERATION OF MEDICAL OFFICERS—INDOOR AND OUTDOOR—AND SUPPLY OF MEDICINES.

128. The Poor Law medical officers are permanent officials whose appointments and salaries must be approved by the Local Government Board. We have received a considerable body of evidence as to the want of uniformity in and the general inadequacy of the salaries of district and workhouse medical officers and infirmary superintendents.¹ It is alleged that the guardians rely on the deficiency in the salary being made up by the vaccination fees which the medical officer receives.² Dr. Fuller says, "it is undeniable that the majority of medical officers in- or outdoor are paid salaries miserably inadequate." A medical officer, in referring to the effect of the alleged underpayment of doctors, candidly states that "the outdoor parish doctors are so underpaid that they cannot be expected to give sufficient attention to the sick poor";³ while another qualifies this by stating that the work "is not badly done, but it is underpaid, and so far as it is underpaid it is not well done."⁴ A Committee of our number also report:—

"The medical officer quite frankly admitted that he was not able to give to the patients as much attention as they ought to have. This he laid at the door of the guardians, who, he said, would neither remunerate him sufficiently nor provide him with an assistant."⁵

On the other hand it would appear, from an analysis of certain returns obtained by the Departmental Committee on Vaccination Expenses, that the average remuneration per visit received by district medical officers in respect of Poor Law work was 2s. 6d. and over in about 40 per cent. of the unions. This is as much as an artisan could pay. In 9 per cent. of the unions the average remuneration was under 1s. per visit. The variations are striking: from 6d. to 44s. 7d. in neighbouring unions, possibly due in some cases to changes in population since the district was formed.

129. Representations have been made to us that a medical officer, who may require to call in another medical practitioner (*e.g.*, an anæsthetist) to assist at an operation, has often a difficulty in obtaining payment from the Guardians for the fee of the assistant.⁶ Further, it has frequently been pointed out to us that the scale of fees allowed to medical officers in respect of surgical operations, which was fixed so long ago as 1842, is urgently in need of revision.⁷ As Dr. Downes has put it:—

"Since 1842, operative surgery has been extended and revolutionised beyond all anticipations. . . . It follows that the list of operations which a medical practitioner may be expected to perform at any time or on urgent necessity is many times greater now than it was sixty years ago. This has necessitated a very large addition to the schedule of possible operations which may have to be performed. The scale is obsolete in several particulars. It provides a very fair fee for the operation of strangulated hernia, but it does not provide anything for abdominal operations, which were, of course, not dreamt of in those days. There is a considerable allowance for amputation, but no provision for conservative surgery, so, as the scale stands, there is an inducement to amputation, and no inducement to conservative operations. I am not suggesting for a moment that weighs, but it is a fact that in the thing which exists there is no inducement."⁸

Moreover, in the opinion of Dr. McVail, this antiquated scale of fees has a tendency to encourage certain kinds of operation and to discourage others.⁹ But we do not think it necessary to dwell on the point, as we understand that the Local Government Board have under consideration the issue of a new Order.¹⁰

130. In many instances, although the salary nominally paid to the medical officer appears to be fairly adequate, it is much diminished by his having to provide out of it any medicines that may be required by the sick paupers under his charge.¹¹ This system offers an inducement to an unscrupulous medical officer to stint the supply of medicines, or to supply drugs of an inferior quality, or to order alcohol (which is paid for by the guardians) in lieu of medicines.¹² The practice is an objectionable one. A medical officer should not be put in the position where his treatment of a case can be influenced by his ability or inability to supply certain medicines which he may consider necessary.

¹² Fuller, 10199; Williams, Vol. VII., App. xci. (5); White, Vol. VII., App. clxx. (8).

Dr. Fuller has graphically described some of the evils arising from the under-payment of medical officers in the provinces. He says:—

“About three weeks ago I was inspecting a workhouse, and I noticed a case in bed; I asked the medical officer what the case was, and he told me that it was a case suffering from syphilitic disease, and apparently from what he said it was curable. I asked him if the case was having drug treatment. He said: ‘No, I cannot afford it; my salary is not sufficiently adequate for me to find the expensive drugs necessary.’ I asked him then whether he had reported this matter to his guardians, and he said: ‘No,’ and I advised him to do so.” “(Chairman.) Q. Is that the only case?—That is the latest case. I think that is a very good example of cases that frequently come under my notice.”¹

131. It is, we think, only fair to add that the blame for the inadequacy of the medical officers' salaries cannot always be laid at the door of the Guardians. The competition of the medical men themselves, and their want of cohesion in the matter of any attempt to raise the salaries, have, we are told, both tended to keep the remuneration at a minimum.² Moreover, it is alleged that the appointment of district medical officer is valuable to its holder apart altogether from the monetary emoluments attached to the post,³ and that low salaries may be sometimes taken for the sake of a collateral appointment such as that of public vaccinator.⁴ While a very large proportion of the medical officers do, we believe, perform their work faithfully,⁵ and without any regard to such considerations as have been indicated above, we think it essential for the efficiency of any system of public medical service that the medical officers should receive adequate compensation for their services. We also consider that medicines should be directly provided by the Public Assistance Authorities and, where this is impracticable, that some equitable arrangement should be made whereby the cost of drugs and medical appliances should be provided without forming a charge on the salary of the medical officer.

132. We do not feel qualified to determine the actual amount or method of remuneration which should be fixed for the various grades of medical officers employed; this is a detail which can, we believe, be safely left to the judgment of the new authorities which we propose to set up. The salary should, as far as possible, however, be settled on a consideration of the Poor Law services concerned and without taking into account any collateral appointment.

(c) INSTITUTIONAL MEDICAL RELIEF.

(i.) *Accommodation for the Sick.*

133. Dr. McVail informs us that the sick wards of the rural workhouses not infrequently provide less cubic space than the standard laid down by the Local Government Board. The wards are also frequently defective as regards such matters as ventilation, light, water supply (hot and cold), bathing arrangements and the sanitary conditions in the immediate vicinity of the building; but in commenting upon these deficiencies Dr. McVail observes:—

“A comparatively moderate expenditure would yield a sufficient remedy for most of the objectionable conditions.”⁶

Judged simply by the number of beds, the accommodation provided for the sick in the rural workhouses is generally equal to the demands made upon it.⁷ This is partly due to the practice of sending surgical and special cases to the voluntary hospitals for treatment, and mainly to the prejudice of the rural sick pauper against entering the workhouse. Many of the latter would, as our evidence shows, be much better in an institution than at home. Accordingly in some cases the surplus accommodation in the rural workhouses would *pro tanto* be reduced, or would vanish altogether, if that prejudice could be eradicated, or if the Poor Law authorities could remove such persons compulsorily to an institution.

134. Our evidence shows that the structural arrangements of the urban infirmaries are, on the whole, very good, and Dr. McVail reports:—

“The best of them are excellent . . . the wards of most of them are quite equal to those of a first class general hospital.”⁸

¹ Fuller, 10610. ² Fuller, Vol. I., App. xxi., Stat. 25, but *cf.* Greenwood, 33391 (5). Dodd, 47191 (7). Edwards, 51188. Fuller, 10629–39. ³ Greenwood, 33419–20. Percival (15), 47946–7. Pochin, 74833. Fleming, 9320. Shaw, 33199–02. ⁴ British Medical Association, 39078–84. Greenwood, 33401. ⁵ Preston Thomas, Vol. I., App. viii. (37). ⁶ Dr. McVail's Report, pp. 20–26. ⁷ *Ibid.* ⁸ Dr. McVail's Report, p. 44.

Indeed, we think that as regards ornamentation of structure, and even as regards equipment, money might easily have been saved in some cases without any sacrifice of efficiency. In this connection a Committee of our number reports of one of these infirmaries as follows:—

“The wards resemble those of a hospital, and are, in every respect, as well equipped. . . . The steward's room is more expensively furnished and decorated than the writing rooms of a first class hotel or club. It has a polished wood block floor, covered with a very fine carpet and the fireplace is of marble and glazed tiles. . . . Taking the entire annual cost, viz., £28,000, and dividing by the accommodation, the annual cost, including debt charges, works out at £85 a bed, i.e., 33s. a week. This figure would be increased if calculated upon the average number of inmates. . . . Money has been, and now is, poured out in an unwarrantable manner upon its provision and upkeep, with no regard for those from whom the money is compulsorily obtained. . . . Speaking generally, we are of opinion that it is impossible to justify the expenditure incurred in the provision of these buildings.”

It seems clear, therefore, that more effective control on the part of the Local Government Board is required for the protection of the ratepayers from unnecessary expenditure. To this matter we have already referred in an earlier chapter.†

Unlike the rural workhouses, “nearly all the urban infirmaries are full to overflowing.”¹ As has been indicated, this congestion is partly due to the increased attractiveness of the workhouse infirmaries and partly to the want of accommodation at the voluntary hospitals.

(ii.) *The Provision of Hospital Accommodation and Overlapping of Agencies.*

135. As we have shown, hospital accommodation for the poorer classes may, at the present time, be provided by three different bodies—by the Poor Law Authorities, by the Sanitary Authorities, and by the authorities in charge of the voluntary or charitable hospitals.* Although all three are providing or may provide similar services for the benefit of the community, each proceeds on its own lines. There is little co-operation among the various bodies. For example, an important factor in the problem of providing hospital accommodation for a district is the incidence of various kinds of diseases in that district. No class of persons is better acquainted than the Poor Law medical officers with the incidence of disease amongst the very poor, and accordingly facilities, apart from those given by the Infectious Diseases Notification Act, have been provided under a General Order dated 12th February, 1879, whereby these officers may supply information of this character to the medical officer of health. We understand, however, that practically no attempt has been made to take advantage of these facilities.²

136. Services thus duplicated and not co-ordinated tend neither to economy nor efficiency; nor has any valid argument been placed before us in favour of the continuance of the present system. A mere recital of some of the existing anomalies is sufficient to indicate how great is the confusion that prevails.

In the hospitals under voluntary organisation, treatment is generally gratuitous. In the Poor Law institutions all patients become paupers and are liable to be sued for recovery of the full cost of treatment. The Sanitary Authority practically gives all treatment free of cost. There are exceptions to this practice, but they are few and far between. Let us note what follows from this diversity.

First as regards the individual patients:—

(a) A sick person in affluent circumstances who may gain admission to a voluntary hospital is, as a rule, treated gratuitously; at least he is seldom placed under an obligation to repay the full cost of his treatment.

* To these may be added a fourth class, viz., institutions provided by the Education Authorities for epileptic children and other classes of defective or diseased children. The establishment of “school clinics” indicates the possibility of indefinite extensions in this direction.

† See Part IV., Chapter 5, pars. 204–5.

¹ Dr. McVail's Report, p. 43 (5). ² Newsholme, 92878.

(b) A sick labourer, on the other hand, suffering perhaps from the same malady as the previous case, but unable to gain admission to the voluntary hospital, is obliged to go to the workhouse infirmary. In respect of his treatment therein he is at once made a pauper. Moreover, in addition, he may be called upon by the Poor Law authorities to repay the entire cost of his treatment, and, if he himself is unable to pay, the cost may be charged upon his relatives.

(c) A workman meeting with an accident in, say, Camberwell (where there is no voluntary hospital) would be taken to the Poor Law infirmary, while if he lived in another part of London, he would, without any disabilities, be taken to a voluntary hospital; or, again, if he resided at Barry, he would be treated in the municipal hospital provided by the Sanitary Authority.*

(d) A phthisical case in Bradford or Liverpool, might be treated by the Poor Law Authorities, while in Brighton it might be treated by the Sanitary Authority. In the former instance repayment might be enforced; in the latter the case would be treated free.†

(e) As regards the disfranchisement of a person receiving medical relief in an infirmary (which includes maintenance), the Courts of Law have decided on appeal that no disqualification shall follow the treatment received if the maintenance is incidental to the medical relief; but, if not, then disfranchisement follows. The interpretation of this exceedingly fine point rests in the first instance with the revising barrister, and, as might be expected, the decisions appear difficult to reconcile. Two persons in adjacent unions may each be receiving identically the same class of relief, yet one may be disfranchised, and the other not.

Secondly, as affecting the authorities having control over the institutions :—

(a) In some areas phthisical cases are in practice dealt with almost exclusively by the Sanitary Authority; in other areas by the Poor Law Authority; while in others again both authorities are dealing with such cases.

(b) Isolation hospitals for infectious diseases are frequently provided by the Sanitary Authority, but in other places the Poor Law Authority provides the only institutions available for the treatment of such diseases.

(c) Accident cases may be dealt with by the Poor Law, the Sanitary, or the voluntary hospital authorities.

(d) Epileptic and other classes of children may be provided for by the Poor Law or by the Education authorities or by voluntary institutions, whether certified or not by the Local Government Board or by the Board of Education.

137. No clear line can be drawn between the sphere of activity of voluntary charity and that of the Poor Law. In certain acute illnesses a person of the pauper class may find himself in a voluntary hospital, whilst another person of higher social standing may, after a few months' chronic or incurable illness, be transferred to the Poor Law infirmary.¹ That transfers from the voluntary hospitals to the infirmaries frequently take place, not only in London, but in the large provincial towns we have abundant evidence to show.

Thus, Mr. Lockwood says :—

"Patients in public hospitals are not infrequently, when their cases become chronic, transferred to Poor Law infirmaries."

* The treatment in the Barry Municipal Hospital is entirely gratuitous, "except in the cases of sailors from ships." (Neale, 49241-2.)

† The Municipal Isolation Hospital at Brighton, "is free to ratepayers and their children." (Newsholme 92534 (4) (I.), (i).)

¹ Dr. Lauriston Shaw, in "British Medical Journal," June 20th, 1908, p. 1471; Lockwood, 13438.

Mr. Craig, St. Pancras, says :—

“We have also had many cases, when there has not been room in the hospital, referred from the hospital to the relieving officer of the district, and they have had to be dealt with.”¹

Dr. Spurrell says :—

“Cases are frequently sent to me, both from the London Hospital and from the Poplar Hospital; . . . they are incurable cases. . . . I should say that on the whole they are of rather a higher class than our average patients.”²

Dr. Fuller says :—

“At Sheffield, and Halifax, and other large union infirmaries that might be named, there are always a large number of cases that are not, strictly speaking, Poor Law cases, under treatment; and the reason for that is, to a great extent, that the local general hospitals have not sufficient accommodation to take those cases in. They may go for two or three days, and then they are transferred to the local union infirmary either because they are incurable or deemed to be incurable, or else they are not quite the class of case they would keep in a general hospital.”³

Mr. Jenner Fust says :—

“A good many apply at this particular infirmary (West Derby Poor Law Infirmary), that have been refused admission for want of room at the voluntary hospitals.”⁴

Mr. Wethered says :—

“The public hospitals now send cases to the workhouse infirmaries who, in former days, would have been received and retained longer in public hospitals; probably this arises chiefly from want of room.”⁵

Patients are also frequently transferred to an ordinary workhouse. In some cases this is a matter of serious annoyance to the patient thus transferred. For instance, a military officer, sent from King's College Hospital to the Strand workhouse, was under the impression that he was going to some branch establishment of the hospital.⁶

138. This transfer of cases from the voluntary hospitals to the infirmaries and workhouses, without any guiding principle as to the respective classes which should be dealt with by these two authorities respectively, and without any appellate tribunal in cases of dispute, leads, we are told, to a good deal of friction. Thus, our special investigator reports :—

“An extraordinary antagonism seems to prevail between the two agencies. Relieving officers are fretful of the constant claim on their time taken up by applications for removal from their local hospitals of the homeless or people who do not belong to that particular union. It was said that the wrong class of person is sometimes sent from the hospital to the infirmary; and that the hospital encourages people to demand relief, sometimes giving them open slips addressed to the relieving officer. The hospitals, on the other hand, complain of the great dilatoriness of the relieving officers in coming to the rescue, and accepting the responsibility of distinctly destitute patients. . . . Constant conflict seems to prevail in all parts of London.”⁷

139. We have received strong representations as to the need for co-operation between the voluntary hospitals and the Poor Law, but no real automatic interchange can be established so long as the patients in the Poor Law infirmaries *ipso facto* become paupers, no matter under what conditions they may have been admitted. Dr. Lauriston Shaw suggests, as a practical method of co-operation, that the dividing line between the voluntary and the Poor Law medical institutions should be determined upon a medical basis, instead of, as at present, upon the economic condition of the patient. Thus, he would transfer the chronic cases to the Poor Law infirmaries and reserve the voluntary hospitals for acute cases or cases requiring specialised treatment. As Dr. Downes points out :—

“If specialisation advances, the Poor Law must either refuse to provide the treatment, or it must specialise. I do not think public opinion would permit it to lag behind in treatment, and unless some organisation and co-ordination of the relief is arranged, we shall have extensive specialisation set up for persons who qualify for its receipt by becoming paupers.”⁸

Dr. Lauriston Shaw's proposals would involve either the gratuitous treatment of patients in Poor Law institutions, or the legal recovery from patients in both sets of institutions upon the same principle. As a matter of fact, at present, the majority

¹ Craig, 19523. ² Spurrell, 23307. ³ Dr. Fuller, 10225. ⁴ Jenner-Fust, 11040. ⁵ Wethered, Vol. I. App. (11a) (£0). ⁶ Visits: Urban, 4, 20. ⁷ Report by Miss Roberts, p. 13. ⁸ Downes, 23193.

of patients in hospitals, whether they be voluntary or supported by public funds. obtain gratuitous treatment, and the recovery of payment for treatment in either set of establishments compared to the total cost of treatment is small. But gratuitous treatment in Poor Law institutions makes the person so treated a pauper, whilst in the voluntary institutions he is subject to no such penalty.

140. We endorse the opinion expressed in 1892 by the Select Committee on Metropolitan Hospitals that “some more satisfactory organisation of medical charity is most desirable.” As the Committee pointed out—

“The establishment of Poor Law infirmaries and rate-supported asylums under the Metropolitan Poor Law Act, 1867, has in a great measure altered the relations between the poor and the hospitals, and every thing associated with medical charity.”¹

(iii.) *Indoor Medical Attendance.*

141. As regards the rural workhouses visited by him, Dr. McVail is of opinion that Rural the small amount of medical attendance required in such institutions is, on the whole, Workhouses. efficiently rendered.² On the other hand, Mr. Baldwyn Fleming states that the time spent by the workhouse medical officers in the performance of their duties is sometimes too short to secure adequate and careful attention to the health of the inmates.³

142. As regards the urban infirmaries visited by him Dr. McVail reports that “the Urban medical staff is hardly ever sufficient” to undertake the work to be performed,⁴ Infirmaries. and other witnesses have furnished us with evidence as to the need for appointing more doctors.⁵ Dr. McVail observes:—

“My general conclusion is that even where guardians provide excellent or, perhaps, extravagant modern buildings, and equip them most elaborately with modern medical and surgical appliances, and furniture and furnishings, yet when they come to the appointing of a staff to do the work of these fine institutions, liberality of policy fails them, and parsimony takes its place.”⁶

143. In addition to the evidence as to the need for the appointment of additional doctors, we have received strong representations in favour of rendering available for the infirmaries the services of a staff of specialists and consulting physicians and surgeons.⁷ The adequacy or inadequacy of the medical staff of a workhouse infirmary is, however, a question which, subject to general regulations, must be decided on the spot, and this we consider should be one of the first duties of the new authority which we propose to set up.

(iv.) *Indoor Nursing.*

144. It appears that the great improvement in workhouse nursing, which has taken place since the issue of the Nursing Order of 1897, “has led many Guardians to suppose that very little more remains to be done.”⁸ Such, however, is not the case. As regards the rural workhouses visited by him, Dr. McVail is of opinion that the nursing arrangements are, with few exceptions, inadequate. A number of witnesses hold similar views especially as to the inadequacy of the night nursing.⁹

145. Rural guardians, it appears, frequently experience a difficulty in obtaining Rural nurses for their workhouses. This has been ascribed to the inadequacy of the nurses’ Workhouses, salaries, the unsatisfactory accommodation provided, the long hours and monotony of the occupation, the absence of companions of an equal social *status*, and the general dislike of young people for quiet country districts.¹⁰ The difficulty of maintaining an adequate nursing staff in small rural workhouses is not, however, entirely one of securing nurses, but, from the Guardians’ point of view, is largely one of economical administration. The

numbers of sick, although small, are liable to considerable fluctuations, and, as Dr. McVail points out, if an additional nurse were appointed she would often have very little to do. The powers of the medical officer and the workhouse master to call in an additional nurse in an emergency are, of course, excellent so far as they go; but they are too exiguous to be accepted as a guarantee that the nursing staff of a rural workhouse will always be sufficient. We endorse Dr. McVail's opinion, therefore, that some of "these very small institutions are in constant risk of inefficiency," and that "the only practical remedy is the formation of larger administrative areas,"¹ with institutions set apart for sick inmates. This remedy would also, we think, remove many of the objections which nurses are now said to have against accepting service in a rural workhouse.

Urban Infirmaries.

146. The proportion of nurses to patients in the urban infirmaries is much lower than in the voluntary hospitals, especially where the hospitals are also medical schools.² This does not necessarily imply insufficient nursing in the Infirmaries, but is partly accounted for by the difference in the character of the cases treated in the two classes of institutions. Thus, acute cases, which predominate in the hospitals, require more nursing than chronic or senile bedridden cases, which predominate in the infirmaries; but, after allowing for this distinction, Dr. McVail is of opinion that the nursing staff of several of the institutions visited by him is insufficient.³ Various witnesses have also expressed similar views. Miss Stansfeld thinks the strain is very much too great upon young nurses.⁴

147. Apart from occasional insufficiency of nurses, the quality of the nursing in the workhouse infirmaries appears to be of a high standard, and this may also be said to apply generally to the training which the probationer nurses receive in the infirmaries recognised as training schools.⁵

Under the Nursing Order, 1897, we think that the objectionable features of the employment of paupers in workhouses and workhouse infirmaries have been removed, and we should not wish to see its provisions made more elastic.

148. Before leaving the subject of indoor nursing, we would add that it has been represented to us that the system of superannuation of nurses and attendants on the sick calls for revision, more particularly as to the age limit (which is too high), and we recommend that the law should be altered in this respect.

(v.) *Classification of Sick Inmates.*

149. The question of classification has been dealt with generally in another Part of the Report (Part IV., Chapters 4 and 5*), wherein we recommend separate institutions being set apart for separate classes of poor persons. It is therefore unnecessary for us to do more here than point out one or two obvious defects in connection with the classification of the sick.

Phthisis.

150. As regards phthisis, the three Liverpool unions have combined for the purpose of erecting a sanatorium for the treatment of cases in the early stages of the disease.⁶ The Bradford Board of Guardians have themselves provided a sanatorium for similar cases.⁷ A number of Boards of Guardians are in the habit of sending cases to non-Poor Law sanatoria; while others have set apart special wards in the infirmary or have erected open-air shelters in the infirmary grounds. In the great majority of unions, however, the provision made for the treatment of phthisis leaves much to be desired. On this subject we have received a number of representations from Boards of Guardians and Dr. McVail reports:—

"Such consumptive patients as I found in rural workhouses were being treated side by side with other patients in ordinary wards, not suited for modern methods of dealing with consumption."⁸

And as regards the urban infirmaries he reports:—

"In some wards about one-half of the inmates are ill with diseases other than phthisis, and even then, the precaution is not invariably followed of ranging the consumptive patients on one side of the ward, and the rest on the other."⁹

¹ Report by McVail, p. 28; Davy, 2385; Fust, Vol. I., App. xxii., Stat. 74 (5). ² Report by McVail, p. 48; Lauriston Shaw, 33131. ³ Report by McVail, p. 49. ⁴ Stansfeld, Vol. I., App. xxvi., 42; Ainsley, 52914; Stansfeld, 14550. ⁵ Fuller, Vol. I., App. xxi., 48. ⁶ Raw, 37927 (35). ⁷ Crowther, Vol. IV., App. lxiii. (9 f.). ⁸ Dr. McVail's Report, p. 91. ⁹ *Ibid.*, p. 92.

* See also Part IX.

The treatment of phthisis is at present in a transition state. The Sanitary Authorities are gradually coming to regard it as an infectious or sub-infectious disease falling within their purview, and this has been given as a reason for Boards of Guardians not taking active steps to provide accommodation for the treatment of cases. Meantime, however, much improvement might be effected at a moderate cost, for, as Dr. McVail points out, the rural workhouses have "abundant spare accommodation which could be so altered or arranged as to make it quite suitable for the treatment of phthisis."

We consider that phthisis cases needing aid from public funds should remain under the care of the Public Assistance Authorities and accordingly that more suitable provision should be made for their treatment.

151. What we have said as regards phthisis may, in a modified degree, be said as regards certain other diseases. Generally speaking, further facilities for classification of the sick are almost universally requisite.

While, however, much improvement is possible under the present *regime*, we are of opinion that the only satisfactory method of securing an efficient classification is to enlarge the administrative area and thereby give one authority control over groups of institutions within that area.¹

(vi.) *Compulsory Detention of Sick Inmates.*

152. We have received a large body of evidence in favour of Poor Law authorities obtaining power to detain compulsorily sick persons who, by discharging themselves prematurely, render nugatory the treatment received by them in the workhouse infirmaries.² At present the workhouse master, on certificate of the medical officer, has power to detain persons who may be suffering from diseases which render them a danger to others, but the power does not extend to non-infectious diseases. The medical officer is sometimes, it appears, able to persuade a poor person to continue his treatment rather than risk any injury to health by leaving the sick ward, but frequently persuasion is of no avail and compulsory powers of detention are suggested as the only remedy. The types of sick cases for which such powers are chiefly sought are:—

- (1) Persons seriously ill and aged persons, partially bedridden, who have no one to look after them outside;
- (2) Persons suffering from phthisis;
- (3) Persons suffering from venereal disease; and
- (4) Diseased children of in-and-out parents, especially when suffering from ophthalmia.

153. The subject of the compulsory detention of these classes of paupers is one of considerable difficulty. Unless the powers of detention were carefully safeguarded, they might easily lead to much abuse on the part of those exercising them. Moreover, the knowledge that the Poor Law authorities possessed such powers would increase, rather than diminish, the objection of poor persons to enter the infirmaries. There would also be a difficulty in securing an effective co-operation and transference of cases between the voluntary hospitals and the Poor Law infirmaries. We consider, therefore that the power of detention should be limited to a few well-defined classes of cases, and even then should be exercised as seldom as possible.

154. With respect to the aged, regard for their sufferings rather than danger to The Aged. others is the justification for detention, and the power of detention should, if exercised at all, be exercised, we think, only with some regard to the feelings of those affected. Accordingly, we are not disposed to recommend the extension of the power of detention to such cases, unless they be friendless or unless the relatives who are responsible for them acquiesce in the detention.

Phthisical Cases.

155. As regards phthisis it has been strongly impressed upon us that, from a public health point of view, it would be very desirable in the interests of the community to allow detention of infectious cases. On the other hand, attractive as the proposal is, its general adoption is beset with administrative difficulties. In the first place, we understand that it is a moot point at what period of its development phthisis may for practical purposes be regarded as infectious. It would, therefore, be difficult, or at least controversial, to place on a doctor, or on a magistrate, the duty of deciding a dubious scientific point which was to involve the question of a man's detention or freedom. This difficulty is enhanced when it is considered that, in many cases, it would be necessary that the detention should continue for some considerable period. We cannot fail to remember also that, to the extent to which phthisis is known to involve the danger of detention to that extent will concealment of the disease be encouraged, and to that extent will it be less possible to attract patients for treatment at the earlier and curable stages. Public opinion is not likely to sanction such drastic powers of detention as would be involved in the proposal to detain all cases of phthisis which might be pronounced to be infectious. We think, therefore, that, meantime, the spread of phthisis must be checked mainly by a wider diffusion of the knowledge of its dangers and of the means of its prevention, and by a stimulation of the efforts of the authorities concerned with its prevention and its cure.

If, however, anything is to be done in the direction of detention of phthisis, a beginning might be made, perhaps, with advanced cases, in which :—

(1) The medical officer pronounced the patient in such a condition as to be likely to communicate the disease, and

(2) The home conditions of the patient are such as to lead with practical certainty to the spread of the disease.

Venereal Cases.

156. The Law Officers of the Crown have, it appears, expressed the opinion that venereal diseases do not fall within the type of contagious and infectious diseases in respect of which the workhouse authorities have power temporarily to detain poor persons. If this be correct, we consider that the law should be altered, subject to the imposition of certain safeguards against abuse. We consider that an order for detention should be obtainable whenever sufficient proof is adduced that an individual suffering from venereal disease is in such a condition as to be a danger to the community amongst whom he is living. This was practically the view taken by the Select Committee on Metropolitan Hospitals.¹ Though the knowledge that the local authority had power to obtain an order for detention, might occasionally lead to concealment of the disease, in our judgment the benefits of compulsory detention far outweigh its evils. It may be urged that action such as we suggest will infringe the recognised liberty of the subject. We admit the imputation, but infringement of the liberty of the subject is the foundation of all recent legislation dealing with infectious diseases of a dangerous character. Venereal diseases are dangerous to the health not only of existing but also of future generations. Evidence, supported by facts and figures, as to the havoc which these uncontrolled sources of physical poison work upon the health, stamina and physique of the whole community, has been placed before us by many witnesses.¹

Thus, Dr. Allan, Leeds, says :—

“During the past twenty-five years the number of inmates treated in the Leeds Union Infirmary for early venereal disease has been fairly constant, 120 to 140 cases annually, and an average of sixteen to twenty at any one time under treatment . . . and having been patched up they do not stay, but discharge themselves long before they have had sufficient treatment. Such people are a public danger before admission and continue to be so after discharge.”²

In addition to the cases actually suffering from venereal disease, Dr. Allan states that its sequelae, *e.g.*, ulcerated legs, various nervous diseases, stricture, etc., cause a large percentage of pauperism. Thus :—

“An analysis of the cases of 550 adult inmates resident at the time of the examination, 300 men and 250 women, shows that of the men eighty-five, and of the women sixty-four were patients on account of some sequel of venereal disease. . . . From an examination of the notes of 560 consecutive male admissions, it was found that of that number 242 had suffered from these diseases.”³

¹ Third Report, 1892, par. 594; Cutter, 18462 (a); Elkerton & White, 26407 (19); Whitaker, 39492; Waite, 43363; Wright, 39880 (5); Wheatley, 40310 (50), etc., etc. ² Allan, 41233 (7); See also Baines, 39541 (13-15). ³ Allan, 41233 (8); Cf. Russell, Vol. V., App. civ. (18).

Dr. Allan also supplied figures as to the effect of venereal disease on infant mortality:—

"I have full particulars of the family history of fifty married men and of fifty married women in the above series of 550 resident inmates. The fifty men had 193 children, of whom eighty-five lived to maturity, the fifty women had 250 children, but of this number only fifty-three lived to grow up."¹

In this connection Dr. Ainsley, Hartlepool, says:—

"These (venereal diseases) exist to a larger extent and in worse form than is usually supposed; they constitute one of the greatest evils of the age. . . . I am convinced the greater majority of children born in the poorest districts (slum) are tainted with syphilis; and that this taint added to the conditions of environment . . . is largely responsible for the awful mortality amongst children in these districts. Even if these children survive they become an expense to the community. They are mostly feeble in body and mind, possess no inhibitory power and readily give way to the vices by which they are surrounded. It is difficult to call them immoral because they do not know what morality is. It is from this class that paupers and criminals are made, and that prisons, asylums and workhouses are filled."²

Dr. Nathan Raw, Liverpool, also says:—

"All cases of venereal disease are now practically debarred from the general hospitals, to the great detriment of the community and the sufferers. The result is that the Poor Law is compelled to provide special accommodation for such cases as will come within its jurisdiction whilst the other cases are not isolated, with the result that venereal disease is spread through the city by women who are not properly cured."³

We recommend, therefore, that, subject to certain safeguards against abuse, the Public Assistance Authorities should have power to detain cases of venereal disease, when medically certified to be dangerous to others.

157. As regards ophthalmic children of in-and-out parents, we have already recommended (Part IV., Chap. 8, Par. 394) that such children should be detained. Ophthalmic children.

(vii.) *Use of Poor Law Infirmaries for purposes of Clinical Instruction.*

158. We have received a number of representations as to the expediency of using the Poor Law infirmaries for purposes of clinical medical instruction.⁴ The infirmaries contain, as we have shown, a much larger number of beds than the voluntary hospitals; they also contain a considerable proportion of chronic cases which are not to be found in such hospitals. Yet in spite of these considerations the doors of the Poor Law infirmaries are closed to medical students. Mr. Smith Whitaker, one of the witnesses on behalf of the British Medical Association, stated that:—

"The difficulty as to chronic cases is very strongly felt by the profession; that the medical student in the ordinary hospital does not really see a sufficient number of the cases that he will be likely to meet in private practice, and that he would see a far larger number of those in the Poor Law infirmaries."⁵

Dr. Ford Anderson, another of the witnesses on behalf of the Association, stated that:—

"There is one aspect of the case that I think ought to be impressed upon this Commission; it is that you see in those Poor Law infirmaries the termination of diseases to an extent which you cannot see them in voluntary hospitals; such a case as disseminated sclerosis, in which the system degenerates through the nervous system, and the patient dies a lingering death. It is very important for the practitioner to know those cases. You see them in Poor Law infirmaries, but the medical student in the voluntary hospital never sees them. Also cases like rheumatoid arthritis, which is a very prevalent disease; you see that in its termination in infirmaries, but you do not see it in the voluntary hospitals. Then there are many casualties and many operations, so that the opportunities for a medical student in the Poor Law infirmary are perhaps in a different degree, but to a great extent, nearly as good as in the voluntary hospitals."⁶

In this connection we may cite the following quotation from the Report of the Select Committee on Metropolitan Hospitals. The Committee observed that:—

"A very useful field for medical instruction is at present closed to students, viz., the Poor Law infirmaries. It was the opinion of nearly every witness that these infirmaries could be usefully opened for clinical instruction. In this, the Committee heartily concurred."⁷

Association, 39240. ⁷ Third Report, 1892, par. 591.

159. The main objection raised against the proposal to open the Poor Law infirmaries for purposes of medical training is that the patients resent being made the subject of lecture, and dislike having students round their beds.¹ This may be so in a small proportion of cases, and in every well-administered hospital due consideration should be had to the feelings of such patients. But, apart from this consideration, we think that the advantage which would accrue to the medical profession and to the community at large far outweighs this objection, and we agree with the British Medical Association witnesses that the exclusion of medical students from the Poor Law infirmaries "is a very serious loss"² to medical science. We are also convinced that one result of the proposals would be the maintenance of a high standard of administration in the Poor Law infirmaries and an improvement in the treatment and welfare of the patients themselves. We recommend, therefore, that under suitable safeguards, these infirmaries should, in future, be open for purposes of clinical instruction.

(viii.) *Defective Records of Clinical Treatment.*

160. A defect in existing medical arrangements is the absence or insufficiency of requirements for recording the clinical treatment of each patient.³ The irksome duty of keeping the medical relief book has long been a subject of complaint on the part of the workhouse medical officers, and the book in its present form was condemned by the Departmental Committee on Workhouse Accounts.⁴ The Committee recommended that, in future, the medical officer should keep instead a "case paper," on which he should enter the medical details of the case and other particulars in the manner usual in hospitals and in most of the separate Poor Law infirmaries.

We endorse this recommendation and we consider that fuller records of treatment should be required in the case of the outdoor sick also. We believe that these are indispensable to efficient control and supervision of medical relief.

(d) OUTDOOR MEDICAL RELIEF.⁵

(i.) *Outdoor Medical Attendance.*

161. Looking to our evidence we are satisfied that the great majority of medical officers efficiently and punctually perform the duties entrusted to them, and that, as we shall show hereafter, many bestow on the poorer classes a considerable amount of attention for which they receive no recompense. We have, however, received from a number of witnesses evidence to the effect that the sick poor are often deterred from applying for assistance from the Poor Law because they lack confidence in the medical attendant provided for them. Thus, Dr. Hawkyard, Leeds, says:—

"The present plan of medically assisting the poor under the Poor Law is not an efficient system. The average Poor Law medical officer (outdoor) does not give the satisfaction he ought to his patients. Consequently, the private practitioner is often called upon to attend parish patients. The remedy for this state of affairs would be to appoint all practitioners in a district Poor Law medical officers who would be willing to act."⁶

Dr. Innes Smith, Sheffield, says:—

"I think the working classes have an idea that the attention they get from the Poor Law medical officer is not satisfactory."⁶

Dr. Barlow, Bootle, says:—

"Another serious objection to the present system is that a great many people object to a visit from the parish doctor as a parish doctor, and often they will pay 6d. or 1s. (which they cannot afford) to another doctor, rather than go to him, or they will travel a long distance to the out-patient department of a hospital rather than go to the parish doctor. I do not know why this should be so, since they are both forms of free medical relief, but, nevertheless, it is so in my experience."⁷

Dr. Burnet, Birmingham, says:—

"They seem to feel that they are not paying for your services; . . . they do not seem to realise that they are getting enough attention compared to what they would if they had to pay for it, provided they had the means."⁸

¹ Williams, 45640-1; Shaw, 33370-7; Spurrell, 23559-61; Cf. also Fleming, 9551-4, and British Medical Association, 39243-7. ² British Medical Association, 39239. ³ British Medical Association, 39013 (24). ⁴ [Cd 1440], 1903. ⁵ Hawkyard, 42509 (2), 42516. ⁶ Smith, 43150. ⁷ Barlow, 38631 (17). ⁸ Burnet, 44452 (17).

Dr. Paton, Newport, says :—

“ I also say for the people themselves it is an advantage to have more than one (doctor). It is easier to get at him, he may live among them.”¹

Dr. McCarthy, Sherborne, says :—

“ The great hardship on the poor is that their doctor is chosen for them, and willy-nilly they must have him, or in most cases they can have none. Something in the plan of a provident dispensary would meet the case in most districts.”²

And again :—

“ They (the poor) are like the rest of us, probably, they like to choose their own doctor. They take a fancy to a particular man, and would like to have him ; there ought to be no reason why they should not have him, although they are poor.”³

162. Confidence in the doctor is an aid to recovery, and a want of confidence may fairly be assumed to operate in the other direction. We fully endorse the principle laid down as long ago as 1838 by the Select Committee, who, reporting upon the subject, felt “ it to be most important that the poor should be perfectly satisfied with their medical attendants.”⁴

163. When the scheme which we propose is in full working order, the member of a provident dispensary* will be able to choose his doctor from the list of those working with the dispensary. We recommend that certain cases in receipt of public assistance, such as the aged and widows with young children might be enrolled as members, and their fees paid by the Public Assistance Committee. To ensure prompt attendance in cases of sudden and urgent necessity, we think that every doctor who joins the dispensary should be required to give an undertaking to attend any such case for a suitable fee. We hope that, ultimately, it may be possible to dispense altogether with the service of the district medical officer, and that his duties will be shared among medical men practising in the district. Meanwhile, arrangements might be made to retain the district medical officer on the staff of the provident dispensary.

(ii.) *Outdoor Nursing.*

164. The voluntary nursing associations, of which there has been a great development of late years, have doubtless done much to alleviate the sufferings of the poorer classes—including those under the care of the Guardians. But such associations are not yet universal. Where they do exist it appears that the Guardians frequently contribute only a nominal sum to their funds, or do not subscribe at all. But, whether the Guardians give a substantial donation, or not, the association is seldom able to provide a nurse whenever called upon by the Guardians to do so. Few Boards of Guardians have appointed Poor Law nurses under the Outdoor Nursing Order of 1892. Few contract with a voluntary nursing association for the care of their outdoor sick. On the whole, it may be said that adequate provision has been made for the nursing of the outdoor sick poor in only a small proportion of unions. Indeed, in many instances the sick are still left to the care of some neighbour or casual helper, frequently underpaid, whose services the guardians are able to obtain. And it not infrequently happens, that a sick person may even be left without any nursing or attendance whatever.

165. While the Guardians cannot altogether be exonerated from blame for having failed to realise their responsibility in the provision of suitable nursing for the outdoor sick paupers, we think it is only fair to point out that they sometimes experience great difficulty in obtaining a suitable attendant ; and that, owing to prejudice and ignorance, the poor often resent the intrusion of a trained nurse whose ideas of cleanliness and order are not in accord with their habits.

¹ Paton, 50328.

² McCarthy, 67566 (5).

³ McCarthy, 67580.

⁴ Report of Select Committee on Poor Relief, 1838, p. 24.

* As to this, *vide* “ Scheme of Reform,” par. 237.

166. There is, we think, no doubt that the want of proper nursing for the outdoor sick paupers, especially in rural districts, "is a serious defect in the present system of medical relief,"¹ and that this has a prejudicial effect on the health of the paupers.² One witness describes the outdoor nursing question as the most important question with which rural Guardians have to deal. Another, a district medical officer of a rural union, states:—

"Many cases die simply from want of proper nursing." "I cannot," he says, "speak strongly enough on this point. It is one of the medical officer's greatest drawbacks that he cannot get efficient nursing for his outdoor cases."³ (Q.) "The lack of nursing is not confined to the pauper class only?—No, it is not quite, but it is very different in the next class, because their friends seem to manage that much better." "I never seem to have much difficulty from lack of nursing except in the parish cases."⁴

167. The inadequacy of the outdoor nursing is not, however, entirely confined to country districts, although in towns there is perhaps less real suffering from want of nursing than in the country.⁵ This is partly accounted for by the fact that the poor have not the same objection to go to the Poor Law Infirmary; that a larger proportion of pauper sickness is treated in institutions; and that nursing charities are more accessible to those sick paupers who are treated at home.

168. Owing to variations in local circumstances, the method by which the nursing of the outdoor poor can best be improved is not one in regard to which it is possible to lay down any general rule. In many instances, as Dr. McVail points out, trained nursing is not actually required:—

"What many paupers need is a little skilled guidance in attending chronic complaints, and in others it is housekeeping rather than nursing that is wanted—the washing and cleaning of an aged man or woman, attention to body and bed clothing, the keeping of the house clean and fresh."⁶

In many cases these services may be rendered by relatives, but, where paid attendants have to be employed, they should be paid a fair remuneration for their work. It is also desirable that there should be, where possible, trained supervision of these cottage nurses. In many, probably in the majority of districts, it may be found that trained nursing, when required, may be best supplied through a voluntary association. With this object it may be well to encourage the extension of existing associations, or the formation of associations in districts where they do not exist. The subscription paid by the Public Assistance Authority to the funds of the association should not be, as it frequently is at present, merely a nominal sum, but should bear some relation to the monetary value of the services rendered. In other words, the Public Assistance Authority should contract with the association to provide such trained nursing to the outdoor sick paupers as may be required by that Authority. Or again, in both urban and rural districts it may be possible to utilise the services of the indoor nurses for outdoor cases.⁷ Or, failing either of the above alternatives, it may be found expedient, particularly in populous districts, for the Public Assistance Authority themselves to maintain a staff of outdoor nurses.

169. But, while the precise method by which improvement may be effected is a detail which may be left to the judgment of the Public Assistance Authority, we are of opinion that the urgency and importance of the question is such that one of the first duties of that Authority is to take steps for the organisation of a satisfactory system of nursing or attendance for the outdoor sick poor. Further, to insure that the arrangements are being properly maintained we think that they should, from time to time be inspected on on behalf of both the Public Assistance Authority and the Local Government Board.

(iii.) *Compulsory Removal of Sick Cases to Infirmary.*

170. The difficulty of providing proper treatment for the sick outdoor poor might, it appears, be considerably diminished if powers were granted to the authorities to remove compulsorily to the infirmary certain cases which obviously would be better looked after in an institution than at home. Such cases include, among others, persons

Fuller, 10377. Lowry, 12140. James, 48348 (24). Biddle, 48888, (6).

suffering from incurable malignant diseases, aged sick persons living alone, who have no friends or relatives to look after them, and phthisical cases whose home conditions are not only bad for the patient, but are likely to lead to infection of the family. We have received representations from a very large number of Boards of Guardians, their Chairmen,¹ and witnesses,² as to the need for Poor Law authorities having such powers of compulsory removal. Dr. McVail also reports:—

“In Rural Unions, I met with many outdoor paupers, old men or women, receiving or requiring medical attention, who ought certainly to be in an institution. Chronic ulcers were being treated or neglected by the patient himself, sometimes without proper dressings, with the result that the sores were in a filthy condition and the whole house pervaded with a sickening odour when the ulcers were exposed. In such houses there was sometimes no nurse or attendant of any kind, yet the mere suggestion of removal to the workhouse sick wards was received with indignation. Quite unquestionably the patients would be much better off in the workhouse, but equally unquestionably they had the strongest objection to going.”³

171. The cases to which we have referred above, especially cases of aged paupers living alone, sometimes impose a serious responsibility on Poor Law authorities and their officers, and one or two instances have been brought to our notice of fatal accidents having occurred, chiefly through the patient falling into the fire, or otherwise setting fire to himself.⁴

172. We recommend, therefore, that, subject to the same procedure as is adopted in the removal of cases to an Infectious Diseases Hospital under the Public Health Acts, the relief authority should have power to remove compulsorily to an institution aged sick persons, living alone and without relatives or friends to look after them, or persons suffering from a disease which cannot be properly treated at home or which is a danger to the health of others living in the same house.

(iv.) *Unconditional Outdoor Medical Relief.*

173. “Some Boards (of Guardians) certainly do not seem to appreciate the value that ought to attach to medical out-relief.”⁵ In these words, Dr. McVail characterises a defect frequently observed by us in the course of our visits to the various unions. As a rule, the medical orders issued by the relieving officer since the previous meeting of the Relief Committee were passed *en bloc*, and without comment. Occasionally, a question might be raised as to reimbursement, and occasionally also the relieving officer might report that the district medical officer considered the case one for treatment in the infirmary. But, the Guardians seldom went over the cases seriatim, to satisfy themselves that the domiciliary conditions, or the habits of the applicants, were conducive to a successful treatment of the ailment.⁶ Moreover, in still fewer cases, if at all, did the Guardians see that the treatment recommended by the medical officer was being carried out by the sick pauper. In regard to unconditional medical relief, Dr. McVail reports:—

“Phthisis cases are maintained in crowded, unventilated houses where there is unrestrained facility to convey the disease to their own offspring. Diabetes cases live on the rates, and eat what they please . . . Outdoor medical attendance is freely and unconditionally provided by the guardians for the drunken and the immoral.”⁷

174. Where, as usually happens, the doctor is paid a fixed salary it is obvious that a few medical orders, more or less, do not affect the pockets of the ratepayers. Accordingly, by distributing these orders freely and unconditionally, the Guardians travel comfortably along the line of least resistance. They neither trouble to ask, nor have they been told to consider what is the effect of their action upon the recipients of their vicarious philanthropy or upon the morals of the community at large.

But, while many Boards of Guardians grant medical orders unconditionally, it appears that, even in Unions where relief is strictly administered, the Guardians have great difficulty in exercising an adequate supervision over outdoor medical relief. Thus, Mr. Crowder, Chairman of St. George-in-the-East Union, says:—

“It is too much to expect a relieving officer to take the responsibility of refusing; it is a doctor's question. I do not think we should do very much good by having all these cases up.”⁸

¹ Cf. Recommendations received from Boards of Guardians and their Chairmen.

² Burnet, 44420 (3); Bygott, 43996 (25); Cameron, 41487 (39); Fuller, 10412; Wilson, Vol. V., App. cxxii. (6); Yeates, Vol. V., App. cxxv. (6); cf. Newsholme, 92854. ³ Dr. McVail's Report, p. 114.

⁴ Cf. Dr. McVail's Report p. 115. ⁵ *Ibid.*, p. 122. ⁶ Ball, 35691, etc., etc. ⁷ Dr. McVail's Report, p. 149.

⁸ Crowder, 17333. Cf. Vulliamy, 73303.

175. Although, therefore, the evils of unconditional medical relief may be aggravated by lax administration, they cannot be altogether removed by the simple process of tightening up the administration. It would obviously be unsafe to refuse relief in all cases where the home conditions or habits of the applicants were unsatisfactory. It would be equally unsafe to withdraw the relief in all cases where the medical officer's treatment was being wilfully ignored. Indeed, we think that a system of conditional medical relief must carry with it as a necessary corollary the power to remove, under certain conditions, sick poor persons to an infirmary¹

176. Being desirous of pushing the principle of "curative treatment" into all branches of relief, and, above all, into that branch which deals with the sick, we recommend that outdoor medical relief when granted should be subject to conditions to be imposed by the Public Assistance Authority which conditions should include *inter alia* the maintenance of a healthy domicile and good habits.

(e) INACCESSIBILITY OF MEDICAL RELIEF AND ITS RESULTS.

177. While many witnesses have told us that medical relief is often granted too freely, we have also received a good deal of evidence to the contrary. In other words, the fact that medical relief is *normally* obtainable on an order from a relieving officer, instead of by means of direct access to a doctor, is said to lead to delay, which, it is alleged, is sometimes attended by serious, if not fatal results. In sparsely-populated country districts it is obvious that such a system of obtaining medical aid would break down entirely if medical officers adhered to the strict letter of the law.² The overseers are, no doubt, empowered to grant an order for medical assistance in case of an emergency, but it does not appear to be sufficiently known among the poor that the overseer has this power; indeed, in one union (Ellesmere) it is said that the Guardians themselves do not know that they can give medical assistance to any person who is not in receipt of other relief.³

178. The prescribed routine of obtaining medical relief was illustrated by Dr. Stephens, a district medical officer for the North Wiltford Union. He says:—

"For instance, if the parish patient wants an order quickly from me he really by law would have to go to Chatteris, that is eight miles, and come back four miles. He would have to go past my house four miles, and come back to my house again, and then I should have to go four miles. As a matter of fact that is not done. . . . It would take a man walking three hours to deliver the order to me according to this arrangement."⁴

179. In the rural districts visited by Dr. McVail "the almost invariable practice" is for the medical officer, who is frequently the only doctor in the neighbourhood, to attend without an order any poor person who may come to him for advice.⁵ In one union (Weobley) the difficulty has been circumvented to some extent by the ingenuity of the relieving officer, who (regardless of its irregularity) is in the habit of leaving with shop-keepers in the district, medical orders, duly signed, but with the space for the name left blank, to be given away to any poor customers who may apply for such orders.⁶

180. While doctors attend cases freely without an order from the relieving officer, our evidence shows that this leads to confusion in practice and causes considerable dissatisfaction to the medical profession. In this connection we give the following extract from the evidence of Mr. Smith Whitaker, one of the witnesses who appeared on behalf of the British Medical Association:—

"We have again and again had instances where doctors were called in to attend cases, and they can either accept or refuse. They go, perhaps, at considerable inconvenience, with the probability that they will not be paid for going, or that they will have to take the risk of not being paid. If they do not go and anything goes wrong, then they are accused of cruelty and inhumanity. If they do go the rule is that they do not get paid."⁷

¹ Cf. Final Report by Mr. Steel-Maitland and Miss Squire, p. 134. ² Slade-King, 69921. ³ Emberton, 71423. ⁴ Stephens, 34631. ⁵ Report by Dr. McVail, p. 124; Beabey, 52426; McCarthy, 67612; Hall, 70730; Parkin, 51533; Burnell, 68233; Griffiths, 71275; Rhodes, 38987; Exham, 72522; Parker, 70303; Farrant, Vol. VII., App. xxxiv. (2). ⁶ Hall, 70671. ⁷ Whitaker, 39315.

181. The duty of a medical officer, on visiting a case without an order, is to report it to the relieving officer, but an inherent dislike to correspondence on the part of the country doctors apparently leads many of them to ignore this part of their duty in cases requiring medical attendance and medicines only. Should extras or sustenance also be required, the case is usually reported, but, occasionally, even these necessities are supplied by private charity. If challenged for his seeming neglect of duty, the answer of the doctor is that he has regarded the applicant as a non-pauper case. In this way a considerable amount of medical assistance to poor persons of the pauper class—estimated by Dr. McVail at 15 to 20 per cent. of the Poor Law cases receiving medical relief—is administered by medical officers without being recorded as medical relief.¹ Conceivably, therefore, to take an extreme instance, the statistics of a union might show that no medical relief was being granted, while actually the Poor Law medical officer *qua* private practitioner might be dispensing a large amount of gratuitous medical assistance in the course of a year.

182. The inaccessibility of medical attendance in country districts also applies to medicines and medical extras. As regards medicines, the difficulty has been minimised by the medical officer carrying with him a stock of compressed medicines, or sending the medicines by the postman or by a messenger. But, as regards medical extras, the medical officer neither has the power to supply them nor to order them. All he can do, as has been stated, is to make a recommendation to the relieving officer that such extras as food or stimulants are necessary. The relieving officer has thereupon to make the necessary inquiries into the pecuniary circumstances of the patient. Accordingly, by the time that the extras are delivered, a considerable interval may have elapsed.²

183. Although the above remarks apply to country districts, it is alleged that medical relief is not always readily accessible in large centres of population where doctors abound. Sometimes, it appears, the poor do not know to whom to apply for medical assistance. Serious delay is also caused in certain unions where medical orders are obtainable only during office hours.³ In this connection we desire to draw attention to the Children Act, 1908, Section 12 of which renders the parent or guardian of a child liable to a penalty if he fails to provide such child *inter alia* with adequate medical aid, or if, being unable otherwise to provide such medical aid, “he fails to take steps to procure the same to be provided under the Acts relating to the relief of the poor.”(*)

184. We have received much evidence to the effect that the health of the community suffers because of inadequacy in the amount and quality of medical assistance.⁴ In this connection we may refer generally to the evidence cited throughout this chapter. Mr. Theodore Dodd has supplied us with a number of extracts from reports of medical officers of health, showing that a great deal of preventable disease and mortality among infants and children is due to the neglect of parents to call in medical aid soon enough.⁵ A number of other witnesses have tendered similar evidence.⁶ We may also refer to the returns of deaths from starvation in London, cited by Mr. Dodd, some of which, he contends, might have been prevented if medical aid had been forthcoming earlier.⁷ Mr. Benjamin Purse, on behalf of the National League of the Blind, informed us that a very large percentage of cases of blindness occurring in infancy might have been prevented if the infants had had proper medical attention; he also mentioned that “at least 33 per cent. of the blind are directly assisted by our Poor Law authorities.”⁸

(*) Children Act, 1908, 8 Edward VII., Cap. 67, Sec. 12 (1).

As regards midwifery cases, we find that a number of boards of guardians refuse to grant a midwifery order unless for a fourth or fifth child. Dr. McVail, in commenting upon this practice, remarks:—

“Necessarily under the Poor Law the point of view in these cases is solely the financial circumstances of the applicant, not the future health of the prospective mother. Manifestly for her health the most important confinement is not the fifth but the first. If not properly guided in it, illness may result which will lead to permanent ill-health.”¹

185. On the other hand, we must not fail to observe that a large number of witnesses have stated that the health of the community does not suffer on account of the inadequacy in the amount or quality of medical assistance.² Again, while medical relief is sufficient as to amount and quality, it is averred that the health of the community suffers because of the want of co-ordination among the various agencies supplying medical assistance.³ Dr. McVail, who made special inquiries on this point on our behalf, reports that he found very few cases “resulting in death or in severe illness or prolonged bad health” in consequence of want of proper medical attendance.⁴ The medical officers whom he questioned on the subject stated that outdoor relief was “freely asked for and freely given.”⁵ It appears, however, that the medical officers in making that assertion had in mind “the pauper class as distinguished from the poor or borderland class.”⁶ As regards the latter:—

“One doctor who had given attention to the subject was strongly of opinion that in his own area the class just above the grade of pauperism was much worse off in respect of medical attendance than the paupers themselves. Poor people who were expected to pay for a doctor often felt the financial burden too great, and delayed sending for him, or asked him to discontinue his visits before the patient ought to have been out of his control.”⁷

Other witnesses have expressed similar views:⁸ home medical assistance is deferred to the last moment, credit is obtained, clothes are pawned and then money is borrowed to pay the doctor in advance. Incipient or subsiding illness and convalescence are left to providence, and it may even happen that a visiting doctor is not told of a fresh case in the house on account of the expense.⁹

186. We, therefore, recommend that medical assistance be more readily accessible to all who are in need of it.

(f.) OVERLAPPING OF AGENCIES PROVIDING NON-INSTITUTIONAL MEDICAL ASSISTANCE.

187. As regards the want of co-ordination, and the consequent overlapping of effort among the various agencies supplying non-institutional medical treatment to the poorer classes, we have already shown that such treatment is being supplied by the Guardians, the Sanitary Authorities, the Education Authorities, the out-patient departments of the voluntary hospitals, the free dispensaries and the provident dispensaries, medical clubs, and friendly societies.

Except to a very limited extent there appears to be no real or effective co-operation between the Poor Law and the other agencies providing medical assistance. We recommend that there should be co-operation, and in the next chapter we shall submit proposals by means of which we hope to accomplish this end.

188. But, meanwhile, we desire to draw attention to the question of what is the right sphere of the voluntary hospital in regard to out-patients. This problem, in our opinion, lies at the very entrance to any radical reform of the system of medical assistance. In the Metropolis, as we have shown, the out-patient departments of the hospitals steadily and enormously enlarge their sphere. Much of this increase is due, rightly and properly,

¹ McVail's Report, p. 110 (a). ² Hounsell, Vol. VII., App. cxxvii. (6); Ross, Vol. VII., App. cl. (8); Brash, Vol. VII., App. xxiv. (12); Culross, Vol. VII., App. xxix. on the one hand to increase in population, and the increasing facility with which the poor in country districts can travel to London, but chiefly to the expensive equipment for dealing with special diseases which science has now placed in the doctor's hands. But these valid grounds for an increase in the work of the out-patient departments render it all the more necessary to save them from certain abuses of which we have had ample evidence.¹

In the first place, the out-patient departments are dealing with a large number of cases for whose treatment the Poor Law authorities are, or should be responsible. Thus, our Special Investigator, Miss Roberts, concludes that, if the three hospitals selected for her inquiry be fair samples, "at least 11 per cent. of out-patients at the voluntary (general) hospitals in London are actually Poor Law cases, being in receipt of some form of Poor Law assistance either at the very time they are treated, or within a half-year of treatment."² Under a co-ordinated system, it might be expedient to refer certain pauper cases to the out-patient department for a second opinion, or for special treatment, but this does not appear to be done to any great extent at present. Accordingly, it may be said that the out-patient departments are performing a great deal of work which should properly be done by the Public Assistance Authorities.

In the second place, it is for consideration whether the Public Assistance Authorities should not also deal with the two following classes of cases which, at present, receive treatment from the out-patient departments:—

- (a) Persons who are suffering from chronic ailments.
- (b) Persons whose home conditions will not allow them to reap any commensurate benefit from such treatment.

In the third place the benefits of the out-patient departments are being extended to:—

- (a) The well-to-do who can afford to pay private practitioners.
- (b) Persons sufficiently able to join a provident institution.

189. Until, therefore, the work of the out-patient department is delimited in such a way as to prevent overlapping between its sphere and that of the Public Assistance Authority, and to leave full scope for private practice and provident effort, any endeavour to reform the system of public medical assistance will be locally thwarted. Indeed, all attempts to create order out of the present chaos will be disappointing. Even in the interests of the out-patient departments themselves a reform appears to be expedient in order to secure the greatest benefits from the treatment which they so lavishly bestow³ and to prevent those benefits from being abused by the well-to-do. Suggestions for remedying the abuses of the out-patient departments have been laid before us by many witnesses,⁴ but by none more fully than the representatives of the British Medical Association. We are convinced with them that a strenuous effort should be made to circumscribe the work of the out-patient departments. They should be used almost exclusively for:—

- (1) Casualties.
- (2) Consultations.
- (3) Cases requiring expensive equipment for the treatment of special diseases and defects.

To this end the "letter" system should be thoroughly reformed or abolished, and, except for casualties, the recommendation of a medical officer or private practitioner substituted.

190. We recommend therefore that the work of the out-patient departments of the voluntary hospitals should be reorganised on these lines; that they should be protected from abuse by the well-to-do; and that a strong endeavour should be made to bring their work into co-operation with that of the new organisation of medical assistance which we propose to set up.

191. We desire also to draw special attention to the position created by the Education (Administrative Provisions) Act, 1907, to which we have already referred. Under that Act the Education Authorities have far-reaching powers of providing medical assistance to school children out of the rates. Unless their work in this respect is co-ordinated with that of the Public Assistance Authorities, the evils of overlapping and consequent waste of effort and money will be accentuated. For example, we have recommended that there should be more medical inspection of all children under the Public Assistance

¹ Marsh, Vol. VII., App. lxi. (4); Wilson, 44618; Rhodes, 38922; Hawkyard, 42531-42764; Packer 70185 (4); Wallace, Vol. V., App. liii. (7); Beeke, 48238; Cox, 51873-4 (4); Morrison, 52466, etc., etc.

Authorities. Of the 38,000 children of school age who were, on January 1st, 1907, being maintained in Poor Law establishments, about 18,000 were attending public elementary schools. In addition, out of the 171,000 children in receipt of out-relief on that date,¹ it may be said that practically all who were of school age were attending such schools. In the absence of co-operation, therefore, it is conceivable that all these children might, simultaneously, be the subject of medical inspection on the part of both the Public Assistance and the Education Authorities, and a large proportion of the children might, likewise, be receiving simultaneously two kinds of medical treatment.

Such a contingency would be regrettable, even if it were to obtain in only a modified degree. We are, however, hopeful that it may be possible to avoid it altogether. We are pleased to observe from the Board of Education Memorandum, dated November 22nd, 1907, explaining to the Education Authorities their duties as to medical inspection and treatment of school children, that the principle of co-operation with other local authorities is not lost sight of. For example, it is recommended that "the work of medical inspection should be carried out in intimate conjunction with the public health authorities, and under the direct supervision of the medical officer of health." Again, as regards the treatment of children by the Education Authorities it is recommended that it be done, meantime, "through such agencies as are conveniently available."

192. We have here an opportunity of establishing, at the outset, an effective method of co-operation, or division of labour, in the performance of a public duty. The medical inspection of pauper children attending public elementary schools may, no doubt, be effectively carried out as recommended in the Board of Education Memorandum, but any treatment for diseases required by such children should, we think, be provided through the agency of the Public Assistance Authorities.

Further, we think that this principle should be applied to all children attending public elementary schools. Thus, the Sanitary Authorities, whose functions are mainly concerned with the prevention of infectious disease, would be responsible for the medical inspection of all children. On the other hand, the Public Assistance Authority, whose functions would be to provide medical treatment, would provide such treatment for all school children, so far as they require to be treated at the expense of the rates.

(g) SUMMARY OF RECOMMENDATIONS AND SUGGESTIONS IN PART V., CHAPTER 2.

1. The primary responsibility of the Public Assistance Authorities for the inspection and supervision of medical assistance should be clearly recognised and carefully maintained; but, meanwhile, the arrangements for both indoor and outdoor medical assistance should be periodically inspected by medical inspectors on behalf of the Local Government Board; to this end the Board's staff of medical inspectors should be increased. (127.)

2. More effective control should be exercised by the Local Government Board over unnecessary expenditure on Infirmaries. (134.)

3. Medical Officers should receive adequate compensation for their services; and medicines should be directly provided by the Public Assistance Authorities, or, where this is impracticable, some equitable arrangement should be made whereby the cost of the medicines would not form a charge on the medical officer's remuneration. (131-2.)

4. Consideration should be given to the question of the sufficiency of the medical and nursing staffs in the Public Assistance Authorities' institutions for sick persons. (143-6.)

5. The system of superannuation of nurses calls for revision, particularly as to the age limit for retirement, which is too high. (148.)

6. To secure proper classification of the sick, with adequate nursing, sufficient institutions should be specially set apart for the treatment of the sick, and to this end an enlargement of the administrative area is necessary. (145 and 151.)

¹ Thirty-sixth Annual Report of Local Government Board, 1906-7, pp. cxxiii-v.

7. Institutions for the treatment of sick persons under the Public Assistance Authorities should be open for purposes of clinical instruction, subject to suitable safeguards. (159.)

8. Improved methods of recording the clinical treatment of sick cases should be adopted: "Case-papers" should be introduced and used for both the indoor and the outdoor sick. (160.)

9. Phthisis cases needing aid from public funds should remain under the care of the Public Assistance Authorities, who should, however, make more suitable provision for their treatment. (150.)

10. Medical treatment should be more readily accessible to all who are in need of it. (186.)

11. Outdoor medical assistance should be conditional on the maintenance of a healthy domicile and good habits. (176.)

12. In certain cases, power of compulsory removal to and detention in an institution should be given to the Public Assistance Authorities under proper safeguards. (153-7, and 172.)

13. Certain classes of paupers, such as the aged and widows with young children might be allowed to choose their own doctor from the list of doctors working with the provident dispensary¹; every doctor who joins the dispensary should give an undertaking to attend for a suitable fee any case of sudden and urgent necessity; it is hoped that it may be possible ultimately to dispense with the services of the District Medical Officer whose duties will be shared among medical men practising in the district; meanwhile arrangements might be made to retain the District Medical Officer on the staff of the provident dispensary. (163.)

14. Immediate steps should be taken for the organisation of a satisfactory system of nursing, or attendance, for the outdoor sick poor; the nursing arrangements should, from time to time, be inspected on behalf of both the Public Assistance Authority and the Local Government Board. (169.)

15. There should be co-operation between the Public Assistance Authorities and the other agencies providing non-institutional treatment to the poorer classes. (187.) To this end especially:—

(i.) The out-patient departments of the Voluntary Hospitals should be re-organised so as to bring their work into co-operation with that of the new organisation of public medical assistance, and to prevent their benefits from being abused by the well-to-do. (190.)

(ii.) The Education, and Sanitary Authorities should co-operate in the medical inspection of school children; any medical treatment, so far as it is provided out of the rates, to school children, should be provided by the Public Assistance Authority. (192.)

¹ As to this, *vide* "Scheme of Reform," par. 237.

Chapter 3.

GENERAL CONCLUSIONS AND PROPOSALS.

193. We have now completed a somewhat lengthy survey of the existing system of dealing with the sickness of the poor, and the defects of that system. We have felt bound to devote much space to the subject, because we are impressed with its importance.

The effects of a system of medical relief under the Poor Laws on a principle of restriction, hedged in by difficulties of attainment, and, till lately, accompanied by political disfranchisement, have been clearly shown in the evidence given before us:—

(1) It has to some extent produced the result which was intended. It has deterred men from applying to the Poor Law, has fostered independence, has called into existence and stimulated the growth of Friendly Societies, medical clubs, provident dispensaries and the like.¹

(2) It has, however, probably, led to a neglect on the part of many to provide themselves, their wives and families with medical attendance, and so helped to impair the health of the present generation.²

(3) It has called into existence a vast amount of medical charity. The out-patient wards of hospitals are only one instance of the eagerness with which men avail themselves of free medical advice, often no doubt as a second opinion where there is grave apprehension or want of confidence in a medical man.³

(4) It has helped to develop on a large scale the sale of patent medicines, and has created a class of practitioners who give advice and supply medicines at an almost inconceivably low price. As to the value of that advice or of those medicines, we pronounce no opinion. In matters of health the lessons of experience are learned but slowly and sometimes too late to profit the learner, and it may be said that the system tends to encourage inefficiency and to demoralise both him who gives and him who takes.⁴

194. The first point to which we would call special attention is the large number of institutions and of social agencies dealing with sickness. We have hospitals, convalescent homes, and retreats for the dying, maintained by voluntary effort. We have infirmaries under the care of the Guardians, and infectious hospitals managed by the Sanitary Authorities. All these provide institutional treatment. For domiciliary treatment, we have outdoor medical relief from the Poor Law, provident dispensaries and free dispensaries. We have also a far-reaching organisation of friendly societies which put medical aid in the forefront of their programme, and which are of great value to the nation because not only do they aid the growth of thrifty and provident habits but they give an opportunity for the exercise of self-government. As things stand, we have not merely much overlapping and consequent waste, but the illogical result that, whereas the inmate of a workhouse infirmary runs the risk of disfranchisement, the patient in a voluntary hospital incurs no such liability. In what follows, we shall endeavour to show how reform can be carried out by co-ordinating, utilising, and developing existing agencies for the provision of medical assistance. But first we shall summarise the evidence which we have received as to the close connection of sickness with pauperism.

(a) THE INFLUENCE OF SICKNESS ON PAUPERISM.

195. The history of the development of the public system for the prevention of disease in England is itself a testimony to the connection between sickness and pauperism. It was the Poor Law Commissioners, who, convinced of the pauperising influence of sickness, agitated for and obtained the first sanitary legislation for the prevention of disease.⁵ And for many years the Poor Law Guardians were in the country, as the Local Government Board still is at Whitehall, the chief authority entrusted with this prevention of disease.

¹ Cf. Part V., pars. 91 to 101. The experience of the Bradfield Union is also full of interest on this point (*vide* Willink, Vol. VII., App. cexi. (A)). ² Cf. Part V., pars. 43; 70-77; 177-186. ³ *Ibid.*, pars. 85-87; 102-107; 183-9. ⁴ Edwards, 38375-5; Scurfield, 41888 (10b); Bygott, 43998 (58), 44102; Burnett, 44570-6; Wilson, 44618 (15-16); Silk, Vol. IX., App. l.; also Memo. by Medical Officer of Local Government Board, Vol. IX., App. liv.; and Report by Dr. McVail, p. 159. ⁵ Cf. Part V., par. 108.

196. Tables have been furnished by witnesses showing that, of the applications for poor relief (not merely medical relief) received during a given year in the union of Nottingham, over 40 per cent.,¹ and in the Parish of Glasgow,² about 50 per cent., were due to sickness or ill-health.

After a careful examination of 4,000 cases of consumption in the wards of a union infirmary, Dr. Nathan Raw, Liverpool, came to the conclusion that nearly 60 per cent.³ were paupers because they were consumptives, and not consumptives because they were paupers. He adds: "there are at present in England and Wales over 200,000 men afflicted with tubercle, the majority of whom will ultimately have to resort to the workhouse, unless released by death." "The sad part of it is that highly respectable people in all ranks of society are dragged down to destitution by this fell disease, finally becoming chargeable with their families to the Poor Law."⁴ Our Special Investigators, Mr. Steel-Maitland and Miss Squire, found "no reason . . . to doubt the estimate of Dr. Nathan Raw."⁵

The effect of sickness on pauperism may be further demonstrated, firstly by the large number of sick (about 30 per cent. of the total paupers)¹⁰ under the care of the Guardians, and, secondly, by the chief characteristic—the chronic nature—of the diseases from which the poor persons suffer. In this latter connection, Mr. Steel-Maitland and Miss Squire point out:—

"An illness of a prolonged nature implies a greater strain on the resources than one which is acute. In the latter case, if the patient recovers, the special strain is comparatively soon ended, both as regards himself and his family. If he does not recover, the widow, and, if there are any, the young children may come upon the Poor Law. Even, however, if such should be the case, there is still the chance of re-marriage, whereas in the case of a lingering illness, the wage-earner will become a pauper, and his wife and children no less, with the added liability on the latter for his maintenance when they are earning or beginning to earn."⁶

Another of our Investigators, Miss Roberts, also reports:—

"Where the application is for the head of the family, the illness is usually of a chronic nature."

197. Sickness is therefore admittedly one of the chief causes of pauperism⁸; and the more chronic its character and the longer its duration, the greater the likelihood of its producing dependence upon the rates.

We estimate that at least one-half of the total cost of pauperism is swallowed up in direct dealing with sickness. To this burden we must add the indirect contributions of sickness, viz., the widows, children, and old people cast upon the rates through preventable deaths of bread-winners, and the host of degenerate, imbecile, maimed and blind, with whom disease helps to populate our workhouses. It is probably little, if any, exaggeration to say that, to the extent to which we can eliminate or diminish sickness among the poor, we shall eliminate or diminish one-half the existing amount of pauperism.

198. The action of preventive medicine will doubtless do much in the future to reduce sickness resulting from non-infectious diseases, as it has done so successfully in the past as regards infectious diseases. Meantime, however, we must be prepared to continue a system of therapeutic treatment, and, in the circumstances disclosed by the evidence, it seems to us that it would be neither prudent nor right to restrict medical aid by making it less accessible than it is at present.⁹

(b) OBJECTIONS TO GRATUITOUS MEDICAL ASSISTANCE.

199. Sickness being then so large a factor in pauperism, it may well be asked if there is not a strong case for providing a gratuitous public service for dealing with it. Is it not in the interests of the State to pay whatever may be necessary for eradicating so costly an evil? In our mind, the answer to the plea for a gratuitous medical service is twofold. In the first place, so far as the prevention of

¹ Herbert, Vol. I., App. XVII. (A), par. 53; also Qs. 8095-6. ² Motion Vol. VI., Minutes of Evidence. ³ Raw, 37927 (34). ⁴ *Ibid.*, 37927 (33) & (35). ⁵ Final Report, p. 130. ⁶ London Report, p. 16. ⁷ Report by Miss Roberts, p. 8. ⁸ Cf. Alden, 27359 (20); Dodd, 25373; Barlow, 38753-5; Young, Vol. IV., App. cviii. (13); Dearden, 41134-7; Niven, 38430, 38439; Buchan, Vol. IV., App. xxxiv. (10); Rhodes, 38898 (3-4); Devonald, Vol. V., App. xviii. (10); Stewart, Vol. V., App. cxi. (23); Newman, 94287 (31); Newsholme, 92534 (10-17); also Vol. IX., App. liv., &c., &c.: *Vide also* par. 156 as to pauperism caused by venereal disease. ⁹ Cf. Part V., pars. 177-186. ¹⁰ Statistical Appendix, Part III., par. 5.

disease is concerned, the free medical service already exists. As we have shown, the Sanitary Authorities at present not only freely apply preventive measures against sickness, but also, with few exceptions, freely cure or attempt to cure many classes of disease where the danger to the community extends beyond the mere danger of losing the individual attacked by the disease.¹ It is true that the classes of infectious or contagious diseases dealt with by the Sanitary Authorities might perhaps with advantage be extended.² But on the whole it is clear from the figures supplied by Dr. Newsholme that, aided by the improved standard of living and well-being of the people generally, the Sanitary Authorities have in the last forty years very materially reduced the death rate due to preventable diseases.³ It is, therefore, a fair assumption that they have to a large extent also diminished the pauperism due to preventable diseases. We are, in fact, at the present time enjoying the benefits of a great and growing free public medical service whose efforts are directed towards preventing diseases which contribute to pauperism. So far as the prevention of disease is concerned, the question of a free medical service is, therefore, confined to considering the extent to which the activities of Sanitary Authorities should be extended.

200. As regards a gratuitous medical service for the cure of disease, we recognise the attractiveness of the proposal, but we are unhesitatingly opposed to it on various grounds. We believe that the disadvantages of the proposal outweigh its advantages; and we are confident that the greater part of these advantages are attainable by other measures. We shall now proceed to develop these propositions.

201. The first objection to a gratuitous system of medical assistance is that it would be impossible to confine it to the very poor, or even to the poor. The class that avails itself of a gratuitous public service naturally tends to grow, and, in proportion as this class increases in numbers, the prejudice against using the service will diminish in intensity; each beneficiary recruits several others from among his friends, and what was at first an arithmetical soon becomes a geometrical progression in numbers, till none but the rich or the eccentric will continue to provide, at their own expense, benefits which are provided freely by the State for the vast majority of their neighbours.

More especially is this the case in a public service such as medical relief, where it is essential that what the State provides should be the best possible, and where it is, as a fact, often far better than can be individually provided by any except the rich. Instances in point are the use by well-to-do tradesmen and farmers of the free outdoor medical relief in Ireland;⁴ while, even with the deterrents at present in force in England, we are faced with the fact that the improvements in indoor medical relief have, in sixteen years, doubled the number of ordinary able-bodied inmates who come for indoor relief in sickness.⁵ We have also quoted evidence to show that an increasingly higher class of society avail themselves of the advantages of indoor medical relief, even under the present system.⁶

We are convinced, therefore, that, if the State were to provide an absolutely gratuitous and attractive medical service, the classes availing themselves of it would so increase that we should be faced with one of two alternatives. Either the accommodation would be inadequate, and we should be confronted generally with a situation such as that at Camberwell Union, where the comparatively well-to-do absorb the best accommodation to the exclusion of the very poor;⁷ or else the State would be obliged to provide gratuitous medical treatment for practically the whole population. The conscience of the community would, in the end, cause the latter alternative to prevail; and it is a consideration of the conditions which would then ensue which brings us to our second objection to the system of free medical assistance.

202. The second objection to such a system, as was recognised so long ago as 1869 by Mr. Goschen, is that it must inevitably tend to kill all the existing voluntary organisations for medically assisting the sick poor.⁸ We have shown what a vast and useful work on behalf of the sick poor is being done by the friendly and provident medical societies, medical clubs, and the voluntary hospitals.⁹ We do not believe that members of friendly societies and subscribers to voluntary institutions would continue to support these institutions if, at the same time, they were called upon to contribute, through

¹ Cf. Part V. pars. 108–114. ² British Medical Association, 39103 (28), 39268. ³ Memorandum by the Medical Officer of the Local Government Board on the Unification of the Official Medical Services for the Poor, Vol. IX., App. liv. ⁴ M'Gonigle, 52708 (31), 52757; also Memorandum on Poor Law Dispensary Medical Relief in Ireland, by Dr. Stafford, C.B., Medical Commissioner of the Local Government Board for Ireland, and evidence by Dr. Stafford, Q. 99835. ⁵ Cf. Part II, par. 122. ⁶ Cf. Part V. pars. 40–42, 7 Report by Dr. McVail, pp. 42 & 50; Foster, 16343. ⁸ Twenty-second Report of Poor Law Board, 1869–70, pp. xlviii.–lii. ⁹ Cf. Part V. pars. 85–7; 91–101.

rates or taxes to a more efficient and, in a sense, a competing public medical service which would deal gratuitously with precisely the same class as those for whom the voluntary institutions were intended.

We therefore concur with the majority of our witnesses who are of the opinion that gratuitous medical assistance would undermine both the voluntary hospitals and the provident and charitable societies which provide non-institutional medical relief.¹

203. It is to be expected also that, if practically the whole, or even a large proportion of the population, resorted to the gratuitous public medical service, the practice of the majority of private medical practitioners would be gone.² With the exception of a very limited number of those who might attend the wealthiest classes, medical practitioners would either be absorbed in the public service or would be obliged to change their profession. We cannot contemplate with equanimity the extinction of an independent medical profession, which may not only serve as a recruiting ground for the more responsible posts in a public service, but will also, by its originalty and independence of criticism, preserve that service from excessive officialism.

204. Finally, we turn to the probable cost of gratuitous medical assistance. Any estimate of the cost must be largely speculative, but, in our opinion, the cost of gratuitous medical assistance would, alone, render its adoption prohibitive.

205. Accordingly, any proposal to establish a system of gratuitous medical assistance would be opposed by the medical profession, by millions of members of provident societies, by the supporters of the voluntary hospitals, and, generally, on account of its enormous expense, by the ratepayers and taxpayers. Such an opposition in the aggregate would, independently of other considerations which might be urged against the scheme, make its realisation quite impossible.

We are of opinion, therefore, that, while one of the first objects of a change in the present system of medical assistance should be to render it more accessible to and more readily obtainable by the working classes,³ it should be administered in such a way that those who contribute towards their own medical assistance should obtain it on more eligible terms than those who do not so contribute. The method should be such as not to diminish, but to encourage and stimulate, a feeling of independence and self-maintenance.

(c) OBJECTIONS TO TRANSFER OF MEDICAL ASSISTANCE TO SANITARY AUTHORITIES.

206. It has been suggested by numerous witnesses—a considerable proportion of whom were medical officers of health—that the proper remedy for the existing chaos in the organisation of medical assistance of the poor is to hand over the administration of medical assistance to the Sanitary Authority, thus uniting in one body the responsibility for the public prevention and treatment of disease.⁴ These witnesses have by no means insisted as a corollary of their scheme that the new service should be gratuitous; but we shall proceed to show why we think that the proposed transfer is inconsistent with any but a gratuitous system, the evils of which we have indicated above.

207. An adequate inquiry as to the means of a patient is the only foundation on which we can build up a system of public medical assistance in which each patient, other than the very poor, contributes according to his ability towards the cost of his treatment at the public expense. Unless such inquiry is energetic, capable, and rigorously enforced, all experience goes to show that the public service will be more and more utilised gratuitously by the well-to-do, instead of by the poor for whom it is intended. But, for an inquiry of this kind, the Sanitary Authority has no existing staff; it would have to create one, and this would duplicate the expense and *personnel* of

¹ Davy, 2738; Shiel, Vol. V., App. cvii. (6); Rogers, Vol. V., App. xliii.; McCarthy, 67603; Reed, Vol. VII., App. lxxiii. the machinery for inquiry that the Poor Law authority already has and of necessity must have. Even if the necessary staff were created, the Sanitary Authority would find it difficult or impossible to adopt a policy of obtaining contributions from patients towards the cost of their treatment. One of the chief features of the Sanitary Authorities' treatment of infectious diseases is that its services are, with very few exceptions, rendered gratuitously to the individual. It has doubtless been felt that it is so overwhelmingly in the community's interest for an infectious patient to be treated in an infectious hospital, that it would be inadvisable to do anything to lessen the attractiveness of the hospital. In fact, whereas it is dangerous for the Poor Law authority to attract for treatment any but those who are unable to provide for themselves, it is the duty of the Sanitary Authority by propaganda, persuasion, and forethought, to make its services attractive to all classes of the community, independent of their economic position. It is, as a rule, in the community's own interest that even a well-to-do citizen stricken with infectious disease should be treated in the public hospital, where proper precautions can be ensured, rather than in his own home, where it is possible that such precautions may not be observed. Moreover, the Sanitary Authority can by its own efforts largely diminish—in some instances to vanishing point—the number of cases of infectious disease it will be called upon to treat. At any rate the fact remains that, rightly or wrongly, the Sanitary Authorities have allowed to fall into desuetude the power of recovering the cost of treatment in their hospitals which, except in London, they legally possess.¹ It would, therefore, be against the tradition of the Sanitary Authority that they should henceforth rigorously enforce a system of contribution according to the patient's ability.

208. But there is yet a more serious objection to transferring the administration of medical assistance to the Sanitary Authorities. These authorities in England and Wales number over 1,800. There are only 643 Poor Law unions. To hand over medical assistance to the Sanitary Authorities, would therefore be to hand it over to a larger number of authorities with smaller areas than at present. We should, as regards medical assistance, be reverting to the small area system that existed prior to 1834 instead of encouraging the large area system of 1908. It is beyond our reference to consider the question of reorganising the Sanitary Authorities of England and Wales, and to make the proposed transfer to the 1,800 existing Sanitary Authorities, would be to stultify the main contention of our Report, viz., that there is in every branch of the Poor Law a crying need of a larger area for purposes both of administration and of classification.²

209. There is the further consideration that medical treatment at the present time is largely a question of dieting the patients. To hand medical assistance over to the Sanitary Authorities would, therefore, involve extending their functions to the provision of maintenance, and, in the case of a family, this would almost inevitably lead to the anomaly that certain members would be receiving maintenance from the Sanitary Authority and others from the Poor Law authority. In other words, we should be creating two relief authorities where only one exists at present. This, also, would be contrary to another of our recommendations, viz., that in each area there should be only one authority administering public assistance. There would, again, be a difficulty as regards indoor cases. A poor person, when well, would be under the Poor Law authority and, when sick, would be transferred to the Sanitary Authority. An aged person whose condition alternated between health and sickness would, therefore, be in danger of constant transfer from the institution of one authority to that of another. This we conceive to be in the interest neither of good administration nor of the patient himself. Indeed, it would probably be found in practice that the aged and infirm would tend to gravitate to the institutions of the Sanitary Authority and to remain there.

210. Finally, before the functions of an existing authority are enlarged by transferring to it the duties of another authority, evidence is generally required that the authority so enlarged or elevated has discharged satisfactorily the primary duties entrusted to it. This cannot be said of many Sanitary Authorities, especially in rural districts, and is, in our opinion, a further objection to the transfer proposed.³

(d) THE LIMITS OF THE PRACTICABLE IN THE REFORM OF MEDICAL ASSISTANCE.

211. But, without incurring the dangers of a universal gratuitous public medical service, and without provoking the administrative and other difficulties which we believe

¹ Cf. Part V., pars. 113–4, 136. ² Cf. Report by Dr. McVail, p. 153; also Memo. by the Medical Officer of the Local Govt. Bd., Vol. IX., App. liv. ³ *Ibid.*

would ensue from transferring medical assistance to the Sanitary Authorities, we think that there are measures available which will go far to remedy the principal defects of the present system.

We do not pretend that the system we propose will realise the ideals of those enthusiasts who contemplate unfettered and unintermittent medical control, supervision, and treatment of every human being from the cradle to the grave. A system which thus made every human life the helpless subject of relentless and aggressive medical inspection and, to some extent, of medical experiment, might tend to encourage morbidly some of the human ills it was designed to destroy. A race of hypochondriacs might be as useless to the State as a race of any other degenerates. Good health is no doubt a matter of the greatest importance to all, but it is not the sole aim in life, and it is possible to exaggerate the part it plays in the attainment of human welfare.

Moreover, in considering the desirability of endeavouring to provide for the poor, regardless of expense, a theoretically perfect armoury against sickness, it must be remembered that a complete defence against illness does not at present exist even for the millionaire. Many of the more expensive "cures," from time to time prescribed by science and tried by the rich, are largely experimental, and often end in costly failure.

212. Our aim is that all methods for the prevention and cure of disease which have been generally approved by science and are reasonably accessible to the citizen of average means, shall also be obtainable by his poorer neighbour upon payment of a contribution according to his means, and shall be made available for the very poor without any payment at all.

We have seen how the present system falls short of this ideal, and it may be convenient now to summarise the nature of its defects, in order to see how they may be met by the proposals we shall make.

(e) ANALYSIS OF DEFECTS OF PRESENT SYSTEM AND REMEDIES INDICATED.

213. The defects in the existing system of medical assistance fall conveniently under three headings:—

- (i.) Defects in quality.
- (ii.) Defects in extent.
- (ii.) Defects from overlapping.

— (i.) *Defects in Quality; and Remedies.*

214. When we consider the enormous improvements which have been made in the last thirty years in the quality of the medical assistance available for the sick poor, we feel that a great debt of acknowledgment is due, not only to the Local Government Board, by whose orders and initiative, as we have seen, the improvements have been chiefly carried out, but also to the Local Authorities, who, to the extent of their understanding, have in most cases endeavoured to respond to the stimulus of the Central Authority. The Local Authorities have also themselves in some cases initiated important changes and have in turn stimulated the Central Authority. But, notwithstanding the improvements which have taken place, it is clear from the Report of our medical investigator, and from our evidence, that there still exist blemishes which cannot be justified in the service of both indoor and outdoor medical assistance. It cannot be right, for instance, that the suffering poor who come to the Guardians for assistance should be left in the workhouse with insufficient nurses, and in their own homes with no nurses at all.¹ It cannot be right that aged paupers should have their sores improperly dressed, that diabetes patients should have their deaths accelerated by improper diet supplied at the cost of the rates, or that sufferers from phthisis should be associated in close wards with ordinary patients.² We do not think that, in view of the enormous advances in medical science and facilities, the conscience of the community will allow blemishes such as these to continue to exist in our treatment of the sick poor. We do not intend to imply that such negligences are deliberate, nor have we any evidence to show that they are widespread; but they have been shown to exist in the limited, though typical, areas submitted to scrutiny, and their existence points, we think, in no uncertain manner to the need of more effective central and local medical supervision and control over the whole field of medical assistance.

¹ Cf. Part V., pars. 144–6; 164–7.

² Cf. Report by Dr. McVail, p. 149.

215. We have already indicated¹ that, as regards the Central Authority, the needful increase of medical supervision should be effected by an increase in the staff of Poor Law medical inspectors, of whom at present there are only two available for the whole of England and Wales.

216. As regards the Local Authority we think that the increase of medical control should be obtained by associating with that authority the assistance of some independent medical men. We cannot conceive that any medical institution could be efficiently managed by a Committee who had at hand no medical experience except that of the actual medical officers responsible for the very arrangements which it was the duty of the Committee to direct, control, and criticise. Yet this is the system which the law practically imposes on the managing authorities of the largest system of medical institutions in the country. Unless by the caprice of the ballot, there is nothing to ensure that there shall be a single man with medical knowledge on any of the 643 Boards of Guardians which are to-day responsible for the proper medical treatment of tens of thousands of the sick poor.

217. In the interests both of the sick and of the medical officers, we feel that there should be associated, with every Authority responsible for medical assistance, men competent, as occasion may demand, to criticise, supplement, or support with expert knowledge the arrangements proposed or countenanced by the medical officers for the care of the sick poor.

218. We, therefore, recommend that the Public Assistance Authority should appoint from among their number a Medical Assistance Committee to which shall be added representatives of various organisations which will be more fully described later on. It would be the duty of this Committee to make a thorough survey of existing medical arrangements to study the needs of the locality, and to suggest a complete system of medical assistance and inspection. It is only by thorough revision and rearrangement of existing methods that we can hope to remedy the present defects in medical assistance.

(ii.) *Defects in Extent, and Remedies.*

219. But whether the service of medical assistance be good or bad, our survey has shown that it is deficient in extent. It is not wide enough, either in its indoor branch or its outdoor branch, to reach a number of cases by whom in our opinion it ought to be used.² This deficiency in extent is chiefly due either to the physical inaccessibility of the service or to the mental aloofness of the people. Both these causes of present evils can, in our opinion, be eradicated through the machinery of a larger authority with special knowledge both of the medical requirements and of the medical facilities of its area. The duty of this Medical Assistance Committee would be to review, as has never been done before, all the available organisations for medical assistance in its district; and as far as may be practicable to adjust those organisations, as a whole, to the medical needs of the district. For instance, the extent of the need for medical officers in a particular district would be gauged by the character of the population and by the strength or weakness of provident dispensaries, and not, as sometimes at present, by misleading formulæ of acres and population. The need for rate-supported hospitals and their situation would be decided by considering the incidence of disease requiring institutional treatment, and the number of existing institutions available for such treatment. But if the Medical Assistance Committee is to have this knowledge of the medical needs and medical facilities of its district, it again becomes apparent that it must have available on its councils that independent medical knowledge which to-day is absent.

220. But is a waste of public money to provide facilities for medical assistance if the persons for whom they are intended will not use them; and we have seen that the present system does deter certain classes who ought to benefit by it.³ We are not prepared to say to what extent, if any, this aloofness of the people is to be attributed to the association of medical relief with the Poor Law. The reluctance to call in a doctor is not confined to the poorer classes, and it may well be the attribute of a temperament of which there are examples in all ranks of society. But, on the other hand, the evidence shows that, where the association of medical relief with the Poor Law has been lessened or disguised, as in the case of the separate infirmaries, there has been an increase in the number availing themselves of the system.⁴ The additions are, however, as we have seen, to an undefined extent, taken from the well-to-do rather than the poorer classes. We are not inclined therefore, to make medical assistance so attractive that it may become a species of honourable and gratuitous self-indulgence

¹ Cf., Part V., par. 127.

² *Ibid.*, pars. 43-7; 73-4; 79-84; 134; 141-3; also Report by Dr. McVail, p. 148 *et seq.*

³ *Ibid.*

⁴ Cf. Part. V., pars. 38-42.

instead of a somewhat unpleasant necessity resorted to because restoration to health is otherwise impossible. Again, we conceive that the right degree of attractiveness and deterrence for the right class of people can best be decided by an authority which, while possessing the economic experience of the Poor Law authority, shall also possess the experience of the medical habits of the people, acquired by independent medical practice among the poor and by association with provident medical societies. We think that only an authority so constituted will be able to make a public system of medical assistance attractive to the needy sick, while at the same time stimulating and educating those who, though sick, ought to have themselves made provision against sickness.

221. We are, therefore, strongly in favour of associating with the new Medical Assistance Committee representatives of provident medical societies, and we think that the encouragement of such societies should be one of the duties of the Public Assistance Authority. The presence everywhere on the Medical Assistance Committees of representatives of provident medical societies would have a double advantage; it would tend to give the poor increased confidence in the system of medical assistance, and it would ensure that that system did not become unduly competitive with the societies.

(iii.) *Defects from Overlapping; and Remedies.*

222. The last of our three classes of defects in the present system is the overlapping and lack of co-ordination between the various agencies ministering to the needs of the sick poor. We have given frequent illustrations of the overlapping in this respect between the Sanitary Authorities, the Education Authorities, the Poor Law Authorities and the provident and charitable institutions.¹ This overlapping involves three dangers, all of which in varying intensity occur in the present system.

The first is that a class of sick poor may be unprovided for because each authority thinks it is the duty of another authority to make the provision. Thus, at present there is an uncertainty as to whether the Poor Law or the Sanitary Authority ought to provide for consumptives, with the consequence that, in the greater part of the country, there is no proper institutional provision for these cases. There is also a doubt as to what is really requisite, and what is the best policy.

The second danger is that if two separate authorities are dealing independently with the same class of sick poor, one authority may be proceeding on principles directly subversive of the principles upon which the other authority acts. In this way the proper educative force of medically treating that class will be lost. For example, a Board of Guardians may be administering outdoor medical relief on such lines as will induce the poor to join provident societies; whilst a neighbouring voluntary hospital may be dispensing to the same class gratuitous and unconditional outdoor relief, and so the lesson of thrift in that district is negated.

The third danger of overlapping is the possible waste of money (sorely needed in other directions) by different authorities establishing, supervising, and staffing competitive organisations for dealing with the same class of cases. This, and all the other pressing dangers of overlapping authorities, clearly point to the need of co-ordinating and organising as a whole the medical activities of each district.

223. We think that that result could be best achieved by ensuring that the Medical Assistance Committee should have available on its councils representatives of the other authorities and organisations engaged in the medical assistance of the poor.

For example, there are at present about 1,800 extra-Metropolitan sanitary authorities in England and Wales with approximately 700 hospitals containing some 21,000 beds for the reception of cases of infectious disease. Moreover, apart from infectious disease, they have been empowered to provide general hospitals for the use of the community, and medicines and medical assistance for the "poorer inhabitants."²

As regards children, we find that simultaneous efforts are being made:—

(1) By Sanitary Authorities and health societies to deal drastically with the diseases of infancy with a view to the prevention of infantile mortality.³

¹ Cf. Part V., pars. 85-7; 135-9; 187-192. ² *Ibid.*, pars. 108-114. ³ *Ibid.*, par. 110; also Niven, 38380 (22); Greenwood, 37621; Scurfield, 41888 (1d); Newman, 94287 (23-31); Davies, Vol. IX., App. xlv; McCleary, Vol. IX., App. xlv. (20-4) &c., &c.

(2) By the Friendly Societies to promote juvenile courts and lodges of friendly societies in the elementary schools.¹

(3) By the Education Authorities to bring to light through medical inspection the diseases and defects from which the children suffer, and to arrange for the treatment of such diseases and defects.²

Again as regards the voluntary hospitals, we have shown that their work overlaps very largely that of the Poor Law.³

224. Any scheme for preventing overlapping between the agencies for medical assistance would certainly fail, therefore, if it did not obtain the adhesion of these numerous, and, in many cases, active authorities. But, if their co-operation were secured in every area, the Medical Assistance Committee would then have full knowledge of what medical work was being done by other authorities, could decide how best to allocate the work between these authorities, and could arrange that they should not proceed on principles mutually subversive of one another's interests and policy.

We recommend, therefore, that the Sanitary Authorities, the Education Authorities, the Voluntary Hospitals, the Provident Societies, and other organisations providing for the poorer classes in sickness should be represented on the Medical Assistance Committee.

225. Apart from the defects above classified, there are one or two so important that we feel we ought to devote separate attention to them and to the remedies, if any, to which they point.

(iv.) *Medical Assistance as a Cause of Pauperism.*

226. In the opinion of a large number of witnesses, many of them persons of the widest Poor Law experience, medical relief owing to its association with the Poor Law frequently leads to other forms of poor relief, and may even result in the permanent pauperism of the recipient. Indeed, the frequency with which this opinion is reiterated might almost entitle it to rank as a Poor Law axiom.⁴

227. In so far as a person becomes ill, and by reason of his illness, becomes temporarily or permanently unable to maintain himself, the statement is, of course, true that medical relief leads to, or rather, is followed by other relief. But this is only another way of saying that sickness is a cause of pauperism, both directly as in the case of a man and his family thrown on the rates by the sickness of the breadwinner, and indirectly, as in the case of an able-bodied man who loses his position through sickness, and is unable temporarily or permanently to find another. In such cases, it is not the medical relief, but the sickness and its disabilities, which cause the persons to come upon the rates for maintenance.

228. We think that very probably it is the prevalence of such cases which explains the point of view of many of the witnesses above referred to. At any rate, we have been unable to find sufficient statistical basis for the narrower view that medical relief, by reason of its association with the Poor Law, causes persons to become either a temporary or a permanent burden on the rates after their sickness has been cured.

Mr. Steel-Maitland and Miss Squire report that, "taking the cases for an isolated year in Hackney, it was found that, of a total of 237 male operatives in the boot and shoe trades, a medical order formed the kind of relief first given in thirty-four cases, or about one-seventh of the total." But they qualify this statement by remarking, "it is, however, disease that, in our opinion, is one of the most important causes of pauperism."⁵

Dr. McVail ascertained, as regards the rural unions visited by him, that in only one per cent. of the paupers, was it possible to say that outdoor medical relief had preceded other forms of relief, and that, even as regards this one per cent. it could not be assumed that they were led into pauperism by having received medical out-relief. In short he found it impossible to get on a statistical basis any evidence of the alleged evil influences of medical out-relief in the rural unions.⁶ As regards the urban unions, however, he formed the opinion, without having any real first

¹ Cf. Toynbee, 30622 (51). ² Cf. Part V., pars. 115-6. ³ *Ibid.*, pars. 185-7; 135-9; 188-9. ⁴ Fuller, 10303; Dansey, 6127-31; Vol. I., App. xii. (23); Lockwood, 4138, 13433; Wethered, 5624; Herbert, 8399; Stonham, 21736; Thompson, 22618, 22622, 22896; Bushell, 23945 (9); 23957; Peters, 19780, 19940; Brown, 24741 (46), 25024, 25037; Dodd, 25575; Battersby, 28919; Alford, 31693 (11b), 32000, 32044; Holland, 32857; Warren, 33487 (47-8); Thompson, 34072 (9), 34073; Montefiore, 35048, Booker, 40854 (17); Bygott, 43998 (23), 44147; Bray, Vol. IV., App. xxxii (27); Hill, Vol. IV., App. lxxviii (9); Thompson, Vol. IV., App. ciii. (11); Williams, Vol. V., App. lix. (30); Burnell, 68090 (9); Blake, Vol. VII., App. xxiii (7); Edwards, Vol. VII., App. cxiii. (4); see also Report by Miss Roberts, pars. 45-6. ⁵ Report on London, p. 15. ⁶ Report by Dr. McVail, p. 142.

hand statistical data at his disposal, that there was "a somewhat greater statistical possibility" of outdoor medical relief being an inducement to pauperism.¹ Having failed to obtain any direct statistics on the subject, we endeavoured to ascertain whether, inferentially, the contention that medical relief is a cause of pauperism could be supported by statistics. If medical relief causes pauperism, one would naturally expect to find a high rate of pauperism in districts where medical orders are freely given, but here again it is impossible to base upon the figures any reliable generalisation that pauperism is increased by the granting of outdoor medical relief. For instance, in St. George in the East and Whitechapel, both unions in which outdoor pauperism has almost been reduced to vanishing point, we find that medical orders are freely given. Mr. Crowder, chairman of the former union, admitted that the excellent results in the administration of the Poor Law had been obtained in his union without any very special strictness with regard to medical relief.² But this does not agree with the experience of relieving officers, who are almost to a man convinced that medical and out-relief are connected as cause and effect.³

229. It is indeed possible that the fact of an applicant being in receipt of medical relief may be considered by a lax Board of Guardians as sufficient proof of the necessity for other relief. It is also a fact that medical relief is in many unions given with the utmost laxity and without any adequate inquiry at all. In such unions there may well occur cases, such as that cited by Miss Roberts, where a person who had applied for medical relief with a view to obtaining ordinary relief and had obtained both was subsequently proved to have been a night watchman earning his livelihood during the hours of darkness, and remaining in bed during daylight with a view to hoodwinking the relieving officer and supplementing his income from the rates.⁴

230. In unions such as these, there is no doubt that medical relief will come to be considered by the population as a pretext and excuse for obtaining medical comforts and ordinary relief. But any unnecessary pauperism thus caused cannot be said to be the result of medical relief; it is rather the result of a generally lax administration.

We do not think, therefore, that the allegation that medical relief leads, under the present system, to other forms of relief, furnishes on examination any reason for dissociating it from the work of the Public Assistance Authorities.

(v.) *Deterrence of Medical Assistance, and Remedies.*

231. On the other hand, we have received a very large and important body of evidence to the effect that certain features in the administration of poor relief do, in their application to medical relief, tend to deter people from seeking medical assistance when they properly should do so. Thus, for instance, it has been argued that it is the relieving officer who gives the order for medical relief, and his tradition is to consider the economic, rather than the medical, necessity of the applicant,⁵ whereas, in the interests of the community, it is of the utmost importance that the applicant should first be treated, and the question of his economic position and his capacity to pay determined afterwards. Accordingly, we think that this is the principle upon which the medical assistance authority of the future should proceed.

Similarly, it has been alleged, and we think with justice, that the mere association of sick persons in a general workhouse with ordinary paupers deters many sick persons from accepting indoor relief.⁶ Accordingly, we propose that the medical institutions of the Public Assistance Authority should in future be dissociated as far as practicable from institutions dealing with other classes than the sick. This involves as a corollary a wider area for purposes of classification by institution.

Again, although it was apparently the intention of the legislature that persons receiving medical assistance should not suffer the disability of disfranchisement, yet, at the present time, it would appear that the definition of what comes under the head of medical relief, in regard to which there have been several appeals, is open to very great doubt.⁷ We think, therefore, that it should be made clear by statute that no person shall lose his local government or Parliamentary franchise by reason of the receipt of any form of medical assistance.

¹ *Ibid.*, p. 143.

² Crowder, 17539: The Jews are said to get medical orders with a view to obtaining substantial advantages from other sources.

³ *Cf.* Report by Miss Roberts, pp. 11-12.

⁴ *Ibid.* ⁵ *Cf.* Part V., pars. 73-4; 177-186. ⁶ *Ibid.*, par. 43. ⁷ *Ibid.*, par. 136 (e); also Adrian, 114-116.

In this connection we may point out that we are recommending an extension of the exceptions to the rule of constructive pauperism, so that those exceptions would include cases of dependants suffering from certain infirmities. In the case of such exceptions the person liable for the support of the dependant would no longer be the subject of disfranchisement.

Another deterrent feature of the present system is alleged to be that the applicant for medical assistance must appear before the body whose ordinary duties include the distribution of relief to the wastrels, and derelicts of society.¹ In so far as this feeling of reluctance is due to the fear of investigation by the relieving authority, we, as will be seen hereafter, do not think it can be entirely removed.

232. In so far, however, as it reflects a genuine reluctance of the respectable to make application to a relieving officer, or to a pauperising tribunal and classed with ordinary paupers, we think it can and should be met, and we accordingly propose that an applicant for medical assistance should be allowed to apply directly to a medical officer for treatment, and that his application should be dealt with as soon as possible afterwards by a committee of the Public Assistance Authority. In other words, investigation should follow upon treatment.

The constitution of a committee of the Public Assistance Authority, dealing solely with medical assistance will have the double advantage of decreasing the reluctance of the poor to resort to it, and increasing the likelihood of each case being dealt with and supervised successfully from a medical and curative point of view.

(vi.) *The Proper Objects of Medical Assistance and Necessary Safeguards.*

233. If these concessions to the feeling as to the deterrence of Poor Law medical relief are made, we think a system can be set up which will meet the medical needs of the poorer classes without, at the same time, making it probable that assistance would be administered on lines likely to sap their independence. For we hold strongly that medical assistance, while not being deterrent, should at the same time be such as will encourage rather than discourage independent provision against sickness by every class that is able to afford it.

234. The present situation would seem to be that medical relief is not legally deterrent in the sense that there is no legal disability attached to it. In practice, however, it is deterrent to those who dislike having recourse to the Poor Law, and to those who do not care for the Poor Law doctor; while it is unduly attractive to those who like getting something for nothing. Thus, the service rendered is in proportion neither to merit nor to needs.

The need for deterrence disappears, if the application for medical assistance can be made the introduction not to pauperism but to a provident dispensary on the lines which we shall hereafter recommend.

Accordingly, we recommend the following inducements to self provision against sickness:—

I.—The power of recovering the cost or part cost of medical assistance should be retained and enforced in all cases where, in the opinion of the Public Assistance Committee, the recipient of the assistance could have afforded to become a member of a provident dispensary, and had not become so. But it should be part of the powers of the Committee that they should be able to recover such cost in instalments, and that they should have discretion to remit the payment of any or all of such instalments upon proof that the recipient of the assistance had joined a provident dispensary. It should also be understood to be the policy of the Committee to use their powers as to recovery as a lever to lift the applicants for medical assistance into a position for making independent provision against sickness. For example, when it can be done without hardship to the individual, the charge for medical assistance at home should be at least higher than the subscription to a provident dispensary for the period during which the medical assistance is given.

II.—Another unattractive feature of the present system, which must remain as a corollary to the right to recovery, is the power of the Committee to make investigation into the means of applicants who have received medical assistance. This investigation is, in our opinion, absolutely necessary to prevent the well-to-do from abusing the system of medical assistance. It might, however, perhaps be omitted in cases of members of provident dispensaries, provided a proper wage-limit for membership of these institutions were established and maintained.

¹Cf. Part V., par. 73.

235. While we think the time is ripe for a great development of provident dispensaries and benefit societies, and we strongly recommend that the system of public medical assistance be organised on a provident basis, it must be confessed that the present attitude and position of the mutual provident societies on the one hand and of the medical profession on the other hand is one of difficulty. Largely, no doubt, owing to the close competition of its own members, medical men have contracted to give their services to the friendly societies at a lower rate than was desirable from any point of view. Some concordat on this question of remuneration is of pressing importance. There is another point of medical etiquette which might seriously hamper the progress of the mutual provident associations, viz., the refusal of the medical profession to allow any canvassing for provident institutions with which its members are connected. Again, the refusal of the friendly societies to impose a wage limit for members paying the ordinary fee for medical attendance, is a permanent source of friction. There is also the further question as to the part that should be played by the medical profession in the management of the dispensaries and other provident institutions.

With a view to removing any difficulties as to the fees to be paid to the doctors and as to the wage limit for members of the provident dispensaries that we propose to set up, we recommend that the British Medical Association be requested to suggest a general scheme or scale of fees and wage limit to be applied by their local branches as local circumstances may suggest. Difficulties as to management of the dispensaries will, we hope, be removed by the associated system that we have suggested.

236. We think that a system such as we have outlined is the best that can be devised under present conditions. Medical assistance would be available for all; the rich and the well-to-do, if they took it, would have to pay for it; the necessitous would obtain it gratuitously. The independent workman who joins the dispensary would be guaranteed adequate medical assistance in sickness at a cheaper rate than he could obtain it from an ordinary medical practitioner. He would have a choice of doctor. He would secure for himself institutional treatment if such treatment were necessary. And his self-respect would be additionally increased by dispensing in his case with all the irritating requirements of investigation into his pecuniary resources. The ratepayers would be protected from improper use of their institutions owing to the misrepresentations of the well-to-do and from unnecessary use of them owing to the thriftlessness or negligence of the poorer classes. The medical community, the Public Assistance and Sanitary Authorities and the people themselves would combine to provide an adequate and honourable system of co-operative medical assistance at the minimum cost, and a genuine attempt would be made to transform into a living and helpful organisation the existing medley of independent and often harmful agencies for dealing with the sick poor.

(f) SCHEME OF REFORM.

237. It is in the hope of attaining this end that we submit the following scheme of reform which assumes that the area of administration of the future Public Assistance Authority will be the county and the county borough, and that within each area this authority will have local committees working under it.

General.

1. That medical assistance should be re-organised on a provident basis.¹
2. That in certain cases power of compulsory removal to and detention in an institution should be given to the authorities under proper safeguards.
3. That there should be systematic co-operation between the Public Assistance Authorities, the Sanitary Authorities, the Education Authorities, and the voluntary medical institutions, based on a clear definition of their respective functions.
4. That no disfranchisement should be attached to any form of medical assistance.
5. That the arrangements for indoor and outdoor medical assistance should be periodically inspected by medical inspectors on behalf of the Local Government Board.

¹ Cf., Report by Dr. McVail, pp. 157-162; Report of Committee of British Medical Association on Contract Practice; Evidence by Dr. Lauriston Shaw, &c., &c.

Functions of the Public Assistance Authority as to Medical Assistance.

6. That in taking over the existing powers and duties of Boards of Guardians in regard to medical relief the new Poor Law authority, or, as we shall call it, the Public Assistance Authority, shall undertake the following functions:—

(i.) To co-ordinate and, when necessary, supplement the medical institutions of the county or county borough and to suggest methods of co-operation with the Sanitary Authorities and the Authorities in charge of Voluntary Hospitals.

(ii.) To organise an outdoor and provident medical service easily accessible in all parts of the county or county borough, this service to include the provision of competent midwives.

(iii.) To develop an adequate nursing service throughout the county or county borough, preferably in connection with voluntary nursing associations.

(iv.) To subscribe, when necessary, toward these purposes.

(v.) To arrange for adequate supervision of, and report on the efficiency and adequacy of the medical institutions and medical service through the county or county borough.

Establishment of Medical Assistance Committees.

7. That, to assist the Public Assistance Authority in carrying out the above functions, they shall appoint a committee from among their number, to which shall be added representatives of the Health Committee of the County Council or of the County Borough Council, and of the local branch or branches of the British Medical Association. This committee shall be called the County or County Borough Medical Assistance Committee, as the case may be, and shall have power to co-opt representatives of local hospitals, county or county borough nursing associations, dispensaries, and registered friendly societies.

8. That, where necessary, a local committee on similar lines shall be appointed by each Public Assistance Committee for the purposes of the local administration of medical assistance. This committee shall be termed the Local Medical Assistance Committee.

9. That all, or any, of the functions defined in No. 6 may be referred by the Public Assistance Authority to the County or County Borough Medical Assistance Committee.

10. That the following shall be the lines of procedure for carrying out the functions mentioned in No. 6:—

Institutions.

(i.) To consider in conjunction with each "Local Medical Assistance Committee" the needs of the county or county borough and the needs of each relief district in the way of hospital (including infirmary) accommodation.

(ii.) To reorganise existing Poor Law medical institutions throughout the county, or county borough, with a view to making them most effective for different classes of patients. (This would be done in conjunction with the committees in charge of workhouses, schools, etc.)

(iii.) To organise schemes of co-operation between Public Assistance institutions and voluntary hospitals.

(iv.) To develop a system of paying and free cottage hospitals in conjunction with voluntary and endowed charities, these to include provision for confinement cases.*

(v.) To arrange schemes of co-operation between hospitals and provident dispensaries or outdoor medical service.*

* It is not suggested that this should be done suddenly or that it should be thrown mainly upon the rates. It is a popular form of charity, and to publish the needs of a district would be a guide to charitable donors. Also there is much evidence in favour of small self-supporting hospitals, or nursing homes, and these might be organised in conjunction with the local medical men and, to some extent, upon a provident basis.

Outdoor Medical Service.

(i.) To require the "Local Medical Assistance Committee," in conjunction with the local doctor to map out their district into convenient medical districts or "dispensary areas."[†]

(ii.) To approach any free or provident medical institution, including private medical clubs, already existing in the district, and invite them to fall in with the scheme. (Refusal not to check procedure.)[‡]

(iii.) The local authority may subscribe to the provident dispensaries, subject to the sanction of the Local Government Board, and under the conditions mentioned in Section 10 of the Poor Law Act, 1879.

Relation of the Poor Law to Provident Dispensaries.

11. That where any applicant for medical assistance is not a member of a provident society, he shall apply to and at once be treated by a district medical officer.[§]

12. That the relieving officer, or as he will be called in future the Assistance Officer, shall enquire into and report the case to the Public Assistance Committee, whose action shall be directed towards :—

(i.) Recovery of cost.

(ii.) Strengthening of provident agencies.

13. That with a view to enlisting the services of all competent medical practitioners in the locality of a provident dispensary, the British Medical Association be requested to suggest a general scheme or scale of fees and wage limit to be applied by their local branches as local circumstances may suggest.

14. That under such scheme, all local medical practitioners consenting to come under it shall be on the list of dispensary doctors, and any applicant who is a member of the dispensary shall be entitled to select such practitioner as he may prefer.

15. That arrangements should be made, where necessary, for the reception of patients in voluntary and general hospitals by the payment of their cost or by some other agreement between the Public Assistance Committee and those in management of the hospital.

* This scheme would have to vary with local conditions. In London the Central Hospitals Council and the Hospitals Committee of the British Medical Association are in favour of preferential treatment to dispensary members who may be sent for consultation by dispensary doctors, and of using the out-patient departments of the hospitals mainly for consultative purposes. Cf. Holland, Vol. III., App. xvii. (B) and Montefiore, Vol. III., App. xxii. (A). We have no evidence to show whether provincial hospitals would follow the same line, but at Manchester the hospital authorities refer out-patients to the provident dispensary. The British Medical Association witnesses say: "It is remarkable how many hospitals who only give general replies on other matters go out of their way to say that they would welcome co-ordination of the provident dispensaries." (Whitaker, 39191.)

† The nature of the "dispensary" to be established in each area would vary with the nature of the district. In large and sparsely-populated districts a room in a cottage, with a locked cupboard for drugs, might be sufficient. In a crowded area, a complete building with waiting rooms, etc., and a dispenser might be necessary; while in medium districts attendance at the doctor's own house might be preferred. The determining factor would be the distance to be travelled by the patient. Existing buildings might often be utilised, e.g., public assistance, provident, and free dispensaries.

‡ It is probable that in many cases these would join at once. The Secretary to the Metropolitan Provident Medical Association says that already some of the free dispensaries have been converted into provident dispensaries, and that he is constantly approached by others with the same object. (Cf. Warren, 33487 (44), 33692-4.) Want of funds is generally the motive, and with the establishment of a universal provident system this motive would probably increase. The head of a large free dispensary in Birmingham is strongly in favour of a provident system. Cf. Evidence of Dr. Bagster Wilson, 44618 *et seq.* Doctors also are glad to come in with their private clubs, thus saving themselves the trouble of management and collection and friendly societies arrange for their members to join.

§ This procedure may be slightly modified if, and when, the office of District Medical Officer is abolished (Cf. Part V., par. 163). See also as to cases of sudden and urgent necessity. (*Ibid.*)

16. That any practitioner attached to a provident dispensary may, where the patient is a member of such dispensary and in need of institutional treatment, recommend him for admission to the local Public Assistance infirmary, and in certain cases, where arrangements have been made, to a voluntary or general hospital.

17. That, so far as the patient is concerned, admission under such conditions shall be covered by the subscription to the Provident Dispensary.

18. That as regards certain cases in receipt of public assistance (such as the aged and widows with young children), the Public Assistance Committee may enroll all such cases as members of a provident dispensary by paying the necessary fees.

PART VI.

DISTRESS DUE TO UNEMPLOYMENT.

Chapter 1.

SOCIAL AND INDUSTRIAL DEVELOPMENTS SINCE 1834.

1. Since 1834 there has been so much change in industrial, legislative, and social conditions that it may be well to indicate briefly the principal movements since that date which, it seems to us, must be taken into account in determining to what extent a change is called for either in the methods of the Poor Law or in the character of the legislation dealing with distress outside the Poor Law.

2. The scope of our reference and the difficulty of deciding where to begin and where to stop our inquiries, are clearly illustrated by this Chapter. It was impossible for us to ignore causes other than administration which occasioned fluctuations in pauperism and in the number of applicants for relief. But a full investigation into such causes would have entailed an inquiry into the whole of our social and industrial structure, and such a scrutiny was clearly impossible, if only from the length of time it would involve. We were, therefore, obliged to concentrate our attention upon certain definite questions, and we obtained upon these points sufficient evidence, together with that which, previous to our inquiry was public property, to enable us to shape and formulate a series of propositions which will be found later on. We have avoided economic subjects of a contentious character, except where their elucidation was necessary for our purpose. The following statements are, we hope, so drawn as to present an accurate and impartial picture of the historical developments of the past, and of the evidence we have obtained.

(1) POPULATION AND WEALTH.

3. The Census of 1831 showed that the population of the United Kingdom, which had already grown very rapidly during the great war, had increased by 15 per cent. in the previous decade, viz., from 20,893,000 in 1821 to 24,000,000 in 1831; that the increase as regards Great Britain was almost wholly in the large towns and the manufacturing districts; and that less than one-third of the population of Great Britain was engaged in agricultural pursuits.

4. This rapid growth of the towns was due to the "industrial revolution" which began about 1770. In 1725 Defoe had said that, in England, "the country south of the Trent is by far the largest as well as the richest and most populous." But when steam became the chief motor power and proximity to coal and iron determined the geographical distribution of industries, the population began to move north to the cotton and woollen, the potteries and hardware districts.

5. At the end of the war, in 1816, the chief towns were populated approximately as follows: London had 1,100,000; Manchester and Salford, 140,000; Glasgow, 125,000 to 130,000; Liverpool, 120,000; Birmingham, under 100,000; Bristol, once the second city in England, 80,000; Leeds, 70,000 to 80,000; Sheffield, 60,000 to 70,000; Plymouth and Portsmouth, 50,000 to 60,000; Norwich, once the third city, 40,000.

6. In Ireland, on the contrary, where in 1831 the population was about $7\frac{3}{4}$ millions, the increase, thanks to the multiplication of small holdings, was mostly in the rural districts, and about two-thirds of its population were engaged in agricultural pursuits. Dublin, however, in 1815 was the second city in the United Kingdom, with a population of 180,000.

7. The decennial Censuses which succeeded showed a much slower rate of increase in the population of the United Kingdom, viz., 11·2 per cent. for 1831-41; 2·5 for 1841-51; 5·7 for 1851-61; 8·8 for 1861-71; 10·8 for 1871-81; 8·2 for 1881-91; 9·9 for 1891-1901.*

* The highest rate ever reached was between 1801 and 1811, when the population of England and Wales grew by no less than $21\frac{1}{2}$ per cent. The increase of the previous decade was estimated at 14 per cent.

8. It is to be observed, however, that these very considerable variations of rate were caused mainly, though not entirely, by the decline in the population of Ireland which began with the Potato Famine. In the same decades (1831-41 to 1891-1901) the population of England and Wales increased successively by 14·3, 12·7, 11·9, 13·2, 14·4, 11·7, and 12·2 per cent.; and Scotland by 10·8, 10·2, 6·0, 9·7, 11·2, 7·8, and 11·1. The population of Ireland, on the contrary, which had increased by 14·2 per cent. during 1821-1831, and by 5·2 during 1831-1841, lost over 1,500,000 in the decade 1841-1851 which included the great famine, when it decreased by no less than 18·9. Since then the decline, though irregular, has been constant, viz., 11·5, 6·7, 4·4, 9·1, and 5·2 per cent.

9. In 1901 the Census gave the population of the United Kingdom as 41,458,721; England and Wales having 32,527,843; Scotland, 4,472,103; Ireland, 4,458,775. As regards England and Wales the rate of increase was 12·17 per cent. during the decade, as against 11·65 per cent. during the previous one. The urban population was now more than twice as great as the rural, while its rate of growth in the previous ten years was three times that of the rural area. In many rural areas, indeed, actual depopulation had taken place, the rate of decrease being greatest in the Counties of Huntingdon, Rutland, Montgomery, and Cardigan.

10. The population of the chief towns in 1901 was as follows: London (Administrative County), 4,500,000; Glasgow, 761,000; Liverpool, 684,000; Manchester, 543,000; (Salford, 220,000); Birmingham, 522,000; Leeds, 428,000; Sheffield, 380,000; Belfast, 349,000; Bristol, 328,000; Edinburgh, 316,000; Dublin, 290,000; Bradford, 279,000; West Ham, 267,000; Kingston-upon-Hull, 240,000; Nottingham, 239,000; Newcastle, 215,000; Leicester, 211,000; Portsmouth, 188,000; Bolton, 168,000; Cardiff, 164,000; Sunderland, 146,000.

11. Putting on one side rough estimates, such as that of Mr. Spencer Walpole that between 1815 and 1831 wealth increased twice as fast as population, the annual income of the United Kingdom was first calculated on definite statistical principles by Dudley Baxter who estimated it at £814,000,000 for the year 1867. For 1875 it was calculated by Sir Robert Giffen, on a method* now generally accepted, at £1,200,000,000, and for 1885 at £1,350,000,000. For 1891 it was estimated at £1,600,000,000, and in 1904 Mr. Bowley considered it very probable that in 1903 the national income fell very little short of £2,000,000,000.

12. The bearing of this on our present problem needs little emphasis. If there is any accuracy in these calculations, wealth in this country seems to be increasing so fast, as compared with population, that we might have expected to find that by this time industrial poverty at least was disappearing.

(2) INDUSTRIES

13. By 1834 England had fairly embarked on her career as pre-eminently a manufacturing country, and the factory system was well under weigh. The great textile inventions in spinning and weaving were already fifty years old, and were all at work. The epidemic of machine breaking had passed. Owing to the introduction of the "hot blast" in 1830, the annual output of pig iron was nearing 1,000,000 tons. The stationary steam engine was in general use. The "Rocket" was drawing a load of 9½ tons at the rate of 13 miles an hour on the Liverpool and Manchester line, and it was only two years afterwards that the attention of the Poor Law Commissioners was drawn to the new demand for labour in the building of railways—"these stupendous works of art." By that time—1836—nearly 8,000 labourers were

* The method was: (1) as regards capital, to take the gross annual income returned for Income Tax purposes, deducting Schedule C. and a proportion of Schedule D., adding a percentage for incomes that escape, and another percentage for incomes below the tax limit which may be ascribed to the possession of capital in the shape of tools, small retail stocks, etc.; (2) as regards labour, to take Schedule E. of the Income Tax returns ("salaries"), and a proportion of Schedule D. as due to the labour engaged in trades and professions, and to add an estimate of the income earned by working people and others under the Income Tax limit. The total may be regarded as the sum that would be assessable to Income Tax if all incomes whatsoever were subject to it, and no incomes escaped it. For an analysis of the justification and shortcomings of this method, and how far it gives an adequate reflection of the national income of commodities and services—"at once the aggregate net product of, and the sole source of payment for, all the instruments of production within the country."—*Vide Smart, The Distribution of Income*, pp. 5-92.

engaged in the construction of the London and Birmingham line, and all the important manufacturing towns were being connected. "From this source alone" said one of the Poor Law Commissioners, "I anticipate at no distant date the entire absorption of all the surplus labour of the country." Already too, it was twenty years since Henry Bell's little steamer of 25 tons had made headway on the Clyde against wind and tide, without oars or sails, at the rate of 7 miles an hour. In 1838 the *Great Eastern* crossed from Bristol to New York under steam. Two years thereafter Cunard launched a steamer for regular Atlantic voyages; two years more and the average passage under steam was reduced to fifteen days.

14. In 1845 there was an extraordinary outburst of speculation in railways. Ten years before there had been but one passenger line in England, and another, seven miles long, in Scotland. Now railway schemes were laid before the country asking, it was estimated, for no less than £700,000,000, and in 1847 a disastrous commercial crisis was due to the mania. It was the railways that finally broke up the stagnant life of England, and diffused the population over the face of the country at the call of the employers.

15. In 1846 came the repeal of the Corn Laws, and, in 1849, that of the Navigation Act, so far as it affected foreign trade. By 1852, Free Trade was generally accepted by all parties as the policy of the country, though it was not till 1860 that Mr. Gladstone made "a sweep—summary, entire and absolute—of what are known as manufactured goods from the face of the British tariff." The effect of the cotton famine, 1861-3, when Lancashire was practically out of work, recalls the fact that by this time a large portion of our manufacturing operatives were engaged in the making of cotton goods.

16. In 1855 the Limited Liability Acts were passed. In 1865 the Atlantic cable was laid by the *Great Eastern*. In 1868 the telegraphic system was acquired by the Post Office. In 1869 the Suez Canal was opened. About 1884 it began to be noted that much dislocation and distress were due to the transition from wood to iron and steel in the construction of ships.

17. These few dates are perhaps sufficient to show that nearly all the great features of modern industry are at least thirty years old, and that, consequently, there has been considerable time both for the evolution and for the study of the industrial problems with which we have to deal.

(3) AGRICULTURE

18. Although 1821 is usually taken as the year when England began to change from an agricultural to a manufacturing country, and when the conversion of arable into pasture and the introduction of threshing mills began to reduce the demand for agricultural labour, still the Census of 1831 showed that nearly one-third of the population of Great Britain was still engaged in agricultural pursuits.

19. Agriculture had been protected, first by the high duty of 24s. 3d. since 1804, and then by the sliding scale since 1828, and yet great fluctuations in price were characteristic, keeping the farmer in perpetual uncertainty about his profits and the landlord about his rent. Of the fifteen harvests between 1832 and 1846 eight were good—some of them extremely good—and seven were bad. But, whatever the crop, the "agricultural interest" was always complaining of distress, fine harvests bringing hardship to some, bad harvests to others.

20. The repeal of the Corn Laws, and of the Navigation Act made it possible for foreign countries to throw agricultural produce freely into Great Britain. The passing of the Elementary Education Act in 1870 powerfully affected the agricultural labourers' position by restricting juvenile labour, and diminishing the aggregate amount of the family earnings. For the next few years the Trade Union agitation to a great extent destroyed the old patriarchal relation, and brought agricultural labourers more into line with other working men.*

21. In the early 'seventies, farming was prosperous; the value of land was at its maximum (the assessment of "lands" under Schedule A. in Great Britain, which is now

* Report by the Board of Agriculture on the *Decline in the Agricultural Population of Great Britain, 1881-1906*, p. 10.

£42,000,000, was then nearly £60,000,000); wheat was never below 45s. a quarter on average.*

22. About 1875, however—the last of the six years of abounding prosperity—the cheapening of transport from America caused the collapse of prices of agricultural produce, which threw certain lands out of cultivation, reduced rents, and sent the labourers flocking to the towns. In 1879 British agriculture entered upon a new era.

23. By 1894 the cultivated area of Great Britain was almost equally divided between arable and pasture—16,000,000 acres of each; 4,000,000 acres of grass being added since 1871. But, in spite of this very large reduction of the sphere for agricultural labour, migration into urban districts had gone so far, that, instead of a surplus of labourers, there was a scarcity.† The Census of 1901 showed that there had been a decline of about 20 per cent. in the number of agricultural labourers in Great Britain within the decade. Since 1901—coinciding with the loss of another 1,000,000 acres of arable since 1894—there has been some further reduction in the number of men employed on farms, but the diminution is proceeding at a slower rate than during the ten or twenty years preceding that date.‡ It is noted that the reduction in numbers—thanks to the general use of machinery, particularly the self-binders introduced in the early 'eighties—has been greater among the casual labourers, who used to be employed at special seasons, than among the permanent staffs. In several Counties of England, for instance, the Irish harvester has ceased to be a yearly visitor. And the Board of Trade correspondents for the last few years generally report “regular employment” in agriculture.

24. Of late years, then, the phenomena of agriculture seem to suggest that equilibrium between the demand and supply of labour, and, consequently, more settled conditions, have been arrived at, on the one hand by the passing of arable into grass, and the extension of dairying and market-gardening, and, on the other, by the check, in many places at least, to rural depopulation. Farms have not gone further out of cultivation, and the number of labourers probably approached an almost irreducible minimum at the time of last Census.§

(4) MOVEMENT OF WAGES

25. The difficulties attending wage statistics—particularly comparative statistics—are obvious.

26. In many of the large factory and workshop industries, where there is a standard wage arrived at by collective bargaining, there has not been much room for error since the first appearance of the *Labour Gazette* of the Board of Trade in May, 1893, although even here it has to be remembered that the mean of standard rates is apt to reflect somewhat tardily the actual changes in wages of trades as a whole. Where, however, the rates are by the piece, or are matters of individual bargaining, there is no such basis, either of ascertainment or of calculation.

27. But when the endeavour is made to compare these wages, of which the basis at least is known, with wages in the past of whose basis we generally know very little, the margin for error is almost incalculable. We put forward the brief statement which follows with full consciousness of its defects.

* *Ibid.*, p. 10.

† This scarcity caused an upward movement of agricultural wages, which continued till 1892. By 1900, it is worth noting, the Board of Agriculture reported that the employment of women and children in agriculture in England had nearly ceased to exist.

‡ *Ibid.*, p. 8.

§ As regards Ireland, Mr. Cyril Jackson points out that the tendency towards depopulation has, perhaps, gone too far. “The stream of emigrants who have passed to the United States, and, to a much smaller extent, to other countries, during the last sixty years, has effectually relieved the labour market of any absolute surplus, but it may be doubted whether, during the last few decades, at any rate, the departure of so many of the most enterprising Irish men and women has not had a more serious effect in checking development than in relieving pressure. That in the country districts there is a dearth rather than any surplus of labour, seems to be fairly well established.” Report, 1908, p. 6.

28. Previous to 1888, the most authoritative attempt to estimate the movement of wages of the half century preceding was that of Sir Robert Giffen, in his Inaugural Address as President of the Royal Statistical Society in 1883.*

29. Basing his calculations on the records begun by Porter at the Board of Trade fifty years previously, such as the wages of carpenters, bricklayers, masons, miners, weavers, spinners, he found that, in all cases where it was possible, from the apparent similarity of the work, to make a comparison, there was an enormous apparent rise in money wages, ranging from 20, and in most cases from 50 to 100 per cent.—in one or two instances more than 100 per cent.—with a mean percentage of increase of over 70. In seamen's wages from 1850, the same rise was witnessed. In agriculture also—conspicuously in Ireland—the rise had been universal. And all this had been accompanied by a reduction in the hours of labour, which he put at very nearly 20 per cent.

30. As to the purchasing power of money, the sovereign went as far in 1883 as it did forty or fifty years before, the level of prices—after the moderate rise between 1847–1850 and 1862, and the subsequent decline—being very much the same. If anything, prices were on balance lower and not higher, while there were many new things in existence, and at low prices, which could not then have been bought at all.

31. Taking the articles on which the working man spent his wages, the price of wheat was lower, but, what was more important, it was steady. “What we have to consider is that, fifty years ago, the working man, with wages on the average about half what they are now, had at times to contend with a fluctuation in the price of bread which implied sheer starvation.” Sugar had fallen largely, and clothing was cheaper. On the other hand, the rent of houses was probably one and a half times more than it had been fifty years before, and the price of meat had about doubled. These exceptions, however, were insufficient to neutralise the general advantages which the workman had gained—for he had little more concern with the price of meat than with the price of diamonds—and Sir Robert Giffen went on to show how the longer life, the increased consumption of the chief commodities used, the better education, the greater freedom from crime and pauperism, the increased savings, the increase in estates paying probate duty, the increase in the number of persons paying tax on incomes above £150, were contributory and cumulative evidence that the mass of the people were immensely better off than they had been fifty years before.

32. He concluded: “Thus the rich have become more numerous, but not richer individually; the ‘poor’ are, to some smaller extent, fewer; and those who remain ‘poor’ are, individually, twice as well off on the average as they were fifty years ago. The poor have thus had almost all the benefit of the great material advance of the last fifty years.”

33. The only census of wages yet taken in this country is that of 1886, and, although necessarily very incomplete, as being confined mainly to the principal manufacturing and other organised industries, and based wholly upon voluntary returns, it affords somewhat of a basis for comparison with later years.

34. From a Memorandum prepared for us by the Board of Trade (Vol. IX., Appendix xxi., E,† to which we must refer for details), we gather the following as results of comparison—so far as that is possible—with the figures of 1886:—

(1) Between 1881 and 1901 a large increase took place in the proportion of employment afforded by the building, mining, iron and steel trades among the great industries, and by the chemical and paper works, among those of secondary importance, while the textile and leather trades showed, particularly in the decade 1891–1901, a large decline. In all these groups of industries, there has been a rise in wages since 1887, but the rise of wages has been greatest in those industries where the proportionate increase of employment has been greatest; that is to say, in building, mining, iron and steel industries, as compared with textiles and leather trades (and agriculture).

* *Economic Inquiries and Studies*, Vol. I., p. 382.

† *Estimate of Numbers of Wage-earners grouped according to wages earned (distinguishing between male and female, juvenile and adult) and an Account of the Movements in the Wages in certain Groups of Industries and in the Cost of Living over a period of twenty years.*

(2) Since 1897, among the rapidly growing class of railway servants—now about 500,000 in number—there has been a rise, over the twenty-seven chief companies of the United Kingdom, of, roughly, 1s. a week.

(3) In the wages of public employes, there has been a general upward tendency, not appreciably affected by the general conditions of the outside labour market.

(4) Between 1886 and 1907, the average weekly amount earned per employé has risen as follows:—In cotton manufacture, from 15s. 2d. to 19s. 5d.; in woollen, from 15s. 6d. to 18s. 2d.; in worsted, from 12s. 2d. to 14s. 7d.; in linen, from 9s. 10d. to 12s.; in jute, from 10s. 1d. to 14s. 4d.; in silk, from 11s. 9d. to 13s. 5d.; in hosiery, from 15s. 2d. to 15s. 7d.; in boots and shoes, from 18s. 4d. to 19s. 2d.

(In comparing these figures, however, due regard must be had to possible changes in the proportion of men, lads, women, and girls employed in the trades. The apparent absence of change, for instance, in the weekly earnings of the hosiery and boot and shoe industries is most probably due to the increased proportion of female workers included in the returns in these two industries.)

(5) In agriculture, the rise in the rate of wages from 1874 to 1906 has fully kept pace with that of the aggregate of the other groups, although the distribution of this rise over the period has been abnormal. There was, for instance, no general tendency to rise from 1874 to 1897; the most marked feature being a depression in the later 'eighties. But from 1897 till 1901 there was a steady and considerable rise, and the subsequent years maintained the higher level reached in that year. The *local* diversity of the rates, however, was more marked in agriculture than in any other large department of industry, except in certain of the building trades, ranging from 11s. 11d. for Dorset in 1906, to 20s. for Durham. The greater part of the difference, apart from the varying value of allowances in kind, appears to be due to the relative proximity of remunerative employment in other occupations with expanding labour markets, chiefly large manufacturing or commercial centres, and the great coal fields.

35. To sum up: "The general results of records in several trades, covering some thirty years, and of comparative statistics based upon the census of wages of 1886 are that, in all these groups of industries, allowing for trade cycles, a general tendency of wages to rise is perceptible through the last thirty years."

36. The change in money wages, however, has to be supplemented by a calculation of the changes in prices of the commodities on which the wage-earners spend their incomes. The information here available is so complicated that it will be prudent to refer to the calculations contained in the Memorandum itself, merely quoting the summary:—"The rise of nominal wages has been accompanied by such a fall of wholesale and of retail prices as implies a rise of 'real' wages, or wages as measured in commodities, considerably greater than the rise of money wages. The fall of prices does not, however, benefit the various grades of wage-earners in direct ratio to their wages. Rent and certain other necessary elements of expenditure, such as fuel, which have risen in amount for the large majority of workers, play a relatively larger part in the budget of the lower grades of workers, reducing to that extent the gain from the general fall of prices. The poorest classes, whose retail purchases are made in very small quantities, also gain least from the lower prices of other commodities than housing and fuel."

37. "Although except in agriculture, no exact measurements in actual earnings expressed in money or in commodities is possible, there is ample evidence for concluding that every grade of skilled or unskilled male labour, in regular employment, enjoys a higher income than in 1886 when the census of wages was taken, and that upon the whole this rise has been steady and of general application."

38. But it must be remembered that "it is mainly as regards labour in organised industries, and especially skilled workers, that any exact data with regard to wages are available. While there is reason to believe that unskilled and even casual labour is generally remunerated at a higher rate than formerly, it is possible that the

large mass of casual time labour is not making any substantial advance in weekly or yearly earnings."

39. "Of women's employment and wages it is even more difficult to speak with any confidence than of men's, because of the much smaller proportionate part they take in the large staple industries respecting which reliable statistics are available. Domestic service, still by far the largest occupation of women wage-earners, certainly has afforded a general rise of wages to the 39 per cent. of women, who, in 1901, were engaged in this work, while the increased proportion of women in the public services, and probably in the lower branches of the professions and of commerce, indicates an increase of wage-earning power, and a wider choice of occupation. Though the proportion engaged in the textile trades and in dressmaking shows a falling off, the absolute amount of this employment remains very large; and the tendency of wages, in the factories and large workshops which have absorbed a greater proportion of these trades, has been upwards, though probably the advance has not been so large as in the case of the more skilled and better organised male industries."

(5) TRADE UNIONISM.

40. Since 1834 the labour of the country has come to a great extent, directly or indirectly, under the dominance of Trade Unions. Coming into existence, practically, after the industrial revolution, with the cleavage of interests induced by the spread of machinery and the factory system, Trade Unionism had scarcely attained to any strength when it was driven underground by the fear and hatred of revolution, which took effect in the Combination Act of 1799, making Trade Unions unlawful associations "in restraint of trade." On the repeal of that Act in 1824, and after the industrial disasters of the next few years were over, there came a rush of activity between 1830 and 1834—notable for the foundation, among others, of the Boilermakers and Shipbuilders' and the Operative Stone Masons' Unions—and the movement entered on an almost revolutionary phase of somewhat reckless and aggressive agitation, largely under the influence of Robert Owen, and, later, much mixed up with Chartism. It was not till this revolutionary chapter was closed, and the magnificent hopes of the period had ended in bitter disillusionment, that Trade Unionism settled down, about 1843, to its more limited work of building up the great associations of skilled artisans.

41. Between 1843 and 1860 the chief characteristics of Trade Unionism were:—The absence of aggressive policy; the deprecation and dislike of strikes; the favouring of conciliation and arbitration; the large Friendly Society element; the centralising of funds and responsible powers; the restriction of membership to legal apprentices—based on the analogy of the protection against quacks provided by the medical profession; the agitation against piece-work and overtime. These characteristics were almost, one may say, embodied in the Amalgamated Society of Engineers founded in 1851, which became for the time the model of trade societies.

42. After 1860 the administration of complex affairs and of large finances in the various unions brought to the front, as might be expected, a number of able officials, who thereafter appeared very much as spokesmen and interpreters—if not directors—of the movement, and the formation of trades councils in the leading industrial centres consolidated it. Under these men Trade Unionism became for some years actively political.

43. The need of leaders and of the adoption of political methods, indeed, was soon seen. In 1867 the Trade Unions were attacked from two sides. On the one hand, the outrages and intimidation at Sheffield—assumed to be a usual and necessary incident of Trade Unionism—roused a body of public feeling very hostile to the movement; and, on the other, came the embarrassing legal decision that Trade Union funds were not protected, as had been supposed, by the Friendly Societies Act of 1855.

44. A Royal Commission of Inquiry was appointed to consider the whole subject of Trade Unionism and its effects. Thanks to the ability with which the Trade Union case was put before the Commission, a complete change was effected in the attitude of the governing classes towards the movement. When the Commission reported in 1871, the

Majority Report, while criticising the theory of Trade Unionism and condemning some of its practices, was found to have proposed no hostile legislation against the Unions, and the more friendly Minority Report, drawn up by Thomas Hughes and Frederic Harrison, put forward several recommendations which practically passed into law. By the Trade Union Act of 1871, the Unions became legalised—"restraint of trade" ceasing to be the test of illegality—and provision was made for such registration as gave complete protection to their funds, at the same time as they themselves became protected from being sued in a Court of Law.

45. During the years of abounding prosperity (1871–1875) the movement made enormous strides in almost every trade, but particularly among the hitherto badly organised—even the National Agricultural Labourers' Union, in 1872, could boast of nearly a hundred thousand members. In 1875 the Criminal Law Amendment Act of 1871, which had practically made picketing of any kind impossible, was repealed: "peaceful picketing" was expressly permitted: and the principle was laid down that "an agreement or combination by two or more persons to do, or procure to be done, any act in contemplation or furtherance of a trade dispute between employers and workmen should not be indictable as a conspiracy if such act committed by one person would not be punishable as a crime." Thus "collective bargaining, with all its necessary accompaniments, was, after fifty years of legislative struggle, finally recognised by the law of the land."

46. By 1879, however, the movement met with a serious set-back, when a long depression culminated almost in paralysis of trade. The membership fell off; the Agricultural Labourers' Union broke up; hundreds of trade societies were swept into oblivion; in South Wales Trade Unionism practically ceased to exist; the Unions that survived were denuded of their reserves.

47. For half a dozen years thereafter the various societies were occupied in sedulously building up again the membership and funds so greatly reduced, little moved by the reproaches of the more ardent spirits that care for the Friendly Society funds was blinding them to their militant duties.

48. In 1889, the Gas Workers obtained an eight-hours day, and the successful London Dock strike of the same year was followed by a great extension of Trade Unionism among the unskilled labourers.*

49. In 1896 the number of separate Trade Unions was at its maximum, viz., 1,309, with a membership of about a million and a half. From that time came a steady concentration, by amalgamation and absorption of the smaller Unions, till, in 1906, in 1,161 Unions, the membership reached the total of over two millions—showing an increase of nearly 40 per cent. since 1892. "The membership of many Unions varies with trade conditions, with its activity or depression, and to this cause the fluctuations in total membership are mainly due; it will be seen that the years of declining employment, 1902–4, witnessed a falling-off in Trade Union membership, as had been the case a decade earlier; and that this was followed by a slight recovery in 1905, when employment began to improve, followed by a very rapid advance in 1906."† It appears probable that something like one-fifth of the total adult male population is now organised in Trade Unions.

50. Apart from the broad historical fact that, since 1834, the working people of this country have become to a large extent a disciplined industrial army, under leaders of their own choosing who claim to have secured rises of wages and improvements of conditions of many kinds, there are certain points of Trade Union policy which have come strongly before us in evidence as bearing on the problems with which we are concerned.

51. (1) Trade Unions, as a whole, insure their members against the accidents and incidents of life by devoting a very large amount of their funds to what is usually

* The above, it need hardly be said, is merely condensed from Mr. and Mrs. Webb's *History of Trade Unionism*.

† Memorandum prepared at the Board of Trade for the Commission on *The Growth of Trade Unions with particular reference to the Payment of Unemployed Benefit*. Vol. IX. App. xxi., C.

called "Friendly Society benefits." It has been calculated that, during the eleven years from 1892 to 1902, the 100 principal Trade Unions spent 61 per cent. of their total income on such benefits, and only 19 per cent. on labour disputes. In this we have the explanation, to a great extent, of the well-known fact that few Trade Unionists come within the scope of the Poor Law or the Distress Committee.

52. Unfortunately, while the Friendly Society element as a whole enters into the great majority of Trade Unions, there is one form of it which is not by any means general—that which provides directly for those fluctuations which have hitherto formed a permanent feature of modern industry.

53. It has always been a principal aim of Trade Unions to assist their members to find work. One of the common rules in many Unions is that any member knowing of a vacancy must give notice of it immediately to the branch secretary, or be fined. But many of the most important Unions connected with engineering and shipbuilding, such as the Amalgamated Society of Engineers, and the Boiler Makers and Iron Shipbuilders' Union, make, besides, a feature of the weekly allowance to members out of work, called "unemployed benefit,"—usually 10s. for a limited number of weeks—conceiving it, indeed, part of their policy to prevent the unemployed workman from being tempted to break away from his allegiance to the standard wage principle. They give also "travelling cards," facilities or allowances for travelling in search of work; and in certain circumstances pay railway or steamer fares and expenses of removal. Other societies make travelling allowances—usually about 1s. 6d. per day—without any further unemployed benefit,* and some few even give or advance sums to emigrate members. Sir Edward Brabrook says that, roughly, one-sixth of the benefits provided by Trade Unions are out-of-work benefits.†

54. Another provision of Trade Unionism insures against the unemployment due to age, namely, "superannuation benefit." The Amalgamated Society of Engineers, for instance, which shows a continual increase of men on superannuation, has 5,300 on the list at a pension of from 7s. to 10s. per week, the average being about 9s. But where physical unfitness to earn a living is proved, men are eligible, after certain years of membership, at the age of fifty-five, and there are large numbers on the list between the ages of fifty-five and sixty.‡

55. Superannuation benefit is paid, however, by a comparatively small number of the 100 principal Unions, chiefly those in the engineering, shipbuilding, building, and printing trades; but these included, in 1906, 633,000 members, or about one-half of the total membership of the 100 principal Unions, and £306,089 was paid under this head. Few of the miners', and none of the weavers' and labourers' Unions pay this form of benefit; but in the case of the miners it is given by the Miners' Permanent Relief Societies. The weekly amounts range from 2s. to 12s., the majority ranging from 5s. to 10s. In some cases the benefit is given only when incapacity (more or less complete) accompanies old age.§

56. There is, then, some ground for the contention that the Trade Unions are the most extensive and effective agencies at present dealing with the problem of unemployment. In many respects they can administer unemployed benefit as no other body can; not only because, in a Union, every man's circumstances are likely to be known to the local officials and to the rest of the members, but because the Union, as the owner of one fund which may be drawn on for many purposes, has every inducement to get the unemployed member off the "vacant book" by finding

* Travelling benefit was originally intended for men travelling in search of work; it is now mainly used to enable men to reach places in which work has actually been found for them. Report of Messrs. Jackson and Pringle, p. 91.

† Evidence, Vol. III., 35147. In 1906, of the 1,161 Unions in existence, 747 (with a membership of 1,456,977, or 69 per cent. of the total trade union membership) paid one or more forms of unemployed benefit in the course of that year, so that rather more than two-thirds of the organised workmen were in Unions which gave some kind of help to their unemployed members. In 1904—a year of bad trade—the amount thus spent reached its maximum of £652,471; in 1906, it was £421,292. Memorandum on *The Growth of Trade Unions*, referred to above, Vol. IX, App. xxi., C.

‡ Mr. George N. Barnes, M.P., Evidence, Vol. VIII., 82814–22, 82906, 83088.

§ Memorandum on *The Growth of Trade Unions*, Vol. IX., App. xxi., C.

him a situation, and to see that he takes it when offered. Thus some Unions give a bonus on situations found, and fine unemployed members if they do not accept them when found. The Amalgamated Society of Engineers, again, has the following rule: "Any member under fifty years of age who is on donation (unemployment) benefit, refusing to remove to other places, shall be suspended from donation, when the branch shall at once investigate the case and decide upon his claim to donation, and what other penalty, if any, should be imposed." And where the Union is very large and well organised, it is a common thing for employers to apply to the local branch for the men they want. In the Unions belonging to the printing, book-binding, and kindred trades also, the finding of employment as well as the giving of relief while out of work is prominent.

57. In the building trades, however, which are largely seasonal, unemployed benefit is far less common, although it is a feature of the largest of these Unions, the Amalgamated Society of Carpenters and Joiners.* The textile industries do not make such provision to any great extent. In coal-mining, again, unemployed benefit is quite exceptional, dull trade being usually met by reducing the number of working hours per week.

58. Two points emerge here. One is that the giving of unemployed benefit in any form is confined to the Unions of skilled workers. For the unskilled, it is broadly asserted that the provision of such benefit is impossible on account of the cost, the ordinary estimate being that the extra weekly contribution necessary for this purpose is no less than ninepence a week.†

The other is that of the skilled Unions, only comparatively few—chiefly in the engineering, shipbuilding, building, and printing trades—make provision of superannuation benefit.

59. But it is significant of later developments that the rate of increase since 1892 has been greatest in the case of Unions which give some kind of unemployed benefit, and that the number in receipt of superannuation relief at the end of 1906 was nearly treble the number in 1892, and almost exactly double the number in 1896.‡

60. (2) One of the points on which Trade Union theory lays most stress is the prohibition of its members from accepting less than the standard wage. It is not our place to do more than state the fact that the Trade Union body considers that its cardinal principle—protection of the Standard of Life once attained—can be secured only by the prevention of any member from "cutting" under his fellows. The counterpart, of course, is that, so long as there is any choice, no employer will engage workers who, either as regards age or capacity, are below the standard of work on which the standard wage is presumably based.§

* The Union of House and Ship Painters and Decorators, with a membership of 16,056 at the end of 1904, paid £22,039 for unemployed, travelling, and emigration benefits in that year, and over £25,000 in the winter of 1905-6. (Report of Messrs. Jackson and Pringle, Appendix W., p. 417.)

† Evidence, Vol. III., 35147. On the other hand, at least one Union, the British Amalgamation of Labour (Manchester), an association of unskilled, chiefly, dock labour, has different sections, enabling the more careful members to insure against unemployment. It has been suggested among the bricklayers that a scheme could be devised by which a short period of unemployed pay, *e.g.*, for six weeks, between November 1st and March 31st, could be arranged without any undue increase of contributions. (Report of Messrs. Jackson and Pringle, p. 97.)

‡ Board of Trade Memorandum on *The Growth of Trade Unions*, Vol. IX., App. xxi., C.

§ Note, however, that trade unions in which operatives are paid by time do generally make special allowance for old men, and permit them to work at lower rates. (Evidence, Vol. I., 9097.) "In the Amalgamated Society of Engineers we do not require a man to shift from one town to another after he is fifty years of age, and, putting it generally, we do not require him to get the standard rate of wages—according to the discretion of the committees who may deal with the matter—after about fifty-five years of age." But the percent age of men who take advantage of this is very small. "In fact, although we allow men to work under the rate at fifty-five years of age, it is rather the case that the men at fifty-five, or even sixty, do not avail themselves of the opportunity. So strong is the sense of discipline in the Trade Unions and their sense of loyalty to their fellows, that in most cases a man would rather give up work altogether than accept work at the lower rate. So that, instead of Trade Unions standing in the way of the men accepting lower rates, the opposite is the fact, and the Trade Unions rather encourage it."—(Mr. G. N. Barnes, M.P., Evidence, Vol. VIII., 82805, 82812.)

61. (3) Trade Unionism has declared bluntly and unmistakeably for the solidarity of the working classes as against the employing classes. The "patriarchal relation" between employer and employed, which prevailed very extensively till at least the third quarter of last century, is neither desired nor thought desirable. The workman has, practically, chosen the "cash nexus" as the only tie between him and his employer. This is seen, perhaps, most clearly in the official attitude towards "labour co-partnership." Even the fact that, under such a system, the men are partly their own employers, only emphasises the contention that it separates them from their fellow workmen and gives them an interest outside that of their own class.*

62. (4) Trade Unions generally have set themselves against piecework and overtime.

63. As regards piecework, the opposition to it has perhaps been too summarily condemned outside trade union circles as merely a device to prevent the more efficient workman from casting an unfavourable reflection on the less efficient. Against this should be set the striking statement of a great employer relative to the "black squad"—the men who build together all the iron frame of the ship:—"The workmen have a feeling that it is sometimes used to drive men to work harder than is good for them. This is a very great feeling amongst trade union leaders, and very likely they are right about it. There is always the danger of the man working harder than he can do permanently and so pulling himself to pieces in a few years. The fact that the trade unions complain of it has come under my notice a good deal. They have taught it to me. I should not have thought of it for myself. They put great stress upon it; and I think they probably know more about it than I do, and probably they are right."†

64. As regards overtime, the trade union argument is not only the questionable one that it tends to spread employment over a smaller number of men, but that the individual worker requires—as in the case of piecework—to be protected against his own anxiety to earn extra wages at the cost of health‡ as well as against the natural anxiety of employers to keep their plant working as long as possible. The example of Lancashire, again is given, where, by resisting overtime, the cotton operatives "steady the demand and resist the seasonalising of trade," whereas, in the woolcomb-ing trade, after each of the five wool sales, the machinery of the East Riding is set agoing night and day, the wool is soon used up, and employment becomes irregular.§

(6) INDUSTRIAL COMBINATIONS.

65. The restrictions and obligations put upon employers by Trade Unions and by industrial legislation, and their increasing risks, due, partly to the continual struggle among themselves to take and hold markets by reducing prices, partly to the rapid superannuation and scrapping of machinery owing to invention, have tended naturally during the past century to throw employment more into the hands of firms and corporations having the command of large capital, and to handicap the smaller man.

* *Vide passim* Evidence of Mr. G. N. Barnes, M.P., Vol. VIII., 82764.

† Sir Benjamin C. Browne, Evidence, Vol. VIII., 86422–86424.

‡ "There is small doubt but that a tendency to break down, leading in some cases to recourse to poor relief, is caused by excessive overtime, especially in those occupations where it is accompanied by intensity of strain."—(Report of Mr. Steel-Maitland and Miss Squire, p. 21.)

§ It may be noted that employers, as a rule, are quite emphatic as regards systematic overtime. In answer to a question in our schedules to employers (*vide* p. 71), the expression was almost unanimous that systematic overtime is bad, should be discouraged, and is actually discouraged. Overtime costs more—even night shifts often cost one-third more in wages—and it is not economically profitable that the workers should prolong their exertions beyond the normal day. To this extent the trade union contention seems justified. But occasional overtime, it is urged, is not only inevitable, but in the interests of all classes, both because, if it were absolutely prohibited, some work now considered necessary could not be accepted at all, and because permanent staffs could not be kept to overtake work that only requires, perhaps, a week or two of overtime without reduction of the employment as a whole. Besides, as we are reminded, "it is necessary for a certain number of men to work overtime to prevent other men from being kept idle and waiting." But, of course, the majority add that the ground on which trade unions generally oppose overtime, namely that its prohibition would spread the limited work over a wider field, is quite indefensible. On the contrary, its prohibition would lead to the giving up of many jobs which must be done at high pressure or not at all. And one witness adds the valuable reminder that "when trade is very bad, the only people who order goods are the people who want them very badly indeed," as when a ship is lost or a property burned. (Sir Benjamin C. Browne, Vol. VIII., 86394.)

Hence one characteristic phenomenon of the present day is the enlargement of the "unit of employment"—the organisation under a single employing control.

66. From the point of view of wealth production, there is nothing against such combinations. They make possible the economies of production on a very large scale—economies in manufacture, in buying, in selling, in office work, in warehousing, freighting, financing, and in the utilisation of bye-products; they save the waste involved in keeping up, pushing, and advertising separate and rival businesses; they secure the stimulus of competition within the various similar branches; and they can specialise in plant, processes, and labour to the utmost limit. They practically involve the elimination of the unnecessary person, the unnecessary process, and the unnecessary thing in the production and distribution of goods.

67. On the other hand such large combinations tend very seriously to become monopolies, and monopolies have at least three dangerous powers—over price, over improvements, and over labour: that is, power to maintain and inflate prices, to do without the improvements which competitive enterprise would ensure, and to keep down wages by eliminating the many competitors to buy the services of labour.

68. Perhaps all that need be said here is that the evils which have attended the formation and working of Trusts in America do not seem to have emerged to any dangerous extent in this country. Under Free Trade, "combines" are an entirely natural development of the competitive system, and none of our witnesses has connected them with unemployment otherwise than as their economies tend to displace labour.

69. We owe it to Sir Benjamin C. Browne, however, to remind us that attention is perhaps too much attracted by the very large combinations. "I do not think people realise how much more important the small employer is than the large employer. You find far more workmen employed by small employers than are employed by the large ones. If you define the large and small employers as men who can or who cannot pay heavy compensation claims without feeling them, I think you might say that more than two-thirds of the working class work for small employers."*

(7) THE CO-OPERATIVE MOVEMENT.

70. In 1844 a few poor flannel weavers out of employment in Rochdale established the first Co-operative Store under the name of the Society of Equitable Pioneers, with a capital of £28. Their success was soon followed up in other places, and in 1852 the Pioneers attempted to form a wholesale department, which might supply the stores in Lancashire and Yorkshire, but failed. In 1863, however, their chairman, Abraham Greenwood, formed a wholesale agency by the union of various co-operative societies, which, in the following year, became the North of England Co-operative Wholesale Industrial and Provident Society, Limited. (In 1873 the name was changed to that of the Co-operative Wholesale Society). Both in the retail stores and in the wholesale, the features were present from the beginning of charging the ordinary market prices, dividing profits according to purchase, and giving no credit.

71. In 1868 the Scottish Wholesale Co-operative Society was founded on similar lines, the only difference of any importance being that the Scottish Society has given employes a bonus since 1870 (8d. per £ on wages, half being retained at credit in the Bonus Loan Fund) and has admitted them to membership, allowing them to take up shares to the amount of £50 each, while the English Society, since 1876, has given no bonus, and admits co-operative stores only as members.

72. The bulk of the general trade of these wholesale societies is in goods bought by their buyers at home and abroad—the principle adopted being, where possible, to go direct to the source of production. But both societies have for some time been manufacturers as well as distributors. The factories of the English society are grouped for the most part round Manchester, Newcastle and London, but boots are made at Leicester, clothing at Leeds, and cocoa at Luton, etc. The society has also creameries in Ireland, a bacon factory in Denmark as well as one in Ireland, and a tallow and oil factory in Sydney. The Scottish Society began manu-

* Evidence, Vol. VIII., 86248, 86421.

facturing in 1881, with the making of shirts; soon added tailoring, upholstering and cabinet-making; then went on to the making of boots, hosiery, printing, clothing, confectionery, tobacco, etc. Most of this manufacturing is now concentrated in Shieldhall, near Glasgow, but the society owns, besides, three great flour mills, tweed mills, soap works, creameries, an aerated water factory, etc. The two societies together own a tea estate in Ceylon.

73. The great part which this "state within a state" plays in modern life may be suggested by a few figures.

74. At the end of 1905, the total annual sales of the Co-operative Societies in the United Kingdom were close on £95,000,000, and their net profits, including interest, £11,681,000. The number of members was 2,259,479. The capital, share and loan, amounted to £38,000,000, and the reserve funds to £2,561,000. The sum devoted to education amounted to over £80,000.*

75. The accounts of the (English) Co-operative Wholesale Society, Ltd., at the end of 1906, showed that 1,131 societies, representing a membership of 1,703,564, held shares; that the share capital (paid up) was £1,388,338; that the sales for the year were £22,510,035, and the net profits, £410,680. The number of employes in October, 1907, was:—in the distributive departments, 6,691; in the productive works, etc., 10,291; a total of 16,982.

76. The accounts of the Scottish Co-operative Wholesale Society, Ltd., for the year ending 1906, showed that 365,907 shares were subscribed by societies and 12,863 by employes; that the share capital (paid up) was £375,198; that the deposits, including reserve and insurance funds, were £2,575,422, the net sales, £7,140,000, and the net profit, £280,434. The number of employes in June, 1907, was—in distributive departments, 1,595; in productive, 5,514; in all, 7,109. About a fourth of the population of Scotland is connected with the stores.†

77. The strength of the co-operative movement is that it starts, one may say, at the other end from ordinary competitive industry. Ordinary employers build mills, work up to the full limit of their capacity, and throw their goods on the market for sale, speculating on a demand which will take off the goods at a paying price. The co-operators, on the contrary, first build up a known and calculable demand from the Stores, and then, as it were, instruct the Wholesale Societies to meet it—thus avoiding, to a very large extent, miscalculation and dislocation. As is obvious from the figures, the goods which the Wholesale Societies manufacture constitute only a small portion of their business; the great majority of the goods supplied to the Stores they purchase from private firms. (In the Scottish Society the proportion is about £2,000,000 to £7,000,000.) Thus the element of speculation—which is universal in private manufacturing—scarcely enters into the manufacturing departments of the co-operators, and the equilibrium between their demand and their supply is easily kept. Hence the claim that, in both the Societies "a strong effort is made to avoid seasonal pressure, and to give continuous employment to the workers—a matter of no difficulty in a rapidly growing organisation, with an extensive and certain market for its goods."‡

78. Without entering on controversial matter, it may be said that the chief success of co-operation has been among the artisan class—not to any considerable extent either among the poorest classes or the better off; and that, in towns where the co-operative

* The returns for 1907, as given at the Twenty-first Co-operative Festival in August, 1908, are as follows: Sales, £105,717,000; profits, £12,000,000; number of members (in 1,582 societies), 2,434,000; share capital, £32,000,000; loan capital, nearly £10,000,000. Close on £100,000 was spent on education and £57,000 on charities.

† See *passim* evidence of Mr. William Maxwell, Vol. VI., 57764 *et seq.*

‡ "Managers of a boot-making, a cabinet-making, and a weaving concern (co-operative) informed us that, during the many years' existence of their establishments, they had never turned off a hand because of slackness. . . . They consider that the tone of employes improves greatly when they have been for some time in co-operative concerns. This is largely due to the steadiness of the employment. What enables them to give constant employment is the steadiness of the demand from the co-operative stores." (Report, Messrs. Jackson and Pringle, pp. 31-2.)

stores have taken a firm hold, the retail trade tends more and more to be divided between them and the owners of "multiple shops."*

78a. But another form of co-operation under the title of co-partnership should also be noted. It has been established on a large scale in connection with the South Metropolitan Gas Company, and has brought a large number of the workers into the position of owners of the stock of the company, and has conferred upon them many advantages at the same time. Mr. Vivian has shown to how great a variety of businesses the system is now applied.†

(8) MUNICIPAL INDUSTRIES.

79. A notable feature of the last twenty or thirty years has been the rise and vast extension of what is generally called municipal industry—the provision and working of great public services or "reproductive undertakings," generally more or less of the nature of monopolies, the most prominent being gas, water, electric lighting, tramways. In these cases the force of circumstances has generally led to great extensions over what was probably contemplated at first; on the one hand, driving these services outside the local area undertaking them, and, on the other, leading to the sale or hire—sometimes manufacture—of accessories such as fittings in electric supply, grates, stoves, ranges, and particularly residual products in the case of gas.

80. The extent of these undertakings may be surmised from the fact that, in 1900, 173 municipal Boroughs in England and Wales, and 53 in Scotland supplied water: that in March, 1899, 222 Local Authorities were authorised to provide gas, and 300, roughly, authorised to provide electric lighting, of which latter 99 plants were in work in 1900. Seventeen Corporations were working their own tramways in 1900

81. Outside of these staples, many Local Authorities construct, own, hire, or manage telephones, markets, slaughter-houses, cemeteries and crematoria, recreation grounds, quays, docks, harbours, piers (including concert rooms, lavatories, refreshment rooms, etc.), baths and wash-houses, ferries, golf-links, houses, warehouses, shops, building ground, allotments, milkshops, refrigerators and cold storage, supply of paving stones, etc., and there exists a strong tendency to extend their operations to more questionable undertakings, such as banking, insurance, pawnbroking, mining, etc.

82. In 1902, of 317 municipal Corporations in England and Wales, no less than 299 were carrying on "reproductive undertakings" of some kind or another; and, of the local debt of England and Wales, which stood at over £370,000,000 in March, 1903, over one-half was computed to be capital invested in undertakings producing profit.

83. To take a concrete instance; in Glasgow, with a population of 800,000, the numbers in the permanent service of the Corporation (excluding members of the police force) in May, 1908, were 14,651. Of these, 4,766 were in the tramways department; 2,776 in gas; 739 in electricity; 644 in water; 131 in markets; 1,561 on the cleansing establishment; 827 on the lighting; 836 on sanitary and public health work; 510 on statute labour (roads, sewers, etc.); 276 engaged in the parks; 220 on libraries; 195 on baths and washhouses; 157 on sewage purification; 175 on the fire establishment; 165 on improvements generally; and 125 on the police establishment (outside of the police force). So far as the servants of the Corporation are concerned, a "living-wage" of 21s. a week is given for able-bodied men, and, in all contracts given out, there is a clause directing that no men shall be paid less than the standard rate of wages applicable to the district and paid to the particular trade affected.

84. The result of such municipal activity is that, in some large centres, an appreciable proportion of the working-classes—and a still larger proportion of the electors—is in the pay of employers who are influenced not so much by the ordinary

* It is sometimes forgotten that J. S. Mill, who not only recorded with delight the rise and progress of the Rochdale Pioneers and other co-operative associations, but lived long enough to quote the Pioneers' balance-sheet of 1864, said: "The form of association which, if mankind continue to improve, must be expected in the end to predominate is not, that which can exist between a capitalist as chief and workpeople without a voice in the management, but the association of the labourers themselves on terms of equality, collectively owning the capital with which they carry on their operations, and working under managers elected and removable by themselves."—*Principles*, Book IV., Chap. VII., par. 6.

† Livesey, 83136, 83161, 83144. Vivian, Vol. XI., and Special Committee on Unskilled Labour: Charity Organisation Society. Evidence of Mr. Horn, p. 238.

economic object of making a profit by the rendering of a service, as by the purely social one of rendering the service—with the curious issue that, where a municipality goes beyond its own area and makes a loss, its own ratepayers pay something for the benefit of the people outside. Local bodies, backed by rates, enter the loan market for enormous sums of capital, and—often with compulsory powers of purchase—compete for custom with private employers. They influence the labour market as “model employers” by offering as a rule higher wages, shorter hours, and better conditions than are given by outsiders. One notable feature is that, as a rule, they discourage casual labour, and employ permanent staffs, for whose continuous employment it is in their power to provide by postponing or anticipating work.*

(9) FRIENDLY SOCIETIES.

85. It would be outside our province to give any detailed account of the rise and present condition of the various thrift societies, which provide relief during sickness or other infirmity, bodily or mental, in old age, widowhood, and orphanage, insure against death and funeral expenses, loss of tools by fire, etc.

86. The great place they fill in modern society is suggested by their membership—which in 1904 was no less than 14,000,000—and by the fact that the funds in their hands increased, in the five years, 1899 to 1904, from £340,000,000 to £402,000,000.†

87. What is important for our purposes is to note that the Friendly Societies do not compete with the Trade Unions to insure against unemployment. Exceptionally, indeed, the Manchester Unity of Oddfellows—the largest, richest, and best organised—has, in many of its lodges, a voluntary or compulsory out-of-work fund, and the central funds liable for relief to those obliged to travel in search of employment. The Hearts of Oak, again, have power to remit, under due conditions, one quarter's subscription to a member during a time of unemployment. The Foresters grant a “travelling licence” for six weeks. The accounts of the Ancient Shepherds and some other societies show considerable sums paid for out-of-work benefit, distress grants, exemptions from contributions, and travelling relief.

88. But as regards Friendly Societies generally, it may be said that they make little or no attempt to provide unemployed benefit. “The only out-of-work benefit provided by Friendly Societies is the payment of the member's contribution, so as to keep him entitled to benefit if he should fall sick when out of work.”‡

(10) FACTORY LEGISLATION.

89. The Poor Law Amendment Act of 1834 came into operation just a year after the first great Factory Act. Two Acts, indeed, had preceded. In 1802, the Health and Morals of Apprentices Act was passed, for the protection of parish apprentices—who were in great demand at a time when mills were erected wherever there was water power to drive them—limiting, *inter alia*, their hours to twelve. This, however, was rather a Poor Law measure than a Factory Act; the State, of course, having the right to impose such safeguards as it thought fit on the employment of the children whom it practically adopted. But, as Sir Robert Peel explained in 1815, parish apprentices ceased to be important persons in the new industry when the introduction of the steam-engine enabled the workplaces to be built wherever the labour was abundant.

* On the other hand, it must be noted that, in times of depression, several municipalities, in the carrying out of large undertakings beyond the powers of their permanent staffs, have made a virtue of employing local unskilled men. This, of course, is a direct discouragement of the gangs of skilled labour which contractors employ more or less continuously and move from place to place as the work calls. It seems sound economic doctrine that the best service a municipality could do, in times of exceptional distress and consequently of contracted demand for labour on the part of private employers, is to undertake works of recognised public utility, and provide the labour necessary either by increasing their own staff of skilled workmen, or by giving the work out to contractors without any obligation of employing the “unemployed.” At such times it is at least quite as necessary to prevent regular labourers sinking into casual employment as to give unsuitable employment to those who are already to a large extent casual. Far from this, however, our Special Investigators report that they have found few municipal authorities interested in making their work regular; few municipal officials who thought it possible to do so; and some who held that the attempt would be disastrous. (Messrs. Jackson and Pringle, p. 30.)

† Sir Edward Brabrook, Evidence, Vol. III., 35158–9, 35282.

‡ *Ibid.*, 35147 (14).

In 1819, owing largely to the activity and the example of Robert Owen—whose proposals, however, went much further, and would, if accepted, have anticipated a great deal of later legislation—the hours of children between the ages of nine and sixteen employed in cotton mills were limited to twelve per day, exclusive of meal times, and the employment of children under nine was prohibited. But this Act was confined to the cotton mills, and, outside of these (except in the case of parish apprentices) there was no restriction whatever on the labour of children. In wool and silk mills they were known to be usually working thirteen, and, sometimes, fourteen hours, and hardly a soul had called out against the cruelties thus inflicted.* Happily the extension of manufacturing drew attention to its possible abuses: Richard Oastler's letters in 1830 on "Slavery in Yorkshire" started the popular agitation of the short-time committees—those "strange combinations of Socialists, Chartists and ultra-Tories": and the reports presented to Parliament between 1831 and 1833 hurried on the passing of the first general Factory Act in the latter year. This Act applied to cotton, woollen, worsted, hemp, flax, tow, linen, and silk mills—lace-making and some subsidiary industries being expressly exempted. In spite of the strenuous opposition raised by manufacturers and economists alike—and one finds it difficult to understand nowadays how the argument could be met that ten hours were the limit of the labour of the adult male convict—young people between thirteen and eighteen were limited to twelve hours' work per day, or sixty-nine per week; children from nine to thirteen were limited to forty-eight hours per week, not exceeding nine hours per day; children under nine were prohibited from working in such factories altogether; and night work was forbidden to all under eighteen. Four official Factory Inspectors were appointed. Unfortunately, the Act did not extend, as regards the minimum age limit, to silk mills, where the proportion of children was larger than in any other industry, and where the children were "preferred at eight years and upwards."

90. In 1842 the issue of "the most sensational Blue-book of the century," the Report of the Children's Commission (for which, it is said, the sober economist Tooke was responsible), brought about the passing of an Act prohibiting boys from being employed in mining and colliery labour under the age of ten—the Bill as introduced proposed thirteen, and the coal-masters stood strenuously for eight—and appointing Inspectors. By the same Act women were excluded from mines and collieries. This was the first restriction of the century on the labour of women, but it was soon followed up. The Act of 1844 restricted the labour of women in factories, bringing them under the same category as "young persons," and limiting their hours to twelve per day, to be taken at any time between 5.30 a.m. and 8.30 p.m., and nine hours on Saturdays. By the same Act the minimum age limit for children was put back to eight, and the hours of those between the ages of eight and thirteen were fixed at six and a half, with compulsory school attendance for two and a half hours in winter and three in summer.

91. But the complete purpose of the promoters of this Act was only carried out in 1847, when the Ten Hours Act for women and young persons passed into law, among "rejoicings throughout the manufacturing districts such as had never been known before."

92. Although from 1847 to 1860 no great extension in principle took place, factory legislation made another advance in the Act of 1850, making the normal day of women and young persons from 6.0 a.m. to 6.0 p.m. (or 7.0 a.m. to 7.0 p.m.) with one and a half hours for meals, work to stop on Saturdays at 2.0 p.m.

93. In 1853 this was supplemented by an Act extending the normal day to children; while their hours remained as before—six and a half hours every day or ten hours on three alternate days—they could not be employed before 6.0 a.m. or after 6.0 p.m.

* The remarkable advance in our ideas about cruelty to children since these days is indicated by the arguments then used for restriction of their long hours. Sometimes the restriction was urged on the ground that it would give employment to male adults who were kept out of work by their competition; very often on the ground that it would practically result in limiting the hours of adults; seldom on the ground of the cruelty to the children themselves. "Not a single witness that came before me to give evidence," said Tuffnell, a Parliamentary Commissioner, in 1834, "in favour of the Ten Hours Bill . . . of whatever trade or station he may have been, supported it on the above grounds (cruelty and ill-usage). I am perfectly satisfied that motives of humanity have not the smallest weight in inducing them to uphold the Ten Hours Bill." (Quoted in *A History of Factory Legislation*, Hutchins and Harrison, p. 50.)

94. Meanwhile, in 1845, children and young persons employed in calico printing had been brought under Factory Acts. Between 1845 and 1860 even the opponents of such legislation were converted, and Roebuck and Graham were instrumental in passing the Act of 1860, which extended similar restrictions to bleach and dye works. In 1861, women, young persons, youths, and children in lace factories were placed under the regulation of the Factories Acts.

95. In 1864 a new principle was introduced into factory legislation by an Extension Act, bringing under Government inspection and regulation not only several manufactures, such as earthenware, lucifer matches, percussion caps and cartridges, in no way connected with textiles, but certain employments as well, notably paper staining and fustian cutting. To bring these industries under the Factory Acts, "factory" was now defined as any place in which persons worked for hire.

96. By 1867 the country was ready to go much further in this direction. The Factory Acts Extension Act brought a number of new industries under legislation, giving a new definition of the word "factory" as "any premises where fifty or more persons are employed in any manufacturing process," and the Workshops Regulation Act brought workshops employing under fifty persons—with certain limitations—under factory provisions.

97. In 1873 a Local Government Board Inquiry, on account of the great strain put upon operatives by the amount and speeding-up of machinery, recommended a Nine-Hours Day (which had already become the recognised limit in the engineering trades) for textile factories, and a Bill to the effect was introduced by Mundella. In 1874 an Act was passed which added half an hour to meal-times, thus making the hours per week fifty-six and a half; implicitly forbade overtime; and raised the age at which children were permitted to work in textile factories to ten.

98. In 1878, with the view of getting rid of the anomalies caused by the various classes of manufacture being regulated by various Acts—particularly as regards children—and to correct the administrative weakness of the Workshops Regulation Act, a General Factories and Workshops Consolidation Act was passed. Under the same Act, the employment of children and young persons was forbidden in certain branches of the white lead and other factories.

99. In 1883 special protective legislation was enacted as regards employés in white lead factories.

100. In 1886 an Act to regulate the labour of children and young persons in shops limited the hours to seventy-four per week, but made no provision as regards women.

101. In 1889 the Prevention of Cruelty to Children Acts gave children employed in theatrical entertainments the benefit of the Factory Acts. From the Report of the Lords' Committee on the Sweating System dates the beginning of the agitation for protecting women engaged in their own homes.

102. In 1891 another Factory Act instituted safeguards against sweating in sub-contracts, and enacted that no child under the age of eleven should be employed in any workshop. In 1895 the important "particulars clause," which had been applied to certain classes of textile workers only, was extended to all textile workers, with permission to the Secretary of State to extend it to non-textile factories and workshops.

103. In 1901 the Factory and Workshop Consolidation Act *inter alia* gave increased powers to Local Authorities, requiring that lists of out-workers should be sent to the District Councils, and that the Medical Officers of Health should keep registers of the workshops within their districts.*

104. The important bearing of all this legislation on the present unemployed question is not always remembered.

"The ultimate end of factory legislation," it has been said, "is to prescribe conditions of existence below which population shall not decline."† It comes to this, that,

* For details of the above legislation, see *A History of Factory Legislation*, by B. L. Hutchings and A. Harrison, 1903.

† *The Times*, June 12th, 1874.

however willing employers may be to employ those who apply for work, they are not at liberty to do so unless they conform to a whole system of restrictions, regulations, inspections, and prohibitions.

105. Where women, young persons, and children are employed, they must limit themselves to certain hours in the twenty-four—the “normal day.” They cannot employ children of tender age at all. They cannot employ half-timers without making arrangements to permit of their education. They cannot employ women or young persons except for a limited number of hours in the week, giving due time for meals and shutting down on certain holidays. They must provide and keep open to Government inspection expensive sanitary appliances. They must fence and guard their machinery. In certain dangerous trades they are under still closer limitations.

106. The definite and avowed object of these restrictions was, of course, the protecting of the health of the younger and weaker workers from injury by overwork or unwholesome conditions. But, as everyone knows, these restrictions, most of them primarily applying to women, young persons, and children, have practically imposed similar limitations on the employment of adult male labour. And, of late years, as regards all their workpeople employers have come under the distinct provisions of the Employers’ Liability Act and the Workmen’s Compensation Acts.

107. A much heavier task, then, is thrown upon our employers than was dreamed of in 1834. They have to earn the wages of organising and supervising labour, and to compensate themselves for taking the manifold risks of supplying a fluctuating human demand, while conforming to a large and complicated code of limitations which the wisdom of the nation has laid down for the protection of those whom they employ.

(11) EDUCATION.

108. Practically the education of the people in England and Wales dates back only seventy years.

109. When the first general Factory Act was passed in 1833, a clause was inserted which authorised the Inspectors to establish or procure the establishment of schools for “half-timers,” but the clause was practically inoperative, as no provision was made for starting such schools.

110. The year which saw the passing of the Poor Law Amendment Act witnessed the first Parliamentary grant towards education. It was £20,000, distributed partly through the National Schools Association (which was strictly Church of England), partly through the British and Foreign Schools Society (which was unsectarian), in proportion to the sum already provided by the applicants for the building of schoolhouses. (It has been noticed that this was less than one-third of what was being granted annually for education by the State of Massachusetts alone.)

111. In 1837—the year of the late Queen’s accession—attention was attracted to the deplorable education of the people. Round Oldham, for instance, in a population of 105,000 souls, there was not a single public day school. About one-fourth of the total children in England and Wales received no instruction whatever. It was stated in the House of Commons that 49 per cent. of the boys, and 57 per cent. of the girls of thirteen and fourteen years old, could not read, and that 67 per cent. of the boys and 88 per cent. of the girls could not write.

112. In a Report to Parliament by the four Factory Inspectors in 1839, on the effects of the educational provisions of the Factories Act, we get some interesting glimpses of the state of education generally in England. In some cases where the mill-owners took an interest in the education of the children, and maintained the school at their own expense, the education was said to be much superior to that which was to be had in the majority of the primary schools for the working classes. But, outside of these cases, the Inspectors had to acquiesce in a very imperfect fulfilment of the spirit of the law, because, they said, “No better system of schooling is within reach. Good schools must be provided before the educational clauses can be generally carried into operation with efficiency.” Of the kind of school existing at this time, one may

judge by this single example: "In the last quarter I had a school voucher presented to me with a mark, and, when I called on the schoolmaster to read it before me, he could not. It had been written out by the clerk of the factory, and the schoolmaster had been called to put his mark to it. I have had to reject the school voucher of the fireman, the children having been schooled in the coal-hole (in one case I actually found them there), and having been made to say a lesson, from books nearly as black as the fuel, in the intervals between his feeding and stirring the fire of the engine boiler. It may be supposed that this could only happen at the mill of some poor ignorant man; but that, I am sorry to say, was not the case—it occurred at factories where a large capital must be embarked."

113. The Factory Act of 1844 compelled school attendance of half-timers for two and a half hours in winter and three in summer, or five hours on alternate days of the week.

114. By 1846 the State expenditure on education had risen to £58,000. It is interesting to remember that Carlyle, in 1843, in *Past and Present*, had said: "If the whole English people, during these twenty years of respite, be not educated, with at least schoolmaster's educating, a tremendous responsibility, before God and men, will rest somewhere."

115. In 1861 a Commission on Elementary Education, in its Report, declared education to be "miserably defective," only one-third of the children in elementary schools being thoroughly grounded in reading, writing, and arithmetic, and recommended a capitation grant proportionate to the number of those who passed in these three subjects. This resulted, during the following year, in Lowe's Revised Code.

116. In 1870 a comprehensive measure was passed, establishing a national system of education, and enabling school boards to be set up, with power to enforce local bye-laws for compulsory attendance at school up to a certain age or standard in education. In 1876 the powers of compelling attendance at school were conferred upon school attendance committees in areas in which there were no school boards and in 1880 compulsion was made universal. In 1891 elementary education was made gratuitous as well as compulsory.

117. Outside of the enormous effect which universal education must have in making the working man into a more efficient and versatile tool of production, what has to be considered is its effect on the ambitions and expectations of the human being. As Mr. Crooks points out, working men are not going to be content with the conditions under which their fathers lived a long time ago. Every stage of acquiring knowledge naturally makes people feel very acutely the conditions under which they are compelled to live. A man's grandfather was out of work, but he only knew the effect; the grandson is out of work, and he knows the cause—and he thinks he knows the remedy. Therefore . . . the discontent is individually greater than it ever was before, and naturally so.*

(12) THE POSITION OF WOMEN AND JUVENILES.

118. It is evident from the preceding sections that the place of women, young persons, and children in factory industry has materially changed since 1834. In the beginning of the nineteenth century, when the outstanding feature of industry was the rapid spread of textile machinery requiring "mindes," it looked as if there would be an unlimited demand for children in the factories. Melancholy stories are given of pauper children sent off by the waggon load from London parishes, and apprenticed in lonely, isolated factories set up by the side of streams, without safeguards, or reasonable regulation of hours.

119. But parish apprentices, as we have seen, ceased to be an important factor in industry when steam enabled the factories to be set up wherever labour was abundant, and, later, children became "unprofitable servants," even at low wages, when their hours were restricted by Factory, Education, and other Acts. As the century went on, the growing enlightenment and humanity of the community demanded that women, as well as juveniles, should not be exposed to the full force of competition, and so came the long series of regulations restricting or preventing their exploitation.

* Evidence, Crooks, Vol. IX.; 91381-3.

120. These regulations have not been without their effect both on the numbers employed and on the industrial functions now allotted to them.

121. In the factory employment both of children and young persons there has been a steady reduction. A Memorandum prepared for us at the Board of Trade, on *the extent to which female and juvenile labour has displaced adult labour in the last twenty years*,* puts this beyond controversy. According to this Return, in almost every trade which has been separately examined, the decrease in the number of children employed below fifteen—thanks in great measure to the operation of the Education Acts—is considerable, and in the case of male children, the decrease is generally as great as in the case of female. The number of half-timers, for instance, under fourteen years of age, employed in textile factories, decreased from 55,625 in 1895 to 31,744 in 1904, and the number of full-timers under eighteen from 238,078 to 208,003. And “the employment of young persons under twenty-five years of age also shows a not inconsiderable, though a less regular, decline.”

122. As regards women, the tendency is not quite so marked, owing to the new openings for the sex. The excessive subdivision of labour and specialisation of machinery favours the intrusion of women into many trades hitherto occupied by men—during which “economic transformation” there is, naturally, much dislocation of male labour, tending to the sinking of the skilled male workman into the unskilled class. Even in some branches of the engineering trade women are now finding employment. In the Westinghouse and other large works round Manchester, we are told, women, both married and single, have been introduced in large numbers to tend the light drilling machines at which the Trade Unions used to find employment for men getting on in years and unable to take heavy work.†

123. Outside of the traditional “women’s trades,” we find women largely, sometimes exclusively, employed in the making of saddlery and harness, slippers, gloves, cocoa, confectionery, jam, pickles, mustard, aerated waters, straw plait and hats, rubber and gutta-percha goods, stationery, elastic web, corsets, cutlery and scissors, gold, silver, white metal, and pewter goods, electro-plate, pottery, chemists’ preparations, explosives, in printing, and in dyeing and cleaning. A suggestive movement is presented by watch-making in Coventry, where female labour is increasing both absolutely and relatively. Boys will not serve the required apprenticeship in the trade, as they can get higher wages in the motor and cycle industries where apprenticeship is not required. Thus girls taken from school are brought into the factory at 4s. a week, rising to 16s. by the time they are twenty-four. In one watch factory the men were found to be only 12 per cent. of the total number employed. In Birmingham, the employment of female labour is a striking feature. Women form by far the larger proportion in the steel pen industry, in bolt, nut, and screw making, and in the leather goods trades; while they form a large percentage in bronze and brass working, white metal, electro-plating, the goldsmith and jewellery trades, and other general industries of the town. In Stoke-upon-Trent it appears that women and girls are very largely employed in the pottery industry. “In some branches of this trade they are being employed to an increasing extent upon work which, a few years ago, was performed almost exclusively by men: they are now actively in competition with male labour; and, as they are able to do similar work for lower wages, they are gradually driving men from certain sections of the trade.”‡

124. Examples such as these, from special trades and in particular places, might be multiplied indefinitely, and we can scarcely wonder at the generalisation so often made that women are displacing men in the general labour market.§

* Vol. IX., Appendix xxi. E.

† Mr. Tom Fox, Evidence, Vol. VIII., 83921–6, 83933.

‡ *Cost of Living of the Working Classes* (Cd. 3864) *passim*, and pp. 81, 160, and 441.

§ We may note here the disastrous effects of this in the cases—happily few—where the staple occupation of a town is a “women’s trade,” in which very few youths or men are employed, and where there is a somewhat marked tendency for the married women to remain on in the factory, and for the men to deteriorate and become dependent on the wives. In Dundee, for instance, where, at last Census, jute employed about 40 per cent. of the total employed population over ten years of age, and where 72 per cent. of the operatives over ten were women the saying is that, among the lower grades of labour, “the wife works; the man boils the kettle.” Probably there is a connection between this and the fact that, in 1904, Dundee headed the list of towns in Scotland as regards infant mortality. (Mr. Jones’ Report, Dundee, pp. 95, 96.) An instructive parallel is drawn by the statement made in Appendix V. to the Report of the Departmental Committee on Physical Deterioration (p. 125), that, in Preston, “the husbands of cotton operatives visited were chiefly employed as labourers in intermittent work,” and that “the mother was in most cases the chief wage earner.” (Quoted in Messrs. Jackson and Pringle’s Report, p. 29.)

125. But, on the whole, there seems no foundation for any such generalisation. On the contrary, the Reports of the last three Censuses indicate that "women are obtaining a smaller, not a larger, proportion of the aggregate employment," although it is right to say that the greater part of the decreased proportion of occupied females has occurred in what is by far the largest of the wage-earning occupations of women, domestic service.

126. To summarise the statistics of the Memorandum referred to: about four fifths of the occupied male population are engaged in employments which they monopolise or in which women are a negligible factor as regards possible competition, such as agriculture, mining, fishing, building, transport, wood, gas and water, and the staple metal and machine-making trades, all of which are virtually male preserves. Only one-fifth of the males are engaged in trades where women enter to the extent of 1 per cent. of the whole number of occupied females.

127. Women are making the largest actual and relative advance in commercial, professional and public employments, and in the chemical and food industries, in each of which groups their rate of increase exceeds that of men, and, among manufactures, in the paper, bookbinding, chemical, food, metal and leather classes.

128. Among textiles, where, as a whole, in the period 1881-1901, the proportionate decline for women was about the same as that for men, it is only in the elastic, cocoa-nut fibre, and horsehair trades, and in hosiery, that signs of substitution are visible.

129. In the larger group of dressmaking trades, including tailoring, dressmaking, millinery, shirt and needlework trades, though female labour still remains the vastly preponderating element, this group is so far from showing a tendency for women to displace men that the net result of movements in recent years has been rather in the opposite direction—the main cause being the encroachment of the factory system upon domestic and small workshop industries.* (In one member of this group, however, the particular set of trades classed as "tailoring," women constitute an increasing proportion.)

130. In the boot and shoe trade—which has been distinctively a male industry—women are certainly obtaining a relatively stronger hold, owing to the division of labour which now furnishes certain lighter processes, suitable for women, that were formerly done as part of the general work of male shoemakers. Slipper-making, for instance, is now passing entirely into female hands.

131. In the grocery trade, which still remains predominantly male, women are increasing in numbers more rapidly than men, and in the drapery trade, women workers seem to be displacing young men.

132. In clerking, it seems at first sight as if the obvious increase in women typists, etc., involved displacement of men, but the fact seems to be that the number of men so employed is rapidly increasing, and that their proportionate advance, compared with population, is faster than that of women.

133. In teaching and the medical services, the proportion of women has, of course, grown a great deal more rapidly than that of men, but—particularly considering the growth in numbers of sick nurses, midwives, and invalid attendants—this cannot be regarded as displacement.

134. In domestic service, contrary, perhaps, to popular belief, the noteworthy phenomenon is the decrease in numbers between 1881 and 1901, not indeed absolutely but relatively to population. Female domestic indoor servants increased by only 8·2 per cent., while the entire population increased by 25·2 per cent.

* The same phenomenon occurs in other fields; for instance, in Sheffield, file-cutting, an occupation which used to be largely done by female out-workers—the work requiring rather dexterity than strength—is now being done by heavy machinery requiring male attendants. (Board of Trade Inquiry on *Cost of Living of the Working Classes*, 1908, p. 409.)

135. The conclusion is that, while women and juveniles are now engaged in many industries in which the specialisation of machinery enables them to take part, they are not, in any considerable trade or process, displacing adult males in the sense that they are being more largely employed to do work identical with that formerly done by men. The great expansion of women's labour seems to have been in new fields of employment, or in fields which men never occupied. "It should also be borne in mind that, even when women are employed where men used to be employed, this is largely due to the men going into more highly paid industries. Mining, machine-making, and building have of late years attracted an abnormal number of men and boys."

(13) BOY LABOUR.*

136. While in factories and workshops the position of children and young persons is satisfactorily regulated by law, the problem of juvenile labour outside the great industries has become more serious. The age of beginning apprenticeship, in the case of most industries, is sixteen. When the age of leaving school was fixed at fourteen, it was, presumably, intended that this should be the minimum; for the great majority it has proved the maximum.† The almost universal experience is that, in large towns, boys, owing to carelessness or selfishness on the part of the parents, or their own want of knowledge and forethought—for the parents very often have little voice in the matter—plunge haphazard, immediately on leaving school, into occupations in which there is no future; where they earn wages sufficiently high to make them independent of parental control and disinclined for the lower wages of apprenticeship; and whence, if they remain on, they are extruded when they grow to manhood. According to the main statistical sources of information available, the very serious fact emerges that between 70 per cent. and 80 per cent. of boys leaving elementary schools enter unskilled occupations.‡ Thus, even when the boy ultimately becomes apprenticed to, or enters, a skilled trade, these intervening years, from the national point of view, are entirely wasted. Indeed, the boy, naturally reacting from the discipline to which school accustomed him, usually with abundance of spare time not sufficiently continuous to be utilised, and without educative work, is shaped during these years directly towards evil. All our investigations and evidence go to show that there is a regular drift from such boys' occupations into the low-skilled labour market.§

137. The problem owes its rise in the main to the enormous growth of cities as distributive centres—chiefly and most disastrously, London—giving innumerable openings for errand boys, milk boys, office and shop boys, bookstall boys, van, lorry, and trace boys, street sellers, etc. In nearly all these occupations the training received leads to nothing; and the occupations themselves are, in most cases, destructive to healthy development, owing to long hours, long periods of standing, walking, or mere waiting, and, morally, are wholly demoralising. Street selling, for example, says the Chief Constable of Sheffield, "makes the boys thieves": "newsboys and street sellers," says Mr. Cyril Jackson, "are practically all gamblers": "of 1,454 youths between fourteen and twenty-one, charged in Glasgow during 1906 with theft and other offences inferring dishonesty, 1,208, or 83·7 per cent. came from the class of messengers, street traders, etc.," says Mr. Tawney. The difficulty of boys, thus aimlessly trained, in finding employment about the age of eighteen, seems to be one of the main causes of enlistment, and the number of van boys and stable hands who enter the Army is very noticeable.

* See, particularly, Mr. Cyril Jackson's Report on the subject, and evidence by Mr. Reginald A. Bray, Mr. E. J. Urwick, Mr. R. H. Tawney, Professor Sadler, and Mr. Sidney Webb.

† Not only so, but the cleverest children—under the "labour certificate" exception—are allowed to leave at thirteen.

‡ According to an official Return of boys leaving elementary schools in London in 1899, 40 per cent. became errand, van or boat boys; 14 per cent. shop boys; 8 per cent. office boys and junior clerks. Only 18 per cent. went definitely into trades.

§ "The theory that boys can become errand boys for a year or two and then enter skilled trades cannot be maintained. Very few boys can pick up skill after a year or two of merely errand-boy work. . . . The great mass of them fall into the low-skilled trades or wholly casual labour" (Mr. Cyril Jackson, Report on Boy Labour, p. 20).

138. These unsatisfactory phenomena are aggravated by the habit of restlessness into which the boys generally fall. Knowing that there is a ready demand for their labour, they throw up their places for the most trivial of reasons, thus destroying, most unfortunately, any motive which their employers might have to absorb them into their own adult employments.

139. This particular problem, it will be noticed, is not a problem of factory industry. But there is another and even more serious form of the problem, where boys, on leaving school, enter without apprenticeship into trades where there are no possible openings for them when grown up; loom boys, doffers, shifters in the cotton and woollen trades—where, it is said, there is little possibility of more than one in ten being ultimately absorbed—rivet boys in shipbuilding, drawers off in saw-mills, packers in soap works, etc.* In many of these trades they are tempted by high wages—a rivet boy on the Clyde, for instance, may earn 20s. a week—to remain till they are too old to enter any other regular occupation. Here “the work performed by the boy, instead of being in the nature of training, is a specialised compartment, for which his sole qualification is the fact that, as an instrument of production, he is cheaper than a man.”†

140. As regards both these classes, we agree with Mr. Bray that, while it may be doubtful how much truth there is in the often repeated cry of “too old at forty,” there is probably good reason to believe that, in many cases, we might say, “No use at five-and-twenty.”‡

141. The great prominence given to boy labour, not only in our evidence, but in the various reports of our Special Investigators, leads us to the opinion that this is, perhaps, the most serious of the phenomena which we have encountered in our study of unemployment. The difficulty of getting boys absorbed, through gradual and systematic training, in the skilled trades, is great enough; but when to this are added the temptations, outside the organised industries, to enter at an early age into occupations which are not themselves skilled and give no opportunity for acquiring skill, it seems clear that we are faced by a far greater problem than that of finding employment for adults who have fallen behind in the race for efficiency, namely, that the growth of large cities has brought with it an enormous increase in occupations that are making directly for unemployment in the future.§

* “We were informed in Dublin that a difficulty was experienced by boys in finding jobs when they grew too old for boys’ wages. In the Guinness brewery the boys are very carefully looked after, and to improve their physique a good mid-day meal is provided for them on the works, but the firm, who are, in every way, model employers, have found some difficulty in absorbing the boys as they grew up, and are giving the matter careful consideration at the present time.” (Mr. Cyril Jackson, Report, 1908, p. 9.)

† Mr. R. H. Tawney, Evidence, Vol. IX., p. 96610 (11–12). Mr. Tawney instances the biscuit-making department of a bakery—which, it may be noted, is quite distinct from the bread-making department in which the boys are apprenticed—where forty-one boys are employed as against twelve men, and where, accordingly, the boys are dismissed at manhood, or when they ask an adult’s wage. Evidence Vol. IX., 96610 (11–12). In contrast with this, the practice of a large firm of manufacturing confectioners in the North of England may be quoted: “As it is difficult to absorb many boys in this trade, the firm is attempting in various ways to supplant them. Machinery, for example, is being used wherever possible in place of boy labour; and wherever it is found practicable, girls are taking the place of boys.” (Report by Miss Williams and Mr. Jones).

‡ Evidence, Vol. IX., 96218 (vi. b).

§ Mr. Tawney draws attention to the existence of a still deeper evil. Of lorry-boys, engaged and paid by lorry-men, he says: “The system of employment tends to encourage a kind of casual labour among boys. The boy has to go down to the yard, and wait there till his man comes in to take the lorry out; a group of such boys (lorry-boys and trace-boys) can be seen in the neighbourhood of any large contractor, loafing and playing cards on the pavement. There is no obligation on the man to take the same boy with him from day to day; nor does the obligation on the boy to put in an appearance seem to be very strict; a firm may employ eighty lorry-boys, and not be able at any given moment to say where forty of them are. Hence these boys rarely stay with the same firm for more than a few weeks at a time, but go from one to another much as they please, till they are not fit to be taken on as van-men when they grow up. Out of 148 lorry-men employed by a firm examined, only one had been with the firm as a boy. In short, the opinion seems to be universal that this particular kind of work gets into the hands of a low class of boys and still further demoralises them. In their case irregular employment in manhood is preceded by irregular employment when they are boys. Though this work is, no doubt, exceptional in having actually harmful effects, it is only one of several occupations undertaken by boys which do nothing to promote any kind of industrial efficiency.” Vol. IX., 96610 (9).

Note.—Our attention has been drawn by several witnesses to the very large increase in the number of boys employed by the Government, both absolutely and as compared with men. The number of boy messengers under fifteen years of age, e.g., increased from 1,831 in 1881 to 4,412 in 1891, and to 7,684 in

142. The evils resulting from boys becoming thus early in life unsuited to regular industrial employment is very forcibly stated by Mr. Sidney Webb. We quote his opinion (Evidence, Vol. IX., 93031 (Ans. vii.) without taking responsibility for the statements he makes :—

A Proposal for Industrial Training.

I regard the growing up of hundreds of thousands of boys without obtaining any sort of industrial training, specialised or unspecialised, as a perpetual creating of future pauperism, and a grave social menace. Mr. Reginald Bray, L.C.C., and Mr. Cyril Jackson, L.C.C., will have explained to the Commission the enormous extent to which this is happening in London. Similar conditions prevail, I believe, in Liverpool, Manchester, Glasgow, and other large towns. Without going into detail, I may be permitted to draw attention to the four-fold evil aspect of this phenomenon. There is, first of all, the evil, through the multiplication of van boys, errand boys, messenger boys, etc., of recruiting a chronically excessive army of unskilled, casually-employed, merely brute labour. There is, further, the illegitimate use, by employers, of successive relays of boys, not as persons to whom a skilled trade has to be taught, but, by ignoring that responsibility, as cheap substitutes for adult workers, who are thereby deprived of employment. There is, as the other aspect of this, the failure to provide for the healthy physical development of the town boy, whose long hours of monotonous and uneducational work leave him a "weedy," narrow-chested, stunted weakling, whom even the recruiting sergeant rejects, and who succumbs prematurely to disease. Finally, there is the creation of the "hooligan"—the undisciplined youth, precocious in evil, earning at seventeen or eighteen more wages than suffice to keep him, independent of home control, and yet unsteadied by a man's responsibilities.

I regard it as essential, if there is to be any effective grappling with what may be termed the pauperism of casual employment or of unskilled labour, that this four-fold evil should be remedied. * * * * Nothing is of any real use that does not stop the sources of pauperism. And one of these sources is our present failure in London to turn our boys into physically strong and industrially trained men.

How we at present recruit the Army of Unskilled Labour.

What stares in the face the exceptionally careful parent of the poorer class who tries to start his son well is, in London, the difficulty of discovering any situation in which his boy can become a skilled worker of any kind, or even enter the service of an employer who can offer him advancement. We have, on the one hand, a great development of employment for boys of a thoroughly bad type, yielding high wages and no training. We have, on the other hand, a positive shrinking—almost a disappearance—of places for boys in which they are trained to become competent men. London employers not only refuse to teach apprentices, even for premiums—they often refuse to have boys on those parts of their establishments in which anything can be learnt. Many employers won't have boys at all, and take adult recruits from the country. In 1899, when I was a member of the Technical Education Board, I found that London building firms, employing over 12,000 men had in their service, not 2,000 or 2,500 boys, as would have been the proportion necessary to recruit the trade, but a few score only. All the skilled grades of the building trade—that most typical London industry—are almost wholly recruited by adults from the country. Enquiries of a large number of builders' foremen show that they were nearly all

1901. (Professor Sadler, Vol. IX. 93386 (6).) As regards those employed in the Post Office, some criticisms passed on the Department on account of the large numbers of boys dismissed at the age of sixteen have called out a Memorandum from the Department to which we gladly give the fullest publicity. (*Condition of Employment of Telegraph Messengers in the Post Office.*)

It is frankly admitted that the proportion of boys who have to leave is, "at the present time abnormally great." But this is very largely accounted for by the fact that the possible openings for boys in the service have been curtailed since 1895 by the policy then imposed on the Post Office by the Government of the day, of reserving half the vacancies as postmen and porters for ex-soldiers and ex-sailors. "The result is that a large part of the total number of boy messengers employed have to be discharged—a matter of continual regret to the Post Office." It is explained that the reason why those for whom there are not openings as adults are required to leave at sixteen is that they are better able to learn a trade or secure stable employment at that age than later.

In these circumstances—for which the Postmaster is not responsible—the Department does all it can to fit the boys either for superior Post Office appointments, or for employment of a remunerative kind outside the Civil Service, and endeavours, so far as possible, to obtain outside employment for those whose services have to be dispensed with. Great pains have been taken to discover the largest possible number of outlets within the service which may be thrown open to the messengers, and it may be said generally that the number retained at the age of sixteen always exceeds considerably the number of vacancies reserved for them. And, during the last two years, the number of messengers placed in good private employment by the assistance of the Post Office has grown steadily and rapidly. In considering the position of the boy messengers, as a whole, the Postmaster points out that, so far as the boys do obtain appointments in the Post Office, "it means very much more than it does in most other trades," as the boy who obtains adult employment there is not dismissed except for gross misconduct. But, in view of the regrettable necessity of dismissing so many, considerable pains are being taken at certain chosen centres to train telegraph messengers experimentally in the use of tools, in the hope that they may qualify for efficient service in the Engineering Department; and, it is said, that other schemes are under consideration, such as the substitution of adults and of girls for boys. There is, then, considerable ground for hope that "within a moderate period, the number of telegraph messengers who can be absorbed into Post Office employment will be found to have considerably increased."

born and brought up outside London. Corresponding with this must be put the investigations of Mr. Wilson Fox (of the Board of Trade), which show that various large employers of labour, such as breweries, railway companies, etc., employ predominantly country-born workmen, in the proportion of 40, 50, and sometimes even of 65 per cent. of the whole. The Metropolitan Police Force, the Metropolitan Fire Brigade, the teachers in London elementary schools, the porters in City warehouses, the junior clerks in the "entering desk" of the great wholesale firms, the subordinate officers of the Excise and Customs services, all include a quite surprisingly small percentage of Londoners. What happens to the London boy? The answer is given in the grim statistical facts, that the district having the highest percentage of born Londoners is Bethnal Green, which is practically the poorest; and that, so far as we can make out, the London industry in which there is the highest percentage of born Londoners is that of unskilled general labour. This section must now comprise something like half a million of population in the Administrative County of London alone. Its social condition may be judged from the fact that not less than half of it lives in an "overcrowded" condition (*i.e.*, more than two persons to a room). It may be added that Poplar has a larger amount of it than any other London union, nearly one-tenth of the whole class being herded together in this one district. It is an ominous fact that this particular class, if we may rely on the statistics, seems to have doubled in numbers in London in the last forty years, *and to have increased at a greater rate than the population as a whole*. It is impossible not to feel that this may have something to do with those other grim facts ascertained by Mr. Wilson Fox, namely, that the applicants to the London Distress Committees, the inmates of the Salvation Army and Church Army shelters, and the inhabitants of some large common lodging-houses are to the extent of 86 to 93 per cent. London-born.

(14) TRADE CYCLES.

143. It has been observed, since at least the latter part of the eighteenth century, that the general industry of the country has described a periodic movement, from lowest activity to highest and back again, within a comparatively short term of years. The cycle is generally put at ten to eleven years. As is well known, Mill's description was this; three years of depressed trade accompanied by want of employment, fall in prices, low rate of interest, and much poverty; three years of revival and healthy trade; four years describing excited trade, speculation and collapse; and Jevons tried to prove this periodicity by examining the trade of the country from the beginning of the eighteenth century till 1878.*

144. While one might deprecate the attempt to prove that the cycles have been at all similar in duration—although the last two decades lend more support to the theory than did the periods examined by Jevons—and might object to the positing of a "crisis" as either starting-point or issue, or indeed, as a necessary phenomenon of the cycle, reference to the annexed table† will at least bear out the proposition that, within

* It will be remembered that Jevons, taking up a suggestion of Herschel, connected the cycles with the power of the sun's rays—the period of maximum appearance of sun spots being separated by an interval of about 10·45 years—and that Bagehot carrying the idea further, considered that the periodicity of trade was due to the consequent fluctuation of harvests affecting the financial market.

† CYCLICAL MOVEMENTS, 1815–1907.

- 1830. Culmination of distress (international).
- 1831. Culmination of distress.²

¹ The chief cause of distress and want of employment during these six years is obvious, and is of little guidance to us in 1908. It was an extraordinary and, happily, exceptional period of transition from the isolating circumstances of the great war of twenty years by which England was, both directly and indirectly, affected, to a peace system in which the nation again joined the international co-operation of industry. Both agricultural and manufacturing supply had to be re-cast to meet the new conditions of demand, and, till this was effected, there was bound to be immense dislocation in both fields of activity.

² In interpreting the tendency of these eleven years, with their well marked cyclical movement of revival (1821–3), prosperity (1824–5), crash (1826), and distress (1827–31), it is well to remember that the economic equilibrium was greatly disturbed by at least three things: (1) The continuance of Protection for agriculture, and of dear food, all

every decade since the great war, there has been a time of deep depression and a time of active trade, and that the movement between the recurrence of these points has described an almost constant ebb and flow.

145. This periodicity is so striking as to tempt to the belief that, if it were not for extra-economic occurrences, such as the potato rot, the cotton famine, or the change to Free Trade, the cyclical movement would have been much more rhythmical than it has proved to be. Be that as it may, the fact remains that, for a century at least, years of good trade have been followed, at a shorter or longer interval, by years of bad.

146. But, indeed, the more closely one studies the phenomena of modern history, the less will one be inclined to wonder at this.

147. The essential features of the present day system are that almost no one makes goods or renders services for his own consumption or support, but—it may be of his own accord or because he cannot help it—risks his fortunes or his livelihood on catering for the wants of others, taking his chance of their buying and paying at least cost price for the goods he makes; that this production is so highly organised—so much divided up and specialised—its processes extending over wide spaces and during long times—that, necessarily, the greater part of the supply is brought

1860. Prosperity.²

the time that manufacture and commerce, while shaking themselves free, were constantly dislocated by the necessary changes; (2) the rapid spread of pauperisation under the old Poor Law; and (3) the political agitation among the un-represented industrial classes which led to the Reform Bill. The painful transition to factory industry, and the use of machinery on a large scale, would of themselves have caused great dislocation and local distress, but the other factors greatly aggravated it.

1 In this period, 1832-46, the fifteen years of the Poor Law Commissioners' administration, the cyclical movement is again clear, but is not so regular over the whole field owing to the erratic phenomena of agriculture under Protection. Of the fifteen harvests, eight were good—some of them extremely good—and seven were bad. But, whatever the crop, the "agricultural interest" was always complaining of distress; fine harvests bringing hardship to some of the interests and bad harvests to others. The cycle is, roughly: distress (1832-3), revival (1834), growing prosperity (1835-6), reaction (1837), distress (1838-42), revival (1843), prosperity (1844-5), crash (1846). The lowest point was reached in 1833, and again in 1842. 1834-6 were years of great manufacturing prosperity—as 1823-5 had been—and so were 1844-5. (So, probably, would have been 1846 but for the "act of God.") The disturbing elements are the perpetual political agitation of Chartism and the League; the six bad harvests in succession; and the great potato famine. There is comparatively little dislocation in old industries through changes of method or appliances. The entirely new industry of railway construction, indeed, is a new demand for labour, and promises to take up any "surplus" there might conceivably be.

2 During this first period of the Poor Law Board's administration the cycle, it will be noticed, is the usual one of between nine and eleven years. There is depression (1847-8), revival (1849-50), prosperity (1851-2), pause (1853), depression (1854-7), revival (1858), prosperity (1859-60). This time there are two crises—in 1847 and 1857. Free Trade seems to justify itself by the elimination of the seasons as a potent factor even in agriculture, by the maintenance of the revenue, and by the advance in imports and exports. The depression of 1854-7 is amply accounted for by the Crimean War. The contentment of the country is, perhaps, witnessed in the absence of information as to industrial progress in several of the years.

forward in anticipation of demand.* Thus the forces of capital and of labour are organised so thoroughly and intimately that, in production, the various branches stand to each other like houses of cards—push over one and the whole range topples—and yet they all depend on a demand which is so far from being organised, that we should never guess that it was even roughly calculable if it were not for the statistical facts that show it to be so.

148. When, then, one considers that, in an old country, the millions of human beings have, on the one side, cut themselves off from the chance of making or raising consumable things for themselves, and have, on the other, risked everything on meeting a demand which is subject to all the vicissitudes of human desires, the wonder rather is that demand and supply should ever come into equilibrium. Those who look upon the cyclical dislocation as a grievance to be urged against the modern system—perhaps to condemn it—would do well to remember that, in a world where harvest comes but once a year, steady week-in week-out employment, and, what is more, steady week-in week-out wage, is the new thing and the “unnatural” thing.

149. Assuming, then, that, in an ideal type of industrial organisation, supply would just meet demand and demand just take off supply, and employment thus be kept continuous, it is easy to see that, under the modern system, mistakes are liable to occur from two sides.

150. If demand to any extent changes its usual channels and amounts—and this is all the more likely to happen the more the human demanders, as a whole, arrive at a position where their “demand” is not limited by their physical wants, but expresses the desires and caprices of a manifold pleasurable life; or if supply for the moment floods any of its channels—which any little spurt of demand always tempts it to do—there are unsold goods; sooner or later, in greater or lesser degree, there is a check to further production.

* “The organisation and specialisation of anticipation is one of the most characteristic features of the modern economic world.” Professor Chapman. (Evidence, Vol. VIII., 84791 (18).)

¹ In this period the cyclical movement is rather shorter. The crisis of 1861 was not due to economic causes. The revival and prosperity of 1863–4, followed by a year of wild speculation, and ending in a commercial crash in 1866, are normal, as are the three following years of depression.

² These years, beginning the *régime* of the Local Government Board, have been grouped because they chronicle the last attempt to keep down Poor Law expenditure by strict and strenuous carrying out of the old principles. For once the cyclical movement seems suspended. They are simply six years of “abounding prosperity,” culminating in 1874 and declining in 1875, the impulse to which may have come from the payment of great part of the huge French indemnity in purchases from England.

³ For the first four years of this period, 1876–9, it seems as if the cycle were again suspended, this time at fixed and serious depression culminating in 1879. In 1880 there is a slight improvement. But as regards 1881, 1882, and 1883, —as seems probable—as years of dullness, the undoubted depression of the next three years, culminating in 1886, gives little support to the theory of decennial periodicity. The steady rise in Poor Law expenditure is a marked feature, but requires much interpretation.

151. But the moment there is this dislocation to any appreciable extent, it spreads like a contagion. The retail shop, after all, is the centre where, in most cases, demand and supply ultimately meet, and it is from this centre that the contagion spreads. Some workers are thrown out of work. Having no wages, they buy less from the shops. The shops, with unsold goods on their shelves and diminished takings in their tills, cannot give the usual orders to the merchants and manufacturers who supply them. In turn, the merchants and manufacturers, with unsold stocks and reduced sales, cannot buy as they did from the shops which supply them. This contraction of demand in course of time affects shipping and all the transit trades which bring them material and take away products, and the persons engaged in them curtail their purchases from their shops. At every step, some shop or other, as it were, is affected and spreads the contagion back to those who fill its shelves. And so the dislocation spreads; until the thoughtful observer wonders how industry is ever to get a start out of the depression and stagnation in which it is sunk.

152. But, mysterious as may be the reason of the new start, it is obvious that, so soon as the start is made, the same contagion revives the whole organised fabric. The workers in some industry or other are put on full time. Their increased wages flow necessarily to the shops; the shelves are depleted and rapidly refilled; all those who supply the shops feel the stimulus of new demand, and in turn hand it on to the shops with which they deal. In a short time, to everybody's astonishment, it is found that trade is again on the up-grade—happy if it is not overdone and hurried into speculation and premature collapse.

153. Apparently economists up till now have looked on periodical depression and unemployment as inevitable, just as one looks for break-downs in a motor car—as “the shadow side of progress itself,” to use Roscher's words. The industrial world, they never weary of saying, had become a very highly organised machine, capable of producing immense quantities of wealth of all sorts, but, like all highly organised machinery, apt to get out of order now and then. Indeed, a very little thing dislocated the fine interacting arrangements. The whole fabric had become so organic that a flaw or defect in one place spread like a plague, and depression in one trade ended in almost universal depression. Some mills went on short time; others dismissed part of their workers; and, without much warning, men, often enough, found themselves walking about in a world full of wealth, and yet unable to get the day's work that would give them a claim on it.

¹ In these years the periodicity is well marked: revival (1887-8), prosperity (1889-1900), decline (1891), depression (1892-4), revival (1895-6). The period of depression, however, is long, and that of prosperity short. In Poor Law expenditure, there is only one long increase from eight and a half millions to ten and a half millions, or, roughly, 24 per cent.

² In this period also the periodicity is well marked; prosperity (1897-1900), decline (1901-2), depression (1903-4), revival (1905), prosperity (1906), prosperity and decline (1907). The period of good trade, however, this time, is long; that of actual depression, short. The most notable feature of all, perhaps, is the enormous increase of Poor Law expenditure, rising to fourteen millions in 1905.

154. Business men, too, aware of this cyclical movement, never regarded the year's income as net, but counted on taking the bad with the good; and the upper working classes insured themselves, so far as they could, against occasional want of employment through their Trade Unions.

155. But during the inevitable periods of depression, those who would not insure and those who could not—and it is much to be feared that the latter suffered by confusion with the former—if they would not starve, had to live partly or wholly on other people.

156. This was the problem as it presented itself to observers probably up till the end of the century, and it was serious enough.

157. It did not fail to be pointed out that, in the best of times, there never was less than 2 per cent. of unemployment among the members of the best organised trade societies; * that, in bad years, the percentage rose to 9 or 10; if this were the case, it was argued, among the best organised workers, what must it be among the worst, or among those who had no organisation at all.† For, as the century went on, in spite of the increase of wealth—or perhaps, on account of it, for, the larger the individual's income, the more difficult to predict his demand—there did not seem to be much ground for hoping that the period and intensity of depression might diminish within the cyclical years. Of course, the more the certainty of the cycle was realised and believed in, the easier it was for the employing class to meet it and even to profit by it. If a manufacturer, for instance, believed that, in a couple of years, there would be a strong demand for goods that were at the moment unsaleable, it would at least give him courage to carry on over the intervening time. But for the worker there was no such compensation. The only possible way of providing against the miseries of unemployment was by insurance—a thing for which there were no facilities in the unskilled trades even where they were organised in Trade Unions—a thing which the low level of unskilled wages seemed unable to provide—*à fortiori*, a thing which the unorganised worker could not be expected to do for himself.

158. There was some plausibility, then, in the contention of those who claimed that the "competitive system" was a failure; that it did not and could not in its nature lead to the steady rise of the whole community to a level where everyone "willing to work" would be sure of getting work to keep him and his family in independence, and prevent his falling from the standard of comfort which he attained or might have attained when the periodic tide was at its height.

159. The contrast was continually made with some fancied golden age when people lived on the land, and, if they lived barely, could not, at any rate, blame anyone but the Creator for bad crops; and even those who were most convinced that there never had

* This 2 per cent., however, is rather misleading. As explained by Mr. Barnes (Evidence, Vol. VIII., 82895) among the 100,000 or so members of the Amalgamated Society of Engineers, there are always some few who are not in the right place, or are registered as unemployed, when, as a matter of fact, they are simply changing over from one employment to another. Mr. A. Wilson Fox considers the 2 per cent. probably an irreducible minimum: "There will always be men out of work between jobs, or on account of breakdown in machinery, or on account of bad weather, etc." (Evidence, Vol. IX., 98897.)

† As to the adequacy of, and the validity of inference from, the "unemployed percentage," see evidence of Professor Chapman, Vol. VIII., 84791 (2-3), and *passim* the two Memoranda prepared for the Commission at the Board of Trade, entitled "Method of Compilation of Board of Trade's Percentages of Unemployed and the extent to which they may be taken as a Measure of Unemployment," and "Cyclical Trade Depressions" (Vol. IX., Appendix XXI., A.-B.). Cf. also evidence of Mr. A. Wilson Fox, Vol. IX., 98826: "After all, we only get the figures for some 600,000 Trade Unionists, and I am somewhat sceptical about applying them to the 2,000,000 trade unionists. One reason is that I think we have got figures from some trades which are particularly susceptible to changes, in bad times, such as the shipbuilding, the building and the engineering. Then another reason is that, among the Trade Unions we leave out, there are large bodies of men who are seldom out of employment at all, such as railway servants (80,000), textile workers (13,000) and coal-miners (400,000). Therefore, I do not think it would be safe to apply our unemployed figures to the Trade Unions as a whole; and, *à fortiori*, I do not think it is safe to apply them to the 11,000,000 of working people, and I do not think that anybody would suggest that one could apply the definite information which we have got as to the 600,000 to the 11,000,000" (98850). As to the question whether there is a larger proportion of unemployment among unionists or non-unionists, Mr. Fox will not express an opinion; there are pros and cons; "I think it a very arguable point" (98862-9). Similarly with the question whether depression affects unskilled men more than skilled men: "It is very difficult to say" (98875).

been such an age historically, and that the existing population could never have been subsisted under the old agricultural system, felt some regret that there was no simple life and labour left, where a man, unable to find an employer, might retire from the stress of competition, and grow his own potatoes.

160. This feeling was intensified as wealth increased, and as the Trade Unions raised the condition of the organised workers till they were able to protect themselves by "unemployed benefit" and invested savings, while yet the wages of the lower classes of workers were seen to be insufficient either to allow them to save much or to contribute enough to their Unions to secure the out-of-work payment.

161. At every time of bad trade, then, when numbers were thrown out of work, it was felt that, however much the problem was complicated and the real issues confused by the appearance of large numbers who obviously owed much of their distress to improvidence, drink, and laziness, there were many who did not deserve to be thrown on charity or the Poor Law—who were really the victims of a system of organised production in which occasional bad times and dislocation were inevitable. Thus local bodies were compelled by public opinion to open "relief works" to "tide over" the temporarily unemployed.

162. The experience of these relief works was almost always the same. Any examination, however perfunctory, weeded out large numbers; of those who got to work, the great majority, judged by results, were not economically worth the barest subsistence. But however unsatisfactory these relief works were—however little help they gave to the skilled artisan, whose skill was there of no advantage to him, and however much was wasted on unworthy applicants whom it would have been better to drive on to the Poor Law and to make feel the beneficence of the deterrent principle—they at least took a few of the "temporarily unemployed" off the streets; kept them in the habit of work; and left them the self-respect of doing something for a living. When trade revived, the relief works were closed; the unemployed were supposed to have gone back to their own work again; and the problem did not come before the public till the inevitable cycle brought the same phenomenon over again.

163. It may well, indeed, be the case that, at some future time, the community will wonder why, during the last quarter of a century or so, when the evils of recurring depression and unemployment were fully recognised by those who watched the phenomena from outside and had nothing to gain from them, so little thought was given to the remedying of these cyclical disturbances, except on the part of those whose methods aimed at a complete overturn of the system of private employment. In defence of this general inaction, it may be urged that *laissez-faire* had worked so well in the earlier parts of the century that it was a little difficult to believe that conscious planning and regulation of industry on the part of any central body could do much to improve matters.

164. Probably those who were most honestly concerned about the failure of this halting organisation of industry to do all that might have been expected of it—where they did not rest content with the knowledge that, on the whole, things were better than they ever had been in historical times—took courage from the hope that, as wealth increased, the Unions even of unskilled workers would become strengthened and add on unemployed benefits; that, as free, compulsory, and universal education showed its results on the rising generation, fewer parents would be content to send their children into the unskilled trades; or that, as the co-operative movement kept on gathering more and more of the working classes within its fold, not only would the habit of saving grow, but more and more production would be gathered into the hands of an organisation which claimed, and seemed, to be singularly free from these cyclical fluctuations.*

165. But still it was not recognised that there was any deeper problem than how to minimise the fluctuations, and to carry over those who were unfortunate enough not to have other provision till such time as the depression passed away. The only applicant technically qualified to be set to relief work under the Unemployed Workmen Act of 1905—which, indeed, only continued the policy of previous municipal and local

* It is a noteworthy fact that, during the very bad year 1886, the co-operative sales did not fall off.

efforts to meet the same emergencies—was the real unemployed workman suffering from temporary depression in his particular trade, and the object of the relief work was, as has been so often said, simply to “tide him over” till he got back to his own work. The typical case may be taken to be that of builders’ labourers, where the demand for this particular service, temporarily interrupted by the cessation of the normal activity of building, was sure to recur.

166. And it cannot be too strongly emphasised that this problem of cyclical fluctuations *remains*, and seems likely to remain even if we made every man a skilled workman, and enrolled him in a Trade Union paying unemployed benefit; that it is a distinct problem calling for its own remedies or alleviations; and that it is a matter of extreme importance that it should not be confused with the other problem which seems now to have emerged, and which we must now try to enunciate.

(15) THE NEW PROBLEM: CHRONIC UNDER-EMPLOYMENT.

167. At every Relief Committee—and later, at every Distress Committee—there appeared large numbers who did not seem to “fit in” with the theory on which relief or distress funds were based. This theory, as we have seen, was that, in times of good trade, there was approximately full employment for all classes; that, in the bad years, and, of course, at all times when any special non-economic calamity had occurred, there were unemployed—people thrown out of work from no fault of their own—who must be supported till the times were better; that a Poor Law provision which, rightly or wrongly, carried some measure of stigma, was not the right kind of provision for working people who merely required to be “tided over” a period which experience had shown to be inevitable.

168. But now, before every Committee, appeared numbers in the prime of life as regards years,* to whom the idea of “tiding over” was evidently quite inapplicable. They seemed to fall into three distinct categories: the Casual workers, the Seasonal workers, and the Unemployables.

169. (1) *The Casual Workers*.—These are men engaged from hour to hour or day to day, and for whom it is a matter of chance whether employment will be forthcoming on the morrow. At the best of times, they are never taken up into regular industry, but count themselves well off if they obtain four days a week of work. In dull seasons and at exceptional times, these casuals are, of course, more unemployed than usual, and they appear in crowds wherever relief work is to be had.

170. The type of “casual” is the dock labourer. This class, and the problem it presents, must have been in evidence ever since there were great docks. In an Appendix to the 1834 Report, for instance, we find the following statement about Limehouse: “No doubt many families are relieved on the ground that their wages are insufficient to maintain their children. This is generally the case in the docks, where the wages paid are generally very small in amount to even constant labourers, and insufficient to support a large family, but when it is considered that many hundreds of persons are hanging about the walls of these establishments from day to day without being employed at all, or perhaps at most but one or two days out of the six, it must be obvious that one or two days’ pay cannot keep their families for a week, and the deficiency is of course supplied from the poor rate. If the redundant labourers were taken off, the constant labourer would be able to demand a suitable return for his labour in the docks, the manufactory, and the shops, by reason of the scarcity.”†

* The average age of the unemployed is a matter on which it seems impossible as yet to give authoritative statistics. In some distress committees, statistics of age were taken, not of the total applicants, but only of those who actually obtained work. But one of the main reasons for selecting men for work was that the applicants had a number of young dependent children, *i.e.*, generally, men between twenty-five and thirty-five years of age. And there can be no doubt, not only that many of the better class unemployed, owing to pride and independence, did not apply to the distress committees at all, but that many elderly and old men were deterred from applying, owing to the rough nature of the work offered. It is quite certain, however, that very large numbers are between twenty and forty years of age. It is significant that, in all probability, the average age of the unemployed belonging to unskilled is lower than that of the unemployed belonging to skilled industries. (Mr. R. H. Tawney, *Evidence*, Vol. IX., 96617.)

† Appendix B. (2), p. 108.

171. The history of the growth of dock labour since that time would practically be a history of the great docks, and it would be beyond our province to enter on this, further than to suggest that it is since 1834 that the growth of our import and export trade has opened up the great tidal rivers and estuaries, and made cities on their banks and at their mouths the great centres for the labour connected with the loading and unloading of ships and the warehousing of goods. Cardiff and the other Welsh ports, for instance, owe their importance to the opening up of the coal fields; Middlesbrough—an entirely new town since 1830—to the development of the Cleveland iron industry, and so on. To this extent the problem of dock labour is a new one, though its features are unchanged since 1834—large numbers, in excess of demand even on the busiest days, hanging about hoping to get a job, and finding employment just sufficient to keep them from seeking work elsewhere.

172. The reason why there should be more or less of an industrial swamp at every shipping centre requires little explanation. The work of the ordinary docker requires nothing but muscular strength and not always even that. Consequently, the ranks are recruited, not only from the families of dockers, but from those who come by sea looking for work and, of necessity, take the first thing that offers, and from the failures of all classes. Casualty here is added to want of skill, and the combination is deplorable in all its consequences.*

173. There is, moreover, an attraction at the docks, which strongly appeals to very many. It is that there is no fixed engagement, and that yet there is a reasonable chance of getting a job or two—with overtime paid extra—each week. The “docker’s romance,” as it is called, is that he, alone of all tradesmen, can take days off when he likes, without suffering for it. And while the life does not lose its attractiveness, the number of dockers required has probably diminished owing to labour-saving machinery, such as cranes, elevators, etc. The docker’s work being necessarily intermittent, he gets into the habit of it, and, even where it need not be irregular, makes it so; the irregular wage discourages methodical expenditure; and the docker becomes a by-word for thriftlessness.†

174. Unfortunately, casual labour is not confined to the persons who load and unload ships. The occupation of the store porters, in the great warehouses which line the docks for miles in Liverpool and other places, is even more irregular. “It is utterly impossible,” says Mr. A. L. Rathbone, “as a rule, for the warehouseman himself to tell from day to day how many men he will require the following morning. He may have a heavy stock of any particular class of goods in his warehouse, the owner of which may sell it, say, late in the afternoon; the order is passed through, and the carrier applies for delivery first thing in the morning. The warehouseman thus requires a considerable number of men; but, for days on end, even although he has a heavy stock in his warehouse, he may not require more than one or two hands besides himself to attend to sampling orders, and such small matters of that kind.”‡

175. In pig iron and steel smelting at Middlesbrough, again, there is much casual labour, particularly in shipping and stocking the huge amounts of iron ore and crude metal, where men are employed by the hour, ton, or job, and labour is liable to interruption by bad weather, or a lull in shipment. In Birmingham, all the large locomotive works, as well as the larger metal works, employ a number of casual labourers, taken on by the day and hanging about the gates between jobs.§ In engineering, the ship repairers’ men, employed in all the dock centres in repairs to ships and ships’ engines, are employed for long hours at high pressure, and are then thrown out of work till the next repairing job. The railway companies also employ casual

* It need scarcely be said that labour may be entirely unskilled and yet not casual. In Burton, for instance, very many of the occupations connected with brewing require no special skill, and a large proportion of the employés are unskilled labourers, so much so that Burton may be called a “labourers’ town.” (*Cost of Living of the Working-Classes*, Cd. 3864, 1908.)

† On account of its extent and special features, the present phenomena of dock labour form the subject of a separate section ((21.) p. 356).

‡ Evidence, Vol. VIII., Appendix lxiii. (9). Cf. also Mr. Pringle’s Memorandum on *Fluctuations of Employment in a Liverpool Grain Warehouse*.

§ Final Report of Mr. Steel-Maitland and Miss Squire, p. 97.

labour—generally as temporary porters—at times of holiday pressure to a varying extent, but so far as possible prefer to get extra labour by transferring men from one grade to another. The occupation of carmen again is a very casual employment: in London, at the busiest times, 5,000 out of 42,000 are said to be idle, and two-third, only belong to permanent staffs.

176. For most men, indeed, as has been said, “employment consists of a succession of jobs,” but it is bad in every respect when the jobs are discontinuous and of irregular duration. This is the characteristic of the many trades connected with buildings where the guaranteed employment seldom extends beyond the completion of the particular contract, and is at all times subject to interruption by bad weather.* There seems in fact to be good reason for thinking that the history of the building trade during the last few years is responsible for greatly adding to the number of casuals. Between 1891 and 1901 the new and striking activity of municipalities in water, gas, electricity, tramways, housing, drainage, etc., not only increased the flow of population into urban centres, but induced a disproportionate flow of capital and labour into the building trades, and the ebb of the tide has left both plant and men stranded. This was particularly unfortunate, as these industries already employed so much unskilled and casual labour. In time, no doubt, building will revive—it is usually the last to feel a depression of trade and the last to recover—but it will not be till the cycle has entered on its upward course; and, if it be true, as asserted, that, owing to recent improvements, the unskilled labour necessary has gone down to about one-half, the industrial swamp in the building trades will rival that at the docks.

177. Whether casual labour is increasing and in what proportion, may be a question. Some witnesses are of opinion that, in cities like London, there is more tendency to take on and dismiss people at short notice than there used to be, and much less employment of men for long periods.† But, in industries where much and expensive plant is used—and the range of such industries is increasing—the tendency would seem to be in the other direction. “Were ‘home-work’ impossible, it is probable that there would be greater regularity of employment in certain branches of the tailoring trades: were expensive machinery needed for brickmaking, it would soon be carried on all the year round.”‡

178. Investigations into the circumstances of the casual unemployed seem to show that, if anything is to be done with this class, it must be done for them. They are unable to work out their own salvation. The Toynbee Trust Inquiry into the condition of the unemployed in 1895–6 reported that their most marked characteristic was their “stolidity,” their “inability to accept change,” “their willingness to rely on someone else—wife, children, or charity, till another similar job turned up.”

* The excessive specialisation in the building trades of itself leads to unemployment. Among even the lower grades there are scaffolders and hoisters, timbermen, mason’s labourers, bricklayer’s labourers, carpenter’s labourers, plumber’s mates, and painter’s labourers, all men who have acquired skill in those particular sections, and are not always ready to take up other work. “Very seldom would a labourer think of asking for employment in any other section but that which he was accustomed to.” (Report of Messrs. Jackson and Pringle, Appendix, p. 417.)

† The tendency in this direction is perhaps illustrated from the Glasgow baking trade. On all days of the week there is a great demand for early morning bread, and, on Saturdays, the average daily demand is doubled. So, instead of keeping a staff, say, of twenty men, fifteen men are permanent and ten are taken on for the first half days during the week and for the whole of Saturday. Of these workers it is said: “They gradually become confirmed in unsteady habits, and among them there are very few cases where a little help would be of much service.” (Mr. James Macfarlane, Evidence, Vol. IX., Appendix cv.)

‡ For an analysis of the tendencies which make, some for greater, some for less, regularity of employment, see the Report of the Special Committee on Unskilled Labour of the Charity Organisation Society, 1908, pp. 4–8. “The conclusions are shortly these. Apart from large disturbing influences, there is a constant process of consolidation and organisation going on in any large group of industries, by which the total opportunities for employment tend to become more regular. Again, the increased use of capital in machinery displaces hand-labour, with the result that the demand for labour is, on the whole, regularised, and in the case of the lower grades of employment the quality of the labourer demanded is raised. On the other hand, in so far as casual labour is itself a cause tending to produce a permanent over-supply in the labour market, there are likely to arise new forms of industry, constituting a fresh demand for casual labour so long as this labour remains cheap.”

179. Casual labour, besides, has this heavy additional handicap, that it does not give the material for building up an industrial "character," such as domestic servants and seamen, for instance, find indispensable. It has been suggested that, in relief or distress work, the best method of discriminating between "deserving" and "undeserving"* is to take records of past employments, and it has seemed to some that provision should be made for workers generally providing themselves with a kind of industrial *dossier*, where the duration and value of their jobs would appear to their credit. But it is practically impossible for the casual labourer who is engaged only by the hour, day, or job, and passes from employer to employer in the course of the week, to build up such a "character."

180. It is quite evident that "tiding over" is not an idea on which to base any remedy for such workers. The distress at the docks, for instance, is not due to temporary depression—although things are worse during these depressions. If relief works are opened in the vicinity, they will be flooded by this class—particularly if the work is for two or three days a week—but nothing that is done there will make the casual less a casual. Evidently the most that "tiding over" can do for such people is to tide them over perhaps from six days a week at relief work to four days a week at their own casual jobs.

181. (2) *The Seasonal Workers*.—These are workers whose work describes a cycle within a cycle; people fully employed, perhaps, for some months of the year and idle the rest. This class also comes largely into prominence at times of relief work—if it be the off-season with them.

182. In a sense nearly all workers are seasonal, their trades busy in certain months and slack in others. To quote the Memorandum prepared for us at the Board of Trade on *Statistics of Seasonal Industries and Industries carried on by Casual Labour*, "Seasonal fluctuation is found to a more or less marked degree in nearly every industry. . . . The seasons on the whole are least marked and least regular in industries connected with the manufacture and use of metals—engineering, shipbuilding, miscellaneous metal trades, iron and steel working, tinplate, and steel sheet milling. Here seasonal fluctuation is not so much absent as liable to be overriden by other movements, in particular, cyclical fluctuation."† In the best industries, indeed, employment is kept continuous only by employers taking considerable risks in preparing stocks in anticipation of demand.

183. But what is now known as the "seasonal worker" is, to a large extent, the product of modern conditions—of the excessive specialisation which tends to set whole trades apart for the provision of some commodity or service which can be produced, or is in demand, only at certain seasons of the year. And the aggregation of population into urban centres often provides large amounts of labour, chiefly of women and children, willing to take a few weeks or months of employment. The types of such work are jam-making, which can be done only in autumn and thrives on the abundant cheap labour of East and South London, and aerated water manufacture, where the active demand comes with hot weather, and where "a sudden fall of temperature means the dismissal of many hands."‡

* Unfortunately, as we think, in many of the distress committees, investigation into character and record has been banned, and preference given, not according to deserts, but according to number of dependents. We entirely agree with our investigators that, by ignoring the fact that, in an appreciable percentage of cases, unemployment is directly due to a man's own fault, injury is done to the genuine worker. "A few instances of men of bad character obtaining relief obtain a quite fictitious importance if, by ignorance of their real numbers, the public is led to hastily regard as undeserving the unemployed as a whole." (Report of Messrs. Jackson and Pringle, p. 59.)

† It is suggestive that, while the seasonal fluctuation in engineering, shipbuilding, and the metal trades is negligible, the cyclical fluctuations of employment are more violent and the depressions in bad periods far deeper in those trades than in others—the reason probably being that, in times of depression, employers do not as a rule renew machinery or undertake extensions, nor do shipping lines add to their fleets in times of falling freights (Professor Chapman, *Evidence*, Vol. VIII., 84791 (15).) In fact, if these trades were eliminated from the general table, the general depressions would have been expressed in far lower percentages. (Memorandum on "Cyclical Trade Fluctuations," Vol. IX App. xxi., D.)

‡ See *passim* the Reports of Mr. Thomas Jones, and of Mr. Steel-Maitland and Miss Squire. In the former industry, to the evils of seasonal employment is added that of casuality: "A certain number are employed throughout all the year, but, during the summer months, June to September, a large body of additional labour is required, and both in the factory processes of making jam and in the preparatory picking of the fruit a very great many casual workers are required. . . . The casual pickers are taken on as required during the day, and wait round the factory doors to be hired." (Report of Mr. Steel-Maitland and Miss Squire, p. 42.)

184. In the clothing trades, the demand is most active in the spring ; in the printin trades, depression comes in late autumn ; in building—a set of trades which seems to stand somewhat by itself in the intermittent character of the work, the hourly terms of engagement, and the great differentiation and specialisation of the workers—operations are most economically carried out in the summer and are suspended in frost and bad weather ; in docking, the slack and heavy seasons depend on such things as the closing of the Baltic by ice, the arrival of cargoes bearing the crops of different countries, etc. In gas making, the demand falls away in summer—so much so that gas workers are recognised as men with two trades, most of them taking to brick-making in summer and a very large proportion being bricklayers' labourers at other times. In summer, on the other hand, the Dublin stout-makers experience a seasonal expansion requiring 150 supplementary hands, which they get by arrangement with the distillers whose heavy season is autumn and early winter.

185. The theoretical position is that, if the community demands seasonal products or services, the price they must pay for them will be sufficient to afford wages high enough to cover an insurance premium against the dead time of the year.* Unhappily this is not always the case—particularly as regards the seasonal women workers ; and, even where it is so, the utterly demoralising effects of intermittent labour are very obvious. Painters, for instance, whose wages while in employment are very high, figure largely in every Distress Committee register.

186. Here, also, as the evil has nothing to do with cyclical fluctuations, the remedy must not be based on the idea of "tiding over." What the seasonal worker, if he is to continue so, requires, is a second trade. To give him public relief work is indeed to fill up the gaps between his seasons of employment ; but, as the seasons of unemployment are annually recurrent, this would require annual relief works, in which case the community would be subsidising certain industries, and encouraging employers to keep down their permanent staffs and trust to getting extra labour, whenever wanted, at the relief works. As one of our witnesses says of the sewing workrooms, opened to give women temporary employment, "while the way in to the workroom will in time become easy enough, a way out of it still remains to be found."†

187. (3) *The "Unemployables."*—These are people whom no ordinary employer would willingly employ, not necessarily because they are literally incapable of doing work, but because they are not up to the standards required by the industries which they wish to enter or remain in. The word, unfortunately, has obtained a large extension

* "Most trades are seasonal in the sense that they are busy in certain months of the year and slack in others. In the majority of the principal industries, employing mainly male labour, these fluctuations are not too severe to be discounted and weathered by reasonably prudent workmen ; but in some, notably the building trades, employment diminishes very seriously in the winter months. Since, however, these fluctuations come from the nature of the work, the industries concerned have no claim on the nation in general, but only on that part of the public who uses their services. In seasonal trades wages should be, and in general are, on a higher scale than for work of similar skill in regular trades, and it is the business of the industries as a whole and of the individual workmen to make the busy months pay for the slack. To give public relief is to subsidise a particular trade at the expense of others. All that can be done by public bodies is to endeavour to equalise the demand by giving their work, when practicable, to be done in the less busy months." (Professor Bowley, Evidence, Vol. VIII. 88112 (3).)

† *Vide* Mrs. Ramsay Macdonald's Evidence, Vol. VIII., 82651. In the case of women's industries, there is, however, some tendency for the evil to right itself. Where there is much plant, and where, accordingly, the fixed charges are high, it is to the employers' interest to keep their factories fully employed, and this, it is said, is the case in most jam and biscuit and aerated water factories. Happily, too, the evil is recognised by the best employers. "The more competent and thoughtful endeavour to overcome the natural fluctuations due to the seasons by superior organisation. With the manufacture of jam and marmalade they combine the making of sweets and the potting of meats. They thus occupy the time of the majority of their employes. An artificial florist, employing over 200 girls and women in a trade which occupies six months of the year, has introduced a second trade, the preparing of quills for hat trimming, and now the workers are employed all the year round. Some make to stock in slack seasons, others work fewer hours ; some employ half the workers half the week, others again dismiss the least skilled and share what work there is among the more skilled. In some factories several devices will be found combined."—(Interim Report of Miss Williams and Mr. Jones, p. 57.) In Luton, where the staple trade is straw hat-making, and where work is always slack during six months of the year, felt hat-making has been introduced ; and, "it is now very usual to find the two trades carried on by the same firm, employing the same workpeople at different periods of the year." (*Cost of Living of the Working Classes*, Cd. 3864, 1908, p. 284.)

of late years. It has come to mean not only the imbecile, the drunkard, the impotent, but also the person who cannot conform to the requirements of a highly artificial and exacting system of industry, or find an employer who can give the time and pains to find him a place where his services are worth a wage.

188. It must be recognised that an enormous change has come over the character of industry since the days when England was an agricultural country. To feed our vast population, and to produce a national income large enough to defray our increasingly heavy burdens, we have had to organise the work of the community in a way of which the past had almost no experience. In the course of this organising, it has become difficult if not impossible for any man to obtain a wage unless he comes in to the organism where labour is divided and its products brought together again, and where everything raised or made is first sold. That is to say, the working man has to find an employer who will fit him in to a place in this organised system. Employers, competing among themselves to sell with a keenness unknown to any former age, are pressed, under dread of failure and disgrace as well as of loss, to adopt the most perfect machinery and the most complex processes for producing goods; with the result that machinery, for long the welcome auxiliary of labour, has become, in countless ways, its relentless rival, taking its place wherever a shilling can be saved. And so it seems to have come about that, while the total demand for labour is probably increasing—of which we shall have to speak later—it may be demand for the kind of labour that the average man is not able to supply.

189. In view of this extension of the term, we seem to have at least four classes who come under the designation of Unemployables, although it would be easy to divide these again into any number of sub-classes:—

(a) The most obviously “unemployable” is the person whose physical condition is such as to unfit him for the stress of manual labour, while his mental and moral equipment is not such as to fit him for anything better. This unfitness may be the result of vice, drunkenness, bad conduct generally, and one may have little hesitation in leaving such a person to be dealt with by the Poor Law. But the unfitness may also be the “act of God,” and the most rigid Distress Committees do, as a rule, send such a man, when willing to work, to whatever jobs they may have to offer rather than to the workhouse. The fact is notorious: light manual work is the only thing which such a man can possibly do, and the manual labour market is already overstocked with applicants who are up to the physical standard required by private employers.

(b) Next to him is the man who would generally pass muster as “able-bodied,” but who has some slight physical defect, natural or acquired, such as lameness, defective sight, defective hearing, want of an arm, liability to giddiness, heart-trouble, etc., or the man who suffers from some slight mental “want,” not enough to bring him within the category of feeble-minded. Such a man is, in many cases, “worth a wage” if the exact employment is found for him which he can do—the proof being that similar persons are employed in all kinds of situations; but the ordinary employer, as a rule, “has no use” for him, and, for want of information or want of interest taken in his case, the man unaided is very unlikely to find the place which, economically, he is perfectly well fitted to fill.

(c) The third class consists of the able-bodied man of middle-age, brought up to, and skilled in, a trade which, through industrial changes, has become irregular or obsolete, and without the alertness and energy to train himself in another skilled trade. “When his own trade fails him, the skilled mechanic seems unable to find employment except as a labourer,” says the Toynbee Trust Inquiry of 1895-6: “in the entire list (of cases investigated) there is not a single satisfactory case of a skilled man who has had sufficient mental and physical activity to attempt a new trade.”

(d) The fourth class is one for which everyone must have the deepest sympathy—the men “too old at fifty.” Everyone has heard how workers in

shipyards dye their hair and are afraid to wear spectacles.* The strain of hard physical work begins to tell, as a rule, long before even fifty, and the men themselves become conscious that they are not so "fit for their work" as younger men. Of late years, things have gone hardly with this class. Employers are willing enough, as a rule, to pay the standard wage, but naturally they want the full return for that wage. If the Trade Unions will not allow the elderly men to take less, the employers prefer younger and stronger men, and no one can blame them. Then, of late years, have come the Employers' Liability Act and the Workmen's Compensation Acts, and dealt another blow at this unhappy class.†

190. One consideration seems to us strongly to reinforce the undoubtedly current feeling that, for the three latter classes, and even for individuals in the first, the modern workhouse is not the proper place. It is that the evolution of industry has necessitated the perfecting of all the tools of production, and that this tendency has had full play as regards machinery—and even as regards land since we opened our ports to the competition of crops grown under better conditions than naturally prevail in this northern climate—while, all the time, there are many circumstances, social and otherwise, which have prevented the human instrument of production from being brought to the same point of perfection. Consequently, in all trades that employ machinery, employers—and the whole conduct of industry has fallen into the hands of employers—almost of necessity put the human tool into competition with the machine tool, and, unless the human tool can stand the comparison, they substitute the machine. Notoriously, the man cannot compete with the machine in very many respects—in point of untiring strength, accuracy of "repeat work," and the like—and, just as the great mass of half-trained pianists have been put on one side by the pianola, so great masses of men are called on to submit to a searching comparison which they cannot stand. In every trade, then, as in every profession, there is less and less room for the ill-endowed and the ill-educated. They sink to a level where the only demand is for labour so cheap that it does not pay to invent a mechanical substitute. They are very like superannuated fishing-boats, drawn up on the shore, and only put in the water at times of exceptional takes.‡

191. If we compare, for instance, the demands made on the average worker by the complex machine industry of to-day with the demands made on him in 1834, when the great employment was agriculture, and when agriculture was at a comparatively low level, it seems easy to understand how it comes that, in every occupation, while there is room enough at the top, there is always a surplus at the bottom.

* "I believe a great many employers would not take on a man at fifty if they knew it. . . . Many employers will not take a man on who is the least bit grey-haired." (Sir Benjamin C. Browne, Evidence, Vol. VIII., 86260–86261.)

† It is questionable if a fifth class should not be added to the unemployables. The information we have from Poor Law sources, distress committees, and shelters is that discharged soldiers find great difficulty in getting employment. In 1893, the Board of Trade Report on the Unemployed pointed out that, in the previous year, something like 29,000 men, discharged from the Army, or transferred to the first class Reserve, were thrown on the labour market to compete for employment as ordinary workmen. Of these, cavalrymen and artillery, from their experience with horses, had a good chance as grooms and carters, and the Royal Engineers were qualified for posts requiring some technical skill. But no less than two-thirds had belonged to infantry regiments, and, as the large proportion of these were not mechanics, they had every chance of drifting into the ranks of unskilled labour. And, unfortunately, they seem to have some difficulty in settling down when they do get employment. "Guinness's Brewery tried to take on a regular percentage of ex-soldiers, but thought them not satisfactory, ready to leave for slight reasons, and apt to consider the work too hard." (Mr. Cyril Jackson, Report 1908, p. 9.) Striking corroborative evidence may be found in the second volume of the Viceregal Commission on Poor Law Reform in Ireland. (Cd. 3203.) The fact that sailors have no such difficulty, and are readily absorbed, seems to point a suggestive moral. See Evidence *passim*.

‡ "Though there always were a certain number of men who were unemployed, and a certain number who, from misfortune, were permanently thrown out of work, there are now a very much larger class who fail to get employment even when trade is good, and whose condition seems to be of a far more hopeless character. They seem to be men for whom, in our present high-pressure industrial system, there is no place; sometimes they are able-bodied, sometimes they are comparatively young, but they do not seem to be quite suitable for any work on which one can lay one's finger even in good times. No doubt occasionally, either by their own effort or by the efforts of somebody else, some of them are restored to proper industrial conditions. Although the numbers are not in our case very large, it seems to me that the existence of the class is undeniable, new, and serious." (Sir Benjamin C. Browne, Evidence, Vol. VIII., 86221 (4).)

It seems probable that these three latter classes, who practically are never regularly employed even in the best times, would, many or all of them, have been employed in simpler times when there was little industry outside of agriculture.

192. This consideration of itself seems to give us a standpoint from which to judge whether the "principles of 1834" are adequate to modern conditions or not.

193. The Commissioners who surveyed the field of employment in 1834 had to deal with a problem which was definite enough and serious enough, but still was comparatively limited, namely, the rapid descent of able-bodied men from being self-respecting labourers to being persons who accepted parish relief without feeling of shame.

194. They saw that, under the existing Poor Law system, the workers themselves—and the nation with them—were losing heavily; deteriorated morally, mentally, and physically, by dependence, they were not doing the work they might—not even producing the equivalent of the relief they got—and so were laying a burden on the rest of the community.

195. So far as one may judge, the Commissioners were sturdy believers in the old economic theory that increase of supply of wealth is increase of demand for labour, and they went to work with the sincere conviction that, if sufficiently drastic measures were taken, the great majority of the pauperised labourers could get back, and would go back, to independent wage-earning. They had no fear that there was not work enough for every able-bodied man willing to work, and thus they had no fear that, if outdoor relief were stopped, the same men would become indoor paupers.

196. The twofold character of their problem deserves to be emphasised. They had not only to forcibly deter the able-bodied worker from accepting relief; they had also to prevent the officials of the time—Guardians, Overseers, Justices—from offering it.

197. What we must not forget, in comparing their problem with ours, is that the labour with which they had for the most part to do was, naturally, agricultural labour. Rightly, but in the teeth of much of popular opinion, they held that, even in agriculture, there was room enough for all the labour in the country. But when they looked outside of agriculture, the labour with which they came most in contact was the new factory industry of Lancashire and the North, and there they were assured that there was employment for more than were likely to come forward.

198. But the very statement of the problem presented to the Commissioners of 1834 is sufficient of itself to show how widely it differs from the problem to-day.

199. We have indeed still to deter men from falling into the habit of dependence—to save them from themselves. We have still to apply some almost self-acting test to safeguard the ratepayers from imposture. Possibly we have still to deter short-sighted philanthropists from listening to the "strong cases" which "make bad laws."

200. But the very much greater problem now presented is as regards those who have never, or never willingly, accepted poor relief; who are, many of them, anxious to work six days out of the seven; and whom deterrent measures are likely to drive, not into employment, but into the very place which the Commissioners of 1834 hoped to keep them out of, the workhouse.

201. Taking into consideration, then, the existence, in somewhat large numbers, of the four classes mentioned whom no employer "will willingly employ," the question we must ask ourselves regarding them is: Is there any hope that, if our measures are sufficiently deterrent, we shall drive or raise them into the ranks of the employed? If not, the great principle of 1834 is not adequate to the new position, and we must conclude that, as regards these four classes, we cannot adopt the simple principle of the Act of 1834 that, in order to drive men into independent labour, we need only apply a test that shall be sufficiently deterrent.

(16) THE EFFECT OF MACHINERY.

202. If our diagnosis is correct, it seems to give an ample explanation of unemployment. Not only is there cyclical dislocation which recurrently reduces the demand for labour,

and issues either in general short time, as in collieries and the cotton trade, or in workers of all classes and grades being thrown out of employment altogether, but, going on all the time—never disappearing, and only intensified by bad times—there is this normal under-employment of casual and seasonal workers, and there is the entirely fitful employment of the “unemployables.”

203. But many of our witnesses, and many others who sent in statements, seem to be under the impression, or are seriously convinced, that the fundamental cause of unemployment is that the demand for labour has actually contracted and continues to contract.

204. This we cannot believe. As all men, whether active producers or not, are consumers, and as all wealth, as a condition of its continuing in existence, is constantly seeking and actually obtaining employment, the demand for commodities must increase, not only as population increases, but as the wealth of the population increases. Indeed, the rise in the standard of life, which is a marked characteristic in all the industrial classes, is an indication that the demand for those who supply the goods and services necessary for this higher standard is increasing.

205 As Carlyle put it tersely: “Too many shirts? Well, that is a novelty in this intemperate earth, with its nine hundred millions of bare backs.” This is only a striking way of saying that the immense majority of men and women have never yet been able to make that “effective demand” for commodities which a full developing life on their part would involve—to say nothing of what is almost equally obvious,—that there is no class which would not gladly take more than it has ever been able to get. Even among the best educated and most sober-minded, plain living and high thinking is an ideal which has sunk into the background in view of the fact that high thinking, particularly in science, demands more and more expensive equipment for research, travel, etc.*

206. To this, however, it may be answered—and we feel so strongly the plausibility of the contention that we wish to do every justice to it—that no one denies that, as population and wealth increase, more and more *goods* will be demanded. But this does not prevent the possibility that, of the two great groups of factors producing these goods, machinery may be doing more and man less. It is pointed out, for instance, that single machines are doing work which formerly used to be done by half a dozen men; that the output of every organised unit of production is very much, sometimes immensely, more than it was a few years ago, while the number of the workers employed within the unit is probably no greater than it was. Even then, if human consumption keeps up with this immense production, there is no reason to think that the human productive factor is not diminishing in importance relative to the machine factor.

207. This contention is of course strengthened by the very obvious and notorious fact that the progress of invention and improvement in industry of all kinds is continually displacing labour of one kind or another. We have had nothing of late years, indeed, so distressing as the displacing of the hand-loom weavers by the power looms; but such things as the change from gas to electric light, from male clerks to women typists, from horse carriages to motor cars, involve for the time a displacement of labour which, in its degree, is very grievous to the classes concerned. †

* Mill once said that it was questionable if all the mechanical inventions yet made had lightened the day's task of any human being, and the passage has been quoted again and again without noticing that he wrote in 1842, and that, in the next paragraph, he looked forward to a time when these inventions would effect those “great changes in human destiny which it was in their nature and in their futurity to accomplish.” But Mill's aphorism remains true in this sense, that the increase of wealth and the steady rise in the general standards of life have so enormously increased the demands for goods and services of all sorts that, unless some new moral or social tendency emerges in the direction of “plain living,” the day's task is likely to be for most of us as long and as hard as ever.

† This incessant economic transformation and its painful accompaniments are necessarily more prominent in an old country, which has been improving and changing machinery and processes for over a century, than in a new one like Germany or the United States, where many of our industries are now being introduced, and where the manufacturers start with all the advantage of our experience, and put in nothing but the very newest plant. In such countries indeed, the most obvious feature in the introduction of machinery is that it is associated with new factories, provides fresh employment, and does not involve displacement or modification of labour already engaged. It is, however, only a question of time till these countries present the same phenomena.

208. Even in agriculture, where progress has been slower during the last century than in other industries, the introduction of the self-binders in the eighties displaced the casual labour from Ireland and elsewhere at harvest and other busy seasons, and it is only of late, as we have seen, that the equilibrium of supply and demand in agricultural labour has been re-established by the immense depopulation of the rural districts. In other industries, this displacement has been so obvious that we need not waste time in proving it.

209. The general answer we should give to this is to say that "displacement" is by no means the same as "contraction," and that, even where it is, contraction in certain industries does not necessarily, or even probably, involve contraction in all.

210. It seemed to us, however, that, while the weight of theory is entirely on the other side, this was a question which might properly be referred to practical men; and, with the view of eliciting the experience of those who may be supposed to have the best means of getting the information, we issued various schedules of questions bearing on the subject to a large number of representative employers in all classes of industry.

(17) DISPLACEMENT OF LABOUR: REPLIES OF EMPLOYERS.

211. Our first set of questions related to the general effect of the spread of machinery and more highly organised processes on the demand for labour.

Here we found that "displacement" takes many forms.

212. In many trades, the common, though by no means the universal, change is that, within the last twenty years or so, "a whole shopful of trained mechanics," as one puts it, each of them of more or less all-round skill, has been replaced by perhaps a hundred workers, men, women, or, it may be, children, tending specialised machinery, and guided and supervised by half a dozen intelligent foremen. Here, there may be no contraction of the total numbers employed, and yet there is a displacement accompanied by serious hardships, raising serious problems, and leading to many perhaps ill-directed efforts at retaining the old systems.

213. In many trades, again, it seems certain that middle-aged men are being displaced by younger men, where the former cannot keep pace with the speed and alertness now required—men between twenty-five and thirty-five are preferred because they are in the prime of their working powers—and the tendency, say some, is intensified by the operation of the Workmen's Compensation Acts, which make employers think twice before employing elderly men who may be presumed to be more liable to accidents.* The man above forty is not, as a rule, dismissed, but, if he is, he finds some difficulty in getting a new place, and in many trades, particularly engineering, boiler-making, and shipbuilding, men have little chance of finding a fresh situation after fifty or even forty-five. This is specially the case among the unskilled.

214. But in others—and these probably the best trades—there is no such tendency, because, among skilled workmen at least, "there is a progressive increase in skill and experience till past middle life," and the losses incurred by new hands are so great,

* This is a very general presumption on the part of our witnesses. The late Sir George Livesey, however, gave it as his experience that from twenty-five to thirty years is "the most dangerous age." During a period of eight years he found that the percentage of accidents at that age was 55 per 1,000 annually, as against 18 per 1,000 of men over sixty years. "Advancing age," he said, "does not make men more liable to accidents. They are, on the contrary, less liable" (83244). Mr. George Barnes, M.P., supplies strong confirmation of this view (Evidence, Vol. VIII. 82803, 82808). The evidence presented to us, however, as to the effect of the Acts in this way is most conflicting. Trade Union representatives, as a rule, deny that they have had any influence, asserting strongly that it is the speeding up of machinery and the consequent increase of nervous and physical strain that is giving the younger men a preference and lowering the average age of employment. (Mr. Sexton, however, says that he now thinks that the Acts are affecting the men: "The insurance companies are stipulating that the employer who insures shall pay more for a man of a certain age than he would pay for a younger one." Evidence, Vol. VIII., 84211.) Employers on the other hand, who are very much disposed to look on the Acts as another of the pains and penalties thrown on them of late years, generally take the opposite view. Sir Benjamin C. Browne, for instance, who thinks that the Act has been an enormous gain to the working classes, and agrees that the aversion to employ elderly men was very much on the increase before the Act came into force, considers it "notoriously only too true that it has made it much more difficult for men above middle age to obtain employment," and puts forward the strong opinion that it acts prejudicially to the small employer, and frightens him from employing labour at all (Evidence, Vol. VIII., 86221 (5) and 86262, 86419).

that the tendency is to have as few changes as possible—and this will be stronger, the greater the amount of capital sunk in fine machinery. Again it is pointed out that, if this were a general tendency, it would be shown by the statistics of the unemployed, and that this is certainly not the case.

215. As regards the often alleged displacement of men by women, it is pointed out that the appearance of women and young persons in many trades hitherto regarded as a “preserve” of the adult man, is not a displacement so much as an addition—the natural effect of the division of labour and specialisation of process which make new openings for those who can perform the lighter and easier jobs, while the adult men get as much to do as formerly, in the heavier work appropriate to them—and that the lesser powers of women and the lack of continuity due to marriage are a deterrent against the undue extension of such displacement. On the other hand, in some industries, such as laundry work and lace manufacture, the manual labour of women and young persons is being replaced by male-tended machinery.

216. As to the displacement of regular by casual labour, there are, happily, few cases in the more important industries where casual workers are fit for the work of such industries. But, where the output is large and the demand intermittent, there is “less permanent labour.” There is no casual labour in collieries and quarries.*

217. One obvious displacement is that a great deal of work that used to employ both skilled and unskilled labour is now done by machinery. Cranes, elevators, steam diggers, etc., replace manual carriers and navvies; the carpenter or joiner, who took the crude timber and converted it into doors and the like from start to finish, has now only to “knock together” work prepared for him by machinery; joiners, masons, and bricklayers alike are displaced by steel frames and concrete, and so on.

218. In the course of displacement of this sort, whether it be due to the larger employment of machinery or to a change in the character of the machinery, there is a good deal of change in the *personnel* and in the character of the labour that is left, and this is discussed later. But when the naïve statement is made that, if there had not been this machinery, human labour would be employed doing its work, there need be no hesitation as to the reply. Independently of the fact that much machinery—perhaps the bulk of it—is doing what man never did and never could do, and that, in many directions, such as puddling, recent inventions have dispensed with severe manual toil and also with the physical strain which attended many processes, the sufficient answer surely is that, if it had not been for the machinery and the possibilities of existence it brought, there would not have been anything like the present population to employ.

219. Another set of questions related to the effect of these various displacements on the demand for labour. Here the answers showed a remarkable consensus of opinion on three things; that the introduction of or improvements in, machinery do temporarily reduce the demand for labour within the department where such changes occur; that the displacement does not, as a rule, reduce the labour employed in each producing unit, the workers dispensed with being readily absorbed within the same business—particularly in shipbuilding, where changes are slowly introduced and affect only a few men at a time; and that the final result is that more labour is required instead of less.†

220. The argument is that machinery and new processes are not introduced unless they reduce cost per unit of product;‡ that reduced cost, thanks to competition, brings

* It is worth noticing that miners scarcely figure at all among the unemployed. Of the 10,473 who applied at the Salvation Army Bureau in 1892, only 28 were miners: of the 803 at the Church Army Labour Homes, only 3. (Board of Trade Report on *Agencies and Methods for dealing with the Unemployed*, 1893, pp. 163, 176).

† “You, generally speaking, find if you spend £5,000 on labour-saving appliances, that you pay more money on wages afterwards than you ever paid before” (Sir Benjamin C. Browne, *Evidence*, Vol. VIII., 86327).

‡ In gas-making, however, machinery was introduced into the retort houses confessedly with the object of “recovering and retaining control of the business” by reducing the need for large numbers of men. The money saving was not nearly in the same proportion as the percentage of men dispensed with. As the late Sir George Livesey boldly put it: “The saving by machinery is so small that gas managers would not have thought it worth while to introduce it, but for the paramount reason just mentioned.” Vol. VIII., 83136. (50 I.)

down price of the commodity produced, and increases the demand for it; that the new demand for commodities leads to new demand for labour; and that the equilibrium is thus again restored. Of course this will depend on the extensibility of demand for the commodity—no amount of cheapening price would much increase the demand for wooden legs—and, in the case of monopolies, it does not follow that reduced cost will involve reduced prices. But, generally speaking, the demand for most goods does increase with the lowering of price; whether this will be in greater or less ratio will vary from commodity to commodity.* But it is certainly striking to hear from great employers in how many cases such changes do not diminish the labour they employ even temporarily, and how general is the experience that they increase it permanently.

221. But if there is any doubt among employers as to the proximate, there is almost none as to the ultimate effect. It is broadly and strongly asserted that, if a displacement of labour does occur in the trade in which the changes are made, it is fully compensated and more—most say much more—by the demand for labour in other directions. The most obvious consideration is that, if any commodity costs less than before, the consumer who purchases it has more in his pocket to spend on other things, and thus every such displacement is countered by an increase of demand for labour over the field of purchased commodities. It very often escapes notice too that, with increasing population come increasing *wants*, as well as increased need for employment, and that the increasing numbers, each of them bringing his own quota of wants, are increasing yet more rapidly in wealth and so in purchasing power. Less obvious, perhaps, is the consideration that the new demand for the commodities supplied by the industry in which the displacement takes place, will create new demand for the machinery which displaces, and that, with the running of this machinery, goes a new demand for coal, oil, water, light, etc.—all the accessories of machine driving. Still less obvious—indeed seldom noticed at all—is the consideration that all this multiplication of commodities and machinery involves a great deal of subsidiary labour, chiefly carriage, and brings a new demand for commercial and distributing servants of many kinds.

222. The answer of economic science at least is simple; it is that the supply and demand of commodities are the same thing looked at from two sides; this being so, every increase of goods is an increase of demand for goods, and, consequently, for the labour which makes them.†

223. But though displacement such as we have indicated may in many cases be another term for improvement of production, and the improved method which displaces the old will, in time and sometimes within a short time, give more employment by increasing consumption, yet we must take account of the human being who by the change is put upon the scrap heap. He may or he may not get fresh employment, but even in the first eventuality he is not likely to get it at once. Thus displacement does, temporarily and locally, add to the number of those out of employment; as Professor Chapman tersely put it there is a “social time-lag,”‡ and in visiting Leicester and Northampton where the boot trade had been regenerated we had visible evidence of how serious this time-lag may be.

* No doubt, as a matter of theory, it is possible that the introduction of machinery, or the equivalent industrial change, might result in the production, not of more commodities, but of the same amount of commodities for much less labour; but, as a matter of fact, in almost all cases, it has been found that there has been a larger volume of trade by reducing the cost of production. See the Evidence of Mr. Sidney Webb, Vol. IX., 93325–93328, 93251 *seq.*

† This perhaps somewhat difficult proposition may be put popularly thus. Imagine an ideal co-operative store, in a remote isolated district where there was no metallic money, and where the members were at once the sole purchasers and the sole producers. Then, during the week, the store would be filled with goods made and grown by the men, who would receive credit-notes for what they brought in. On the Saturday night, the wives would bring the credit-notes to the store, make their purchases to the amount of their credit-notes, and empty the store. In this case it would be clear that the goods brought in (supplied) were the goods purchased (demanded); that the more supply there was, the greater would be the amount of the credit-notes and the greater the purchases. In other words, the wives would make more demand for goods, the more their men increased the supply of goods—the same sum of goods being at once supply and demand. All this is obscured only by the intermediation of the “third commodity,” money. Under a system of barter, everyone would see that the more goods he and others contributed to the common store as supply, the more he and others would have in pocket with which to express their demand.

‡ Evidence, Vol. VIII., 84791 (25).

224. But as the goodness and stability of any industrial system must be measured, not only by the output of material wealth in which it issues, and by rise of wages, but by its effect on the happiness and character of the worker, we felt it desirable to put the further question, whether the general effect of modern industrial developments was to increase the demand, on the part of employers, for higher skill and intelligence on the part of the workers.

225. Here the replies were so conflicting as to show that no such wide generalisation can be made as regards industry generally. Some said that it was certainly so; others, that the very reverse was the case; others, again, that it was so in some departments and grades of their business but not in others.

226. In building, for instance, it is said that changes in construction, in the using of wood, stone, and steel, have entailed higher intelligence on the part of the small portion—the machinists—and have made lesser demands on the intelligence of the other workers. In the steel and iron trades, again, it would seem that a higher level of intelligence over the whole is required.

227. But the general trend of our answers was that the “skill” of modern industry is scarcely comparable with the skill of labour in the past. One might say that, within twenty years, with the universal employment of machinery and the excessive subdivision and specialisation of its use, the character of the production process has quite changed. There is a growing demand for higher intelligence on the part of the few; a large and probably growing demand for specialised machine minders; and, unhappily, a relegation of those who cannot adapt themselves to either demand to a quite inferior, it not worse paid, position. If, then, our conception of the “skill” which we might have looked for and desired is what might be called “craftsmanship,” we must conclude that the demand for skill is, on the whole, declining. The all-round ability, which used honourably to mark out the mechanic, is no longer in demand, so much as the work of the highly specialised machine minder.

228. In many platform descriptions of machine industry, the artisan is pictured as a person who merely stands by and watches, while automatic machinery does the work; and, to those who believe that this is typical, it seems clear that, instead of great numbers of workmen working with interest and intelligence at tasks which employ all their powers as human beings, modern developments demand a great mass of unintelligent, if not unskilled, machine minders, supervised and guided by a few foremen.

229. It must be admitted that such a picture is true enough of many of the textile industries where women and young persons mostly are employed. And outside of these, in trades where manufacturing involves “repeat work” in large quantities, the natural tendency is for the clever manipulator to take the place of the intelligent craftsman, and the all-round man, who had to do and could do many things, disappears—the best instance being found in the boot-making and in the printing trades.

230. But, as a fact, in the greater industries employing adult male labour, “machinery” does not in the least resemble the long lines of revolving spindles one sees in a cotton mill. In the machine tools of an engineering shop there is comparatively little of such automatism, and, even where the machines are automatic, single men are put in charge of a number of machines, and the setting and supervising of these is work probably demanding a higher level of intelligence than ever before.* “I should say the skilled men require even more skill than they did,” says Mr. Barnes, “because of the finer work and more intricate machinery . . .

* The essential truth on this matter seems to us very felicitously put by Professor Chapman: “Generally speaking, I should say that invention in its first stages, while calling for some labour of greater intelligence than that which had been previously employed, frequently imposes a number of tasks for the performance of which very low-grade labour is required. Through later improvements however, these tasks tend to be assumed by machinery. The tendency of machinery is always to cause a substitution of “intelligence” for dexterity, the person who was in effect a machine by reason of his dexterity giving place to one who could understand and direct a mechanical process. Incidentally a number of monotonous operations are created, but these, as it has been observed, afterwards tend to be reduced, and it is not certain that they are always more monotonous than the hand operations abolished, though they may require less dexterity.” (Evidence Vol. VIII., 84791 (52).)

Side by side with automatic machinery there has come about more intricate and highly complicated machinery.”* “The semi-skilled of to-day,” says Sir Benjamin C. Browne, “is in many cases as good as the skilled was a quarter of a century ago.”†

231. But the disappearance of the all-round man is by no means universal. In collieries, for instance, he still holds his place; and, *ceteris paribus*, in smaller trades and in special industries, such as the making of fine small machinery or scientific apparatus, the all-round man is preferred, if for no other reason than that it is necessary to provide “considerable flexibility among the workers to meet such day-to-day contingencies as sickness, accidents, leave, promotion, etc.,” where the temporarily vacant places can be filled immediately.‡

232. This, at least, can be said, that, as regards the higher classes of artisans, foremen, supervisors, and the like, in such trades as iron and steel, ship-building, engineering, building, there is a growing demand for a higher level of intelligence. It must be remembered, too, that, in these industries, owing to the same specialisation, there has been growing up an increased demand for purely head workers—those who design, draw, make plans, and generally prepare the work which the machinery, thus tended, carries out. The drawing office, for instance, is a post much sought after.§

233. It is very generally said that every form of machine minding, even the lowest grade, requires a certain amount of skill, and excites more intelligent interest. But as regards the rank and file in the textile industries, a very moderate level of intelligence seems demanded. Attendance on the machinery, and careful attention to it, are really more wanted than any great degree of skill. As one of the employers puts it: “The less the human element enters the better.”

234. As we have suggested, in all such discussions there are two things the distinction of which at least should be clearly recognised. One may inquire with some anxiety as to whether modern developments are tending towards a higher level of labour, and so of life—more interesting occupation, more intelligent exertion, more human powers put forth. Or one may inquire whether they tend to higher wages. Questions about “skill” easily confuse these two. “The idea which is usually latent in the mind of those who put this question,” says Professor Cannan aptly, “is not really one involving the measurement of skill, but some belief as to the relative proportion of different grades of labour, the grading being arranged by standards nominally of skill but really of pay. The questioner wants to know whether the low-paid grades are increasing more rapidly than the upper or *vice versa*. This is a matter on which statistical history as yet appears to afford no guidance.”||

235. It is to be noted, however, that it is not necessarily the most highly skilled and intelligent occupations which are the most highly paid. The riveters in ship yards, for instance, whose level of wage is very high, “can hardly be called highly skilled men, nor do they require an exceedingly high grade of intelligence.”

(18) MOBILITY OF LABOUR.

236. With the view of finding out what employers considered to be the line of reform indicated, we took advantage of our schedule of questions to ask if, in these circumstances of displacement and change, greater mobility of labour was not called for both between different trades and different branches of the same trade; and, if so, how this mobility was being provided for, or how it should be provided for.

* Evidence, Vol. VIII., 82943.

† *Ibid.*, 86333.

‡ Professor Archibald Barr. Evidence, Vol. XI., Ans. II. (d).

§ “The men are a different thing to what they were. A skilled mechanic now is a far higher class of man than he was twenty years ago. If you only speak to any Admiralty inspector, you will find how much their demands have increased; for example, how much more exacting they are than they were a few years ago.” (Sir Benjamin C. Browne, Evidence, Vol. VIII., 86244.)

|| Evidence, Vol. XI., Ans. II. (c).

237. To those employers who have not found it necessary, owing to changes in methods and process, to dispense with labour in their own businesses, the need for this mobility does not present itself as a pressing one. But, unless where this is the case, there is no hesitation in answering that it is most desirable.* But some are very doubtful if this is possible in view of the strong tendency towards specialisation—"a good fitter is seldom a good turner, although a skilful cabinet maker may be quite a good joiner."

238. There is, however, pretty general agreement that at present Trade Union ideas and regulations are very inimical, if not hostile, to trade mobility†—the many bitter and prolonged disputes about "demarcation" questions being cited in proof. So long, for instance, as a bricklayer is prevented by his Union from doing stone mason work, or a pattern maker from being a joiner, it is hopeless to speak of mobility. It is pointed out that one obvious remedy for this is the amalgamation of the many separate Unions in related trades.

239. As to how this mobility may be secured, it is agreed that it depends chiefly on education. If, at school, young people were taught, first of all, to be intelligent—to "think," in fact—and if technical training were general—non-specialised, and teaching principles rather than practice—mobility would have a better chance. There would be no difficulty in providing for trained machine labour at least.

(19) APPRENTICESHIP AND TECHNICAL TRAINING.

240. In the early days of industry there was no entrance to the great trades except through the one door of apprenticeship; from the age of Elizabeth onward, it was considered the duty of the State to enforce apprenticeship—even as regards pauper children. It might have been expected, then, that the progress of industry would have seen a universalisation of the system. But, at an early period in the nineteenth century, the Trade Unions began very generally to set themselves against the unlimited apprenticeship of youths; partly on the ground that apprentices were often used as a form of "cheap labour"—the boy being set to the performance of routine tasks where his work soon became as good as that of an adult—partly from the fear that the skilled trades would become "over stocked" and wages brought down. Thus many Unions passed regulations that only a limited number of apprentices should be allowed—generally in some definite proportion to the number of adults. This tendency was, of course, strongly protested against by those who considered that the economic safety of the young generation depended on the entrance to skilled trades being open to everyone.

241. The actual development of industry, however, has, to a certain extent, put this particular problem on one side. On the one hand, employers were not always willing to take the trouble of educating apprentices;‡ while, at the same time, it

* As to "place mobility"—the ability and readiness to move from one centre of industry to another, according to the state of the labour market—all our evidence goes to show that its importance is recognised by the skilled workers generally, and that, among them, there is a very considerable amount of such mobility. But, as regards the unskilled, the very reverse seems the case; they seem to object equally to migration and to emigration. As in many cases, where, for instance, local changes have taken away the employment of great numbers, the only remedy is to break up the stagnant pools which remain, and drain away the surplus labour, the problem is one of peculiar difficulty. In such cases "relief work" of the ordinary kind is the very thing which should be sternly discountenanced.

† Mr. Ramsay Macdonald, M.P., gives the reason quite frankly: "The organisation of labour is absolutely essential in view of the organisation of capital, and it is practically impossible to organise labour if there is much fluidity of labour between trade and trade." (Evidence, Vol. XI., Ans. V.)

‡ "London employers not only refuse to teach apprentices, even for premiums—they often refuse to have boys on those parts of their establishments in which anything can be learnt. . . . The evil is apparently increasing, because it has relation to the substitution of large firms and large works for individual employers. The village blacksmith can take an apprentice, but a large engineering firm does not take anything like a proportionate number of apprentices. . . . The trade union rules are old-fashioned survivals which have mostly been given up. Where they still exist, they exist in an almost entirely nominal state, and they certainly are not responsible for the restriction of apprentices, as a rule, because the limit imposed by the rules is far in excess of the actual number of apprentices. For instance, in London no employer in the building trade has anything like as many apprentices as the trade union would be quite glad that he should have. It is only in certain trades, usually a few small old-fashioned trades, that the restriction of apprentices is at all effective. There is one exception to that, perhaps, the compositors, where they have a restriction which seems to me an unwise one, but it is not a universal one." (Mr. Sidney Webb. Evidence, Vol. IX., 93031 and 93035, 93181.)

became evident that apprenticeship was not necessarily any security for the ranks of the skilled trades being kept restricted—the ranks of journeymen being constantly recruited from those who received an irregular training. On the other hand, many who had least sympathy with any restrictions on the openings to skilled trades, became convinced that, under the rapidly changing conditions of industry, it was a mistake to devote years to the acquirement of a particular skill for which the occasion might have disappeared by the time it was acquired. “It is fortunate,” says Professor Chapman, “that the apprenticeship system is falling into disuse. Under modern conditions it renders our industrialism too crystallised. The technical school must take its place.” *

242. It must be said that, in the statements and evidence which we have got from employers, there is little recognition of this latter view. On the contrary, a strong feeling is expressed very generally that apprenticeship is the only way in which skilled workmen, as a body, can get their training, and that the maintenance or revival of the system is necessary.†

243. One modification which seems pretty generally approved is that the term should be shortened; at any rate, if the school age were extended and some amount of manual and technical training introduced, it seems agreed that three or at most four years in the shops should turn out a qualified journeyman. Another suggestion, advanced by two representative employers, is that, in order to meet the difficulties of working-men parents—who are generally quite unable to apprentice more than one of their sons—and to guard against undue hurry to be earning money on the part of the boys themselves, the wages of apprentices should be revised so as to reach the level, say, of 18s. in such industries as building, engineering, and shipbuilding, in the last year of the apprenticeship.

244. Over technical schools there seems much difference of opinion; and, although their desirableness, even necessity, for the future overlookers, foremen, managers, employers, or indeed for any lad who aims at rising from the ranks is recognised, it would appear that the character of the training at present given does not meet the requirements either of short-sighted or of broad-minded employers. “A very small percentage of those in technical schools derive a life benefit from it,” says one: “We often say that a technical school spoils a good workman, without making a scientific man of him,” says another.

245. On the one hand there is the view that, if the school age is to continue as at present, some training should be given in primary schools in such things as drawing, the nature of materials and natural forces, and the general use of tools; on the other, the view that, if the age is extended, the education must include a considerable amount of training bearing directly on the future occupation of the scholar. And the general principle seems to be accepted that, unless technical education means a good deal more than could be learned in the factory or shop,‡ it is of little real value. It must aim at giving the lad an appreciation of the end of the industry, and of the relation of the whole organisation to the product, as well as a knowledge of the technical processes.

246. We append three statements on the subject, which seem to us of peculiar value.

* Evidence, Vol. VIII., 84791 (56).

† Sir Benjamin C. Browne, of Messrs. Hawthorn, Leslie & Co., Newcastle, says that his firm has no mechanics except those who have served a legally indentured apprenticeship. “We train a lot of young people to be engineers and shipbuilders; we take the greatest pains with them. For example, we pay for any of our apprentices to attend any classes they choose, of any kind, absolutely free; besides that we give them prizes and inducements. Any boy who attains a certain not very high standard of efficiency in his class in bookwork, we give him an extra shilling a week for that year, and if he passes the examination next year, the shilling a week goes on again. Then we take some of the best boys into the drawing office every year, and then they are made men for life under ordinary circumstances. When I say ‘we’ do that, I mean not merely Hawthorn’s; most other employers do something of the kind.” (Evidence, Vol. VIII., 86295.) Mr. G. N. Barnes again, the Secretary of the Amalgamated Society of Engineers, says that apprenticeship, which had been on the decrease till about five years ago, has been on the increase since then, and ascribes the change to “a more enlightened public opinion.” (Evidence, Vol. VIII., 82945–6.)

‡ “At the present moment, technical education means far too much trade education.” (Mr. Ramsay Macdonald, M.P., Evidence, Vol. XI., Ans. VI'.)

“The general effect of modern industrial development being to increase the demand for really skilled and intelligent workers, the training of apprentices is becoming increasingly important. The problem is complicated by the tendency which undoubtedly exists, and must exist, to take the greatest advantage of the labour of apprentices during their training. I think that it is possible to arrange a suitable system of apprenticeship combined with attendance at continuation classes in the evenings, in appropriate subjects, provided that some temporary sacrifice be made by the employer.

247. “It is essential to a suitable training that the boy be not kept too long at one operation or in one department. If his training is sacrificed to the demand for a very limited and highly specialised skill in the management of one kind of machine or in one operation, the factory may benefit at the moment, but will suffer later on in having too few thoroughly trained men to draw upon when conditions change, as they must do in any progressive industry. The superintendence of such a training, involving a carefully graded series of changes of work combined with courses of instruction in the science and technology pertaining to the industry, should not be left to chance, but should be looked after by someone in sufficient authority to say whether the immediate interests of the factory as a producing organisation must be set aside to some slight extent in order to secure a better ultimate result. Such superintendence of the interests of apprentices requires to be in the hands of a man of broad views and sympathies, and such will be the more easily found as scientific and technical education advance.

248. “Now, many managers, and even foremen, as well as employers themselves, have had training in universities and technical colleges, and the broader views such men should be able to take, and I believe as a rule do take, will lead them to look further ahead, and not to sacrifice the future of their own business, or of the industry in general to any narrow and immediate interests. In many cases the teachers in technical evening classes are themselves engaged during the day as managers, foremen, or draughtsmen, and so come into contact with apprentices not only in the school, but in the factory or workshop.

249. “I do not think that any systems of training which can be devised outside the daily factory routine, as by trade schools or by establishing a separate department within the factory for the purpose, are likely to be satisfactory, except, perhaps, in the case of very large establishments. It is an advantage not to be overlooked for apprentices from one factory or workshop to meet with those from another. This broadens their views and prevents the teacher from devoting the class hours to very specialised questions affecting only one branch of a trade; and, besides, it will no doubt have the effect of letting the conditions of employment in various factories or workshops be more generally known, and so secure for the best-organised factories a supply of the most promising material of which to make men of wide skill and intelligence.

250. “I think that the existing arrangements in most centres of industry are amply sufficient for the requirements of the ordinary apprentice. What is required is a more enlightened view on the part of employers, managers, and foremen, so that boys may be able to take full advantage of the facilities offered by evening science and art classes. I think there is ample evidence that more enlightened views are being taken as time goes on, and, as I have said, the greater advantage that is being taken of the facilities now offered in all large centres of high scientific and technical training by youths who will become employers and managers, will lead to a rapid increase in the required enlightenment among leaders of industry.”*

251. “The training of skilled mechanics must be on broad lines. The pupil must be provided with a thorough technical and practical acquaintance with the whole principles of his craft, and not merely with the application of certain of those principles to some particular trade. Hence the need for technical training under Government supervision. A man cannot learn his business as a mechanical engineer, for instance, by merely working in, say, a marine engine building shop.

* Mr. Archibald Barr (of Messrs. Barr & Stroud), Professor of Engineering in the University of Glasgow. Evidence, Vol. XI., Ans. VII.).

252. "We do not to-day want men who are 'all-round' at building marine engines—we do need men who are 'all-round' mechanical engineers—men who can apply the principles of their craft to any form of machinery that may be called for. That is a class of training which cannot be achieved by any system of apprenticeship and is essentially a matter which the governing authority must handle if this country is to maintain its position in the industrial world. That is a matter in which we lag behind our neighbours."*

253. "The present system of technical school training, following on the general education in elementary and higher elementary schools, in which manual work (as a means of education) and instruction in elementary science should be important features—with a diminished number of subjects of a less important character for working men—should prepare boys to enter upon a system of apprenticeship which might be adopted by all enlightened employers in preference to the old system, which begins too early, and with boys ill-prepared for the training now necessary to form intelligent and capable working men. For those engineering apprentices who can give the time, and have the means, to train for foremen and managers and positions in which they would have to control others, the training in technical schools should be continued for a longer period before apprenticeship to practical work is commenced. The education for working men's sons should always be partly through manual work in the elementary schools, not to acquire mere dexterity, but to develop their faculties of thinking and reasoning, and habits of accuracy and thoroughness; and this work should be accompanied by instruction in freehand and geometrical drawing. With such a training continued in a higher elementary school or elementary technical school, a boy should be equipped at sixteen years old to learn a trade in the workshop in four or five years, far more thoroughly than under the old system of apprenticeship and untrained faculties; and throughout his apprenticeship he would render more efficient service to his employer. During his apprenticeship, attendance at evening classes of technical schools should be one of the conditions which the boy must comply with, for two or three nights a week, the neglect of which would render him liable to be discharged. If a boy showed qualities for a superior position than that of ordinary workman, employers should give facilities for his attendance at day classes in the technical schools to take a specified course, by allowing him off certain hours in the week for that purpose."†

(20) COUNTRY-BRED MEN IN LARGE TOWNS.

254. The large amount of evidence brought before previous enquiries,‡ and presented to us by various witnesses, to the effect that the building trades, and, indeed, most of the skilled trades in London are recruited in the main from outside London, and that in many trades the Londoner is at a discount§, makes it of interest to ascertain how, in the large centres, country-bred men stand relatively to town-bred as regards unemployment. At our request the Board of Trade has made some investigations, and prepared a Memorandum on the subject.||

255. The conclusions of the Memorandum are:—

(1) That the greater part of the poverty and distress prevalent in London and the large provincial towns is among the town-bred part of the population, and not among the country-bred.

* Sir Christopher Furness (Evidence, Vol. XI., Ans. VII. (12-13)).

† Sir William Mather (of Messrs. Mather & Platt). Vol. XI., Ans. VII.

‡ Such as those made by the Committee of the London County Council on Apprenticeships, and by the London Council Technical Education Board on the Building Trades, quoted in Vol. IX., 96218.

§ "With carpenters and joiners, bricklayers, carriage-builders, engineers, smiths and saddlers, the percentage of heads of families born out of London range from 51 to 59 (Mr. Charles Booth quoted, *ibid.*). "The investigations of Mr. Wilson Fox (of the Board of Trade) show that various large employers of labour, such as breweries, railway companies, etc., employ predominantly country-born workmen in the proportion of 40, 50, and sometimes even of 65 per cent. of the whole. The Metropolitan Police Force, the Metropolitan Fire Brigade, the teachers in London elementary schools, the porters in city warehouses, the junior clerks in the 'entering desk' of the great wholesale firms, the subordinate officers of the Excise and Customs services, all include a quite surprisingly small percentage of Londoners." (Mr. Sidney Webb, Evidence, Vol. IX., 93031.)

|| See Vol. IX. Appendix XXI., J.

(2) The countrymen who migrate to large towns are, in the main, physically strong and of good character, and frequently move to the towns to fill definite positions which have been secured beforehand.

(3) Such men generally obtain good employment, especially in outdoor trades, which resemble somewhat those to which they have been accustomed in the country, and in situations requiring special steadiness and trustworthiness.

(4) Country immigrants do not, to any considerable extent, directly swell the ranks of those who are more or less in a chronic state of unemployment in the large towns. The unemployed of this class are, in the main town-bred, and recruited from those who have sunk to the bottom of the social scale."

256. In view of the opinion sometimes expressed that rural depopulation accounts greatly for urban distress, in the sense that agricultural labourers, finding no place on the land, migrate to the cities, and, finding no regular occupation open to them, sink into casual labour, these conclusions are so far satisfactory. They show that *prima facie* the country immigrants do not worsen, but better their position in the cities, and they show besides that the veins of the city population are kept filled by fresh blood from the country.

257. On the other hand they tend to prove that the anæmic, worn-out town worker is continually put in competition with new comers of better physique, and consequently is relegated to the less regular and worse paid occupations. In short, the Londoner is easily out-distanced by his country-bred rival in trades where strength and endurance tell, while, in the skilled trades, owing to the temptations of boy labour and the lack of industrial training, he is not taking the place which his natural quickness of wit might be expected to secure.

(21) DOCK LABOUR.

258. This typical form of casual labour, or rather of "under-employment"—for dockers may, at any given time, with almost equal appropriateness be counted employed or unemployed, and are at all times both casual and seasonal workers—seemed to us to present so many painful features as to warrant some amount of special investigation, personally and by schedule of questions, as well as by taking evidence.

259. The commonsense of the nation has seen for some time that the best ordinary life for the ordinary kind of man is that he should not have too much leisure or have it whenever he likes; that his work should be so regular as to become a habit; that he should be able to count on taking home a regular sum weekly to his wife as wage; and that he should have some reserve to fall back upon in bad times.

260. All these things are conspicuously absent in the docker's life, and it is this that makes dock labour almost a problem by itself.

261. The employing agency in the loading and unloading of ships varies from dock to dock over the kingdom. At some, the work is done by shipping companies having stevedoring staffs of their own; at others, by merchants, dock and railway companies, crews of ships, master stevedores and porters; only in a few cases is it done by a harbour trust. At the Manchester docks almost all the work is done by the canal company. At Dundee there is a "registered benefit society" composed of eighty men, who are recognised and licensed by the Harbour Trustees, and have special privileges; they manage their own affairs co-operatively, engaging casual labour when their own numbers are not sufficient.

262. Shipping companies, dock companies, railway companies, and employing stevedores have usually a small staff of permanent hands paid by the week. Cranesmen, checkers, engine-men are often permanent, as are coal trimmers. At most docks again there are, in each employment, numbers of recognised or actual preference men who have the first call on a job. But all except men on the staff are taken on by foremen by the day, half-day, quarter-day, hour, or job—employment by the hour being not uncommon. In many docks, however, the labour is altogether casual; there are neither staffs nor preference men.

263. Wages seem to vary very widely from port to port, and, of course, from one class of work to another. In some places they are as low as 3s. 6d. or even 2s. 6d. per day—4s. 6d. to 7s. being common; in others they are as high as 10s., or from 5d. and 6d. per hour—with a common average of 7d.—to 8d. In Liverpool they are 5s. per day of nine hours for stevedores and 4s. 6d. for porters. Weekly wages vary from 26s. to 28s. Overtime wages again vary widely—from time-and-half to double; and the hours counted as overtime vary as widely—beginning as early as 5.30 p.m., and as late as 8 p.m. Payments are sometimes made weekly, often daily, and in the latter case “sub” is usually given at any time. But payment is often counted by the piece or by tonnage rates.

264. It will not escape notice that, as a rule, the nominal wages, or rather the nominal rates are high, and this is found to constitute a dangerous element. In Liverpool it is freely said that the nominally high wages attract men from the country and from Ireland under the impression that they can get regular work at these rates. As fresh country-bred men, they are apt to get a preference from foremen, and thus to crowd out the older and weaker.

265. In almost all cases overtime is considered inevitable—“ports could not be worked without it”—“the exigencies of the shipping trade demand it.” These exigencies are: Departure of boats at fixed times of sailing, sailing at midnight or to suit mails, perishable cargoes such as fish, fruit, butter, necessity of catching tides at other ports, tidal docks, to get turn of the coal spouts, pressure in berthing room, to save the accruing of demurrage, or, more usually, for despatch. In some ports regular nightshifts are worked, counted as overtime, but generally the trade is too irregular to permit of this. Only in very few ports is overtime the exception.

266. In many ports and for many cargoes the trade is seasonal. Owing to ice, timber from the Baltic arrives only from May to the opening of winter, and timber dockers work only five months in the year: owing to the harvests, the import of cotton at Manchester is from October to March, and of fruit and potatoes from the end of July to the end of September; the manure traffic is heavier between January and April; sulphate of copper comes only in winter; from June to November, maize comes from the River Plate, but, happily, it comes from North America and the Black Sea during other months of the year. In Dundee, the busy season is from September to April—the jute arriving only during the winter. In Liverpool summer is the slack time, winter the busy. But, in this great port at least, the fluctuation due to the seasons is much less than might be expected. “The average number employed daily during the three slackest months of the year is between four-fifths and five-sixths of the average number during the three busiest months”—a seasonal fluctuation which is small as compared with a good many other trades.

267. It must not be supposed, then, that the intermittent character of dock labour is by any means all due to the seasons. The fluctuation from day to day in Liverpool is much greater. The small numbers taken on Saturdays one can understand. Saturday is a short day, and employers for economical reasons take on as few hands as they can; and, from the other side, the men like to take their half-holiday on the same day as their fellows in other trades take it—to attend football matches and the like. But the small numbers engaged on Mondays has another explanation: the men are not to be had—will not turn out if they can help it; the dissipation of the week-end leaving them with little energy on Monday. Thus the busiest days of the week are Wednesday and Thursday, and the conclusion is that “the number employed on the least busy day of the week is frequently only three-fourths, occasionally, two-thirds of the number employed on the busiest day.” It deserves emphasis, then, that a good deal of the irregularity of dock labour is of the docker’s own making, and blame should not be attributed to the nature of the employment.

268. The majority of our statements say bluntly that there is no or very little alternative employment open to men when not engaged at the docks, some adding that the men do not care to look for any. At the timber ports the men as a rule go to shipyards and building for the seven months when no timber comes in. The other alternatives mentioned at various docks are;—public works or wharves in the neighbourhood, quarries, harvesting, “boating and fishing in the harbour,” and, at

Grimsby, steam fishing. At Swansea the only alternative is that of a man "getting a chance of a hobble with various gangs who may have a bit of a rush of work." But such a chance is very remote, because "there is always a surplus of men following their particular gang in loading and discharging." It may be added that, as the men generally must hold themselves ready for any job that turns up, alternative employments do not get much encouragement.

269. In all the large docks, it would seem that there is always a surplus of labour seeking employment. "I have not had to go to look for men these forty years," says one. In Liverpool where there is estimated to be considerably over 20,000 dockers, employers have no difficulty—except at holiday times perhaps—in getting all the men they want. In Swansea, it is said, there might be about 300 men in the docks who cannot get a living. In the smaller docks, however, this is by no means universally the case, and in busy times there is sometimes a deficiency.

270. In a few of the smaller docks, no labour-saving appliances have been introduced. But, in the larger ones, cranes—steam, hydraulic, and electric—have displaced much manual labour, and do many things which manual labour could not do. The largest appliances are in the grain ports, where grain is discharged, conveyed and stored by elevators, and in the timber ports, where the cargo is taken out of the ship, and conveyed direct by the same cranes to the piles, or to railway waggons. In Bristol and Manchester, fruit also is discharged by elevators. In coal, there are coal tips worked by hydraulic power, grab buckets, shoots, etc.

271. As to the amount of displacement of labour by such appliances, a timber transporter is estimated to do away with ten casual labourers. "As regards the grain elevator, when the circumstances are such as to preclude its use, about eight men are requisitioned for the work." In the discharging of grain, a Swansea correspondent says that 75 per cent. of the labour formerly employed has been displaced, a calculation confirmed by another statement that, in grain, only eight men are employed as against fifty to seventy formerly. But the actual amount of displacement is difficult to estimate, as, generally speaking, the trade at every port has gone on increasing. "So far as my experience goes," says the General Secretary to the Coal Trimmers' Union in Cardiff, "the improvements in appliances have gone in the direction of increasing the amount of tons shipped or discharged in a given time, rather than in reducing the number of men in a gang." One good result is that the labour attending such machinery gets more regular employment.

272. Thus, of all the docks of the kingdom, it may be said that the labour employed is casual and intermittent, although there are degrees even here—Swansea, for instance, priding itself on being "not so casual as Hull." This by no means prevents a good many of the men from being regularly employed and earning good wages. The master stevedore of the Booth Line, Liverpool, says that, of the maximum number employed at the ships at any time, about one-half may be considered regular men who very rarely get less than four days a week and often get more. These men "follow the firm," and do not care to work for others.

273. In the larger centres it seems undoubted that the dock labourers prefer casual labour to steady employment, and stop after they have earned a few days' wages. At Swansea, for instance, the Secretary of the Dock and General Workers' Union says that "men very much prefer to work on tonnage or piece system with occasional days off." The best class of labourers, indeed, often avow their preference for constant employment. "At Fife ports, regular work is desired"; and in Grimsby, exceptionally, "experience shows that casual men who have been transferred to the permanent staff would not willingly go back to their old conditions of service." But, on the other hand, at Southampton Docks, several cases have come under notice where permanent hands have asked to be given casual employment, and, in West Hartlepool, "a firm of timber merchants have had the greatest difficulty in getting men to stay over the busy season when they were promised full wages (27s. per week) all the year round." The determining fact seems to be that, at a busy time, the permanent hands see that they have a wage much lower than they could make by a few days' casual work, and they are too short-sighted to think of the coming dull season.

274. In most docks perhaps there is little specialisation calling for what might be called skilled labour. But checkers, coal-tippers, coal-trimmers—who are very highly paid — capstan men, ropers, chainers, sheeters, are skilled men, not subject to broken time to the same extent as ordinary labourers; timber carrying requires men possessed of physical strength, and is a highly-paid branch; the discharging and warehousing of grain is usually done by a more or less regular staff; the storing of coal, coke, patent fuel, and iron and steel cargoes requires some special training; the shipping of fuel, fuel bricks, and tin-plate, and the unloading of different kinds of ore require special skill and capacity. It is the case, however—whatever be the reason—that, as a rule, men keep to one particular kind of work, and that the handling of different cargoes is usually undertaken by different sets of men.

275. In view of the general impression about dock labourers that they are nearly at the bottom of the social scale, it is interesting to see how much evidence there is to the contrary. Generally, indeed, the permanent and the more regularly employed men are said to be careful, respectable, steady and trustworthy men. Among the Cardiff coal-trimmers, who may earn about £4 a week, and have regular employment, “the steady, sober, thrifty men by far outnumber the careless and indifferent.” But the general character of the others is by no means so bad as is usually conceived. In Belfast, it is said, the majority are respectable and well-conducted men; in Swansea, the dockers “will compare favourably with any other class of workmen.” The Grimsby dockers, it may be noted, on the testimony of ship captains visiting the port, are “superior to those at any other port in the world.” Drink, of course, is the ruling weakness, and the system of “subbing” day by day fostered by irregularity of work and coupled with betting and unthrift, tends to deterioration, physical and moral.

276. There is, unhappily, almost no difference of opinion among our witnesses as to the possibility of making dock labour more regular. The answer is an almost unanimous negative. The fluctuating and intermittent nature of the business seems, to most employers, an insuperable obstacle—“the matter of shipment and discharging is beyond the control of any dock company”—although one witness gives as reason for the impossibility that there is “a large surplus of men more than what is required to carry out the amount of labour to be done.” “You cannot decasualise dock labour at all,” says Mr. Sexton. “You may relieve it, but you cannot absolutely decasualise it.”* In some of the docks the necessity of making work more regular, however, is not so evident as in others: in Swansea, for instance (which, however, seems exceptional in many ways), the secretary of the Trade Union says that “although the work is intermittent, 90 per cent. of the total might be said to be in regular employment.”

277. Against these strong assertions must be put the notable example of the London and India Docks Company. In their docks, which comprise Tilbury, the Royal Albert and Victoria, the East and West India, the South-West Indian, and the London and St. Katharine’s Dock, it was given in evidence that, in 1906, 72 per cent. of the labour employed was done by men on regular weekly wages.† The rest was done by preference men and casual labour, taken on from day to day, at an hourly rate of 6d. with 8d. for overtime, engagements being for a minimum of four hours or payment of 2s. And, it is said, “the men on regular weekly wages value their employment and vacancies are readily filled.”

278. The system dates from the great London Dock strike of 1888, when the directors, impressed by the evils of ordinary dock labour, adopted the policy of distributing the work with a view to as much as possible of the labour being carried on by the weekly wage men, involving, as a consequence, the curtailment of the number of preference men and the elimination altogether of casual workers. At first it was extremely difficult to get the men out of their irregular habits—particularly as regards absenting themselves on Saturdays and Mondays—but now the permanent and registered staff has become nearly regular. The organisation is very complete, and the men are transferred from one dock to another as wanted. The method is as follows.

* Evidence, Vol. VIII., 84402.

† Mr. H. H. Watts, Evidence, Vol. IX., 96011, Ans. II.—96014-6.

279. The labourers are graded as permanent, registered, and preference.

280. The “permanent” are weekly workers who have served previously as “registered,” for twelve months at least, having got their name on the registered list between twenty-three and thirty years of age. They must be physically sound and strong, of good character, and ready to undertake any work which they may reasonably be called on to perform. Their wages are 24s. a week of six days of eight working hours between 6 a.m. and 6 p.m., overtime being counted from 6 p.m. to 6 a.m. Engagements are terminable at seven days’ notice on either side, and regular employment is guaranteed “only during good behaviour.” These men get a pension at the age of sixty-five, or after fifteen years’ service if incapacitated for work by circumstances beyond their own control.

281. The “registered,” or “Letter A.” men—selected from the best of the preference men—differ from the permanent in having 24s. per week of forty-eight hours in summer and 21s. per week of forty-two hours in winter, and in having no pensions. If promoted, however, to being “permanent” men, half the time passed while on this list counts towards the pension.

282. With overtime, and bonus on piecework averaging 1½d. an hour, the average wage of the two classes ranges from 29s. to 32s. per week all the year round. No man is allowed to work more than sixteen hours at a time, and he must not come on again till twelve hours afterwards.

283. The “preference” or “Letter B.” men have tickets issued to them every quarter, giving them a preferential number. There are forty-five departments in the whole establishment, and each department has a proportion of preference men allocated to it, on the basis of 40 to 45 per cent. of the number generally at work. Each afternoon the requirements of the following day are posted up, and at certain fixed stations—usually at six, seven, or eight in the morning—the preference men are taken on strictly in the order in which their names appear on the list. Thus, if work is slack, the men at the bottom of the list do not show up; they know that there is no work for them. If, again, say fifty men are required to-day, the first fifty at the top of the list are taken on; if, to-morrow, fifty are wanted, the same men are engaged, thus keeping the work among the smallest number, and giving them regular occupation. Every quarter the preference lists are revised and the order of numbers raised or lowered, according to good or bad record of attendance, etc. In 1904 there were 2,100 names on the preference list, and the average number employed was 600, giving a floating reserve, so far as the company was concerned, of 1,500.

284. The actual results of this system are that the preference men get on average about three days a week of work over the year, the men at the top, however, getting much more. When not employed, they can go anywhere else they please, and the preference ticket is, so far, a guarantee of character—“a number of them obtain a fair turn of work with other employers of dock labour.” The employers, on the other hand, claim that they gain by getting better men and better work.

285. Under such arrangements the ordinary casual labourers, who are taken on only when the preference lists are exhausted, have not much prospect of employment except at an unexpected rush of work, and are not kept hanging around on the off-chance.

286. Boys enter the service as messengers, and then are set an examination enabling them to become assistant and junior foremen, from which positions they ultimately pass to be foremen and outdoor clerks. Those who do not pass the examination become “labouring boys,” beginning at 10s. per week, and are drafted direct into the permanent staff at twenty-three years of age. By this system all the lads who enter the service “are provided for for life.”

287. The London and India Docks Company has control over all the docks except the Surrey and Commercial, the Millwall, and the small Regent’s Canal Dock. But it must be understood that its business is almost altogether unloading; that outside of the company’s service there is a great mass of similar labour employed by stevedores, wharfingers, warehousemen, and others; and that the employes of the London

and India Dock Company are a small proportion of the 12,000 or 13,000 employed at or about the docks.* Among this outside labour, the same conditions prevail as did before 1896; that is to say, the work is mostly casual.

288. It should be added that, during the last ten years, the numbers of the weekly men employed by the company have fallen from about 5,000 in 1894 to about 3,000 in 1904, owing to shipowners taking on their own men within the docks.

289. This successful experiment of decasualising dock labour in London has not gone without notice, and strenuous endeavours have been made by individuals in Liverpool—notably Mr. Charles Booth—to introduce there a modification of the system.†

290. The existing system in Liverpool is briefly this. The hours are from 7 a.m. to 5 p.m. with an hour off from 12 to 1—a nine hours' day. Night work begins at 6 p.m. and ends at 4 a.m., with an hour off from 10.30 to 11.30 p.m.—a nine hours' night. Half-a-day is the minimum term of engagement. The men prefer to take a night and a day in succession, and this suits the employers. The wages are:—Stevedores, 7s.; shipmen, 5s.; porters, 4s. 6d. Overtime and night work are paid at 13s. for stevedores and shipmen, and 8s. for porters. These wages—thanks, apparently, to strong customary force—have remained unchanged since 1871. Each employer holds his separate stand precisely at the same hour (6.45 a.m. and 12.45 p.m.) so that there is no time for men not wanted at one place to go to another.‡

291. The surplus of labour is very great, although it is impossible to estimate it, owing to the numbers who come intermittently to the docks in the hope of getting an odd job. Mr. A. L. Rathbone puts it at some 4,000;§ Mr. Sexton at not less than 10,000.|| At any rate there is always an excess, and the average employment is not more than three days a week. Thus the amount of work which, if well organised, might keep a smaller number of men fully employed at high wages over the whole week, is spread over a great many thousands more; hardly anyone gets a full week's work; and casual labour becomes a pernicious and a favourite habit.

292. Mr. Booth's scheme involved combination of employers, for labour purposes only. "The South End employers who employ only Union men might form one ring; the North End employers, who ignore the 'button,' might form another, and the central firms in the coasting trade a third." The dockers registered in each combination, and given preference rank as in London, would become the workers, as it were, of one great dock company, and be sent to any of the docks within the ring as wanted.

293. It looked at one time as if some such scheme might be seriously tried, and at four successive meetings of a Conference called by the City Council, the proposal got the length of being fully discussed and finally rejected—"the representatives of both employers and employed having felt that the scheme would be difficult to work owing to mutual lack of confidence."

294. The objections, voiced by Mr. Sexton, are these:—

(a) It would keep the A. B. C. classes continually hanging around (as it does now in London) dependent upon the small amount of work doled out to them, in the hope of being shifted up into a higher class.

* Evidence, Vol. IX., 96014–15.

† Cf. "The Problem of Dock Labour (Liverpool)." in Appendix to Messrs. Jackson and Pringle's Report, p. 339.

‡ Miss Rathbone, Evidence, Vol. VIII., 83251. (10).

§ Evidence, Vol. VIII., lxiii. (6).

|| Vol. VIII., 84190–2. Cf. A Census was taken in December, 1905, by the City Council Distress Committee, on a given morning when there was a fair—even a large—amount of work at the docks. It was found that thirty-six firms among them engaged 7,709 men, leaving 2,013 on the stands—about 26 per cent. Grisewood, Vol. IV., 37105, (5).

(b) The men crushed out by the classification system would simply drift to other trades than the docks, and compete with the labourers in those trades, such as building, etc.

(c) The preference class or permanent gangs, as with the London dock companies, which are shifted about to follow the work, would be of no use to a stevedore with an all-round cargo or to different employers loading to different ports.*

295. Mr. Sexton, it may be noted, appeared to attach much weight to the second of these, the necessary crushing out of the 25 per cent. or so, "who are getting something per week." †

296. In estimating the difficulties of decasualisation, in addition to the obvious one of getting employers to combine for labour purposes alone, the attitude of the trade unions must be taken into account.

297. There are several Trade Unions which cover dock labourers, such as the Dock, Wharf, and Riverside Labourers', the Gasworkers' and General Labourers', and the National Union of Dock Labourers in Great Britain and Ireland. The control of the Union is dominant and aggressive in Swansea, strong or weak in other centres, and is non-existent in a good many of the smaller ports. In Southampton the Union was succeeded in 1890 by the Free Labour Association. In Liverpool Trade Unionism is not strong, and is not recognised at the North Docks where the biggest ships berth.

298. As to how these Unions would look on any attempt at "decasualisation," there is a difference of opinion. "We much prefer the present system," says the secretary of the Dock and General Workers' Union in Swansea. In Bristol, one witness thinks they would oppose, because "no casual labour is allowed by the Union to work at any work in connection with the docks at less than 6½d. an hour," and because decasualisation would necessarily mean a considerable reduction in the rate of pay. On the other hand, some think that the Unions would be favourable to it. But, says another correspondent, in any case the men would not agree to it.

299. The latter sentence probably is not far from the truth. "The difficulty we meet," says Mr. Sexton, speaking for the National Union of Dock Labourers in Great Britain and Ireland, "is that there is a comradeship existing among the dock labourers; the labourer feels that it is not fair to crush out the man who is getting three or four days a week, and he objects to it. The men themselves object to the creation of a permanent class." ‡

300. There is another anomaly resulting from dock casual labour. The less chance a man has of being employed, the more necessary is it for him to be constantly near the place where the off-chance of employment may crop up. Dwellings in the immediate neighbourhood of docks thus get a fictitious value, and however insanitary or unwholesome may be the lodging they afford, there is always a demand for them. A premium is thus offered to the owners of slum property in the streets adjacent to docks.

302. Granted, as we think it must be, that, in the interests alike of the dockers and of the community, decasualisation is desirable, the situation which was faced on a small scale at the reorganisation of the system of employment at the London and India Docks in 1892 will require to be faced on a great scale if attempted now. After as many as possible had been taken up into the permanent staff, and others made "preference men" according to efficiency and steadiness, there remained a large residuum for whom evidently no employment could be hoped, and the work of the Committee of the Mansion House Conference of 1892-3 remains as an evidence of the difficulty encountered in dealing with it. § Temporary digging work on waste ground was provided for those displaced, and afterwards some few were

* Evidence, Vol. VIII., 84125. (1).

† *Ibid.*, 84239.

‡ *Ibid.*, 84147.

§ *Vide* the account given in the Board of Trade Report on *Agencies and Methods for dealing with the Unemployed*, 1893, p. 238

emigrated. But it was found that a large number proved “unhelpable,” even among those whose conduct and work at the temporary digging was good: they “were of the class who are always in chronic poverty—they were taken up, relieved, and dropped again—most of them much in the same position as at the beginning.”

303. If we be correct in our analysis of casual dock labour, and if such a system does economically and morally infuse and spread evils of a most serious character into the social life of the community where it prevails, then the system cannot be considered solely from the standpoint of the employer and of the employés. It is detrimental to the moral and material well-being of the community, and should, in consequence, be reduced, and if necessary by legislative regulation, to the smallest limits possible. We shall say more on this point later on.

(22) CONCLUSIONS.

304. This review of historical developments since the passing of the Poor Law Amendment Act, and of the more prominent existing industrial conditions, demonstrates that the problem with which we have now to deal is far more complicated than that of 1834. Whilst the moral causes contributing to pauperism and unemployment remain much the same as before, the material influences regulating employment and industry have changed both in their character and scope. Forces have come into operation affecting employment, its regularity, its cessation and expansion, which are quite beyond local control. Cyclical fluctuations now are world-wide in their effect upon industry and its employés. Changes in methods of production follow one another more rapidly than heretofore, and, as specialisation becomes more marked and definite, those habituated and trained to the processes that are superseded find it more and more difficult to obtain occupation elsewhere. Trade Unions, and employers' organisations have, in response, as it were, to one another, succeeded, the one in raising the standard of wages, the other the standard of industrial efficiency. Those who are not in the prime of life, nor in positions of adequate physical strength or competency, are apt to fall out of an industrial system which is above their level. There is also a large amount of work which partakes more of the character of personal service than of industrial production, such as that of errand boys, newspaper boys, telegraph boys, street sellers—occupations which, though remunerative for the time being to those engaged in them, have a tendency to cease at adolescence. A considerable proportion of those so occupied early in life become subsequently either unemployed or under-employed and swell the ranks of casuality. Casual and other occupations giving intermittent employment engage a large proportion of the wage-earning class—possibly a larger proportion than heretofore—and the ranks of those seeking this form of maintenance are periodically swollen by those who have lost, or prove their unfitness for, a regular or skilled occupation. These are modifications and developments in our industrial system which cannot be ignored, and their products and wreckage, when either out of employment or in distress, require a treatment more elastic and varied than the simple method which, eighty years ago, was sufficient to cope with able-bodied pauperism in agricultural districts.

Chapter 2.

THE NEW PROBLEMS.

Improvement in condition of working classes and its effect on able-bodied pauperism.

305. The foregoing review of the principal social and industrial developments and changes since 1834 in this country permits of certain generalisations. It may safely be asserted that, so far as the great mass of the wage-earning classes are concerned, their condition now as compared with that of 1834 shows a marked improvement. This improvement embraces a rise in wages, a reduction in working hours, and a fall in the prices of the necessaries of life. Town and country have benefited alike in these respects. The improvement is evidenced also by the returns of the Savings Banks, the benefit societies, and other agencies and organisations dependent upon weekly or periodical contributions from the working classes.

306. It might be expected that, as a result of this improvement, able-bodied pauperism would have largely diminished, and this is actually the case. During the last eighty years able-bodied pauperism has been steadily falling, and the great evil upon which the Royal Commission of 1834 concentrated their attention has, in rural districts, almost ceased to exist.¹

307. In urban districts, the ratio of total pauperism to population is somewhat lower than in rural districts, but the urban ratio has not decreased to the same extent as the rural ratio during the last thirty or forty years. Indeed, notwithstanding a rapid growth of population in London the ratio increased between 1895-6 and 1905-6 by no less than 2·6 per 1,000.² This is a fact calling for serious attention, and, when we examine into the causes, we find that the great increase in general wealth of the community during the last thirty years is associated with some untoward and unsatisfactory developments which are specially noticeable in the great industrial centres and above all in London.

308. In 1834, there being no public agency for the relief of the able-bodied other than the Poor Law, all able-bodied persons applying for relief went to the Poor Law, and as relief was then generally given on very easy terms, the number of able-bodied so relieved was a criterion of the number of those who publicly asserted their inability to maintain themselves. This state of things no longer prevails; the number of able-bodied applying for assistance to agencies outside the Poor Law is far greater than those applying to the Poor Law itself.

309. On 31st March, 1906, when pauperism was at a high level, there were approximately 13,000 to 14,000 healthy able-bodied men in receipt of Poor Law relief.³ In the winter of 1905-6 there were 111,000 applicants to Distress Committees, of whom only 1,434 were women.⁴ The number includes at least 3,000 who had received poor relief, and it also includes all those who made application at any time during the winter. It is certain that the whole 111,000 were not unemployed at the same time, and that a large proportion of them obtained work at some time during the winter. At any given moment, therefore, the number would be much less. In addition to the numbers in receipt of poor relief and the applicants to Distress Committees, a very large number of persons received relief from charitable associations, though in many cases those so treated were the same persons as applied to the Distress Committees. It may, therefore, safely be said that the number of able-bodied men in urban districts applying for assistance outside the Poor Law is much greater than the number of those who apply to the Guardians.*

* The number of ordinarily able-bodied men in health relieved indoors on March 31st, 1906, was 10,060. Of healthy able-bodied men in receipt of out-relief, a large proportion receive relief on account of the sickness or infirmity of some member of their families, or on account of "sudden and urgent necessity." Such men would not fall to be dealt with as unemployed persons, and omitting them, there were on March 31st, 1906, 3,283 able-bodied men in receipt of outdoor relief. Taking indoor and outdoor paupers together the total number relieved was thus 13,343 (Statistical Appendix, Part II, Table 1.) The year's count (1891-2) for men aged sixteen and under sixty-five was 3·26 times greater than the mean of the day counts of that year (Statistical Appendix, Part IV, Section 2, par. 34.) There are no statistics as to the numbers relieved in the winter only, but applying the ratio of 3·26 to the number of unemployed given above, it would still appear that the number of unemployed able-bodied men relieved by the Poor Law is much less than the number relieved by other agencies.

¹ Cf. Annual Reports of Poor Law Commission, 1839 (p. 8), 1843 (p. 254), 1847 (p. 4), with Appendix to Vol. I. of Evidence, Appendix No. II B., Table 10. See also Statistical Appendix, Part I., Table XV.
² Statistical Appendix, Part I., pars. 85 and 101. ³ Statistical Appendix, Part II., Table 1. ⁴ Return—"Unemployed Workmen Act, 1905 (Proceedings of Distress Committee, 1905-6)." H.C. 392, 1906, pp. i and ii.

310. In the examination of witnesses who gave evidence upon the working and results of the Unemployed Workmen Act of 1905, we found a general agreement as to the condition of the wage-earning classes and the lines on which they are divided. The witnesses agreed on a division into skilled and unskilled¹; with a further sub-division of the unskilled, viz. (1) the upper grade; and (2) the lower grade.²

311. This classification is in no sense scientific as there are many classes of workmen on the border line between skilled and unskilled who can equally well be put in one or the other class, but generally speaking the rate of wage would be the distinction, the skilled having a higher and the unskilled a lower wage, though this difference does not always prevail.

312. The great majority of witnesses were of opinion that the general material condition of the skilled workman had improved during the last few decades.³ As regards the higher grade of unskilled the same opinion was expressed, though not so confidently or uniformly.⁴ As regards the lower grades of unskilled labourers, many witnesses, especially some from London and the crowded industrial centres, were of opinion that the position of such labourers was worse than formerly.⁵

313. Here again the continuity and regularity of the wage rather than its amount determined in the main whether a man belonged to the higher or lower grade of unskilled labour. A docker's pay per hour is higher than that of the ordinary railway employee, yet no one would on that account place him in a higher category of labour than the railway man. In this sense the lower grade of unskilled labour almost exclusively embraces the casual and intermittent worker. Casual or intermittent work, however, can be and is of great variety; sometimes it comes within the category of seasonal work, oftener it is outside it. An outdoor painter is a seasonal worker, but his employment is skilled, and frequently continuous while he can work; a fruit or hop picker's work is seasonal, but it is also casual and unskilled. We may therefore lay down this further generalisation—that, the more regular an occupation is, the less likely are those in it, when able-bodied, to apply for public relief.

314. Reviewing this generalisation, our Investigators, Mr. Steel-Maitland and Miss Squire, assign to casual labour the chief place among industrial conditions that contribute to pauperism⁶, and this view is confirmed by a number of witnesses.⁷ The summary of previous inquiries into distress due to unemployment in Messrs. Jackson and Pringle's Report⁸ discloses a most striking unanimity in the view that the great bulk of applications for relief from unemployment come from casual labour. Another of our Investigators, Mr. Jones, also says: "Among the most effective pauperising agencies must be placed casual labour."⁹

Relation of casual labour to pauperism and unemployment.

315. This striking unanimity among our Special Investigators is absolutely confirmed by our own inquiry. Mr. Hamilton tells us: "As far as can be gathered, quite 90 per cent." of the men coming to the Church Army labour depôts are general labourers, about half of whom "have not been in continuous employment for several years."¹⁰ In London the bulk of the applicants to Distress Committees are said to belong to this class.¹¹ In West Ham 50 per cent. of the applicants to the Distress Committee in 1906-7 had had, during the twelve months preceding their applications, practically under two days' work a week. That is the normal condition, or very nearly so, of the casual class which is so large a part of the population of West Ham.¹² In West Hartlepool, out of 626 applicants to the Distress Committee, 32 per cent. were dock labourers.¹³ In Swansea, out of 703 applicants who registered at the labour bureau from November, 1905, to May, 1906, 67 per cent. were either dock or general labourers.¹⁴ And for the whole of England and Wales, 53 per cent. of the applicants qualified for assistance from Distress Committees during the year 1907-8 belonged to the general or casual labour class.¹⁵

Relation of casual
labour to
pauperism and
unemployment.

316. What proportion this form of labour now bears to employment generally we cannot say. Casual labour was in evidence before the Royal Commission of 1832, but the references to it are very few,¹ and it is difficult to believe that more grave and pointed reference would not have been made to it, if it then formed so large a contributing element to pauperism as by universal admission it now does.

317. We may therefore reasonably infer that this cause of distress and pauperism has now assumed, both absolutely and relatively, larger proportions than in 1834. Indeed it is the almost unanimous opinion of witnesses residing in industrial centres, and especially of London witnesses, that it is yearly developing.² Mr. Sidney Webb, whose evidence we have referred to elsewhere, described in serious language the rapidity of its increase.³ The growth of casual labour to its present dimensions is, however, a modern evil.

318. Our Special Investigators report that though there is no evidence that any considerable proportion of the men applying to Distress Committees owe their unemployment to sickness, yet "from the evidence of borough engineers and foremen of relief works there seems little doubt that the men are of low physical capacity."⁴ And in summing up the characteristics of the unemployed class they say: "We do not find that there is a very large proportion of men of bad character, but there are certainly a considerable number of men who are not very competent and not very industrious."⁵

319. Without infringing upon other parts of our Report we must here present, so far as applications of able-bodied for relief are concerned, what are the almost invariable products of this casuality. They may be summed up in one word—inefficiency and inability for anything but unskilled and non-continuous work of the most elementary kind.

320. Once a casual labourer always a casual labourer, unless there is within the individual some special grit and force of character to emancipate him from his vicious and retentive environment. Thus, while those who become casual labourers remain so, there is from various sources a constant recruiting of their ranks. Those who have failed in higher branches of work, either from bad habits, bad fortune, breakdown in health, or incapacity to give a remunerative return for the wage they get, all naturally gravitate into the ranks of those seeking casual work. So it comes to pass that at every great port the numbers seeking employment are largely in excess of the demand, and that there is at the large ports and at certain of our populous centres a stagnant mass of low-grade labour, ready to clutch at any form of assistance which will add to their precarious livelihood.⁶

The relation of
skilled labour to
unemployment.

321. But if, as regards unskilled labour, there are factors to be dealt with in our large towns which were almost unknown to those who reorganised the Poor Law in 1834, some phenomena affecting the capacity of workmen of a higher type have also developed themselves which were equally unknown or unforeseen by our forefathers. Cyclical fluctuations due to the enlarged area of operations of our trade are apt to become less amenable to local or even national control. Changes in fashion, greatly affecting demand, follow one another more rapidly than heretofore, and the wider competition to which production is subject forces upon the manufacturer new processes and new mechanical appliances. All these causes tend to put out of employment temporarily and even permanently men of respectable character, who are willing to work but whose work is not of the type or standard required. The standard of machine work is constantly rising, and the efficiency of the worker is expected to correspond. If from age, failing health, or ineptitude a worker fails, his employment may cease, and he has difficulty in again obtaining work in his old grade or level.

⁴ Jackson and Pringle's Report on Effects of Employment or Assistance given to the Unemployed since 1886, Part II., 2^b, i. ⁵ *Ibid.*, p. 146. ⁶ See previous chapter, Sec. 21.

322. Messrs. Jackson and Pringle, while pointing out the difficulty of exactly defining what is meant by the skilled or artisan classes, estimate that, of the applicants to Distress Committees, 20 per cent. are skilled.¹ This proportion of skilled to unskilled varied much according to the local state of trade. In Northampton, Leicester and Woolwich, it was higher owing to changes in the boot trade at the first two places, and to a reduction of Government establishments in the last one.²

Relation of skilled labour to unemployment.

323. The Workmen's Compensation Acts³ and the Trade Union standard⁴ also tend to render it more difficult for able-bodied men above a certain age or below a certain standard of physique or efficiency to retain or re-obtain work to which they are accustomed. These again drift into casual or under employment. This, though not a new phenomenon, has greatly increased since 1834.

324. Summing up the new factors and developments we find—

(1) That we have an increasing aggregation of unskilled labour at our great ports and in certain populous districts.

(2) That this aggregation of low-grade labour is so much in excess of the normal local wants as to promote and perpetuate under-employment.

(3) That this normal condition of under-employment, when aggravated by periodic contraction of trade or by inevitable changes in methods of production, assumes such dimensions as to require special machinery and organisation for its relief and treatment.

Chapter 3.

CRITICISM OF EXISTING METHODS OF RELIEF TO THE ABLE-BODIED.

(1).—The Poor Law.

325. We now turn to the existing methods of relief, with the view of testing how far they are adapted to and capable of dealing with the new conditions that have arisen. We have described at length in a previous chapter the methods of dealing with the able-bodied under the Poor Law. We have seen that the normal methods intended to be established by the Central Authority under the Act of 1834 were indoor relief and emigration, and that the abnormal methods were outdoor relief, with or without a labour test. We have, therefore, to examine *seriatim* the suitability of the workhouse, emigration, the labour yard, and out-relief, as methods for dealing with the able-bodied in distress from unemployment.

326. The first point to note is that at least one of the abnormal methods, viz.,* the labour-yard, has tended by the force of events to become normal, and that at the present day the Unions having power to give outdoor relief accompanied by a labour test, are much more numerous than those in which relief to the able-bodied must be given in the workhouse.† Experience, therefore, raises *a priori* a presumption against the adequacy of the normal methods. This presumption is increased when we examine more closely the working of those methods.

The workhouse.

327. We have spoken elsewhere of the evils which to our mind are inseparably connected with the present general workhouse, and of the need for classification by institutions. Our position is greatly strengthened by the evidence which we have received as to the effect of residence in the workhouse on the able-bodied.¹ Whatever may be said of the reasons for deterrence in the case of those among the aged who come there by their own fault, the only principle which can be defended in the case of the able-bodied is that they should leave the workhouse better fitted to earn their living than when they entered it. Whether we rely on discipline, on industrial training, or moral suasion, the end should be in all cases the same, viz. to restore efficiency, physical, mental, and moral. But the evidence of workhouse Chaplains, a high authority on such a point, is emphatic that, so far from this end being reached, the effect of a sojourn in the workhouse is wholly bad.²

"Even men above the ordinary working class appear to lose their manhood when they come into the house."³ The able-bodied "easily become enervated and lose all desire to rise again to true citizenship and individual responsibility."⁴ "It is pitiable to see the mental torture which decent people suffer when circumstances compel them to enter the workhouse—there comes a loss of self-respect and a moral deterioration."⁵

328. We are, of course, aware that in individual Unions the deterrent conditions are waived or modified by more prescient Boards of Guardians in favour of a man searching for work—as, for instance, when a man is permitted to leave the workhouse in search of work unencumbered by his wife and children. But these concessions are often abused by the workhouse loafer, with the inevitable result that the Guardians are compelled to withdraw them. In the main, we believe that we have not exaggerated those features in the present workhouse system which make it not only repellent (as is perhaps necessary), but also (as is unnecessary) degrading to the honest man who is anxious to reinstate himself in independence.⁶ The workhouse does not afford any abiding help to the class of distressed unemployed who are willing and anxious to work.

* For shortness' sake we here include all forms of outdoor relief accompanied by a test of labour.

† See list of Unions where the Regulation and Labour Test Orders are in force.⁷

(10). ⁷ Report on the Policy of the Central Authority from 1834 to 1907; Mrs. Sidney Webb: App., Vol. XII.

329. The second normal resource of the Poor Law for dealing with the able-bodied is Emigration. emigration; but, as we have already shown,¹ it is in practice so little used that it cannot be regarded as having had much effect in dealing with this problem. The Royal Commission of 1832 hesitated to recommend its general adoption.

330. Having dealt with the normal Poor Law methods of relieving the able-bodied, The labour yard. we have next to consider the methods available abnormally, viz., the labour-yard and unconditional outdoor relief. The inherent difficulty of the labour-yard is that, if it is in any way a permanent institution, it tends to become the habitual resort of the incapables who are content with the barest subsistence, and are willing to put up with all the inconveniences of the yard so long as they are assured of living at home with enough to keep themselves and their families from starving.² After the manner of the parish labourers of 1832, they prefer to do a little work for a certain subsistence out of the rates, rather than to take any trouble to obtain an independence by their own exertions.³ The labour-yard, unless well administered, encourages the incapables without reforming them. It provides no incentive to industry;⁴ the relief is not earned in proportion to effort, but it is given in proportion to needs, subject to the qualification of performing a prescribed task of work.⁵ A loafer with many children may do the minimum of work required and obtain four times as much as the industrious single man, even though the latter should do four times the work of the loafer. The labour-yard, in fact, is the home of the "ca' canny,"⁶ and so infectious is its atmosphere and its principle of "do little," that a stay there will demoralise even the best workman.⁷ Hence, by the industrious and respectable persons out of work, the labour-yard has become, and under existing conditions rightly, almost as much tabooed as the workhouse.⁸

331. Whatever the inherent evils of the permanent labour-yard, they are intensified when it is resorted to as a remedy in times of emergency.⁹ The conditions under which the abuses of the system can be abated are the existence of a large and efficient staff to supervise the labour, the existence of large and suitable premises in which the work can be properly done and properly supervised, and, lastly, the existence outside the labour-yard of a sufficient staff of skilled relieving or enquiry officers to check imposture.¹⁰ But these three conditions are not to be improvised in a moment.

332. Upon unconditional outdoor relief, i.e., out-relief without a labour test, the last Unconditional Poor Law method of dealing with the able-bodied, we need not dwell. Nothing can outdoor relief. be said in favour of setting aside in times of panic or stress the principles underlying the Poor Law Amendment Act of 1834 and the Report of the Royal Commission of that date. At present the workhouse-test, the labour-test, the giving of relief in kind, and strict investigation, are the safeguards attached to the grant of relief to the able-bodied. But all these safeguards can be and occasionally are systematically dispensed with on the plea of "sudden and urgent necessity"¹¹ and under certain dispensatory provisions of the Prohibitory or Regulation Orders.¹² In such cases, out-relief to the able-bodied is given with practically all the freedom which existed before 1832; and in our opinion it is open to all the evils disclosed by the Royal Commission of 1832. Unconditional out-relief to the able-bodied tends to aggravate rather than diminish those accumulations of surplus labour, which as we have seen, are among the disquieting features of modern industrial conditions.

General effect of
the Poor Law on
unemployment.

334. Indeed, generally speaking, the whole influence of the present Poor Law upon pauperism is centripetal rather than centrifugal.¹ Except to the extent to which the Guardians can emigrate and can remove under the law of settlement, they can only deal with the poor by relieving them where they are. And in proportion as they relieve them where they are, it follows that there is less inducement for the poor to move to other districts. The one method the present Poor Law possesses for directly assisting the mobility of labour within the kingdom is the casual ward; and the whole Report of the Vagrancy Committee shows how repellent and useless the administration of the casual ward is to the genuine work-searcher.²

335. The present Poor Law, therefore, in effect does nothing to decrease the immobility of labour or to grapple with the new tendencies which go to make up the modern problem of relief to the distressed able-bodied.³ In times of emergency there has always been a desire to secure the help of voluntary and other agencies. Indeed, in the whole of the evidence we took, we are not aware of a single witness who urged that the present Poor Law, as it now stands and is generally administered, is adequate to deal with the problems of distress due to unemployment.

336. As the Royal Commission of 1832 themselves remarked:—

“A person who attributes pauperism to the inability to procure employment will doubt the efficiency of the means by which we propose to remove it.”⁴

337. The administrators of the present Poor Law are in fact endeavouring to apply the rigid system of 1834 to a condition of affairs which it was never intended to meet. What is wanted is not to abolish the Poor Law, but to widen, strengthen and humanise the Poor Law, so as to make it respond to a demand for a more considerate, elastic, and, so far as possible, curative treatment of the able-bodied.

(2).—Charity.

Nature of early
attempts of
Charity to
relieve the
able-bodied.

338. It is noteworthy that, in the generation succeeding the Poor Law reformers of 1832, the first attempts of charity to supplement the Poor Law in dealing with the able-bodied related to particular periods of exceptional local distress. Such efforts were spasmodic rather than permanent. The problems connected with unemployment did not at that time assume such a shape as to necessitate the permanent organisation of charity as a standing accessory to public relief.

339. At any rate, whatever be the cause, at that time voluntary efforts, as shown by the operations of charity, seem chiefly, if not solely, to have been directed towards supplementing the organisations of the Poor Law in times of special distress. It is only in quite recent years that charitable organisations, such as the Church Army and the Salvation Army, have established permanent machinery for dealing on a large scale with great numbers of those out of work, as part of the chronic and permanent problems of charity.

Charity and
Metropolitan
Distress, in
1860-1.

340. On the other hand, as far back as 1860 we find interesting evidence of the tendency of the general public, in times of special distress, to believe that the Poor Law was unequal to the emergency, and to accumulate large temporary funds and machinery for supplementing by charity the functions of the Guardians in regard to the relief of the able-bodied. In the Report of the Select Committee on Poor Relief of 1864, we are told that in consequence of a five weeks' uninterrupted frost in the winter of 1860-61, nearly the whole of the labourers in and about the London docks and along the banks of the river were thrown out of work; and the numbers were largely increased by the necessary cessation of work in other directions. For the relief of the persons thus deprived of their ordinary means of support, large sums of money, voluntarily contributed, were placed at the disposal

¹ Mackay, 29843 (22). ² Report of Departmental Committee on Vagrancy, 1906. [Cd. 2852.]

of the police magistrates, clergymen, and others in the several localities in which the distress existed.¹

Charity and
Metropolitan
Distress, in
1860-1.

341. These subscriptions were raised on the assumption that the machinery of the Poor Law was inadequate to meet the prevailing distress, and that not only did the Rules and Regulations under which relief was administered require to be modified, but that the funds at the disposal of the Guardians were insufficient for such an emergency.²

342. Several public writers and speakers alleged that the Poor Law had "broken down," and this impression was widespread.³ The Select Committee do not themselves express a definite opinion as to the quality and extent of the distress which prevailed, but they expressly state "that there can be no doubt that the machinery of the Poor Law administration was adequate to the occasion, and that the Guardians possessed the requisite powers necessary for the relief of distress." They set out, however, at some length the conflicting views conveyed to them by witnesses on the subject of the distress.⁴ These views we here epitomise, because they are in themselves an epitome of the usual situation which precedes the interposition of charity in the work of relieving the unemployed.

343. On the one hand, Mr. Farnall, the Poor Law Inspector for the Metropolitan District, was of the opinion that the state of affairs "scarcely ought to bear the name of a crisis," and he pointed out that, out of 15,000 odd men who applied for, and were offered, relief subject to the workhouse or labour test, only 5,000 accepted the relief; the rest refused the test and were never heard of again.⁵ This view that the Poor Law, if left to itself, could easily and satisfactorily have coped with the situation, was also stoutly maintained by a number of Clerks and Chairmen of the several Unions concerned.⁶

344. On the other hand, the Committee quote a number of Chairmen of Boards of Guardians, clergymen, and police magistrates who took the view that there prevailed "terrible distress," "most extreme and awful misery," and that "but for charitable subscriptions there would have been a fearful loss of life through starvation." The Committee noted the refusal of large numbers to accept the workhouse and the labour test, and point out that a considerable amount of evidence went to prove that it arose from the great facility with which the relief voluntarily contributed could be obtained.⁷ But, without any exception, the evidence of the London police magistrates, who distributed the voluntary relief to the poor, was emphatic and unanimous that there was a large number of cases which the Poor Law did not and could not reach.⁸

345. Such was the state of affairs which, in the opinion of these witnesses, justified the interposition of charity, and the collection and distribution of subscriptions for the unemployed. But their own evidence goes on to show what great scandals this interposition of charity entailed. We hear how applicants often obtained relief from one police court in the morning and from another in the afternoon;⁹ that there was no co-operation between the Guardians and the police magistrates,¹⁰ so that, in many cases, duplicate and even triplicate relief may have been given without the possibility of detection. One inexperienced district visitor sent in without investigation the names of the occupiers of a whole street and square as being clearly entitled to assistance.¹¹ Sums as large as £50, £80, and £100 were often distributed in handfuls of silver to crowds of applicants, the sole qualification being a display of dirty hands.¹² Bread, which was given in relief, was taken to public-houses and exchanged for beer, and then sold by the publicans at a reduced rate.¹³ There was no doubt, in fact, that imposture was rampant on account of the want of organisation and investigation which accompanied the distribution of the money so promptly and generously subscribed.

346. The ultimate finding of the Committee with regard to the measures taken during this time of distress was as follows:—

"That they received strong evidence that such distress could have been relieved by the Poor Law authorities, inasmuch as the legal machinery of administration was sufficient, and

the guardians possessed the requisite powers for raising the necessary funds for the purpose; but the legal charge would have pressed very heavily on some parishes within the Metropolis. The regular action, however, of the Poor Law was, to a considerable extent, rendered unnecessary by voluntary contributions; and however desirable it is that in great emergencies destitution should be relieved by spontaneous charity, Your Committee find that on the occasion in question evils resulted from the want of a sufficient organisation for the investigation of the cases of the persons relieved."¹*

347. We have quoted and referred at some length to this Report, now more than forty years old, because we believe it to contain a true picture of the situation which almost invariably arises when money is subscribed in a hurry by the charitable public for the relief of distress from unemployment and is distributed without adequate investigation by means of hastily improvised or inexperienced organisations.

348. From this Report we gather :—

(1) The motive of the interposition of charity was the assumption that the Poor Law was inadequate to meet the situation.

(2) Both the Central and local Poor Law Authorities concurred in maintaining that the Poor Law was adequate, and their view was upheld by the Select Committee of the House of Commons.

(3) But, notwithstanding, the Select Committee admitted that it may possibly be "desirable" "that in great emergencies destitution should be relieved by charity," and in the body of their Report they themselves indicate a form of organisation which might enable charity to intervene more successfully in future.

349. The secret of this inconsistent attitude of the Committee in regard to the necessity of the intervention of charity may be explained by the fact that, between the date of the Metropolitan distress into which they were inquiring and the date of their Report, there had occurred the Lancashire Cotton Famine. An enormous sum had been collected and distributed by voluntary agencies towards the relief of half a million destitute persons, and both the people who gave and the people who distributed the charity had been publicly thanked in the Speech from the Throne.

350. It would appear, therefore, to have been necessary for the Select Committee of 1864 to combine, with a disapproval of the administrative scandals of charity in 1861–2, a concurrence in the principle of the intervention of charity which had been approved by the Government, Parliament, and the nation at large.

Charity and the
Lancashire
Cotton Famine.

351. The Lancashire Cotton Famine was the occasion of the greatest effort which charity has ever made in England towards the alleviation of distress due to want of employment. The distress began to be acute in December, 1861, and by the end of June, 1863, charity had accumulated £1,974,203 for the relief of the unemployed operatives and their families.² It is probable that under the circumstances this vast sum was distributed with the maximum of good and the minimum of demoralisation. When perfected, the charitable organisation consisted of a Central Executive Committee and a General Relief Committee at Manchester, and a Mansion House Committee in London. The function of the General Relief Committee was merely to collect subscriptions; the function of the Central Executive Committee was to distribute the subscriptions through the medium of 170 local Committees, and generally, as far

* Two things should be added. There was then no central organisation for the administration of voluntary relief. The parishes could not rally for the purpose, and the necessity for treating problems of want as matters of social knowledge and education was hardly present in the public mind. The Magistrates were admittedly an unsatisfactory tribunal in an emergency of this kind; and there were no local agencies who were able to support them systematically by concerted action. On this and other occasions the difficulties of organisation were immensely increased by the over-haste of the donors themselves, who were impatient of all pre-consideration, and in their excitement pressed for the immediate and wholesale distribution of large funds. This element has always to be reckoned with in a crisis in the Metropolis, and it is obviously most difficult to restrain or to guide it.

¹ Report of Select Committee on Poor Law Relief, 1864 [255] p. 10.
Cotton Famine," p. 493.

² Arnold's "History of the

as possible, to influence, control, and co-ordinate on a common plan the activities of these local Committees.¹ The functions of the Mansion House Committee were to collect and forward subscriptions to the distressed districts, but this it apparently did to a considerable extent in co-operation with the Central Executive Committee.²

Charity and the
Lancashire Cotton
Famine.

352. On the Central Executive Committee sat the special representative of the Central Poor Law Authority, Mr. Farnall, whose evidence as to the adequacy of the Poor Law to deal with the London distress in 1861 we have already quoted.³ There was also some co-operation and communication between the local Poor Law Authorities and the charitable organisations. The Central Executive Committee used its influence, and successfully, to raise the average weekly rate of poor relief per head from 1s. 2½d. to 2s.,⁴ and there was a mutual inspection of each others' relief books by the local Charitable Relief Committee and the Board of Guardians.⁵ The local Relief Committees were enjoined to refer chronic cases of indigence to the Guardians, and to use voluntary or paid visitors for the purpose of investigating cases. There was, in fact, at the end of the period of distress, a complete paraphernalia of regulations and inquiry, a central controlling Committee distributing to local Committees funds, partly raised locally, partly centrally—in a word a replica of the official and statutory Poor Law system, acting parallel to and in co-operation with it.

353. It might have been expected that charity distributed by such a complete organisation and with so many safeguards would have been free (if ever relief of any kind whatever on a large scale could be free) from serious abuses. But it is clear from the "Manual" issued by the Central Executive Committee in the autumn of 1863⁶, when the worst distress was over, and also from Arnold's "History of the Famine," which is throughout written in a laudatory spirit, that, at any rate in the times of worst pressure, serious abuses did arise. At the outset there were separate funds administered by separate Committees in many towns,⁷ and there were at least four central funds also administered by four Central Committees.⁸ It was not till August, 1862, that is in the eighth month of the period of distress, that the Central Executive Committee came on the scene to co-ordinate the various funds and to prevent overlapping. In Manchester, where the Guardians and Relief Committee relieved the same cases, it was alleged that 25 per cent. of the recipients were not proper objects of charity,⁹ and when special visitors were employed it was discovered, according to a report of the assistant clerk of the Manchester Union, that:—

"Almost every conceivable variety of fraud, it would appear, has been practised upon the officers of the Board, as the reports of the special visitors now employed prove every week. Children, recently dead, have been booked as living; children that never existed have been booked; children have been borrowed to make up families; concealment or misrepresentation of wages seems almost to have been the rule in some districts of the city; men, whose regular work was at night have obtained relief for want of work in the day time; sick men have been found drunk in bed; men discharged by employers for drunkenness have obtained relief as decent, respectable artisans; persons have left employment avowedly because they could get a living easier by charity and parish relief than by work; men have been found who, having work at home, were attending the school or the farm; men have been found who were working, but not at their homes; and the short hours required of those sent to the school or to the farm, have enabled many to secure wages of which they gave no account whatever; and to finish this most unpleasant recital the reports referred to have made the Guardians acquainted with the existence, in one district at least, of an amount of immorality which they had not before heard of, a large number of persons living in adultery having obtained relief as married people."¹⁰

354. It is probable that such wholesale abuses were not found elsewhere than in the largest towns, and that even there, as in the case cited, they were ultimately detected

† "Rascaldom was in clover during the early period of the distress, and the revision of the school lists, in the spring of 1863, turned out domestic servants from the sewing schools, sent hand-loom weavers to their normal dependence upon the poor rates and even committed to prison swindlers, who whilst in regular work and in receipt of good wages, were also getting assistance from the relief committees. But these cases of imposition occurred only amongst large populations, and certainly did not at any time comprise 5 per cent. of the recipients of relief."—("Lancashire and the Cotton Famine," Watts, p. 212.)

Charity and the
Lancashire Cotton
Famine.

and diminished by the system of visitors recommended by the Central Executive Committee. But the point we wish to emphasise is that it was only the long duration of the distress that enabled the provisional administration of charity to acquire the experience and skill in investigation and revision of cases which, in the words of the Executive Committee's Manual, "will alone prevent abuses."¹ For it is only when sufficient time has elapsed to introduce, train partially, and control a newly organised association of workers that the skill, experience and co-operation necessary to charitable work can be attained.

355. Another abuse, to which the Executive Committee refer, was the tendency to supplement the wages of workmen on full time by means of money allowances.* As in 1834, some employers took advantage of this system to pay inadequate wages. "It is better," say the Committee, "that operatives should be entirely withdrawn from work than that they should labour sixty hours weekly for little more, or even less, than the scale of relief."² In one case an operative is said to have worked fifty hours a week in a factory for 9½d.³ In other cases work for fifty-five hours a week would be exacted for a wage of 3s. or 4s. exclusive of deduction for rent, the miserable pittance then left being made up by "relief" to the standard of 2s. a head a week.⁴ We have, therefore, here in miniature an indication of what would probably be the general effect on wages of re-introducing an indiscriminate system of giving money allowances to the able-bodied, whether from charitable or from public funds.

356. Yet another evil was the protracted pensioning of a large number of able-bodied men and boys without providing them with any occupation. The "Relief Committees" had been from the time of their establishment utterly unable to provide manual labour for all the able-bodied men whom their funds supported, "and the Guardians (not unnaturally) neglected a requirement which the Committees did not make."⁵ The labour test, therefore, seems almost of necessity to have been largely abandoned. Although the Poor Law Board did not repeal the Outdoor Relief Regulation Order, they had pointed out to the Guardians that its provisions could be dispensed with in cases of urgent necessity, and that the existence of masses of starving operatives constituted such necessity.⁶ Thus in March, 1863, although there were between 60,000 and 70,000 girls employed in sewing schools and 20,000 † men and boys being taught in other schools—all of whom were accounted as "working"—there were yet "upwards of 25,000 able-bodied men and boys who were then receiving the means of subsistence without labouring in any way in return for it."⁷

357. This protracted idleness led to demoralisation and riots,⁸ and no doubt was the cause of the Government's adopting a new method of alleviation, viz., the provision of works of public utility undertaken by the Local Authorities and paid for by them out of loans advanced from the Exchequer. To this part of the lesson of the Cotton Famine we shall refer subsequently. We are here only concerned with the moral that, even with the most effective organisation, a general system of money allowances to able-bodied in distress can never be safely resorted to.

358. There was yet another early mistake on the evils of which the Executive Committee commented in their Manual. The original bent of the Local Committees was to supplement the relief of the Guardians, instead of confining their sole attention to cases with which the Guardians did not deal.⁹† This system of divided responsibility for

* "During the last two years, however, the allowance system has been set up anew and sanctioned in every form and to every conceivable extent in Lancashire."—"Lancashire's Lesson, etc.," McCullagh Torrens, p. 120.) "Some Committees had also supplemented full time wages in cases where the material to be worked up was so wretched that weavers who used, in ordinary times, to earn from 10s. to 12s. per week, could not earn the amount as wages."—"Lancashire and the Cotton Famine," Watts, p. 210.)

† In the winter of 1862-3, when the famine was at its worst, 48,000 men and boys were being taught in schools.—("Lancashire and the Cotton Famine," Watts, p. 210.)

‡ The Report of the Honorary Secretary for May, 1865, shows that, a month before the Executive Committee adjourned *sine die*, "the relief of 3,872 persons from the Guardians was being supplemented by the local Committees at a cost of £901 per month, when the total expenditure of the Relief Committees was only £5,090 per month."—"Lancashire and the Cotton Famine," Watts, p. 210.)

particular cases was found to "invite a struggle between the Guardians and the Relief Committee as to the proportion of the relief to be given by each, and so lighten the responsibility for the relief of each case as to leave no appreciable burden of such responsibility either on the Guardians or Committee."¹ In fact, the system then, as now, led to the unwarranted assumption by the Guardians and the Charity Committee that each would supply the other's deficiencies as regards the relief or the investigation of a case. This unsatisfactory arrangement was gradually replaced by one in which there was a clear demarcation of charity and Poor Law cases, with the consequence that the responsibility for the relief of each case was distinct; charity dealt with the better class of cases and left cases of misconduct and chronic indigence to the Guardians.²

Charity and the
Lancashire Cotton
Famine.

359. The history of the famine and of the measures for the relief of the sufferers by it brought to light some grave defects in the machinery, no less than in the system, by which that relief was administered. And we can hardly be surprised if it illustrates the truth that "knowledge comes but wisdom lingers." It was the first experience of the kind in England. Never before had the country attempted to cope with suffering on so large a scale. The tradition of voluntary effort in such cases was well-nigh lost; certainly, co-operation between Poor Law and charity in dealing with such an emergency had not been contemplated. It was only as experience grew longer and wider that bad methods were discarded and sound administration took their place. The almoners, official and other, had everything to learn, and the scale and the duration of the distress had this, at least, of good, that its lesson was learnt thoroughly.

360. The Guardians, not unnaturally, considered that they were the proper persons to deal with the crisis; they were confident of their ability to do so; and they were supported in that confidence by the Poor Law Board. In November, 1861, the Poor Law Board informed the Guardians that: "The Board are also confident that the machinery of the law itself will, with judicious management, be found, as heretofore, equal to any emergency."³ And, as late as May, 1862, the President of the Board advised an anxious deputation of Lancashire Members of Parliament to "leave the matter at present in the hands of the Guardians, who were performing their duties very efficiently."⁴

361. It was, in fact, only the extraordinary and protracted nature of the distress that brought about the close co-operation of the Poor Law Authorities with the efforts of the Central Executive Committee to supplement the Poor Law by charity—and it was that co-operation alone which enabled the Committee to work so efficiently.

362. In considering, therefore, the teaching of the Lancashire Cotton Famine as to the operations of charity in relieving the unemployed, we must not fail to remember that both the successes and the failures of charitable effort on this occasion were largely due to the character and duration of the distress.

363. The distress was not in any way sudden. It was foreseen in the autumn of 1861,⁵ developed gradually in the winter of that year, and did not reach its acutest stage until the winter of 1862. There was thus ample time given to the Central Poor Law Authority to concert measures of relief. A special representative of the Poor Law Board was sent down to the district, and stayed there permanently, explaining and smoothing down the asperities of the Poor Law, assisting and co-operating in the organisation of charity.⁶ That organisation in its perfection was only possible owing to the long duration of the distress. The working-classes affected were not casual labourers, but highly skilled, respectable, and thrifty operatives*—but, none the less, the protracted and idle dependence on charity in the end demoralised them.⁷ We have thus in the history of the Lancashire Cotton Famine a most instructive commentary on the limits of right charitable action in connection with the relief of the unemployed.

* "Some of the operatives are men of superior intellect . . . many of them attain great proficiency in scientific, artistic and other pursuits."—"A Visit to Lancashire," Ellen Barlee, p. 5.)

Mansion House
Funds,

364. In 1886 there was much distress in London, and in the winter a Mansion House Fund was opened. "Nearly £80,000 was rapidly subscribed and almost as rapidly distributed without in most cases any adequate precautions being taken to ensure a proper administration; as a consequence much of the money was wasted and had a most demoralising effect."¹ This experience led to an inquiry into the conditions of dealing with exceptional distress by a special Committee of the Charity Organisation Society, of which Mr. Albert Pell was Chairman, and this Committee arrived at two conclusions, viz., a recognition of the inadvisability of starting central relief funds for London except under certain express conditions, and, next, a recognition of the view, which largely influenced public opinion at the time, that relief employment was a method of assistance of very limited utility.²

365. The latter question was very closely investigated in connection with plans carried out in that and subsequent years, and also after reviewing the schemes of past years including those of the Cotton Famine. The conclusions of Mr. Pell's Committee were:—

"That in the event of employment being provided, the wage should not be a 'charity' wage; that the best methods of payment appeared to be either by contract or by 'measured work,' or by scale; that the men should be worked, not by shifts of four or five hours, but for an eight hours' day with days off to look for work; and that on work other than that done on contract there should be sufficient inquiry or a trustworthy recommendation. The supervision should be strict, the gangs small, and the manager empowered to dismiss summarily if necessary."

The Mansion House Fund was used only to a comparatively small extent in providing employment. The next year there was much less distress; and the Lord Mayor appealed for £20,000 to provide assistance in some way that "might lead up to permanent remedies."³ From the excitement and lavish giving of the past year there was a natural reaction, and only £5,000 was received. A small number of men (394) were employed under proper supervision and their cases considered individually. It was found possible to assist only 17 per cent. in such a way as to prevent their falling back into the ranks of the unemployed, even if so much as that could be guaranteed. Subsequent experiments in 1892-3 and later gave similar results. The best conditions of employment relief were fairly ascertained; and the after-results of such relief did not appear to justify it, unless great pressure required the use of this expedient. The Mansion House Committee of 1887-8 summarised the question thus:—

"The Committee are of opinion that works started for the relief of the unemployed, even though they be in some degree useful and beneficial, are in the long run an injury instead of a benefit to the community, by discouraging the real spirit of work, and thereby diminishing self-reliance and enterprise; also, that such works under the management of amateurs, however well-intentioned, will usually result in increasing the number of those dependent on almsgiving, and by slackening foresight during the months when wages are earned, intensify the evil instead of remedying it. Moreover, such works tend to attract labour to London and further glut the market."

366. In regard to the other main conclusion of Mr. Pell's Committee, to which reference has been made above—the recognition of the inadvisability of starting central relief funds for London except under certain express conditions, a definite scheme for the establishment of a central voluntary administration with the aid of local committees and skilled help was proposed; and suggestions for dealing with distress in times of emergency which have been found of great service in subsequent years were submitted in detail. In 1892-3 and in 1894 employment relief was provided in connection with Committees at the Mansion House with results similar to those of 1887-8. In 1903-4, there was another Mansion House Fund for employment relief; 467 men were dealt with, and it was claimed by the Committee:—

"That in spite of the limitations caused by the smallness of the fund a large number of genuine unemployed families were thoroughly helped, the men were maintained in health, efficiency, and self-respect, their homes kept together, and their wives and children enabled to preserve a fair standard of comfort through the winter. This was done without attracting to the fund the habitually dependent, and at a cost which must be regarded as small in proportion to the thoroughness of the relief afforded."⁴

367. Subsequent inquiries, however, showed that only 26 per cent. of the men helped had obtained more or less regular employment, the remaining 74 per cent. having lapsed into casual labour or obtained no employment at all.⁵ But it is noteworthy that even

this result of painstaking efforts in selecting the men was only achieved by sending the men to farm colonies under the management of permanent charitable organisations, which we shall hereafter shortly describe.

368. In brief then in London the experience of the period between the Mansion House Fund of 1886 and the introduction of Mr. Long's scheme, has been that in meeting distress employment relief is of very partial utility, and that, so far as general relief is concerned, it is almost inevitable that a considerable part of all temporary funds for the unemployed shall be wasted on unworthy objects, or, at best, spent with no permanent benefit to the recipients, unless the management of the fund has the assistance of—

- (1) Persons skilled generally in the administration of charity; and
- (2) Some permanent organisation to which the cases can be referred for treatment.

369. This view is emphasised by the experience of funds raised and administered by the Press for the benefit of the unemployed. At Tottenham, we are told, money and goods to the extent of £10,000 were collected by a newspaper and distributed, being greatly in excess of the needs of the district. Fifty sheep were "contributed," and with difficulty got rid of;¹ thus illustrating an inducement to lax administration, innate in all such funds. For unless the whole of the fund is actually distributed, the subscribers are inclined to believe that their contributions have been extracted from them under false pretences. Hence there is an incentive to spend as much as possible on as many as possible; for as a rule, the public estimation of a charitable fund is increased or decreased in fairly accurate proportion to the number of pounds subscribed and the number of persons upon whom they have been spent. Press Funds.

370. At West Ham in 1903–4 some £20,000 was raised by newspapers and distributed to the unemployed, but :—

"Unfortunately there were a lot of impostors, and I think it was pretty well circulated that the money went to other than those who needed it."²

It is alleged that the knowledge that this money was mis-spent operated subsequently to the detriment of the Distress Committee in collecting voluntary subscriptions.³ Another newspaper in London collected some thousands of pounds, which were distributed among a few thousands of the unemployed as wages for doles of from one to three days' work; thus affording another instance of the mistaken endeavour to cure casual labour homœopathically.⁴ Casual labour was also the chief form of assistance given by another Press fund, as to which we had evidence which convinced us that a genuine attempt was made to administer the fund on sound lines.⁵ The organiser of yet another great Press fund gave it in evidence before us that, except as regards emigration, the methods of help employed by the fund had been unsatisfactory.⁶ And though those responsible for each of the last two mentioned funds were of the opinion that a number of respectable workmen had been genuinely assisted, it was admitted that there was no co-operation between the two funds, which were being applied to the same district at the same time.⁷ In the end, we were informed by two competent witnesses, there was indiscriminate giving of relief to such a degree that it tended rather to the aggravation of the trouble than to any reduction of it.⁸

If these are the acknowledged results of Press funds, it may well be asked how it is that they are again and again repeated. We feel convinced that the answer is, that, rightly or wrongly, there is a wide-spread impression that the Poor Law in its methods and tests is so deterrent that there are very large numbers who would prefer to undergo suffering rather than accept poor-relief. Hence the necessity for charity, especially in times of distress. We cannot better illustrate the prevalence of this view than by quoting the answers of certain clergymen, almoners of one of the West Ham Press funds, to the following question which was addressed to them :—

Question.—Do you consider that the relief of distress is best left in the hands of the Poor Law officials?

¹ Court, 6197. ² Rusbridge, 20478. See also Maynard, 78371 (3), 88038. Humphreys, 79463–70. ³ Rusbridge, 20418 (13). ⁴ Jackson and Pringle's Report, p. 108. ⁵ Gardiner, 78640 *et seq.* ⁶ Richardson, 85623 (10). ⁷ Gardiner, 78678–9; Richardson, 85684–6. ⁸ Maynard, 78371 (3), 88038. Humphreys, 79463–70.

Answer.—"I should be sorry to see all relief left entirely to the Poor Law officials, as the most deserving would be omitted, on account of their not applying through fear of being bullied."

N.B.—Poor Law officials should remember every one has a right to make application even if not qualified to receive relief, and should treat applicants all alike as to behaviour and courtesy. The best do not apply because of this."

Answer.—"It would be impossible for any voluntary system to take in hand Poor Law administration. But I do not think that in times of *exceptional* distress Poor Law officials are such fair and considerate almoners as the clergy and their district visitors."

Answer.—"No, the relieving officers are often harsh, and even cruel, and not always honest."

Answer.—"The consideration of relief is greatly influenced by the class of people to be dealt with. Two divisions :—

(1) Those whose character for work is still unimpaired.

(2) Professional parasites of Society.

"The classes of people best dealt with by charity are those of the first class. For a satisfactory distribution of alms of any kind, personal knowledge of cases is essential. This the Poor Law officials are not in position to acquire. Furthermore, the genuine cases of distress are not, as a general rule, willing to apply for relief, and in consequence the Poor Law officials do not always have the best material to work on."

Answer.—"No."

Answer.—"I think that the relief of distress should be left in the hands of the Poor Law officials in the case of those people who *like* being relieved by charitable people."¹

371. It seems clear that, so long as this view of the harshness and inadequacy of the Poor Law methods prevails in certain sections of the community, it will be difficult or impossible to prevent the outpouring of charity, even in the most indiscriminate and demoralising manner, in times when distress is widespread. The evidence as to Press funds, therefore, seems to point to the conclusion that distress from unemployment cannot helpfully be dealt with by sporadic and unorganised charity, but that under existing conditions it is difficult to prevent the interposition of this form of charity in times of special distress.

372. We now turn to consider the operations of permanent charitable organisations affording assistance to the able-bodied. These may be divided into two classes, viz., first, those which deal chiefly, if not exclusively, with the better class of workman, and second, those which deal chiefly with the worst classes—the unemployables or the "incapables."

Charity
Organisation
Societies.

373. To the first of these classes belong the Charity Organisation and other kindred societies in the country. Of these societies we may take two as illustrating their work generally, the Charity Organisation Society in London and the Liverpool Central Relief Society. The Secretary of the latter society thus describes its work, and the statement may be taken as of general application :—

"Ordinarily, the work of the Society consists in relieving distress of a temporary kind in whatever way is likely to restore the distressed to self-support. Persons in distress are brought under the Society's notice by ministers of religion, missionaries, nurses, school attendance officers, or private persons, or personal application is made. Careful investigation is made as to the antecedents and character of the applicants and the prospects of self-support being resumed, and appropriate action is taken."²

In addition at Liverpool the Society has workshops where men in want of employment are put to firewood making. The London Society has started no such institution. Its rule is that the cases of able bodied persons temporarily out of work should be considered, like other cases, on their merits. Where the want of work is due to seasonal or other recurrent causes, conditional relief of various kinds is given, the efficacy of which is practically limited by the amount of individual influence and personal supervision that is forthcoming. If the distress is due to some exceptional temporary cause, those who suffer are dealt with in accordance with a rough classification as :—

(1) Thrifty and careful men ;

(2) Men of different grades of respectability, but non-provident and of very limited capacity ; and

(3) The idle, loafing class, and those brought low by vice or drink.

¹ Richardson, Vol. VIII., App. cii.

² Grisewood, 37105 (22).

The first class and those in Class (2) who have a decent home are temporarily supported by charity, or assisted, *e.g.*, by the payment of arrears of rent, by redeeming tools, and in other ways, and by emigration. Others are left to be dealt with by the Poor Law Guardians. This method has been frequently put in force in exceptional years. Thus "a man may be out of work whose occupation is such that relief work offered by the Guardians or under the Unemployed Workmen Act would be wholly unsuitable for him. In such cases allowances have been given, after inquiry, for weeks, or, it may be, even for months."¹ And in this way, for instance, the Kensington District Committee, who "had no faith in the remedy of employment relief," adopted the plan of making careful inquiry and granting assistance according to the requirements and needs of the particular case. In the result the men, assisted for varying periods from one or two weeks to five or six weeks, "found work for themselves in most instances, and showed real appreciation for the help afforded them."² Charity Organisation Societies generally believe in the utility of emigration as one remedy for distress, especially when the distress is due to permanent causes, as for instance, when a trade is failing or dying out or removing, and when shortness of work tends to become chronic, and the applicant cannot turn his hand to some other occupation. The Liverpool Society has set a helpful example of how to mitigate local accumulations of surplus labour, by transferring a number of families of widows with children to factory districts, where they become quite self supporting and independent of parish relief.³

374. There are more than 100 Charity Organisation "Corresponding" Societies in Great Britain; and in many of the larger towns there are District Committees as well as a Central Organisation, and visitors either attached to them in part, or working in the district and co-operating with them. These Societies no doubt, like other locally organised bodies, official or non official, differ in different places in their utility, energy, and means and influence.⁴ Sometimes a division of opinion in a town may lead to the formation of what is, or appears to be, a rival society. These are conditions which in the changes of public and philanthropic opinion are almost inevitable; no less is it likely that where with a view to ultimate self help a definite and discriminating method of inquiry and assistance is adopted—whether it be in the Poor Law or in voluntary administration some unpopularity will be incurred. And no doubt there may be other causes for it differing according to the character of the local management.⁵ But, however this may be, it is evident that in many places the operations of these societies have often been very helpful to the men assisted and most educative to those engaged in the work of assistance. In fact, it is not too much to say that, since the more general introduction of the methods of Charity Organisation, the standard of the administration of voluntary relief has been definitely raised among a large number of persons whose duty it is to deal with this branch of work. The value of societies such as that at Nottingham,⁶ as centres from which an organisation on right lines can be extended to meet the demands of special distress, is very great indeed.

375. We feel, therefore, that, while what we may call permanent charity organisation committees are well adapted for dealing with some classes of the unemployed, they will only achieve success if they are multiplied and reorganised as part of a larger and completer organisation, under a new name and upon a wider basis than at present. This point will be found more fully developed in Part VII. of our Report.

376. Chief among the larger permanent charitable agencies which purport to provide assistance for the incapables or the lower class of the unemployed, are the Salvation Army and the Church Army. The Salvation Army have furnished us with a valuable paper of proposals for the future by General Booth;⁷ but, although they kindly allowed one of our Committees to visit their colony at Hadleigh, they did not supply us with any oral or written evidence as to the general working of their scheme for helping the unemployed. The Salvation Army also preferred not to give direct information to our Special Investigators, Messrs. Jackson and Pringle, when requested to do so,⁸ and they declined to answer a schedule of questions which we sent them as to the work and cost of their colony at Hadleigh, on the ground that:—

"The Hadleigh Colony was not, in the ordinary sense of the words, established for dealing with the unemployed, but rather on behalf of those who have, through loss of character, illness,

⁸ Jackson and Pringle's Report, p. 99.

the effects of excessive drinking, and kindred evils, become for the time being unemployable, and with a view to restoring them and enabling them once more to undertake employment in this or some other country.

Men have also been received at Hadleigh who could not be regarded as unemployed or distressed persons in the usually accepted sense of those terms.

It should also be borne in mind that the moral restoration of the man is the leading purpose of the colony, and that everything there is made subservient to that end."¹

377. Although the impression made upon those of our members who visited Hadleigh was favourable we do not feel in a position to express any decided opinion as to the value of the assistance given generally by the Salvation Army to the unemployed. The indirect evidence quoted by Messrs. Jackson and Pringle in their Report raises a presumption that, in certain respects, there are defects in the Salvation Army system, when considered as a means of restoring to a life of independent industry those whom they endeavour to help.²

Church Army.

378. The Church Army submitted detailed evidence to us which convinced us that on the whole it is performing a valuable and useful work of reclamation among a class of the unemployed with whom it would perhaps be difficult or impossible to deal except by means of a semi-religious agency. Although from the figures supplied to us it appeared that, for the twelve months ending September, 1907, 66 per cent. of the men dealt with in the Church Army labour homes had previously been in workhouses, casual wards or prisons, yet we were informed that, of those who passed "the three day" work test and ultimately left the homes, 40 per cent. went to situations or were restored to their friends or emigrated. Another 42 per cent. whose conduct and industry in the homes are stated to have been satisfactory, left of their own accord to seek work, but their subsequent careers could not be traced.³ Altogether the Church Army sent out to Canada 3,000 persons in 1906, and 1,595 in 1907—and these people are stated to have succeeded well on the whole.⁴ For a complete account of the work of the Church Army we must refer to the evidence of Messrs Hamilton and Jones,⁵ and to our Investigators' Report.⁶

379. We are disposed to agree with our Special Investigators that "the devotion and enthusiasm of the Army officers is beyond all praise."⁷

Conclusions as to the sphere of charity in the relief of the able-bodied.

380. This last quotation gives us the clue to what is probably the true utility of this class of charitable institutions. They afford a means of helping otherwise hopeless cases by individual attention, directed and applied with religious enthusiasm. It would appear essential, however, that the numbers dealt with at any one place and time should not be so great as to render individual attention impossible. We think it also inexpedient that such organisations should enter to any large extent into competition with independent industries, and it is obvious that they can deal only with persons willing to submit to voluntary discipline.

381. Subject to these qualifications, we believe that these permanent charitable organisations have a special aptitude for dealing with the lower grades of the unemployed; and we think that such organisations might well be used by public relief authorities for dealing with such cases.

382. We may now sum up the conclusions at which we have been able to arrive, from our retrospect of the operations of charity in connection with the relief of the able-bodied. We have found that the intervention of sporadic and unorganised charity in times of special distress from want of employment has done little good and much harm, unless there has been available for the right distribution of the money such experience in the administration of charity as is usually to be found only in a permanent organisation. Sympathy must be linked with discrimination, if charity is not to demoralise, and discrimination is a plant of slow growth. We have also found that much of what may be called the excesses of charity are due to public distrust of the Poor Law, and we may infer that, if the excesses of charity are to be curbed, Poor Law methods must be broadened and reformed so as to regain the general confidence of the public. Beginning

at the top of the scale, we have seen that the better class unemployed workmen can be afforded effective temporary help by means of permanent charity committees, but that these committees need to be authoritatively recognised if they are to form a definite part of the system for dealing with distress from unemployment. Descending to the bottom of the scale, we have seen that the unemployables in special classes can be successfully dealt with in small numbers by charitable institutions. It would, therefore, appear that the proper field for voluntary effort is that form of distress which is due to temporary unemployment, whilst at the same time it can reclaim some of those whose unemployment is due to moral causes. The spheres of work of organised charity are wide and manifold; but the relief of permanent destitution or of chronic unemployment seems to be more properly the duty of a public authority supported by public funds.

(3) Municipal Relief Works.

383. We have seen how in times of special distress charity intervened to supplement the supposed inadequacy of the Poor Law as an agency for relieving the unemployed. It has also been pointed out how the Poor Law Board at first publicly and gratefully recognised these charitable funds as “diminishing the number of applications” to the Poor Law,¹ and subsequently, while criticising “indiscriminate” charity, themselves proposed a scheme which would “enable Boards of Guardians and charitable agencies to work with effect and rapidity, if any emergency should arise.”² The Poor Law Board in fact recognised charity as the proper agency for supplementing the Poor Law in times of distress. We now propose to describe briefly how in later times the Local Government Board came to recognise and encourage the Municipal Authorities, as an additional agency for supplementing the Poor Law in times of unemployment.

384. In 1886, Mr. Chamberlain, then President of the Local Government Board, issued the now famous Circular in which Municipal Authorities were encouraged to undertake relief works for the unemployed.³ The Circular is printed in full in the Appendix, and we need only here refer to such points in it as are essential to an understanding of the new policy which it embodied. It assumes that there exists “exceptional distress amongst the working classes”; that there is “evidence of much and increasing privation in the ranks of those who do not ordinarily seek Poor Law relief”; that “it is the duty and interest of the community to maintain” the spirit of independence⁴; that the usual Poor Law labour tests of stone-breaking and oakum picking are not suited or are even prejudicial to skilled artisans; and that “*it is not desirable that the working classes should be familiarised with poor law relief.*”⁵ In districts in which exceptional distress prevails the Board, therefore, recommends that the Guardians should confer with the Local Authorities and endeavour to arrange with the latter for the execution of works on which unskilled labour may be immediately employed. The work is to be:—

(1) Such as will not involve the stigma of pauperism.

(2) Such as all can perform, whatever may have been their previous avocation.

(3) Such as will not compete with that of other labourers at present in employment.

(4) Such as is not likely to interfere with the resumption of regular employment in their own trades by those who seek it.

385. As indications of suitable kinds of work, the making and cleansing of streets and roads, the making of recreation grounds, cemeteries, sewage farms, and waterworks are instanced.

“In all cases . . . the men employed should be engaged on the recommendation of the guardians as persons whom . . . it is undesirable to send to the workhouse, or to treat as subjects for pauper relief, . . . the wages paid should be something less than the wages ordinarily paid for similar work.”⁶

Contrast between
"relief" works in
1886 and "com-
mercial" works
in 1863.

386. It is important to bear in mind that the work which the Municipal Authorities were thus recommended to undertake was, from an economic point of view, in an entirely different category to the famous works undertaken towards the close of the Lancashire cotton famine in 1863. The works in 1886 were intended to prevent men from becoming paupers: the works in 1863 were intended to restore to an "independent livelihood" those who through exceptional distress had become paupers. When the Lancashire works were started, the distress had already been in existence for nearly two years and was rapidly diminishing. The number of persons receiving relief, which at one time reached a maximum of over half a million, had now fallen considerably, and trade and employment were improving, as is clear from the report of Mr. Farnall to the Poor Law Board. The Lancashire works were therefore intended to provide "a livelihood" for a residuum of unemployed who had not then been re-absorbed even by the remarkable revival of industry which began in 1863, grew in 1864 and culminated in 1865. In other words, the Lancashire works were a remedy for what was a long protracted condition of unemployment, and, accordingly, the works themselves were more or less protracted. They lasted for at least five years. By contrast, the works recommended by the Circular of 1886 were intended to be temporary, and for the temporary relief of a certain number of workmen temporarily out of employment.

387. Again, the work in 1863 was to a very large extent on a commercial basis.¹ It was work at ordinary wages, partly piece-work, partly time-work. It was to some extent let out to contractors in the ordinary way. And both skilled and unskilled men were employed upon the ordinary commercial conditions. The Local Authorities were expressly informed that it was the intention of the Act of Parliament "to provide remunerative employment for the labouring classes."² By contrast, at the works proposed in 1886 the men were not to obtain the market-wage for their labour; the work was in no sense to be commercial work on commercial lines; it was not to be carried out by contractors: it was to be designed specially for the unemployed, and the men selected were to be sent to the Municipal Authorities by the Guardians.³ In brief, the 1863 work was commercial employment, the 1886 work was to be relief employment. Except that the Local Authorities were given the advantage of national over local credit in obtaining their loans, there was nothing in 1863 to differentiate the work from ordinary work undertaken in times of prosperity.⁴ Except that the money paid to the workmen was called wages, and not relief, there was little or nothing economically to differentiate the work in 1886 from the work provided by Guardians as a condition of relief.

388. It is clear, therefore, that there was a very vital difference between the experiments initiated by the Central Authority in 1863 and 1886, and it appears from the Memorandum attached to the Circular of 1886 as presented to Parliament, that the Local Government Board were at any rate to some extent aware of that difference.

Municipal relief
works 1886.

389. The Local Government Board were in fact officially recognising the Municipal Authorities as suitable agencies for assisting the Guardians in relieving distress from unemployment. It is true that there is evidence that, in some districts, the Municipal Authorities were already in the habit of providing additional work in times of unemployment. But what the Central Authority now did was to insist on the "relief" nature of such work by recommending that the "wages" should be below the normal, and that the men should be taken on by recommendations from the Guardians. Men were to apply for relief to the Guardians and were then to be transferred to the Municipal Authorities.⁵ In other words, the workers were employed in their character as applicants for relief and not in their character as independent workmen. The Municipal Authorities were being urged to become a second "relief authority"; and it is interesting to note that, at any rate in some districts, as for example at Poplar, there was at the outset considerable reluctance on the part of the Municipal Authorities to take upon themselves this new responsibility.⁶

¹ Sixteenth Annual Report Poor Law Board, 1863-4, p. 15. ² *Ibid.*, p. 28. ³ Sixteenth Annual Report Local Government Board, C. 5131, 1886-7, App. A (4), pp. 6-7. Cf. Jackson and Pringle's Report, App. A., p. 11, and Return of Pauperism and Distress [H.C. 69, 1886], pp. 9-10. ⁴ 26 & 27 Vict., c. 70. ⁵ Sixteenth Annual Report Local Government Board, C. 5131, 1886-7; App. A., No. 4, pp. 5-7. ⁶ Pringle's App. II. to Jackson and Pringle's Report, pp. 61, 62.

390. The Circular of 1886 was re-issued by the Local Government Board in subsequent years,¹ and it ultimately came to be generally considered a moral obligation of the Municipal Authorities to open special relief works for the unemployed in all times of special or even seasonal distress. We have unfortunately no figures to show definitely to what extent the Municipal Authorities provided relief for the unemployed, but it is clear from the particulars given in Sir Hubert Llewellyn Smith's Report of 1893, and in our own Investigators' Report, that the amount of relief thus given outside the Poor Law must have been very considerable indeed.² For instance in Bradford, between October 1904 and January 1906, the corporation provided relief works for 1,973 men to whom they paid nearly £12,000 in wages.³ In the same way during a period of six months the Municipal Authorities in London relieved, at a cost of over £100,000 in wages alone, an indefinite number of workmen who in a single month amounted to over 13,000.⁴

391. Assuming, therefore, the existence during the last twenty years of this ancillary system of relief by the Municipal Authorities we now propose to examine briefly its effects.

Defects of Municipal Relief Works.

392. In considering the provision by municipalities of relief works for the better class of the unemployed, the first difficulty which arises is that the Municipal Authorities have no staff or machinery for ensuring that the men relieved by them really are of that class. We have seen that the mass of unemployment is among the casual and unskilled labourers and the "incapables" chronically in distress, whom, even in 1886, it was the intention of the Local Government Board to leave to the Poor Law. It was, therefore, a fair assumption, that, unless strict discrimination were used, there would be a tendency for the new relief works (ex-hypothesi more attractive than the Poor Law) to be utilised by the incapables to the exclusion of the capables. The Local Government Board apparently hoped to guard against this difficulty by suggesting that the Municipal Authorities should only employ men on the recommendation of the Guardians, who would presumably use the Poor Law machinery of inquiry to ascertain whether the cases were really suitable for such recommendation. While, however, there is evidence that in a few cases the municipalities did take on the men sent to them by the Guardians, we cannot find that as a rule there was anything in the nature of strict co-operation between the municipalities and the Guardians in the matter. The list of instances of such co-operation given by Messrs. Jackson and Pringle⁵ is very short, when we consider the vast extent to which it is admitted that this form of employment-relief was used. We infer, therefore, that, as suggested by Messrs. Jackson and Pringle, in most cases it was left to the municipal surveyor to select the "unemployed" whom the municipality were to relieve. "The usual system has been to vote a sum from the rates for certain work . . . and to open a register for the unemployed at the borough surveyor's or engineer's office or depot; little or no inquiry was made usually in these cases"⁶ and again:—

Indiscriminate acceptance of men for relief-works.

"These bodies have no investigating staff. Discrimination has sometimes been exercised by the surveyor's superintendent. . . . The men were generally taken from the unemployed registry, and it has always been the practice to give preference to the neediest applicants with large families."⁷

393. Sir Hubert Llewellyn Smith, in his report on these municipal relief works in 1893, says:—

"It appears, for example, to be conclusively shown . . . that the offer of work without discrimination to all applicants is likely to attract large numbers of a class for whom it is unlikely to be of permanent benefit. Many (though not all) of the local authorities who carried out relief work; during the past winter were sufficiently alive to this fact to attempt some kind of sifting process, though the tests applied were not always of a very searching character. It would appear, moreover, that the inquiry was usually merely directed to ascertain fitness for employment on the relief works, and did not extend to the question of the possibility of permanent assistance."⁸

394. It seems clear, therefore, that no effective measures were taken by the municipalities, as a whole, to ensure that they should confine their relief of the unemployed to the particular class of workmen suggested by the Local Government Board.

Relief works
attractive to
casual labourers.

395. But further than this, the method of apportioning the work was in most cases such as to make it especially attractive to the lower class of unskilled labourers, which, as has been indicated, the Local Government Board never intended should be relieved by the municipalities. As a rule the relief work was divided up among as many men as possible into daily doles of work, with effects which have been well described by Mr. Walter Long, M.P. :—

“The municipalities, since they could not possibly find work for all the unemployed, . . . adopted a most unfortunate shift. They gave the men so much work apiece—i.e., if they had 1,000 men and only enough work for 200, instead of carefully sifting the 1,000 and selecting the 200 most likely to be helped by relief work, they gave all the 1,000 one day's work each, so that you had 200 employed on the Monday, 200 others on the Tuesday, and so on. Thus the good men suffered and the loafers benefited, getting their one or two days' work a week and loafing the rest of the time.”¹

396. Mr. Long's evidence as to the prevalence of the system of “dole-work” is corroborated by a number of other witnesses² and also by a reference to the very interesting table contained in Sir Hubert Llewellyn Smith's report of 1893. From the conclusions of that report, we may also quote the following passage :—

“Loafers and tramps are not unwilling to do a couple of days' work—even hard work ; and many who will work for weeks together three days in each week, would be weeded out if they were compelled to work every day. This being so, schemes which merely provide a few days' work for a large number of men in successive relays are of all others the most likely to be abused. They offer work in the form which exactly suits those who are unwilling to submit to continuous exertion, while doing very little for those really in distress. The plan of employing men in two shifts—three days a week each—is recommended on the ground that it gives them a chance to look out for work during the rest of the week, but against this very real advantage must be set the encouragement offered to loafers by an arrangement which falls in with their habits.”³

Such a system is, in fact, nothing but municipal casual labour, offering additional points in favour of that gamble for a weekly existence which is the vice and the attraction of the casual's life.

397. We may, therefore, take it that, in the municipal relief system which followed the Circular of 1886, the municipalities not only failed to take adequate steps to exclude the casual labourers, but even took positive steps to attract them. It is a natural inference that the municipal relief works “relieved” chiefly the loafer and the casual labourer, and this is, in fact, the burden of most of the evidence on the subject which we have been able to collect. Here and there, as in Birmingham, we have been told that the better class of workman has been assisted by the municipality,⁴ but elsewhere, and especially in London, the evidence is conclusive that the relief works were frequented by the under-employed casual, the “professional unemployed,”⁵ and the loafer. At Newcastle, for instance, as early as 1895 the city engineer reported :—

“Decent men willing and wishful for work . . . are even intimidated and prevented from doing their best by those with whom they must work. Several cases came to our knowledge last year where men were threatened for doing more than the ‘professional’ unemployed thought was sufficient.”⁶

But even more striking is the evidence of the surveyor of Chelsea before the Select Committee of the House of Lords in 1888 :—

“The surveyor has seen a number of the unemployed to whom he gave work walking about the streets since, and is afraid they were not men who would be considered first-class workmen. They were either men who had never had regular work or did not have it now. The police told him he had a great number of thieves. Some men were discharged because they struck for higher wages : they stood round the works for a good length of time and then gradually drifted off into their old haunts, walking about the streets and so forth. He did not know that they found employment elsewhere, and does not know how they live at any time. Fifty per cent. of the tales they told of their distress was imposture, he was sure, but there was undoubtedly a dismal background of fact which was very painful to listen to. . . . When snowstorms occur he would put on first the unemployed and then afterwards the more industrious labourers who were thrown out by the storm ; men of a superior class to the former, being out of work temporarily, while these are out of work generally.”⁷

¹Long, 78465. ²Angel, Vol. IX., App. lxxxviii. (2) ; Jameson, Vol. IX., App. xci. (2) ; Maynard, 78371 (14) ; Stepney, 79644-5 ; Connolly, 99146 (5) ; Bailward, 78703 (2), 78708-9, 78871-78931-2 ; Morris, 79033 (10), 79049-51 ; Heckford, 80573-9, 80691-703, 80592, 80619-21 ; Balfour, 77744 ; Somers, 82377 (4) ; Gageby, 99299 ; Wood, Vol. VIII., App. lxxxv. (15). ³Jackson and Pringle's Report, p. 37 ; Humphreys, 79407 (16-20) ; Manfield, Vol. VIII., App. xlix. (3) ; Fairchild, Vol. VIII., App. xxiv. 398. It is open to doubt whether the municipal relief works, in addition to attracting the casual labourers, did not even add to their numbers. One experienced witness informed us that :—

Demoralising effect of relief-works.

“The natural result was that before long ‘a day from the vestry’ came to be looked upon as a matter of right and its refusal as an injustice. Crowds gathered round the vestry every winter waiting for work and gradually losing their hold upon the open labour market. At a meeting of the vestry in 1895 a young man complained that ‘he had been up every day for ten weeks, but had not been taken on once,’ and he was one of many. Almost every man capable of work who applied to the Charity Organisation Society or the guardians had had one or more days from the vestry, and a generation has grown up which has learned to look upon it as a right.”¹

A similar criticism is also made by the Bishop of Stepney, who says :—

“This is a plan which obviously rather creates a class of unemployed. . . . In several boroughs there is, or until recently was, a real danger of a class of permanently unemployed expecting winter by winter to subsist on doles of municipal work.”²

399. Another defect of relief works to which frequent reference has been made in the evidence submitted to us, is its demoralising effect on the industrial capacity of the men employed. We have seen how demoralising in this sense is the test-work supplied in workhouses and labour-yards as a condition of relief, and we think it may generally be said of municipal relief work that, in proportion as emphasis is laid on its relief character and not on its commercial character, so the work degenerates from helpful, manly exertion for wages into the inefficient and lazy performance of the necessary prelude to a meal.³

400. If the men are taken on in relief work because they are destitute and not because they are workmen, it follows that their capacity as workmen has no bearing on the question of their employment or discharge. As we have seen, among the unemployed, are always a number and sometimes a majority, of inefficient, who have become so from want of food, of training, or of brains. These inefficient set the pace at relief-works, just as the least efficient vessel in a fleet sets the pace of the fleet. The pace and standard of the inefficient on relief-works spread by contagion and example to the few efficient men employed, with the result that there is a general deterioration in the industrial efficiency on relief-work. Hence the extravagant cost of relief-work, as compared with commercial work, which has been so generally admitted.⁴

Excessive cost of relief-work.

401. The whole subject has been dealt with at length in Messrs. Jackson and Pringle's Report,⁵ from which we may quote the following instances in support of our remarks :—

“Some forty or fifty select outdoor labourers from the register of the unemployed at Blackburn were put on to sewer excavation. It is said that the few permanent men who were put with them and the better of the Unemployed themselves, got demoralised on relief works. The Borough Surveyor says that he would not again mix men, and he estimated that where an ordinary man would do 5s. worth of work, an ‘Unemployed’ would only do 1s. worth.”⁶

“From St. Pancras we were informed that the cost of painting the arc lamp columns by the unemployed amounted to about 8s. 6d. as against 6s. by contract in the open market. ‘It certainly was not so well done, in spite of rigid supervision.’”⁷

“In Stepney the borough engineer worked out the cost carefully a year or two back and there was an increase of 33 per cent. over ordinary labour.”⁸

“At Gateshead the Church Army Captain thought the Distress Register men worse than his ordinary clients. The estimated value of their wood-chopping work was £35 0s. 11d., for which they were paid £99 8s. 6d. Various other work was given at Gateshead, excavating, painting and stonebreaking at a total cost in wages of £654 4s., of which the estimated value was £447 5s. 2d.”⁹

“At Liverpool work which cost £2,000 was only estimated as worth £350 to £400. (Returns of the Local Government Board).¹⁰

¹ Bailward, 78703 (2). ² Stepney, 79619 (8). See also Angel, Vol. IX., App. lxxxviii. (5). ³ Eighteenth Annual Report Poor Law Board, 1865-6; Cf. (12); Sutton, Vol. VIII., App. lxxvi. (5). ⁵ Jackson and Pringle's Report, pp. 125-132. ⁶ *Ibid.*, p. 127. ⁷ *Ibid.*, p. 125. ⁸ *Ibid.*, p. 125. ⁹ *Ibid.*, p. 128. ¹⁰ *Ibid.*, p. 129.

Excessive cost of relief-work.

"At York about 9½ acres at Naburn Asylum were dug over by the unemployed. They were paid £498 16s., but the value of the work, as estimated after consultation with various farmers, was £57."¹

402. But we would especially draw attention to the following instances in support of the view that, the more the conditions of the undertaking approach the commercial and recede from the eleemosynary, the better the industrial results of the work.

"In 1905-6 the borough surveyor (Woolwich) reported that:—'As a rule the men showed a willingness to earn their wages. There was little fault to find with them when fairly started and a larger proportion were as capable as the regular men.' The men chosen by the surveyor in 1905-6 were employed by the borough under the usual conditions, *i.e.*, likely men only were chosen and told they must earn their wages. Practically all the men recommended by the distress committee to the surveyor were employed by him. The business of recommending and employing were kept clearly separate, and this was thought to explain the success achieved."²

"An interesting case is that of Barking, where twenty men were employed for four months. They were at first paid at a rate which led to an expenditure of 1s. 5d. for painting a single bay of iron railings. The council thought this excessive and offered 10d. for the same work, paying by the work done. The men accepted the offer and are said to have 'earned good money.'"³

403. In some cases the cost of relief works has been still further heightened by the payment to the unemployed of "full Trade Union rate of wages even when the men were obviously not of the Trade Union class or standard of efficiency."⁴ This device, while it purports to assimilate the relief-works to ordinary commercial works, is, economically considered, only a method of increasing the eleemosynary nature of the undertaking; the difference between the actual and the market cost of the work is thereby increased, and that difference is a measure of the increased free gift of money from the pockets of the ratepayers to the pockets of the unemployed.

404. There is no doubt, therefore, that municipal relief-works, whether at or below Trade Union rates of wages, have been found by general experience to be a most costly device for concealing the fact that a certain number of workmen are reduced to dependence upon the rates. Of the cost in itself there would perhaps be little reason to complain, if the device had proved of real help to the workmen: but unfortunately the relief works have been useless as a remedy and demoralising as a method. In fact in many places, as for example at West Ham⁵ and Leicester,⁶ the municipal relief works, which were intended to be exceptional and remedial, became seasonal and casual in their nature, and as prejudicial to the workmen as any other form of seasonal or casual employment.

Effect of relief-work on municipal authorities.

405. Nor is a system of municipal relief-works entirely free from a demoralising effect on the authorities who provide them. Town councillors may find themselves open to pressure from their constituents which it is difficult to resist,⁷ especially if, as in some localities, 35, 38, or even 47 per cent. of those applying for work have the right to vote at the election of the local authority which is expected to supply the work.⁸ But it is obvious that no considerations should be allowed to enter into the question of providing relief-works other than the dispassionate decision as to whether, firstly, the situation justifies the taking of special measures, and, secondly, whether relief-works can be opened in the particular locality such as will benefit the unemployed without prejudicing the employed.

406. This local pressure from within a Borough, combined with the Central Authority's pressure from without, has, we have no doubt, in many cases caused Local Authorities to forestall, by relief-works, work which they would in the ordinary course of events have shortly put in hand, and upon which they would have largely or exclusively employed their regular staff of workmen. The ordinary work to be done by Local Authorities is provided for in their estimates, and so far as possible it is, or should be, arranged so that the work is performed by men employed throughout the year. If, therefore, ordinary work is anticipated and made into relief-work for the unemployed, it either displaces these permanent hands, or lessens the amount of work they would otherwise have performed and been paid for. According to our Special Investigators, the forestalling of the work of the more regular labourers by postponing a Borough Council's works to the winter for the relief

¹ Jackson and Pringle's Report, p. 130. ² *Ibid.*, p. 126. ³ *Ibid.*, p. 127. ⁴ *Ibid.*, p. 131.

⁷ Wheatley, Vol. VIII., App. lxxxii. (2); Manfield, Vol. VIII., App. xlix. (3); Green, Vol. VIII. App. xxxii. (13); Bailward, 78703 (2); ⁸ Jackson and Pringle's Report, pp. 74-5.

of the unemployed has been fairly common, especially in the provinces.¹ The hardship generally falls on the class of men who are regularly taken on when an expansion of municipal work occurs—the Municipal Authorities' second list men. But occasionally the regular municipal employees are also affected. The Bethnal Green Distress Committee point out:—

“Carrying out . . . ordinary work at an earlier period than is necessary is directly calculated to have the effect of causing at a future date a reduction in the number of men regularly employed. . . . This means that the better class of workmen . . . become unemployed for the sole reason that the work . . . has been done at an earlier period by the unemployed at a much greater cost and with far less efficiency.”²

407. Instances in illustration of this tendency are cited by Messrs. Jackson and Pringle, and given elsewhere in our evidence, and though we have no reason to believe that there has as yet been any considerable displacement of regular municipal employees by reason of relief-works, it is obvious that the tendency to such displacement must increase in proportion as, year by year, the number of extraordinary and financially feasible undertakings available as relief-works diminishes,³ leaving in effect no scope for relief-works except the ordinary work of the Local Authorities.

408. We have now shown that municipal relief-works have not assisted but rather prejudiced the better class of workmen they were intended to help. On the other hand they have encouraged the casual labourers, by giving them a further supply of that casual work which is so dear to their hearts and so demoralising to their character. They have encouraged and not helped the incapables; they have discouraged and not helped the capables. Moreover, the provision of artificial work for unskilled labourers in particular localities can only tend to fix in such localities these agglomerations of unskilled labour, to disperse which is one of the solutions of local unemployment. We regret, therefore, that we must pronounce the system of relief-works suggested by the Local Government Board Circular of 1886 a failure, and we support our condemnation of them by the following extract from the Report of our Special Investigators:—

“The Municipal Relief Works, encouraged by Mr. Chamberlain's circular in 1886, have been in operation for twenty years, and must, we think, be pronounced a complete failure—a failure accentuated by the attempt to organise them by the Unemployed Workmen's Act of 1905. The evidence we have collected seems conclusive that relief works are economically useless. Either ordinary work is undertaken, in which case it is merely forestalled, and, later, throws out of employment the men who are in the more or less regular employ of the councils, or else it is sham work which we believe to be even more deteriorating than direct relief. If the ‘right to work’ is to be construed as the right to easy work, we are directly encouraging the lazy and incompetent and discouraging the trade unionist and the thrifty. The evidence seems very strong that most men on relief works do not do their best, and to pay them less than ordinary wages only encourages the belief that they are not expected to do so. Competence to do the work required should be the basis for selection of men for work, not destitution and a large family. These are very good reasons for giving relief, but not for giving work.”⁴

(4).—The Unemployed Workmen Act, 1905.

409. It was with a view to remedying some of the defects in those methods of relieving the able-bodied, which we have reviewed in the previous sections, that in the winter of 1903–4 Mr. Walter Long, then President of the Local Government Board, started his scheme of Joint Committees for dealing with the unemployed in London,* which has since been developed and legalised in the Unemployed Workmen Act of 1905.⁵

410. To make intelligible the criticisms which we shall find ourselves obliged to pass on the Act, it is necessary that we should devote a short space to a description of the

* For details of this scheme see Jackson's Report on Unemployment, pp. 68, etc. See also that Report, p. 133 for references to the recommendations and conclusions of various Commissions and authorities on Unemployment Distress.

¹ Jackson and Pringle's Report, pp. 117–9. ² *Ibid.*, p. 117. ³ Richardson, 91141 (14). ⁴ Jackson and Pringle's Report, p. 148. ⁵ 5 Edw. VII., c. 18.

authorities it set up; of the classes of workmen with whom it was intended to deal; of the methods contemplated for assisting such workmen; and finally, of the methods by which the Act is financed.

Authorities set
up under the
Act.

411. We have seen how the problem of relief to the able-bodied is largely, if not exclusively, an urban problem, and it is significant of this incidence of unemployment that the Unemployed Workmen Act, following the precedent of Mr. Long's precursory scheme of 1903-4, first sets up machinery for London,¹ subsequently applies that machinery to the large urban centres outside London,² and lastly enables smaller urban centres and the rural districts to apply for permission to set up machinery if necessary. In London every Borough Council was to appoint a Distress Committee consisting of members of the Borough Council, of the Boards of Guardians, and of persons experienced in the relief of distress. Exercising authority over the whole of London, there was to be appointed a Central Body consisting partly of members of the Distress Committees, partly of members of the London County Council, partly of co-opted persons, and partly of persons nominated by the Local Government Board.³

412. In every Borough and urban district outside London, with a population of 50,000 and over, there was to be compulsorily established a Distress Committee on the London pattern, and combining the powers both of a Distress Committee, and of a Central Body.⁴ A Distress Committee on similar lines might also be established by the Local Government Board in any Borough or urban district with a population of less than 50,000, but not less than 10,000 on the application of the Council of the Borough or district.

Moreover the Board might, on the application of a County or Borough or District Council or Board of Guardians, or on their own initiative, establish in any county or part of a county, a Central Body and Distress Committees with similar constitutions and similar powers and duties to those of the Central Body and Distress Committees in London.⁵

413. In Counties, Boroughs, and districts, where no Distress Committee was set up, it was provided that the County Council or County Borough Council should appoint a Special Committee to collect and supply information as to the conditions of labour in their district by means of Labour Exchanges, etc.⁶ We have no evidence to show that effect was given to this valuable provision by the Local Authorities, or that any pressure was put upon them to do so.

414. In all, 29 Distress Committees and a Central Body have been established in London, and 89 Distress Committees in the Provinces.^{7*} It will be observed that the establishment of Distress Committees only applied compulsorily to the large urban centres. We understand that Distress Committees have been formed in 14 urban districts with a population of less than 50,000 in 1901, and that no Central Body or Distress Committees on the London plan have been established in provincial counties.

Duties of the
Local Authorities.

415. The main duties of the Distress Committees in London are to acquaint themselves with the conditions of labour within their area, and, *when so required by the Central Body*, to receive, inquire into, and discriminate between any applications made to them from persons unemployed.⁸ Outside London, as already explained, the Distress Committees have all the powers possessed in London by the Distress Committees and the Central Body. This distinction must be borne in mind in what follows.

416. A Distress Committee may endeavour to obtain work for a suitable applicant, but have no power to provide work for him. They must refer to the Central Body all cases for whom they are unable to obtain work, but for whom they think work should, if possible, be provided.⁹ The Distress Committees are also to keep a register of the Unemployed and a record or case-paper with regard to each applicant who comes before them: and before "entertaining" a case they are bound to inquire into it.¹⁰

* One of these Committees, that of Northfleet, was dissolved in August, 1907.

¹ 5 Edw. vii. c. 18, § Sec. 1. ² *Ibid.*, Sec. 2. ³ *Ibid.*, Sec. 1 (1). ⁴ *Ibid.*, Sec. 2 (1). ⁵ *Ibid.*, Sec. 2 (2).
⁶ *Ibid.*, Sec. 2 (3). ⁷ Return as to the Proceedings of Distress Committees, etc., for year ending March 31st, 1908. p. 2. ⁸ 5 Edw. VII., c. 18, Sec. 1 (2). ⁹ *Ibid.*, Sec. 1 (3). ¹⁰ *Ibid.*, Sec. 1 (2); St. R. and O., 1905, No. 1071, Art. VI. (1).

417. The main functions of the Central Body are :

(1.) To decide when the Distress Committees can begin to receive applications from unemployed persons ;¹

(2.) To superintend and as far as possible co-ordinate the action of the Distress Committees ;²

(3.) To establish, take over or assist labour exchanges or employment registers and collect information.³

(4.) To assist an unemployed person referred to them by a Distress Committee, by aiding his emigration or migration or by providing, or contributing towards the provision of, temporary work in such manner as they think best calculated to put him in a position to obtain regular work or other means of supporting himself.⁴

418. The qualifications for assistance under the Act are of a two-fold nature: firstly, those prescribed by the Act, and secondly, those prescribed by Regulations of the Local Government Board. Classes of persons who can be assisted under the Act.

419. The qualifications prescribed by the Act are :—

(1.) That the applicant must have resided for not less than 12 months immediately before the application in the district ;⁵

(2.) That the applicant is honestly desirous of obtaining work ;

(3.) That he is temporarily unable to do so from causes over which he has no control ;

(4.) That his case is capable of more suitable treatment under the Act than under the Poor Law.⁶

420. The qualifications prescribed by the Local Government Board now in force are :—

(1.) That the applicant is of good character ;

(2.) That [he has not from any source sufficient means to maintain himself and his dependants ;⁷

421. In addition the Distress Committees have been instructed by the Local Government Board to give special preference to a person complying with the following conditions :—

(1.) That he has in the past been regularly employed, and has been well-conducted and thrifty ; and

(2.) That at the time of his application he has a wife, child, or other dependant.

(3.) That in respect of his age and physical condition, he is qualified for such work as the Distress Committee may be able to obtain.⁸

422. It will be seen that the methods of assistance are roughly three, viz. :—

(1.) Emigration and migration ;

(2.) The provision or arranging for the provision of temporary work ;⁹ and Methods of assisting the Unemployed under the Act.

(3.) Labour bureaux.¹⁰

The first two methods of assistance can be offered only to persons with the qualifications prescribed in the preceding paragraphs, but the last method of assistance—labour bureaux—is available for all unemployed workmen irrespective of any other qualification.

15. Edw. VII. c. 18. Sec. 1 (2). 2 5 Edw. VII., c. 18, Sec. 1 (4). 3 *Ibid.*, Sec. 1 (4). 4 *Ibid.*, Sec. 1 (5).
5 *Ibid.*, Sec. 1 (2). 6 Sec. 1 (3). 7 St. R. and O., 1905, No. 1071., Art. II. (iv.). 8 *Ibid.*, Art. II.
(2 ; a, b, c). 9 5 Edw. VII., c. 18, Sec. 1 (5). 10 *Ibid.*, Sec. 1 (4).

423. With regard to the provision of temporary work, it is laid down by the Act or the Regulations :—

Provision of
work.

(1.) That any such work must be of actual and substantial utility ;¹

(2.) That it must afford continuous occupation for the person employed with such absence only as may be needed to facilitate his search for regular work ;² and

(3.) That the total remuneration for any given period must be less than that which would, under ordinary circumstances, be earned by an unskilled labourer for continuous work during the same period.²

424. Temporary work may not be provided for any person for a longer period than 16 weeks,³ except with the consent of the Local Government Board, and contributions by a Distress Committee or Central Body are allowed towards the provision of temporary work only in those cases in which the work is provided by a local authority or Public Body.⁴

For the purpose of the Act it is open to the Central Body to rent or purchase land, etc.⁵

Finance of
the Local
Authorities.

425. The Act contemplated that the expenditure of the local authorities should be defrayed from two different sources. Firstly, it authorised the payment, from a limited contribution to be made out of the rates, of establishment charges, and expenses incurred in relation to labour exchanges, migration and emigration and the acquisition of land. Secondly, it was contemplated that all other expenses should be defrayed⁶ out of voluntary contributions. Since the first year after the passing of the Act, however, Parliament has granted an annual sum of money, amounting to £200,000, out of which contributions are made by the Local Government Boards of England, Scotland and Ireland respectively towards defraying the cost of work provided under the Act. This year the amount is to be increased to £300,000.

General objects
of Unemployed
Workmen Act.

426. From this brief summary of the provisions of the Act, it will be seen that it aimed at combining members of municipal, Poor Law, and charitable bodies into a new and special local authority, whose normal duty was to watch, so to speak, for the approach of unemployment in their district, and whose abnormal duty was to provide help for the better class of unemployed workmen under conditions which, it was hoped, would avoid some of the evils which had arisen through the unregulated provision of work by the municipalities and charitable agencies.

427. In so far as the Act provided for the diagnosis of the problem of unemployment and for the classification and dispersal of the unemployed, it would seem, *a priori*, to have met a need which has been indicated by our examination of the modern problem of unemployment in previous sections. In so far, however, as the Act perpetuated the system of relief-works, in so far as it assumed that the chief problem of unemployment was furnished by the capable workmen as distinct from the incapable, and in so far as it added yet another authority to the medley of organisations already dealing with the unemployed, the Act seems to have been doomed from the outset to failure administratively, and to failure as a remedy for the evils against which it was designed.

Class of men
for whom
the Act was
intended.

428. We propose to deal briefly with what we conceive to have been the three main objects of the Unemployed Workmen Act, and to show from our evidence how these objects have been frustrated.

429. In his evidence Mr. Gerald Balfour informed us :—

“ We distinctly proposed to deal with the *elite* of the unemployed. . . . The unemployed for whom the Bill was intended were respectable workmen settled in a locality, hitherto accustomed to regular work, but temporarily out of employment through circumstances beyond their control, capable workmen with hope of return to regular work after tiding over a period of temporary distress.” ⁷

¹ St. R. and O., 1905, No. 1071, Art. V., (ia). ² St. R. and O., 1905, No. 1071, Art. V. (i.).
³ Art. V. (iv.). ⁴ Art. V. (v.). ⁵ Art. X. ⁶ 5 Edw. VII., c. 18, Sec. 1 (6). ⁷ Balfour, 77738.

430. It seems therefore clear that it was the intention that the Act should benefit *regular* workmen of good character temporarily out of work. Hence it is remarkable that the Act itself lays down no qualifications to give effect to this intention. Regular employment does not entitle to the benefits of the Act. Irregular employment does not debar from the benefits of the Act. Putting aside the residential qualification, the only statutory definition of a beneficiary under the Act is, "*any applicant (who) is honestly desirous of obtaining work, but is temporarily unable to do so from exceptional causes over which he has no control,*" and whose case the Distress Committee consider "*is capable of more suitable treatment under this Act than under the Poor Law.*"¹

431. In considering the meaning of "*exceptional causes*" in the above definition, it must be remembered that the whole machinery of the Act, so far as the provision of work is concerned, was intended to apply only in exceptional emergencies. Distress Committees are to be always in readiness, but are not to receive or entertain applications for work until so directed by the Central Body. It is therefore clear that it would be quite possible for either a casual or a seasonal labourer out of employment to urge that, though he was often out of employment, on the present occasion he was out of employment owing to exceptional distress. It would, in fact, be very difficult to say that, under the terms of the Act, casual or even seasonal labourers could be excluded. This view was apparently taken by the Local Government Board,² inasmuch as, under their Regulations, regular and thrifty workers are to be given, not the exclusive right, but only the preference to the benefits of the Act. There was thus implied at any rate a secondary right of the irregular and unthrifty worker to receive assistance. It would appear, therefore, that neither the terms of the Act nor the Regulations of the Local Government Board exclude irregular or casual workers from the benefits of the Act.

432. As a matter of fact, as we have already indicated in previous paragraphs, the general statistics show conclusively that the greater proportion of applicants to Distress Committees were either casual labourers or persons belonging to those trades in which casuality prevails. This testimony of the general statistics is amply corroborated by the evidence we have been able to obtain from individual Distress Committees. In a few places, such as Woolwich,³ Newcastle,⁴ and Cardiff,⁵ the majority of the applicants may have been drawn from a higher social stratum than those who ordinarily applied to the Poor Law, and possibly were decent hard-working men anxious to get employment. But these cases are the exceptions, and, as a rule, it seems clear that the bulk of those seeking benefit from the Unemployed Workmen Act have been irregular labourers more or less in a chronic state of destitution.⁶

Class of applicants under the Act.

433. Dealing first with London, we are told that the bulk of the applicants to Distress Committees are "*men normally in or on the verge of distress, men earning perhaps fair daily wages, but getting on an average only two or three days' work in a week, or two or three weeks in a month.*"⁷ At Bethnal Green the great majority of the applicants were casuals—the same people, generally speaking, who applied to the Poor Law or Borough Council in former years.⁸ In West Ham, out of 4,825 cases registered in 1906–7, 48·7 per cent. were casual labourers.⁹

434. Out of 675 applications considered by the Marylebone Distress Committee in 1905–6, 236, or rather more than one-third, were ineligible from want of good character or capacity. In 1906–7, the Committee considered 361 applications, of which 173 were found to be ineligible, a considerable number of these having refused to consider colony work.¹⁰ Generally, there was a very small proportion belonging to any kind of organisation or making any kind of provision for want of work or sickness.¹¹ Of the 2,085 applicants registered by the Camberwell Distress Committee in 1905–6, 716 were "not

¹ Edw. VII., c. 18, Sec. 1 (3). ² Balfour, 77825, 77828; see also Maynard, 78383. ³ Larner, 79226, 79237. ⁴ Wood, 85722–3. ⁵ Melhuish, Vol. VIII., App. li. (11). ⁶ Balfour, 77825–7; Maynard, 78371 (47); Wood, 80244–6; Marshall, 82146 (19, 20, 23). ⁷ Gardner, 92112 (11, 12, 14), 92125, 92130–2, 92367–70; Somers, 82378–88. ⁸ Beveridge, 77831 (8). ⁹ Bailward, 78720, 78793. ¹⁰ Humphreys, 79408 (6), 79418. ¹¹ Morris, 79034 (4). ¹² Morris, 79034 (5).

Class of applicants under the Act.

recommended for work;" that is, they "were physically unfit, of bad character, or of the ordinary loafing class, never had any particular trade, and were more or less in regular receipt of Poor Law relief."¹

435. In the Provinces, we find almost equally ominous instances. At Salford, in 1906, 64 per cent. of those registered were disqualified on account of bad conduct, receipt of Poor Law relief, etc., etc.² The Clerk to the Walsall Distress Committee thinks that about 75 per cent. of the applicants were "perfectly useless as workmen, they never have worked, they never want to work, what they want to get is the daily wage which is paid to them."³ At Preston, in 1905-6, 45 per cent., and in 1906-7, 51 per cent. of the applicants were unsuitable.⁴ At Liverpool more than two-thirds of the applicants were chronically unemployed or casuals.⁵

436. The evidence, therefore, seems overwhelming that the bulk of the applicants to Distress Committees have been persons of the class to which the casual labourer belongs.

Class of persons assisted under the Act.

437. Such being the character of the bulk of the applicants for assistance under the Act, we turn to the evidence in order to ascertain what class of persons actually received assistance under the Act or under the precursory scheme of Mr. Long. Under Mr. Long's scheme, it appears that, though there was better discrimination than before of the skilled regular workmen, it was not sufficiently effective.⁶ For out of 46,000 applicants 3,496 were selected, and of these 55 per cent. were returned as general labourers, and 20 per cent. as in the building trade. Of the remainder a very large proportion were low-skilled and irregular workmen. The experience of several Joint Committees was that the men on the whole did not come within either the spirit or the letter of the scheme.⁷

438. Under the Unemployed Workmen Act, according to the latest Return of the Local Government Board, out of a total of 54,600 applicants pronounced qualified by Distress Committees, 29,100, or 53 per cent., were "casual or general labourers," and 10,500, or 19 per cent., belonged to the building trades, and these two categories of cases thus formed 72 per cent. of the number of cases entertained as qualified for assistance under the Act.⁸

439. In quoting these figures, we do not intend to imply that every casual or seasonal workman is necessarily a case of chronic unemployment to which the Act should not apply. Even among the dock labourers, there is a considerable class of respectable men who obtain regular and sufficient employment at what is a typically irregular industry,⁹ and a trade depression might well throw some of these out of work owing to exceptional circumstances over which they have no control. When cases of this kind do occur, it may be surmised that these men would have some chance of recovering their normal and sufficient amount of employment, provided they were "tided over" the time of depression. They are cases which may rightly be assisted by voluntary agencies,¹⁰ and among the applicants classed as "casual or general labourers," there may be men normally obtaining such a sufficiency of irregular employment that they have as good a chance as a "regular" workman of being "tided over" into independence again by means of the Unemployed Workmen Act. Such men, however, must be but a comparatively small number. The opinion is overwhelming that among the casual labourers under-employment is very rife. Hence, in order to discover those who, though casual labourers, are normally sufficiently employed, the most careful discrimination would be necessary.

The inquiry would have to be not whether the man is destitute—for a large proportion of casual workers are always verging upon destitution—but whether the man in normal years is a respectable workman earning sufficient to keep himself respectably the year through. Such an inquiry would be very difficult in the case of a successful “casual,” getting employment from one, two, or perhaps even half a dozen employers in the year. But unless such an inquiry were made, it may be assumed that the very large majority of casual labourers assisted would belong to the class of the chronically under-employed or unemployed for whom the Unemployed Workmen Act was not intended.

Class of persons assisted under the Act.

441. The question of the method of inquiry and selection adopted becomes, then, crucial in deciding whether the 30,000 casual and general labourers, found qualified by the Distress Committees, may be assumed to have been really suitable for treatment under the Unemployed Workmen Act. On this point Mr. Crooks has told us that the Distress Committees selected the most distressful cases, which they ought not to have done, the object of the Act being to save men from falling into the ranks of the permanently unemployed. Neither the Act nor the Regulations made destitution the test.¹ The same opinion was expressed by Mr. Maynard, late Secretary of the Central Unemployed Body in London, who thought the classification was seldom carried out thoroughly by the Distress Committees, chiefly because they objected to leaving unassisted any class which they considered worthy of assistance.² Mr. Scotland, Works Superintendent of the Central Body, has informed us that the men selected by the Distress Committees in London and assisted by the Central Body were mainly builders and dock labourers, factory and warehousemen and general casual labourers.³ Mr. Hammond, Late Superintendent of the Farnbridge Labour Colony, informed us that “a very large number of the men assisted at the Labour Colonies under the Central Unemployed Body are chronically unemployed.”⁴

442. As to the Provinces, Messrs. Jackson and Pringle have reported to us:—

“There have been in some boroughs small Executive or Classification Committees, and they have sometimes interviewed applicants, and very carefully considered their relative claims. In a very large number of towns, however, the selection of men for work has been left practically in the hands of the clerk to the Distress Committee. In some places there were no rejections. Preference was given in most boroughs to married men with families, and it would be true generally to say that the ground of selection for work has not been that a man has been thrifty, or had a good industrial record, and had been thrown out of work through general depression of trade, but that he is destitute, has a large family, and can show no chance of employment in the ordinary market.”⁵

443. With a view to testing the evidence which we have thus received, we issued questions to the Distress Committees in London and the Provinces, asking them *inter alia* to inform us to what extent they had been able to give special preference to the classes of men indicated in the Local Government Board Regulations, which classes it will be remembered were roughly the following three:—

- (1) Regular thrifty workers;
- (2) Men with families;
- (3) Men physically suitable for the work which could be provided.

444. About half of the London Distress Committees (15) reported to us that they had endeavoured to give preference as required by the Regulations. Eleven others had only done so to a limited extent, and three Committees reported that they had given no preference under the Regulations.⁶

445. Turning to the areas outside London, of 79 active Committees, 9 reported that they had given no preference under the Regulations; 40 that they had given preference to needy men with families; and only from the replies of 26 is it possible

Class of persons
assisted under
the Act.

to gather that preference may have been given to regular workers.¹ The conclusions which we draw from these replies, which are printed in full in the Appendix, are that the number of cases "entertained" outside the class of irregular or under-employed workers was, on the whole small, and that the necessities of the particular applicants have far outweighed any other consideration, such as the regularity of their normal employment or the prospect of the help given being of permanent benefit.

446. The result has been, according to the evidence of one witness, that the work has not been provided for the persons contemplated (*viz.*, the exceptionally distressed), nor has it achieved the purpose contemplated (*viz.*, restoration to regular employment).² For those assisted were mostly irregular workmen before applying, and they simply returned to the same industrial condition when the relief work was over. In July, 1906, only 31 per cent. of those assisted by the Stepney Distress Committee in 1905-6 were found to be in "fairly permanent work," and, of 278 men who had been given work by the same Committee in 1905-6, 45 per cent. applied again in 1906-7.³ And even in Woolwich, where the unemployed were admittedly of an exceptionally superior class, not more than half of the men provided with work subsequently obtained employment in the open market.⁴

447. Even in the labour colonies, the encouraging features of which we shall describe elsewhere, the presence of the casual labourer seems to have spread failure. The general opinion of the chief witnesses as to the result of colony work under the Act is that the men, although recuperated and sometimes made into competent workmen, afterwards relapsed into their old conditions, with little more chance of finding work for themselves than they had had before.⁵

448. A further indication of the extent to which persons assisted under the Act are of the class not exceptionally but chronically requiring assistance is afforded by the number of recurrent applications for relief to Distress Committees. Messrs. Jackson and Pringle have given some particulars of the number of recurrent cases in their Report.⁶ Although the results they give are by no means exhaustive, the figures seem to indicate that in some places in London, roughly speaking 30 per cent. of those registered in 1906 were persons who had applied either to Mr. Long's Joint Committees in 1904-5, to the Mansion House Committee in 1893,⁷ or even to the Mansion House Fund in 1886,⁸ while at West Ham, 2,088, or over 40 per cent., re-registered in the winter of 1906-1907.⁹ As to the Provinces, at Bolton it was thought that 75 per cent. of the applications had applied in previous years,¹⁰ at Newcastle 36 per cent.,¹¹ and at Devonport 64 per cent.¹²

449. This evidence is substantiated by that which we have ourselves taken. At Bethnal Green we were told that more than one half of those who registered in 1906-7 had been on the register in previous years, and 22 per cent. of those who registered in 1905-6 re-applied in 1906-7.¹³ Of 245 applicants to the Nottingham Distress Committee in 1906, 102 had applied in the previous year.¹⁴ At Bradford, 521 persons re-registered the second year,¹⁵ and at Norwich 41 per cent.¹⁶

450. In practice, therefore, we find that the irregular and under-employed labourer, who was intended by the promoters of the Act to be excluded, has in fact very largely, though not exclusively, benefited under the Act; while on the other hand, there is a considerable body of evidence to show that, partly on account of this extensive use of the Act by the casual labourers, the better class of workmen, for whom it was intended, have in some districts refused to apply for its benefits.¹⁷

451. A second object of the Unemployed Workmen Act was, apparently, to correct some of the abuses of the municipal relief-works system inaugurated by Mr. Chamberlain in 1886. Mr. Gerald Balfour informed us that :—

Effect of the
Act on Municipal
Relief works.

“ The situation was quite accurately summed up in a Report issued by the Charity Organisation Society in 1904, in which it was said : ‘ There are at present two public relief agencies in the field—the Poor Law Guardians under the Local Government Board, and the Borough Council, who have a free hand.’ That was the situation which the Government had to deal with, and the question was, what was the best way to deal with it.”¹

Mr. Long also told us that his aim was to “ regularise ” and “ secure more beneficial results ” from the then existing system of municipal relief-works, the evils of which were admitted.²

452. It was apparently thought that the establishment of a Special Authority for dealing preferentially with the better class of men who since 1886 had been referred to the Municipal Authorities, would to some extent deprive those Authorities of the excuse for continuing a separate system of relief with separate methods and separate standards.

453. The new “ Unemployed ” authority, the Distress Committee, was, in fact, closely associated with the Municipal Council, and, in law, a Committee of it. It was therefore, perhaps, a fair inference that, even if the municipalities were to continue their separate system of relief, they would tend to incorporate in that system any improvements suggested by the experience of the Distress Committees. And there was even a more direct inducement for them to do so. The Distress Committees were empowered to contribute towards the cost of relief-works provided by the Municipalities where such works complied with the conditions laid down in the Regulations of the Local Government Board.

454. Hence the Act provided inducements, both moral and monetary, for the municipalities either to fall into line with the new system and to abandon their separate relief works, or else, if they retained them, to reform them. But the successful operation of these inducements was conditional on the Act realising the objects of its promoters. If the new authorities provided, as we have seen they did provide, for the same class as the Poor Law, and if they failed to provide, as we have seen they did fail to provide, for the better class of workmen, then the argument in favour of the municipalities themselves providing for the better class unemployed remained practically as forcible as before the new Act was passed. If the authorities under the Unemployed Workmen Act, instead of reforming, merely perpetuated the methods of municipal relief works, there was clearly no moral inducement to the municipalities to reform their methods. If the new authorities failed, as we shall see they did fail, to collect contributions towards properly conducted municipal works, the monetary inducement to the municipalities was equally inefficacious.

455. We will first consider the moral inducement to reform afforded to the municipalities by the Distress Committees. The chief evils of the municipal relief-works were, as we have seen, doles-of-work, insufficient discrimination, extravagant cost, and the forestalling of work. We regret to be obliged to report that, notwithstanding the terms and safeguards of the new Act, we have received evidence that every one of these evils has, to a greater or less extent, been perpetuated by the new authorities.

Demoralising
effect of work
under the Act.

456. As regards the forestalling of ordinary work, it was admitted by Mr. Balfour that the Unemployed Workmen Act provided no particular safeguard against this evil,³ and several witnesses have asserted that ordinary labour has been displaced by work provided for the unemployed under the Act.⁴ In so far as work was

Forestalling of
work under
the Act.

directly provided by the Unemployed Body or Distress Committees the danger of reducing the employment of regular municipal employees was to some extent minimised. But as a matter of fact, except in London, more than half the work "provided" under the Act has been work provided through the agency of the Municipal Authorities. For the three years for which figures are available, work was provided under the Act for 47,400 persons by the Distress Committees or Unemployed Body directly, and for 55,100 through the agency of the ordinary Local Authorities, and these numbers are exclusive of "unemployed" given work directly by the municipalities apart from the agency of Distress Committees.¹

Doles of work.

457. It is clear, therefore, that considerably more work has been provided by the municipalities than has been provided by the new authorities set up under the Act. The Act has, in fact, systematised municipal relief work, without materially altering its unimproving and demoralising character. Except in London the system of dole-work continues to be resorted to.² At Manchester,³ Birmingham,⁴ Walsall⁵ and elsewhere, the unemployed have been given "spells" of three days' work, at Bradford⁶ four days, at Newcastle⁷ six days a fortnight; and where, as at Norwich,⁸ the work has been for five days a week, this has apparently been found possible only by making the day a five-hour day—in a word, by making the dole a daily dole instead of a weekly dole. As instancing generally the discontinuous nature of the work provided, we may mention that, in the most recent Return of the Local Government Board, 27 cases are noted in which the average duration of the work was a fortnight or less, as against 23 cases where the average duration of the work was over a fortnight.⁹

Cost of Relief Works.

458. Similarly, the Act has apparently failed to reduce the cost of relief works. We have had numerous complaints as to the cost of the works under the Act.¹⁰ At West Ham the expenditure on local works in 1906-7 was £10,250; the contract price for the same work would have been nearly £7,500.¹¹ The Secretary of the London Central Unemployed Body thinks the work done by the unemployed was on the average from 25 to 50 per cent. more costly than it would have been if done by ordinary contract labour.¹² The cost of reclaiming a small portion of Chat Moss (Manchester) with unemployed men was nearly three times as much as it would have been with ordinary country labour.¹³ In the matter of excessive and useless cost, the Unemployed Workmen Act has therefore also failed to reform the system of municipal relief-works.

Failure of Act as a measure of relief.

459. Finally, the general failure of the Act as a measure of relief has falsified the hope that the municipalities would be encouraged to discontinue their relief works on the establishment of a special authority for dealing with distress from unemployment. There is a great consensus of opinion that, chiefly from lack of funds or the failure to find suitable work, the actual number of persons relieved has been extremely small in proportion to the number in distress. The Act has been described to us as "useless,"¹⁴ "entirely inadequate,"¹⁵ "incapable of dealing with the question of unemployment in a thorough manner,"¹⁶ "very little use except to the employer desiring cheap labour,"¹⁷ and we have been informed that "the position of the unemployed workmen was better before the passing of the Act than after."¹⁸ This opinion as to the general failure of the Act as a system of relief for workmen in distress from unemployment has been repeated to us by a very large number of witnesses of all shades of opinion and from all parts of the country.¹⁹

460. We have no means of ascertaining how many “unemployed” the municipalities continue to employ otherwise than through the Distress Committees: but we may note that, in 1907–8, in one half of the provincial towns where the Distress Committees sent unemployed men to municipal relief works, the Distress Committees made no contribution to the cost of such works.¹ It is only the fact of such contribution which gives the Distress Committees any effective power of bringing the municipal works under the Regulations of the Act as to continuity of work, rate of pay, etc. It may therefore be assumed that, in one-half of the cases in which the municipalities provided relief-works to which the Distress Committees sent men, these relief-works were, to all intents and purposes, as little under any regulations and control as were the relief-works before the passing of the Act in 1905. Moreover, in the most recent return as to the working of the Act, frequent cases are noted in which, in the same district, work has been provided simultaneously by the municipality and the Distress Committee.² The co-existence of what are in a sense competitive relief-works, cannot, we think, be beneficial. Our Investigators have described how, in such cases in London, the municipal works would employ men rejected by the Distress Committees, and how men would refuse the Distress Committee relief-work for the easier relief work of the municipality.³ The reverse of this situation is illustrated at Bournemouth⁴ where the Distress Committee complain of the straits to which they have been reduced owing to the municipality retaining for their own relief-works all the men whose labour was remunerative, and referring to the Distress Committee relief-works all the inefficient. We cannot but think that the simultaneous establishment of independent relief-works by two separate authorities in the same district must be productive of harm, and tend to destroy any possibility of usefulness in either set of relief-works.

Co-existence of
Municipal and
Distress
Committee Relief
Works.

461. We find, therefore, that the Unemployed Workmen Act has largely failed in its second main object, viz.: the regulation and improvement of municipal relief-works.

462. A third object of the Act was the prevention of the demoralisation of the “unemployed” by indiscriminate charity, the evils of which we have explained in a previous section. Mr. Long referred to the evils of “Unemployed Funds” as one of the abuses he hoped to check by his scheme. The Act, in fact, assumed the collection of voluntary subscriptions by the new authorities, and contemplated, as we have seen, that a great part of their expenditure, and particularly that incurred in providing work, would be defrayed out of such voluntary subscriptions.⁵ To a certain extent, no doubt the Act has discountenanced the raising of hasty “unemployed funds,” to be spent in an indiscriminate manner on ill-considered schemes, by bodies whose activities often overlapped. It has, we think, been beneficial that money, which the charitable public were inclined to give for the relief of the unemployed, should be given to a responsible authority conducting experiments on lines subject more or less to central control. In so far as the new bodies collected the money and focussed the efforts of charity, their action has undoubtedly been beneficial. But unfortunately the success of the new bodies in attracting the help of charity has become less and less. Under Mr. Long’s scheme, and largely through his instrumentality, £52,000 was collected.⁶ In the following year, the first of the new Act, the subscriptions amounted to £105,000.^{7*} For the next year, in order to meet the plea that voluntary subscriptions were insufficient, the Government allowed the provision of work to be paid for out of Imperial, instead of voluntary funds, and obtained a Parliamentary Grant of £200,000 for this purpose; and in this year the voluntary subscriptions sank to £36,000.^{8†} In the third, the last year of which we have particulars, a similar grant was voted and the voluntary subscriptions amounted to only £7,800,⁹ i.e., less than one-fourteenth of the amount raised in the first year. Charitable contributions have practically ceased, and a further object-lesson has been afforded of the truth that the charitable public will not easily or largely contribute towards purposes for which money is compulsorily taken from them by means of rates or taxes.

Influence of the
Act on Charity.

* Including £86,418 from Her Majesty the Queen’s Unemployed Fund.

† Including £24,669 from Her Majesty the Queen’s Unemployed Fund.

326–1907. ⁹ H.C., 173–1908.

463. In most respects therefore the Unemployed Workmen Act has failed. Its primary object was to assist the better class of workman: the vast majority of those whom it has relieved did not belong to that class. It was hoped that it would supersede the existing bad system of municipal relief works: it has, on the contrary, encouraged them. Under its operations the sources of charity might have been enlarged and its agencies further developed in dealing with the able-bodied: both have in many directions been curtailed and discouraged. The aim of the Act was to deal with a section of the unemployed by means other than the Poor Law. The Poor Law administration was in a manner put in abeyance. This led to misunderstanding and some injustice. The people had before them an alternative, and in many instances they applied to the Distress Committees when they should have applied to the Poor Law Authorities.

Points in favour
of the Act.

464. We readily admit that in some directions the Act has been of service. A number of decent, sober, honest workmen who would have felt naturally reluctant to go to the Poor Law, were assisted during a period of serious unemployment. It was a good thing to bring together in one body members of diverse agencies, hitherto working spasmodically and disconnectedly towards the same object—the relief of the able-bodied. The association of Guardians, Town Councillors, and voluntary workers on the Distress Committees has been of great benefit educationally. The new bodies, and the public from whom they are recruited, are beginning to diagnose the problem of unemployment, and to recognise its diversity and difficulty, as they have never done before. Since 1905 the nation as a whole has learnt much about the possibilities and the limitations of help for the unemployed. But if it is true that valuable educational experience is due to the Act, it is also true that it is the failures rather than the successes of the Act which have provided the education.

Reasons of
discontinuing the
Act.

465. The Act was started under impossible conditions, and if it has failed the failure is largely due to the hopeless task imposed upon the Local Authorities which it set up. In various directions they have accomplished experimental work of great value, with regard to emigration, labour colonies, and labour exchanges. What, however, we do emphatically assert is that neither Distress Committees nor Unemployed Bodies are necessary for carrying out these methods of assisting the distressed able-bodied.

466. As regards emigration, this is probably the one method of relief which the Poor Laws specifically authorise to be afforded to the poor, as distinct from the destitute. There is no question here of entering a workhouse, nor of submitting a man and his family to unduly repellent conditions. Disfranchisement in England, even if it continued to apply, would hardly affect an emigrant. There is no reason, therefore, why a reformed and enlightened Public Assistance Authority should not undertake all the emigration relief which it is wise for the State to give.

467. As regards labour colonies, we hold most strongly that, except for purposes, for which a prolonged stay on them is necessary, labour colonies are almost if not entirely useless. But it would appear irrational and senseless to place in the hands of an authority intended to meet temporary distress, institutions which are useless except as a method of more or less prolonged and permanent help. Such institutions should surely be placed in the hands of the authority dealing with prolonged or permanent distress—that is the Public Assistance Authority.

468. In the matter of labour exchanges, we shall show in the next section why it is in our opinion essential that these institutions should not be managed by, or associated with, an authority whose primary object is to give relief.

Conclusions.

469. We feel, therefore, that the methods successfully used by the Distress Committees would be exercised more appropriately by other authorities. On the other hand, the unsuccessful methods of the Distress Committees are in our opinion so harmful, that we feel it to be in the interests of the State that they should be discontinued. Except as regards the operations referred to above, we believe that the Act has mainly resulted in the wholesale and periodic relief of casual or chronically under-employed labourers under non-deterrent conditions. This class of men is tending to rely more and more on the regular provision of municipal relief-work which has been sanctioned and encouraged under the Act. In effect the result is, that we are in some danger of repeating in an indirect manner the disastrous experiment of relief to able-bodied wage-earners, which occasioned

the scandals and reforms of 1834. The gravamen of the Report of 1832 is that the community was subsidising wages which ought properly to be paid by the employers. But if casual labourers are supported year after year at certain seasons at the cost of the rates, their yearly wage is just as effectively subsidised by the community in 1905 as their weekly wage was subsidised by the community in 1832. To give regularly to a casual labourer 13s. a week employment-relief for 4 weeks in each year is arithmetically equivalent to subsidising his weekly wages by a shilling throughout the year. And the subsidy is in some ways more dangerous, because it is indirect and disguised, instead of direct and open as in 1832. Any general increase of this dangerous practice of indirectly subsidising wages from the rates, would, we are convinced, lead to a recrudescence of the evils so ably described by the Royal Commission of 1832. The evils would be equally certain, but the remedy would be less easily applied, because the cause of the evil would be less apparent. Even now there are signs that among the casual labourers, encouraged and subsidised by the Unemployed Workmen Act, there is arising precisely that spirit of dependence and demoralisation which was so rampant in 1832.

470. We feel, therefore, that if the working classes are to retain their independence and their industrial efficiency, it is essential that all encouragement of casual labour or the subsidisation of the wages of casual labour, out of public funds should cease as soon as possible.

471. For this and for the other reasons we have detailed, we recommend that the Unemployed Workmen Act should not be continued, and that the functions of Distress Committees, so far as they are useful, should in future be discharged in the manner hereafter described.

Chapter 4.

PROPOSALS AS TO DISTRESS FROM UNEMPLOYMENT.

472. We propose to classify our recommendations for dealing with distress from unemployment under three headings according as they relate to:—

- (1) Permanent Preventive Measures of a Social or Industrial Character ;
- (2) The Permanent System of Public Assistance for the Able-Bodied.
- (3) Transitional Measures.

(1)—Permanent Preventive Measures of a Social or Industrial Character.

(a) Labour Exchanges.

Dearth of
statistics as to
unemployment.

473. Any investigation into the facts and problems relating to unemployment-distress and its relief, discloses, as one of the chief defects of our present system, an extraordinary lack of accurate information as to the extent and character of unemployment. It is at best a happy chance to find a remedy for a disease as to which there is no possibility of accurate diagnosis. But this is the position which we, as a great industrial country, occupy as regards the unemployment of our people. There are no data which give any accurate idea of who and how many the unemployed are, and what is the duration of their unemployment. Yet the ascertainment of these particulars is essential to the successful treatment of distress from unemployment.

Poor Law
statistics.

474. There are Returns periodically published of able-bodied paupers, under which term may be included the halt, the maimed, and the blind—all persons in fact who are not sick or physically or mentally disabled. Statistics of able-bodied paupers compiled on such a basis are clearly illusory, even as an indication of mere numbers. As to the character, industrial and moral, of able-bodied paupers, there is no other periodically available information than the opinion of a few individuals and the meagre information afforded by the decennial census.

Board of Trade
statistics.

475. When we turn to the figures furnished by the Board of Trade as to the percentage of unemployment in certain Trade Unions, the information is hardly more satisfactory. These figures to-day are founded on returns from about 600,000 Trade Unionists,¹ many of them belonging to trades subject to special fluctuations; and in the past this basis has been even narrower. They show the tendency of trade, but little more. Any attempt to apply the percentages to the whole ten million of adult workers would give wholly untrustworthy results.

476. Even in regard to the Trade Unions, to which the figures relate, the statistics afford no help to those whose business it is to provide for distress arising from unemployment. The figures are some indication of the fluctuations of unemployment. But they do not show how many men in a given period are unemployed even in the limited number of Trade Unions to which they relate. They give no trustworthy measure of the numbers unemployed or the duration of their unemployment. Thus, for instance, in a year in which the Board of Trade percentages show a mean annual average of unemployment of 4 per cent. on 600,000 men, the figures may mean either:—

(a) That the same 24,000 men have been unemployed throughout all the months of the year; or

(b) That a different 24,000 men have been unemployed in each month throughout the year.

477. On hypothesis (b) the statistics would indicate that some 288,000 men had each been unemployed for one month in the year. This from a social point of view

¹ Wilson-Fox, 98850.

is an insignificant amount of unemployment, not likely to cause serious distress, nor to require remedial action. On hypothesis (a) the statistics would indicate that, throughout the year, the same 24,000 men were without any employment. This would be an amount of unemployment of considerable intensity, and would indicate the probability that relief measures of some kind would be necessary in some localities. But as to which of these two interpretations, (the one pointing to relief measures, the other not), is the right one, the figures themselves give us no guide. It is clear, therefore, that, even in regard to the Trade Unions to which they relate, the Board of Trade figures afford no safe criterion of the intensity of unemployment, nor of the likelihood of distress arising from it. Far less do the figures afford any accurate measure of unemployment among the labouring classes as a whole.

478. In view of the limitations thus attaching to the use of the Board of Trade unemployment percentages, we requested that Department to make further inquiries into the extent of unemployment in certain selected Trade Unions. The inquiry extended to some 30,000 members of the Amalgamated Society of Engineers, the Amalgamated Society of Carpenters and Joiners, the Compositors', Operative Plumbers', and Wood-cutting Machinists' Trade Unions, and shows that the large majority of Trade Unionists are not out of work for more than three days in the year; that is to say, the large majority are in continuous employment. In a bad year a percentage varying from 11 to 27 in the different Unions were unemployed for an aggregate period of three days but less than eight weeks, whilst from 11 to 16 per cent. were out of work for eight weeks or over, and 7 to 11 per cent. for twelve weeks or over. The percentages vary, of course, between good and bad years, and in the good year selected for the inquiry (*i.e.*, 1898 or 1899), the percentage unemployed for twelve weeks or over, varied from less than 1 per cent. with the Carpenters to nearly 5 per cent. with the Compositors. It would seem, therefore, that, whilst in good times the amount of distress from unemployment amongst Trade Unionists must be small, in bad years the number reduced to straitened circumstances through unemployment must be considerable.*

479. Turning to the data collected by the Distress Committees under the Unemployed Statistics under Workmen Act, we have seen how the Committees' registers have been avoided by the capable workmen. The registers and records of these Committees are, therefore, only an index of the extent of unemployment amongst a certain inferior class of workmen in those few districts in which the Committees have been set up.

480. In this dearth of trustworthy information it is hardly to be wondered at that mistakes should have been constantly made in attempting to deal with distress from unemployment. The mass of hasty and inconsiderate donors assume that a large number of decent and capable workmen are in distress from unemployment, and pour out funds in a manner which could be justified only on the assumption that the men assisted really were of the class supposed to be out of work. Experience has shown that these funds, raised in excitement and distributed without thought, are invariably, to a very large extent, absorbed by incapable and undeserving workmen to their own detriment. The failure of such gifts is obvious. They have no relation to conditions, causes, or remedies—none whatever to the evil or its diagnosis. The Unemployed Workmen Act assumed that there was a special class of workmen out of work who would avail themselves of it. That class, if it existed, has not made use of the Act, and all its potentialities for good have been destroyed by the clogging of its machinery with a mass of under-employed labourers.

481. This points to the need in future of obtaining more accurate statistics as to the numbers, classes, and character of the men reduced to unemployment, and as to the length of the period during which they are unemployed. It is only by obtaining such accurate particulars that it will be possible to make the remedies effective by adjusting them to the needs of the time and to the wants of the particular class of men affected.

482. A second defect which permeates our modern system is the failure to do anything positive and effective to increase the mobility of labour. Although, as we have seen, there is a lamentable tendency for unskilled labour to stagnate in certain localities, and although there is on all sides an increasing difficulty for individuals

Lack of machinery for assisting the mobility of labour.

* Statistical Appendix, No. xvii., A.

Lack of machinery for assisting the mobility of labour.

by their own efforts to recover regular employment¹ when once it has been lost, yet the community has provided no public machinery for helping the unemployed workman to find work which may be waiting for him. This failure to assist mobility may be noticed in each of the systems we have reviewed. The Guardians, except here and there in an individual instance where a particular Guardian takes an interest in a particular man, take no steps and incur no expenditure with a view to finding a workman a situation while he is in or when he is leaving their institutions. There is some doubt whether they may even pay a man's fare to a place where he knows that work is awaiting him.² On the other hand, as we have seen, the general tendency of the workhouse life is to reduce a man's efficiency, and so to render him less mobile, considered as an atom in the economic organism. Charity, we have seen, makes occasional efforts to send the workers where work is awaiting them, but the operations of charity in this direction are limited by its funds, and it has no permanent or suitable machinery to help it in finding work for cases outside its own particular district.

483. Under the Unemployed Workmen Act, it is true that the Distress Committees have powers of migration, but these have not been used to an appreciable extent. Labour exchanges were also established under the Act, but these have achieved only a partial success; they have suffered by their association with a relief authority; and they have not been able, except to a small extent, to increase mobility generally. On the other hand, the system of municipal works encouraged by the Distress Committees has tended to encourage directly the immobility of unskilled labour by providing periodically artificial work in districts where there was already an excess of unskilled labour. Clearly, then, the Unemployed Workmen Act has done little or nothing to assist the mobility of labour.

484. If we turn to the Trade Unions we find that each union provides for mobility of labour as regards its own particular members, but the rules of Trade Unions impose a serious fine on any member of the union finding or endeavouring to find work for a man not belonging to the union. To some extent, therefore, the Trade Unionists may be said to have increased their own mobility at the expense of the mobility of workmen who do not belong to the Unions.

485. We have hitherto been referring principally to the lack of facilities for removing workmen from place to place, *i.e.*, to what is technically known as place-mobility. But there is not only a similar lack of facilities for moving workmen from trade to trade, and so ensuring what is known as trade mobility, but the Trade Union organisation discourages such inter-trade mobility. If a man abandons his own trade and Trade Union he is penalised by the immediate loss of unemployed and other benefits, and he is not for some time qualified for the Trade Union benefits of the trade into which he transfers his labour. We have received some evidence that the ranks of the unemployed and of the casual labourer are recruited from workmen who, from one cause or another, no longer find employment in their original trades, and who degenerate into unskilled labourers, thus helping to overstock still further the already overcrowded unskilled labour market. It is not within the province of the Poor Law to provide technical training for the able-bodied; nor are there, so far as we are aware, technical schools where adults can learn a new trade. To the extent to which this is an educational question, it is perhaps beyond our scope to prescribe remedies. But the difficulty is not merely educational. Even if the necessary technical training were available either in schools or ordinary workshops, there is at present no available information to indicate to a workman desirous of changing his trade in what other trade or trades there is most demand for the kind of qualities which he possesses. To this extent the question of trade mobility is one of obtaining more accurate information on the state of employment in various trades; and to this extent we believe we can propose some remedial measures for the difficulty.

486. To sum up, it is clear that there is at present great lack of machinery for assisting the mobility of labour, and this at a time when such machinery is particularly needed, and when, through the increase of travelling, postal, telephonic, and telegraphic facilities, physical mobility should not be a difficult matter. We lay it down, therefore, as one of the leading objects of our future proposals that they should tend towards an increased mobility of labour. After what has been said, it is equally clear that any successful treatment of distress from unemployment on the basis of the existing statistics is impossible. We therefore lay it down as a second object that statistics

¹ See *e.g.*, Pringle's App. ii. to Jackson and Pringle's Report, p. 35.

² Adrian, 293-8; Sidney Webb,

relating to the enumeration and classification of the unemployed should be collected on a trustworthy and scientific basis.

487. Both these objects can we think be achieved by the establishment of a national system of Labour Exchanges. As instancing the way in which labour exchanges can assist mobility, we may cite the evidence given us by Mr. Fair, the Chairman of the Association of Employment Exchange Superintendents.¹ We shall refer later on to the London labour exchanges and their working. As pioneer institutions they were not free from defects. But, in spite of these defects, we believe that the scheme of exchanges in London under the Unemployed Workmen Act has dealt with the problem of the unemployed on a limited but a scientific basis. The linking together of all the different parts of London, by means of a central exchange acting as a clearing house, brought the supply and demand for labour into touch with each other. Mr. Fair declares that the Metropolitan exchanges have already done good work, employers have promptly found men they could not have obtained so quickly by any other means,² and men have obtained work which they could never have got by their own unaided efforts.

488. We have also been informed that the German labour exchanges have operated towards abolishing the vague search for work in the streets and at the factory gates, and have increased the industrial efficiency of the community by adding to the mobility of the labour supply.³

489. With regard to the way in which labour exchanges would facilitate the collection of data for the classification of the unemployed, we may again refer to the evidence of Mr. Fair. He there points out that, if the exchanges are to aid the unemployed, it is necessary to get trustworthy figures as to the number and capability of workers employable and of the capacity of various industries to absorb labour. The Metropolitan exchanges have done much in this direction. Their books, at the end of the first year's working, showed at least 100,000 men and women in London who are only partially employed, exclusive of the trade unionists. The exchanges can show the various trades affected, and further can prove special stagnation in particular industries.⁴

490. Similarly, we have been informed that it was one of the objects of the German labour exchanges to "get a perfect test for unemployment as a means of knowing if a man is really unemployed against his will. You can only do this if you can see the whole labour market and all the jobs that offer."⁵

491. Before further developing our proposal for the establishment of a national system of labour exchanges, it may be asked how we reconcile such a proposal with the admitted failure of labour exchanges in England to attain the objects expected of them. We will, therefore, briefly recapitulate the gist of the evidence given before us as to these institutions, and the reasons why they have failed.

492. Prior to 1905, a good many municipalities had made experiments * in the way of labour exchanges, but apparently these institutions were seldom carried on with any full understanding or foresight.⁶ According to the view of our witnesses, the weakness of the old municipal exchanges was due to certain easily ascertained causes. There was no knowledge of what they were intended to do; they were not properly staffed; they were hampered by many bad rules; they were nearly all started in times of depression—"exactly the wrong time to start a labour exchange; the time to start it is when trade is going up, because then the people whom you decasualise have the best chance of finding other places for themselves."⁷ Employers mostly held aloof from these exchanges; they knew nothing about them. No effort was made to advertise them, "though everything depends on that."⁸ They worked independently of one another, until an attempt was made by the London Unemployed Fund to provide a central unemployed exchange.⁹

Municipal labour
bureaux before
1905.

493. The London Act of 1902, we are told, was a failure because it merely permitted, and did not compel, Borough Councils to establish bureaux, and consequently only a

* *e.g.*, in London under the Labour Bureaux London Act, 1902, and in other places under local Acts.

Cf. Fordham, 81304-8.

very small part of the Metropolis was covered. Further, amongst those established, there was no interchange of ideas, men were placed in charge of the bureaux who were, perhaps, the protégés of some influential councillors, regardless of their fitness for the work. The bureaux “were the shuttlecock of party politics, and, to a large extent, became mere registers whence a borough surveyor could get his staff of scavengers, etc.”¹

494. In fact, the evidence seems to show that the failure of these pioneer labour bureaux was not owing to any innate defect in the idea which they embodied, but rather to their inchoate and disconnected character and to their overclose association with the faults and failings of particular Local Authorities. Indeed, it is chiefly owing to the inability of the Local Authorities to institute and maintain what should be a national service that we feel bound to recommend a national organisation to carry on these important industrial institutions.

Labour exchanges
under
Unemployed
Workmen Act.

495. The local labour exchanges established under the Unemployed Workmen Act have been to some extent, but not very much, more effective than their predecessors.² In the Metropolis we are told that these exchanges are not very satisfactory, and “there has probably not been a single labour exchange in England which has yet been an important or indispensable industrial institution.”³

496. A new institution, to be successful, generally requires something more than a cold support from the authority establishing it. The Local Authorities, especially in the country, do not seem to have supported the labour exchanges either with energy or determination. In addition to this lukewarm support there were obstacles in the way of their development; such as the unfavourable attitude of the Trade Unions, the poor support given by employers, the fact that the best types of men have not registered, largely because they have not been encouraged, and lastly the financial difficulty.⁴

497. As to this last point, most of the districts, as one of the witnesses observes, can probably meet from the $\frac{1}{2}$ d. rate the comparatively small expenses necessary for the efficient working of an exchange in conjunction with a linked-up system. But the districts where unemployment is worst find the limit too low for efficient working, and in one or two areas little or nothing can be done in this way for that reason. “Yet any increase of the rate contribution would tend to aggravate in such rate-burdened districts the very trouble it is intended to relieve.”⁵

498. The opinion again has been strongly expressed that the association of the labour exchanges with what is really a relief authority has largely contributed to the comparative failure of the exchanges under the Unemployed Workmen Act.⁶ There has been a tendency to confuse the exchanges with the Distress Committees, which repels many employers who object to aid a system of “State-created work.”⁷ On the other hand their association with an authority administering assistance to the lower types of unskilled and casual labourers has led to their being looked upon with suspicion by the Trade Unions, who have in some cases unhappily regarded them as “blacklegging” organisations.⁸ For instance, in Liverpool, we were informed that no distinction was made between applicants to the labour exchange and applicants for the Distress Committee register; they had all to answer the same questions and fill up the same form.⁹

500. It is obvious that any neglect to draw a distinction between persons applying for assistance and persons merely desirous of obtaining facilities for being put into communication with employers, will be likely to affect prejudicially the attitude of the better class workmen to the labour exchanges. Where, as in Edinburgh, the labour exchange has been dissociated from the relief work of the Distress Committee,

¹ Fordham, 1258, St. 2, 81262. ² Tom Fox, 83974. Leech, 83769 (22). Wm. Wood, 85750-3, 85851-4 85860-3. Coates, Vol. VIII., App. xiv. (10). the evidence shows that the labour exchange has been more successful, and has enlisted considerably more sympathy from the Trade Unions.¹

501. Other witnesses have told us that the administration, staff, equipment, etc., of the exchanges have been starved under the Act, and that this accounts for their failure.² The superintendents of the exchanges have in many places had to struggle against great difficulties. They have had but one clerk to help them (often an inexperienced youth), hardly any advertisement, offices of poor appearance and in bad positions. In many cases little or nothing has been done to make the labour exchanges either a popular or attractive institution.³

502. But the greatest objection to be urged against the existing system is that under it labour exchanges are only set up sporadically.* Isolated exchanges, especially if successful in their detachment, tend to decrease rather than increase the general mobility of labour. If, for instance, labour exchanges are established in London and not at Norwich, the fact that these facilities for quickly obtaining work are available in London is all the more likely to attract to London or to retain in London, unemployed people who think that they have thereby a better chance of getting work.

503. That the failure of exchanges in England is due to local and special causes and not to any innate defect in the institutions, seems clear from the interesting account of their success abroad which has been furnished to us in evidence.⁴ Labour exchanges in Germany.

504. In Germany, with its diversity of kingdoms, laws, and customs, there is no imperial system of labour exchanges. The lack of homogeneity among the constituent peoples would tend to prevent it. But there is a network of labour exchanges of various types. The most important and the most akin to what we should propose for England are the public and municipal exchanges. "There are over 200 such, among the 700 odd exchanges, filling now 150,000 places a month, which report regularly to the Imperial Statistical Officer. Practically there is a public general exchange in every town of over 50,000 inhabitants, and in a very large proportion of the smaller towns." Most of the public labour exchanges date from 1894-6 or received a fresh impulse then. They have been extraordinarily successful. Thus according to the evidence supplied to us by Mr. Beveridge:—

"The Munich Exchange, for instance, filled over 25,000 situations in the first complete year of its working. The Düsseldorf Exchange, after remaining unimportant for some time, filling less than 2,000 situations two or three years ago, rose suddenly to filling 28,000 in 1906-7, and will hardly fall short of 50,000 in 1907-8. In Berlin, Stuttgart and Strassburg, the activity has nearly doubled in the last two years."⁵

505. The public labour exchanges in Germany are not confined to unskilled or low-skilled labour. "Most show a percentage of forty to sixty in definite trades, and the larger exchanges, at least, have separate sections for unskilled and skilled men of various types."⁶

506. The causes of the success of the German system of labour exchanges have apparently been as follows:—

(1) The high standing given to the movement by the advocacy and practical assistance of all public authorities, town councils, State Governments, Imperial Government, etc.;

(2) The association through combined Committees of employers and employees in the management of the exchanges;

(3) The unequivocal character of the exchanges as industrial and not relief institutions;

(4) The excellent arrangements for the use of telephonic, telegraphic, and postal facilities by the exchanges;

(5) The preferential railway fares for men sent to a situation.⁷

A National
system of
Labour
Exchanges
essential.

507. We see no reason why these features which have been so successful in Germany, should not be reproduced to a large extent in England. In view, however, of the importance in England of obtaining all statistics through these labour exchanges on a uniform basis, and in view of the desirability of keeping them absolutely impartial, untinged, so to speak, by association with the Poor Law, or by local controversies,¹ we think it essential that the system should be worked centrally by the Board of Trade, and that the organising officer or secretary in charge of the exchange should be an officer of that Department. It would, however, be essential, if the exchanges are to be a success, that the Board of Trade officer should be assisted by an advisory Committee consisting of employers, workmen, and representatives of the Municipal or Local Authorities. There is a large consensus of opinion that the actual managing body of each exchange should be a Committee constituted on some such lines.²

Employers'
attitude to
Labour
Exchanges.

508. We think that a managing authority of this nature would attract the support both of the employers and of the Trade Unions. As regards the employers there is, as we have said, evidence that they have hitherto been chiefly discouraged, as at Leicester, by the fact that the labour exchanges have been concerned chiefly with the less skilled and less efficient workmen,³ or, as in London, by the confusion of the exchanges with the Distress Committees, which are objected to by the employers as inaugurating a system of "State-created" work.⁴

509. On the other hand, there are indications that, even under the present system, the employers can be induced to use these institutions. The Chairman of the Association of Labour Exchange Superintendents considers that the number of employers who have obtained through the Metropolitan exchange satisfactory workmen is highly creditable to the superintendents, considering the paucity of means at their disposal.⁵ At Newcastle we were told that the employers were using the exchanges to some extent, and that this state of affairs could be improved, if it became possible to establish a system by which employers and the representatives of labour were brought more closely together upon the management.⁶

510. The experience in Germany has been that employers have increasingly supported the labour exchanges, and the general opinion in England is that the employers are gradually becoming more favourable to the institutions by finding out that it is to their interest to use them.⁷

511. It is also obvious that, the more the Trade Unionists and the better class of workmen can be induced to use the labour exchanges, the more will the employers resort to them.

Trade Unions'
attitude to
Labour
Exchanges.

512. As regards the attitude of the Trade Unions, although the difficulties are serious there is no reason why they should not be surmounted. The Trade Unions' hostility, such as it is, is based on several grounds;—that labour exchanges might be used for the supply of "blacklegs" in trade disputes, that no preference is given to unionists, and that they might provide labour below the standard rate of wages or conditions of employment. It is also demanded that Trade Unions using the exchange should be entitled to provide their own "vacant books" and continue their present methods except as to the place of registration. Many are jealous of any scheme which would supplant their own systems.⁸

513. It has, however, been represented to us that much, if not all, of the hostility of the Trade Unions would be removed if they could be induced to take their proper share of representation on the managing bodies of the exchange.⁹

514. We think that when the working and results of a successful system of labour exchange is explained and thoroughly understood, the Trade Unionists will be more ready to accept them, as they have done in the cases already cited. For though, as one witness has pointed out to us, there might be in theory a loss to Trade Unions when public labour exchanges are set up, since they would take away one of the reasons for joining a Union, yet the objection in many cases is quite theoretical. In most trades the action of the Union in regard to finding work is very rough and ready, and in few does it go much beyond the way of mutual information and assistance by men in the same trade who are constantly in touch with one another, and recommend one another to the foreman.¹

Trade Unions'
attitude to
Labour
Exchanges.

515. The practical gain to Trade Unions through labour exchanges would, we are convinced, outweigh any possible loss. It is directly to the interest of the Trade Union to have the labour exchange as efficient as possible, because it is paying unemployed benefit to its members, and it wants to get them off its "vacant books" as soon as possible. Moreover, in proportion as the exchanges are efficient there should be a corresponding reduction in the cost of "travelling benefit" to the Unions.² In future a man will not have to travel about indefinitely in search of work: it should only be necessary for him to make one journey, direct to where the work is waiting him.

516. In Lewisham, for instance, by addresses to the Trade Unions branches and discussion of the whole question, a friendly feeling has already been induced. Three of the Trade Unions keep their books in the employment exchange, and their members usually come and sign there, instead of at a public-house as formerly.³ Similarly at Newcastle, we are told, there has been no trouble with the Trade Unions; the superintendent has always had the absolute confidence of all the working classes in the city.⁴

517. Indeed, in Germany, though the attitude of Trade Unions has hitherto been hostile towards public labour exchanges, there are some signs that it is becoming increasingly favourable. At the present time it is common for workmen to ask for the establishment and exclusive use of a joint labour exchange, as one of the terms of an agreement terminating a dispute.⁵ In one or two towns, the Trade Unions have even made over to the exchange the payment of their unemployed benefits.⁶

518. Moreover, we think that if, as will be proposed subsequently, the State contributes to the unemployed benefit paid to each Trade Unionist, the State might well make it a condition of such payment that the Trade Unionist, when out of work, should register his name and report himself to the local labour exchange, in addition (if it is so desired) to his entering his name in the vacant book of his Union. If the State supports and encourages the Trade Unions, it seems only reasonable that the Trade Unions should assist the State by supporting the national and nationally needed labour exchanges.

519. Finally, both skilled and unskilled labourers might be induced to use the exchanges to a considerable extent if Local Authorities and Government Departments engage their men only through the agency of these exchanges. As has been already shown, the support of the exchanges by public authorities has been one of the reasons for the success of the system in Germany.

520. Questions may be raised as to the cost of establishing labour exchanges. We have not taken much evidence on this subject, but such as it is, it appears to show that the cost would not be extravagant considering the benefit which they would bring. In London, we are told, the cost at present is about £9,000 a year for the hire of offices, staff, wages, postage, telephones, etc.⁷ This cost could, we think, be much reduced if some arrangement could be made whereby the exchanges had the free use of telephones and postal services; a result which would naturally follow from their being branches of a Government Department. In Germany the estimated cost of filling a situation is from 4d. to 10d.⁸ Mr. Webb estimated roughly that the very elaborate system of labour exchanges under his scheme (which were to be universal) would cost about £1,000,000 a year.⁹ On the other hand the Association

⁹ Sidney Webb, 93339.

of Superintendents of Metropolitan Exchanges estimated that a complete system of exchanges for the whole of Greater London would cost only about £30,000 a year.¹ If this estimate is applied to the whole of England on the basis of population, we get a much more reasonable sum. At the same time we feel bound to say that, as the principal officer in charge of each exchange must be a person able, *inter alia*, to meet employers and employing bodies on an equal footing, he must be given a recognised *status* in the community and must accordingly be somewhat highly-paid. In our opinion to attempt to keep down the cost by the appointment of any but specially qualified persons would be fatal to the scheme.

521. If, as in Wurtemberg, the rural post offices were used as branches of the exchange, the cost of establishing a complete system of exchanges would no doubt be reduced.

Labour
Exchanges and
Trade disputes.

522. Another question of some difficulty is the attitude which should be adopted in the case of trade disputes. The practice in Germany in regard to strikes and lock-outs is various. Sometimes the exchanges take no notice of a dispute in considering the filling up of vacancies. Sometimes they register the vacancies due to disputes and notify them to applicants, but at the same time give formal notice of the dispute to the individual applicants; in other places they suspend operations within the range of the dispute while it lasts; and in yet others the action of the labour exchanges is dependent on the verdict of a special tribunal. The second course, viz., to notify applicants when vacancies are due to trade disputes, has most approved itself in practice. As a result, such vacancies are seldom accepted by any of the men in the exchange.² We do not think, therefore, that this difficulty need prove insuperable in England.

National
Labour
Exchanges
and their
advantages.

523. If a national system of labour exchanges, working automatically all over the country, could be established, it should tend to ensure that the supply of labour available in all parts of the country would be, in a measure, gauged and recorded. It might be hoped that demand and supply would be brought generally and locally in touch with each other, and that the overstocking of certain trades and the difficulty of getting labour in other industries would be diminished. The present system of engaging workpeople, whether through advertisement or by taking them on at the gate, is often wasteful and ineffective. By using the exchange as a centre, the employer would obtain the men he wanted, and the men would know where they were wanted,³ instead of having to endure, as at present, the misery of tramping after problematical work.* To this extent the exchanges would replace haphazard methods by a comprehensive system based on industrial supply and demand.

524. The need for labour in country districts could possibly be met by placing out men from the towns who had an aptitude for agricultural work. And, in another way, the labour exchange might help to check rural depopulation by diffusing accurate information as to the actual conditions of life in large towns.⁴

525. It is hoped that labour exchanges would also

- (1) Make it easier for men permanently displaced by industrial changes to pass to a new occupation.
- (2) Facilitate the use of subsidiary trades by seasonal workers.
- (3) Substitute for artificial tests, and inquiries the beneficial and natural test of a situation through the exchange.⁵

* Labour Exchanges would incidentally help the tramp problem generally.

¹ Fair, Vol. VIII., App. xci. (A). ² Beveridge, 77833 (13 and 14), 77884. ³ Fair, 81464 (21, 36), 81527. Fordham, 81322-5. Shann, 83857 (22). Wright, 85068. Ward, 83583. Owen, 86001. Hamilton and Jones, 94020. ⁴ Fordham, 81372. Allen, Vol. VIII., App. ii., (8.). Fair, 81464 (25). G. H. Wright, 85096-7. ⁵ Beveridge, 77832, (64), 78142, 78090, 78354. Tawney, 96790.

526. Of course, we recognise, as Professor Chapman has pointed out, that there is some danger that labour exchanges might lead "the operative classes to feel that responsibility to find work was shifted from their shoulders."¹ But we do not think the risk is great. It should be made incumbent on each applicant to attend each day at the exchange; and when a likely employer was found, the workman would still have to travel to the employer and satisfy him of his suitability. The responsibility for securing a place would still be the worker's; but he would be spared the aimless and often hopeless tramp after work.

527. But in two other respects the labour exchange would be of the greatest benefit. First, it would give practically accurate data and records of the amount, character, and intensity of industrial depression or unemployment.² It would afford the Central as well as the local authority a vantage ground from which to watch over and deal with the results of distress from want of work. For the first time facts and figures capable of proof would be in the hands of the administration, in place of the empirical returns now current. Second, the information obtained by the exchange would be of great use if widely circulated in an intelligible form to the elementary schools of the country. An intelligence bureau should be formed, acting in concert with the managers of schools, through which both parents and teachers would obtain guidance and information as to what branches of employment give the best future opening for children and what the worst. Thus warned and guided, the parent would doubtless respond and take some trouble in securing a good start for his children.³

528. We recommend, then, that there should be established under the Board of Trade a general system of Labour Exchanges throughout the United Kingdom; that these exchanges should be managed by officers of the Board of Trade, with the help of an advisory Committee of employers, workmen, and members of Local Authorities; that there be no compulsion to make use of these institutions, but that it should be the object of the Board of Trade and the advisory Committee by propaganda and otherwise to popularise them in every way. The exchanges should be granted free postal and telephone facilities by the State, and arrangements should be made whereby they might grant passes entitling workmen travelling to a situation to specially cheap fares from the railway companies. In suitable cases, the cost of such passes might be defrayed by the Labour Exchange and afterwards recovered from the workmen.⁴ (See also paragraph 666).

(b) Intermittent or Irregular Employment, and some Suggested Remedies.

529. We have referred in previous chapters to the extent to which “casual intermittent and seasonal labour” prevails in certain trades, and contributes both to pauperism and unemployment. We have also indicated that a sufficiency of normal employment may be, and in some cases undoubtedly is, obtained from what are casual trades. Instances are the “preference men” at the London docks, and the better class of dock labourers referred to by Mr. Nelson;¹ while, in connection with women, the point is well illustrated by our Special Investigator Mr. Jones, who says:—

“Where the employer fails to organise his factory so as to give regular work, the task of dovetailing employments is thrown on the dismissed worker. The more energetic women do this with astonishing success, and fill in the year, with few gaps, between the jam and ginger beer factories, laundries and rag stores, with the addition of indefinite charring and mending. The baby will be out at a subsidised crèche or in charge of a subsidised grandmother. The same person at different times may be found at matchbox-making, hopping, step-cleaning and hawking. We found a tailoress working at book-folding, a jam girl at screws, and a machinist giving pianoforte lessons at 1s. an hour.”*2

530. In a different category of intermittent occupations, viz., the seasonal trades, cases have also been cited where a sufficiency of employment is obtained by persons who are, *e.g.*, gas-workers in the winter and bricklayers in the summer.³ Moreover, in many parts of Ireland, as is well known, the inhabitants are able to gain a livelihood only by the possibility of combining several kinds of seasonal employment. The Memorandum furnished us by the Board of Trade as to seasonal and casual labour also shows that, in point of fact, it would be theoretically easy in many cases to combine or “dovetail in” one or two kinds of seasonal labour so as to afford ample occupation throughout the year.⁴

531. We have drawn special attention to these instances because we do not wish it to be assumed that, by our previous or future comments on casual or intermittent labour, we intend to imply that all casual or intermittent trades can or should be abolished. It is obvious that, however [much industry and trades are regularised, there must always be a certain amount of periodicity in the demand for certain kinds of work. All, therefore, that can be hoped for is to endeavour so to reduce the number of persons dependent on intermittent trades that, in normal years, the totality of work which these trades in the aggregate provide shall supply the workers in them with a sufficiency of maintenance throughout the year. Our object must be, not so much to abolish the casual trades as to diminish the surplus of labour in them.

532. We have more than once before in the Report referred to the cumulative evils of intermittent employment, but these evils are so grave that we make no apology for referring to them again.

533. As Mr. Sidney Webb has pointed out to us, the mass of casual labourers “intensifies the evil of unemployment and renders nugatory all kinds of relief-works.”⁵ It intensifies the evil, because reliance by individual employers on casual labour creates little crowds of surplus labour at each dock gate or round each builder’s foreman. Moreover, so long as there exists this huge army of labourers who are never regularly employed, every attempt to provide for the comparatively few skilled workmen displaced by machinery or other causes is doomed to failure. The practically inexhaustible flood of casual labourers flows in and swamps the register and the relief-works; and apparently these stagnant pools of casual labour are getting larger and still more casual.⁶

534. The remedies for intermittent employment may be divided into two classes:—

First, those which aim at diminishing the sources from which the intermittent labourer is recruited;

Second, those which aim at decreasing and contracting the existing practice of intermittent employment.

* Other instances of combinations of casual trades (though to an insufficient extent to ensure maintenance), are given in Pringle’s second Appendix to Jackson and Pringle’s Report, pp. 35–37.

¹ Nelson, Vol. VIII, App. lix. ² Final Report, Part II., p. 30 ³ Livesey, 83222. ⁴ Board of Trade Memo.: Vol. IX., App. xxi. D. ⁵ Sidney Webb, 93030, Vol. IX., Part II. of statement
⁶ Sidney Webb, *ibid.*

535. Apart from special local causes, there is a consensus of opinion that the intermittent labour market is recruited from the following classes :—

(1) Those who like intermittent employment, or follow it because their forefathers did.

(2) The “failures and breakages” who have fallen out of better and more regular employment into the ranks of casual labour. Some of these have failed from their own faults, others by possibly a hard combination of mischances.

(3) The agricultural labourer attracted by the high wage per hour.¹

536. These classes in themselves constitute a large numerical aggregation ; but in late years the casual market has been largely and increasingly recruited by boys Boy-labour. barely adolescent, who have been cast off by the “blind alley” occupations which they entered upon leaving school,

537. A great many boys when they leave school drift into occupations which are not very strict in their regulations, and though relatively well paid, not likely to lead to permanent work. Many parents do not look sufficiently far forward to take into account what will happen to their children when they are between the ages of eighteen and twenty-five. They look at the occupation mainly from the point of view of the wage immediately obtainable.² In this way a great number of lads are allowed to start as errand boys with grocers and small tradespeople, or as street-traders, newspaper boys, and van boys, or as telegraph boys, numbers of whom are thrown out by the Post Office* every year at the age of sixteen.³

538. The parents are generally ignorant as to the best ultimate occupations in which to place their boys, but this ignorance is, on the whole, the not unnatural consequence of the industrial complexities and changes by which they are faced. The desire of the boys to earn a high wage quickly is a contributory cause.⁴

539. On this point, Professor Sadler observes that the fact that it is easy for boys in big towns, on leaving school, to get uneducative temporary employment, results in their having during adolescence a relatively large amount of pocket-money. This makes them largely independent of home control, and also accustoms them to a certain standard of personal expenditure which it is difficult to maintain later. Many of these boys, too, lose the habit of learning ; they become very quick, but they lose the habit of steady application.⁵

540. But, in addition to all this “blind-alley” labour of boys in the streets as messengers and errand boys and van boys, there are factories⁶ in which lads are taken on largely as “process workers,” “put to machinery, and, while becoming expert in one operation, learn nothing of the fundamental principles of the trades in which they are engaged.”⁷

541. The results of this large employment of boys in occupations, which offer no opportunity of promotion to employment as men, are disastrous. The boy, thrown out at sixteen, seventeen, eighteen, or twenty years of age, drifts naturally, as the witnesses testify, into the low-skilled labour market, or the army of unemployables.⁸ There is, the Bishop of Stepney says, a continual influx of unskilled boys ready to do casual work at almost any wage,⁹ boys often demoralised and physically enfeebled by their two or three years in the streets, or on vans, and so forth.¹⁰

542. Still more disastrous, another witness holds, are the factory occupations in their effect on the boys’ after-careers, for the boys stay in them till they are eighteen or twenty, and then find that they are too old to get any permanent occupation elsewhere.¹¹

543. Our Special Investigator, Mr. Jackson, informs us that :—

“The evidence seems conclusive that in the ‘woollen’ centres the bulk of the boys have to leave the mills between sixteen and twenty for some other work, and though the regular hours and work of a mill have probably been a better training than the casual work of an errand boy, it is still the case that they are thrown on to the unskilled labour market without any special aptitudes.”¹²

* See however the Memorandum by the Post-master General on this subject attached to Mr. Jackson’s Report on Boy Labour.

Boy Labour.

544. Professor Sadler mentions, as an illustration of the "economic results of un-educative boy-labour," that nearly one out of every three qualified applicants for assistance from the Distress Committees in 1905-6 and 1906-7 were reported to be under thirty years of age.¹

545. The whole question of boy labour has been ably and exhaustively examined by Mr. Jackson, to whose Report on the subject we may refer for further details. From amongst his conclusions we may, however, quote the following:—

"The evidence as to the difficulty boys find in getting into permanent work of a satisfactory kind seems overwhelming. Every enquirer gives the same impression. In his latest book Professor Sadler writes: 'It has never been so easy for a boy of thirteen or fourteen to find some kind of virtually unskilled work involving long hours of deteriorating routine. . . . The work lasts for a few years and then leaves the lad at the very time when he begins to want a man's subsistence out of line for skilled employment. . . . Certain forms of industry which make large use of boys and girls who have recently left the elementary schools are parasitic in character and get more than they ought of the physical and moral capital of the rising generation. . . . In this matter great Government Departments are to blame.'"²

546. It is in connection with these boys that a School Committee working in connection with the labour exchange would be so beneficial. In place of the haphazard and thoughtless manner in which boys plunge into any occupation which takes their fancy, they would have put before them, in a way they would not misunderstand, the consequences of such thoughtless acts. They would have, at perhaps the most critical period of their existence, a trained adviser to whom they could go for advice,³ the direction of their wishes would be changed and the one false step early in life, which has been the subsequent ruin of so many of the rising generation, would be averted.

547. We may be optimistic, but we attach great importance to the establishment of such an organisation which would combine parent, child, teacher, and industrial expert for the ultimate good of the child's career.

548. Such being the recruiting ground of casuality, we have now to consider how we can diminish its area. As regards the casuals by inclination, Class (1) (Par. 535), everything reasonably possible must be done to increase the inducements to regular work and we can only hope that in course of time the attraction of casuality will be neutralised as its evil becomes more self-evident. As regards Class (2), the decadents from better trades, so far as the loss of regular employment is due to faults in the workman, it is, perhaps, inevitable that he should continue to pay the penalty of his defects. But as regards men who have lost regular work through no fault of their own, we are confident that the institution of labour exchanges will give such men a better chance than heretofore of regaining regular employment. As to Class (3)—the countryman attracted by deceptive ideas of the wages obtainable in towns—we are hopeful that the labour exchanges will act as centres for disseminating information which will at least warn him that the larger wage will be associated with inconvenience and charges unknown in the country.

549. The question of instituting some control over boys, beyond the now recognised school age, so as to check their entrance into occupations which are deleterious, is very difficult. The rights of parents, the interests of employers and of the juvenile employees are all affected by any such restriction. We regard, however, with favour the following suggestions of Mr. Jackson:—

(1) That boys should be kept at school until the age of fifteen instead of fourteen;*

(2) That exemption below this age should only be granted for boys leaving to learn a skilled trade; and

(3) That there should be school supervision till sixteen and replacement in school of boys not properly employed.⁴

550. A large number of witnesses have also suggested as remedies compulsory continuation schools, an extension of the half-time system to all persons below the age

* Note that the raising the age to fifteen was one of the remedies proposed for unemployment at the Trade Union Congress.

¹ Sadler, 93386, St. 7-10, 93459-61. Cf. Jackson and Pringle's Report on Unemployment, pp. 49-50 and App., p. 45. ² Jackson's Report on Boy Labour, p. 27. ³ Gordon, 97300 (20 et sq.). ⁴ Jackson's Report on Boy Labour, p. 30.

of eighteen, etc., etc.¹ We understand that a special inquiry has been undertaken into these subjects by the Consultative Committee of the Board of Education, and that they are of the opinion that proposals of this character would meet with general public approval.² We ourselves believe that there is an urgent need of improved facilities for technical education during the period between the present age for leaving school and the age of eighteen or twenty.

551. But there is little use in keeping boys at school if the education which they receive there is not suitable, and a considerable amount of evidence has been submitted to us to the effect that the present system of elementary education is not adapted to the wants of an industrial community. As long ago as 1887, the Mansion House Committee of that date reported:—

Defects in public elementary education.

“It is remarkable that out of the 394 men (111 were between the ages of 20 and 30), scarcely one of whom could hope to improve his social position if opportunity offered owing to the persistent neglect of education by parent or child or both. So far, the administration of the Education Acts has not, it is clear, given the people what they require as members of a great industrial community.”

552. Similarly, Mr. Jackson reports to us:—

“It must not, however, be supposed that the present education given in the schools is all that can be desired. There is a wide-spread feeling that it is too academic and must be made more practical. In any case it must aim at developing character and intelligence rather than merely imparting book knowledge.”³

553. This opinion has been corroborated by many witnesses who have appeared before us. There is a consensus of feeling, in which we ourselves concur, that the present education is too literary and diffuse in its character,⁴ and should be more practical.⁵ It should be more combined than at present with manual training.⁶ It is not in the interests of the country to produce by our system of education a dislike of manual work and a taste for clerical and for intermittent work, when the vast majority of those so educated must maintain themselves by manual labour. If school training is to be an adaptation of the child to its future life and occupation, some revision of the present curriculum of public elementary schools seems necessary, and to this necessity we will revert in a subsequent chapter of our Report.

554. But the mere extension of the school age, or of the period during which the boy is under control, will of itself be insufficient unless, during that period, the training and influence brought to bear upon the boy is a good preparation for facing and overcoming his future difficulties. We have been told in evidence, and the statements are confirmed by our own individual experience, that there is a lack of self-discipline, both moral and physical, amongst the rising generation which in no small degree contributes to its subsequent decline.⁷ Since the establishment of universal compulsory education, home influences, especially during the latter years of school life, are no longer what they were.⁸ In some cases this may be beneficial, but, when the school life and its influences are over, the weakened home influence is often ineffective and insufficient to restrain the boy from bad habits, undesirable companions, and occupations which lead to nothing.

Decline of home influence.

555. An investigation into the causes of pauperism and unemployment makes it manifest how largely moral defects contribute to these evils. They produce such a softness of fibre and physique as to make the burden and continuity of prolonged labour unsupportable, especially if the work be of a strenuous kind. Some form of continuous physical training is an excellent antidote for such weakness, and we consider it very necessary that a continuous system of physical drill should be instituted, which might commence during school life, as now, and be continued afterwards.

Need of physical training.

556. There are some of us who believe that the simplest and most effective method of improving the physique and morale of adolescent youth would be to establish universal military training for all at a certain age. Many of the problems which now confront us are due, in a measure, to a lack of early training. The labouring community requires for its elevation intelligence, a combination of discipline and of knowledge of how best to husband and utilise its muscular strength. All these qualities are developed by a course of regularised and intelligent physical exercises, performed in co-operation and unison and under authority, with a knowledge that the experience and improvement thus gained will, in normal times, be beneficial to the performer and, in abnormal times, be of use to the country. Moreover, the physique of all those in training would be improved

at a critical period of life by good and regular meals. Those of us who support this idea do so not for the purpose of improving our military organisation—a question which is quite outside our reference—but because we believe that such a proposal would be both physically and industrially beneficial to the whole population.

Proposals for
discouraging
intermittent
employment

557. But, to curtail the future sources of supply of the intermittent labour market by more careful guidance of the young, will not be sufficient. We have to deal with the mass of intermittent labourers which already exists. What their numbers are we cannot tell, and shall not be able to do so until our labour exchanges are formed, but that they exist in very large numbers there is no doubt. We must, therefore, do all that we can to make intermittent labour less the resort of both workmen and employers.

558. As regards the workmen, this can probably be best done by increasing in every possible way the advantages of regular as against irregular employment.

559. As regards the employers, two proposals for the regularisation of work have been made to us which assume somewhat opposite and antagonistic forms. On the one hand, it is urged that employers should regularise their work by spreading it more evenly over the year, and in this way employ more men regularly and fewer men casually.¹ On the other hand, it is urged that public authorities and the State should, in their capacity as employers, deliberately reserve a certain volume of their work, and throw it upon the labour market at such times as the ordinary demand is slack.² Such action, it is urged, would tend to regularise the total demand for labour. Thus, the first proposition is that employers should spread their work evenly over the year, and the second that a certain section of employers should deliberately not spread it evenly over the year.

560. We are of the opinion that both of these principles may, to a certain extent and with certain limitations, be adopted.

Regularisation of
employment.

561. Dealing first with the proposal to spread work more evenly over the year, it is obviously desirable that, in so far as it can be foreseen that a certain amount of work will regularly need to be performed each year, that work should, in the interests of the men and of the employers, be done by regular and not by casual employees. From the evidence which has been accumulated by our Special Investigators, Messrs. Jackson and Pringle³ it is clear that the Local Authorities, and also some of the Government Departments, have not always given due weight to this principle. We believe, however, that both the Local Authorities and the Government Departments are now alive to the evil of employing a needless amount of intermittent labour and are endeavouring to employ as many regular hands as possible. We think this tendency should be strengthened by means of special communications addressed both to Government Departments and Local Authorities.

562. With regard to private employers, it may doubtless be urged that a large reserve of labour is really essential to them; that if they have not such large reserve available it will be impossible for them in the face of competition to accept new contracts suddenly advertised; that such contracts will go elsewhere—possibly abroad—and will carry with them, as is too often the case, other orders. The result would be that the general volume of trade undertaken and employment offered by them would decrease.

563. We recognise, further, to the full, the difficulty there may be in certain occupations, such particularly as the docks, both on the part of the men and on the part of the employers, in inducing them to regularise industry. We think, therefore, that the Board of Trade should send officers to visit localities where intermittent employment prevails, and should endeavour, through conference with employers and employed, to arrange for some schemes by which the industry may be to a greater extent regularised. A provision in this sense has, we understand, been inserted in the Port of London Act for establishing a London Port Authority.⁴

564. One method of discouraging casual labour would be the imposition of what we might call an "employment termination due." That is to say that, to the termination of an engagement either by the master or by the man should be attached a small payment, both by the master and the man, in the nature of a fine or stamp duty to the State. The tax or "employment termination due" could be very easily levied by means of stamps placed upon a "termination of employment" form which it might be made incumbent upon every workman to produce to the labour exchange upon registration. It is urged that the advantages of this system, if it could be adopted, would be threefold. In the first place, it would discourage the so-to-speak wanton termination of employment either by the employer or the employee. In the second place, it would discourage also the em-

¹ Barnes, 82764 (3 (a) (b)). ² Maynard, 8372-(54, (i.)). ³ Jackson and Pringle's Report on Unemployment, p. 116 *et seq.* ⁴ 8. Edw. VII. c. 68, sec. 28.

ployment of casual labour, inasmuch as, the more casual the labour employed in a concern the greater would be the amount of "employment termination due" which would have to be paid. And, thirdly, to the extent to which it did not deter either of these practices, it would afford a source of revenue which might be devoted to defraying the cost of one or other of the proposals which we shall make.

565. Another method of compulsion which has been proposed is that the employers should be bound to employ all their casual labour through the labour exchanges.¹ We doubt the wisdom or practicability of such a proposal. If casual employment could be obtained only through what would in effect be a Government office, the tendency would be to shift on to the office the responsibility of providing casual work for all who applied. On the whole, we do not think that the time has yet come for any compulsory measures.

566. Turning now to the second proposal for the regularisation of work, viz., the reservation by local authorities and public bodies of certain work which it is proposed should be put upon the open market in slack times, this proposal must be scrutinised with some care. To the extent to which it suggests that public authorities should not regularise their work, but should deliberately casualise it for the benefit of the intermittent labourer, we think that the proposal is pernicious. It is probable, however, that it may not always be possible for public authorities to perform their work entirely and regularly throughout the year by means of their ordinary workmen. In addition to the normal work of such authorities there will generally be some special work, in some years more, in some years less in amount, the undertaking of which is imposed upon them by their necessities. So far as it may be inevitable to employ occasionally other than their own regular workers, or to place contracts, we think that it may be desirable for public authorities to arrange such irregular work so that, if possible, it comes upon the labour market at a time when ordinary regular work is slack. This point has been well put by Professor Chapman, who suggests that, so far as the public authorities' demand for labour fluctuates, it is desirable to liberate such demand from the influences of good and bad trade and seasonality, and then deliberately to attempt to make it vary inversely with the demand in the open market.*²

567. A policy of this kind might help to some extent to steady the fluctuations in the demand for intermittent labour. Such demand cannot, as we have seen, be abolished. The object must therefore be so to spread out the total demand for intermittent labour that it shall, as far as possible, provide a regular sufficiency of employment for the residuum of workers engaged in it.

Remedies and suggestions.

568. To sum up, the following are the measures which we propose with a view of diminishing intermittent employment:—

I. Measures tending to decrease the future supply of intermittent labourers.

- (1) Labour Exchanges. (Par. 548).
- (2) Diversion of boys from occupations certain to result in casuality.
- (3) Increased facilities for the compulsory technical education and physical training of the young.
- (4) Our general scheme of assistance for distress due to unemployment.

II. Measures tending to discourage resort to intermittent labour by workmen and employers.

- (1) The Board of Trade to endeavour by local inquiry to arrange schemes for progressive decasualisation of trades in localities specially affected by intermittent labour;

(2) Public authorities to be enjoined—

- (a) To regularise their work as much as possible;
- (b) To endeavour, as far as possible, to undertake their irregular work when the general demand for labour is slack.

* In this connection we asked the War Office whether it would be feasible to carry out the annual training of the Militia during the winter instead of during the summer months. The Army Council were decidedly unfavourable to such a proposal, on military, administrative and general grounds. They pointed out, however, that the Militia Service was on the eve of re-organisation, and that, among other changes, the period of annual training would be shortened. They also indicated that in future "It is probable that all recruits will be trained on enlistment for six months, and they will be able to do this during the winter." (Vol. IX., Minutes of Evidence, App. No. lxxxvii).

These changes have now been given effect to, and we are glad to observe that the winter training of the Special Reservists on enlistment is claimed by your Majesty's Government as forming "a very substantial addition to the provision made for the unemployed." (Speech by Prime Minister on the measures proposed by the Government for alleviating the distress due to unemployment in the winter of 1908-9.—Hansard, Vol. CXCIV., 1908, page 1169.)

(c) Insurance against Unemployment.

569. A study of modern industrial conditions proves that unemployment is often due to influences for which the workmen is not responsible. Whether it be from general cyclical depressions of trade, or from fluctuations of the demand in particular trades, or from the effect of machinery, or from special inclemencies of weather, it has long been recognised that every workman, however regularly employed, incurs a risk, uncertain in imminence and indefinite in extent, of being thrown out of employment through causes beyond his control. It is this recognition of unemployment as a normal risk of industrial life which has led to the various attempts of so-called insurance against unemployment. The Board of Trade, in their Memorandum on the subject, have pointed out that insurance in a technical and commercial sense is not feasible, or at any rate has never been attempted, in the case of unemployment.¹

Trade Union
Unemployed
Benefit.

570. Practically the only form in which insurance against unemployment has been attempted in England is by means of Trade Union unemployed benefit.² It is true that the Friendly Societies give a considerable amount of travelling benefit, and also charitable grants to their members which occasionally are used for the relief of unemployment not due to sickness. Such grants are, however, incidental and uncertain, and are not claimed as a matter of right.³ We believe that the Trade Unions afford the only English instance of a body of men co-operatively insuring themselves against the risks of unemployment by means of paying in contributions ensuring the receipt of specific allowances for a limited period of unemployment. The extent to which the Trade Unions have expended their funds in mitigating or preventing distress due to this cause is no doubt very great.⁴

571. The Board of Trade have pointed out that the hundred principal Trade Unions alone paid in unemployed benefits in a single year, when distress was very great, a sum of over £650,000, which was:—

“Sufficient to pay 36,000 workpeople or nearly 4 per cent. of the total membership of the unions paying the benefit, a weekly sum of 7s. each during the entire year. The number relieved was, of course, very much greater than 36,000, as few, if any, of the workpeople would be out of employment for a year, and fewer still would receive the benefit for that period. The number of dependants on those assisted must also be taken into account when any estimate is made of the importance of this benefit with reference to the relief of distress.”⁵

572. This scheme of insurance, however, benefits only a comparatively small proportion of the total number of workmen. There are, roughly, 1,500,000 Trade Unionists entitled to unemployed benefit.⁶ But if we consider that there are in England and Wales some 8,000,000 adult males between the ages of twenty and sixty, it is clear that the Trade Unionist insurance scheme covers only a very limited portion of the ground. Moreover, it is chiefly the highly-skilled and therefore most highly-paid workmen who are thus insured, for in most cases the Trade Unions of unskilled workmen give no unemployed benefit.⁶

Foreign methods
of insurance
against un-
employment.

573. When we look abroad, we find that a considerable number of experiments have been made in insurance or *quasi*-insurance against unemployment. A full account of the various systems adopted and of their results will be found in the Board of Trade Memorandum to which we have before referred.⁷

But, in order to render our subsequent remarks on this difficult subject more clear, we here reproduce the following outlines of some of the typical foreign systems of so-called insurance against unemployment:—

(a) Cologne: Direct Voluntary Insurance.

“The ‘City of Cologne Unemployed Insurance Fund’ was founded in 1896 in pursuance of a resolution of the town council in 1894. Ultimate control rests with the general meeting of patrons, subscribers and representatives of the insured, held annually between April 1st and July 1st. The Executive Committee consists of twelve representatives of the insured and twelve honorary members (subscribers) elected at the general meeting. In addition, the *Oberbürgermeister* or his representative and the President of the labour exchange are *ex officio* members of the Executive and of the general meeting. There is also a committee of the insured to deal with details of administration, *e.g.*, the decision of doubtful claims. Insurance is voluntary, against winter unemployment only, and confined to males of eighteen and over, resident in Cologne

¹ Board of Trade Memo., Vol. IX., App. xxi. (k). ² Abbott, 42353. ³ Abbott, 42352; Blossom, 43094-5; Marlow, 77256 (2 *et seq.*) 77262; Stead, 77468 (19); Bunn, 77642 (7), 77653-5; Hudson, 47458-63. ⁴ Brabrook, 35147 (14), 35273-5; Conolly, 99146 (7). ⁵ Memorandum by Board of Trade on Growth of Trade Unions, Vol. IX., App. xxi (c). ⁶ Bell, (1), 86143; Barnes, 82868-70; Wallis, 77141-8; Kelly, Vol. VIII., App. lxxv. (4); Harris, Vol. VIII., App. xxxv. (3). ⁷ Memorandum by Board of Trade, Vol. IX., App. xxi. (k).

for at least a year. Persons without a recognised occupation and casual labourers (*Gelegenheitsarbeiter*) are excluded. Insurance is for each winter separately, the business year running from April 1st, and contribution extending over thirty-four weeks.

"The contributions (premiums) to be paid by the insured are, in the case of unskilled men, 4½d. weekly for thirty-four weeks, making a total of 12s. 0½d.; in the case of skilled men 5½d. a week for thirty four weeks, making a total of 15s. 7d. Proposals for insurance have to be made by the first Sunday of June in each year, with payment of contributions reckoning always from April 1st. A workman four weeks in arrears with his contributions forfeits all claim upon the fund.

"The contributions were originally fixed at 3d. a week for all classes, and have been successively raised in 1901, 1903, and 1905, to their present point.

"The benefits offered by the fund are 2s. a day for the first twenty days, and 1s. a day for a further twenty-eight days of unemployment not due to personal fault between December 1st and March 1st, making a maximum of £3 8s. No allowance is paid for the first three days (including Sundays) after the insured person first notifies himself as unemployed (the 'waiting time'). Men claiming or receiving an allowance must report themselves twice daily at the office of the fund (which is also the office or next to the office of the municipal labour exchange) and are bound, under penalty of forfeiting all claim on the fund to accept any employment offered them there, provided it corresponds fairly with their occupation and their usual earnings, and provided that it is not employment vacated through a trade dispute. No payments are made in respect of Sundays and holidays. Persons who during each of two successive winters have drawn three-quarters or more of the maximum may, in the third winter, draw only £2 14s., viz., 2s. a day for the first twenty days, and 1s. a day for a further fourteen days. This rule is (apparently) a new one introduced in 1905, since it is not mentioned in the annual reports before then. Thirty-six persons fell under it in 1905-6, and twenty-two in 1906-7.

"The annual income of the fund is derived from the following sources:—

"(1) Weekly contributions of insured amounting in 1906-7 to £860, or 37 per cent. of total income.

"(2) Grant from municipality (since 1902-3) amounting in 1906-7 to £1,000, or 43 per cent. of the total income.

"(3) Voluntary subscriptions amounting in 1906-7 to £128, or 5½ per cent. of the total income. This item has shown a steady decrease since the first year of the fund, both actually and in relation to other items.

"(4) Interest of £318, or 14 per cent. of the total income, on capital accumulated mainly at the start, and now amounting to over £6,900.

"The solvency of the fund is guaranteed by a rule forbidding the entering into any new insurance contracts so soon as the maximum possible claims on those already made amount to two-thirds of the whole fund. This rule had to be put in operation in the years of depression 1901-2 and 1902-3."

(b) *St. Gall.—Direct Compulsory Insurance.*

"On May 19th, 1894, the Great Council of the Canton St. Gall passed a law empowering local authorities either singly or in combination to introduce compulsory insurance against unemployment. The main provisions of this law are as follows:—

"Membership of the Insurance Fund established in any district was to be obligatory upon all men working for wages in the district, unless either their average daily earnings exceeded 4s. a day or they were already members of an association affording unemployed benefits at least equal to those of the Fund. Men with earnings above 4s. might join voluntarily. Either the obligation or the right of membership might be extended to women by the local authority, which might make further regulations as to the Fund subject to the following conditions:—(1) The Fund to be managed by a committee of not less than five containing adequate representation of the insured members.

"(2) The weekly contributions payable by the members not to exceed 3d.

"(3) Unemployed allowances to be paid only to able-bodied persons who had lost work otherwise than through their own fault; to whom employment in their own trade, suited to their capacities and at the current rate of wages could not be offered; and who had paid contributions continuously for at least six months or (in the case of a foreigner) such period not less than six months, as might be fixed by the local authority.

"(4) The unemployed allowance not to be less than 9½d. a day, nor to last for more than sixty working days in a year, nor to be payable in respect of the first unemployment within three months unless this lasted at least five days.

"(5) Every Insurance Fund to be connected with at least one Labour Exchange.

"The expenditure of the Fund to be met out of:—

"(a) the regular contributions of the insured members.

"(b) donations, legacies, etc.

"(c) grants by local authorities up to 1s. 7d. per member per year in addition to costs of administration.

"(d) grants by the Cantonal Government.

"(e) grants, if made, by the Federal Government.

“Workmen under obligation to be insured but failing to pay their contributions might on proof of their ability to pay be fined up to £1 or imprisoned in default up to five days. The Cantonal Government was also empowered to make grants in aid of voluntary associations providing unemployed benefit to their members.

“After proposals for joint action between the three neighbouring districts of St. Gall, Tablat and Straubenzell had fallen through, the law was put in force by the municipality of St. Gall alone. A Fund for compulsory insurance was established there and commenced operations on July 1st, 1895. The following regulations were adopted :—

“The committee of the fund consisted of nine persons, two being members of the municipal council and seven insured members of the fund, of whom four were appointed by the Labour Federation from amongst trade unionists, and three were non-union, one being appointed by Labour Federation and two by the municipal council, with special regard to otherwise unrepresented occupations. The detailed administration, *e.g.*, registration of the insured, collection of contributions, calculation and payment of allowances was undertaken free of cost by the municipality, and was in fact carried out by the chief of the Poor Law department.

“Apprentices and minors earning less than 1s. 7d. daily were excluded from the insurance fund. For the purposes of weekly contributions and allowances the members of the fund were divided into three classes, according to their own statements of their wages, as follows :—

| Average Daily Earnings. | Contribution. Weekly | Unemployed Allowances per day. |
|--|-------------------------|--------------------------------------|
| 2s. 4½d. or less - - - - - | 1½d. | 1s. 5¼d. |
| Over 2s. 4½d. up to 3s. 2½d. - - - - - | 2d. | 1s. 8¼d. |
| Over 3s. 2½d. up to 4s. - - - - - | 3d. | 1s. 11d. |

“No member could claim allowance for more than sixty days in a year, nor till he had been a member for six months (in the case of foreigners, twelve months). Contributions were to be paid by the purchase and insertion of special stamps in books provided for the purpose, and were to be excused during the time when an unemployed allowance was actually being received, as well as during sickness or incapacity due to an accident for which no compensation was payable. The claim to an allowance was to be forfeited if the member had become unemployed exclusively through his own gross fault, had ceased work through a strike or refused, without sufficient ground, employment offered him. At times of depression the committee were empowered to reduce the payments to single men, and if, notwithstanding this and the receipt of full subventions from the Municipality and Canton, the Fund proved insufficient, they might reduce the allowances in the higher classes and at need in all classes. The fund was to come to an end after two years unless renewed by resolution of the Municipal Council.

(c) *Strassburg: Municipal Subvention to Trade Unions.*

“In Strassburg the ‘Ghent system’ of municipal subventions in aid of allowanees paid to their unemployed members by industrial organisations has been in force since the beginning of 1907. The main features of the scheme as set out in the resolution starting it are as follows :—

“(1) The municipal subvention is paid only to persons in receipt of an unemployed allowance from a trade organisation of employees to which they belong, is to be 50 per cent. of the amount of such allowance at any time and is not to exceed 1s. per day. It paid in respect of unemployment resulting or continuing as a consequence of strikes, lock-outs, sickness, accident, etc., or to persons who have been less than a year resident in Strassburg.

“(2) The subvention is paid through the organisation (trade union), *i.e.*, the union pays in advance to the unemployed workman and recovers from the municipality.

“(3) The subvention is conditional upon daily appearance at the Municipal Labour Exchange, and ceases so soon as suitable work can be offered to the applicant in his trade.

“(4) Disputes are referred to a committee chosen from the Labour Exchange Committee.

“(5) Trade organisations desiring the benefits of the subvention have to submit a copy of their statutes and the rules governing their unemployed benefit funds, and have to keep these distinct from funds for other purposes.

“No provision is made for men not belonging to any trade union. From the report of the Reference Committee, upon whose recommendation the scheme was adopted, it appears to have been generally admitted that the scheme would not touch either the great mass of unskilled men or the building operatives—for whom, therefore, annual relief works are contemplated.”

Members of Trade Unions insured under the scheme are obliged, when unemployed, to have their cards stamped at the labour exchange, once, twice, and in some cases, three times a day, in order to prevent fraud. They are not expected to take relief work, but they must accept a

situation at their own trade when offered by the labour exchange. It is evident that such a scheme of supplementing Trades Unions' unemployed benefit would be unworkable without the labour exchange. As to whether the subvention is the best possible device for the prevention of skilled workmen becoming otherwise more dependent upon public assistance is a matter of serious consideration.

(d) *France : State Subvention to Trade Unions and other Associations.*

In April, 1905, the French Government set aside in their Budget for the ensuing financial year £4,400 to subsidise the funds of societies assisting their members during unemployment. The conditions of participation in this subsidy were subsequently announced by Presidential Decree (September 9, 1905).

"The classes of funds eligible for participation are :—

"(1) Those whose membership amounts to at least 100 engaged in the same or kindred occupations.

"(2) Local funds with a membership of at least fifty engaged in the same or kindred occupations, provided these are already subsidised by the communal authority concerned. *Amended Dec. 31st, 1906. (See below.)*

"(3) In communes of less than 20,000 inhabitants (*amended Dec. 31st, 1906. See below*) funds with a membership of at least fifty, whether engaged in kindred occupations or not, provided that these are already subsidised by the communal authority.

"(4) Funds organised by a federation of societies for the purpose of paying travelling benefit and supported by lump sum contributions of the federated societies provided the resources of those societies are themselves derived from the contributions of individual members.

"The conditions of participation are :—

"(1) The fund must have been in operation at least six months, must have an organised system of gratuitously assisting its members to find employment, and must furnish a copy of its bye-laws and rules to the Ministry of Commerce.

"(2) These bye-laws and rules must include the following (amongst other) provisions : that a member may belong to one fund only for each kind of benefit ; that no member shall have the right to benefit till he has belonged to the fund for at least six months ; that every unemployed member shall sign a register at the office of the fund at least three times a week during working hours, and shall accept such work in his own trade as may be found for him by the fund.

"The extent of participation is not to exceed 16 per cent. of the total benefit paid by the fund in accordance with its rules during the half-year ; but in the case of funds operating in at least three different departments and having a paying membership of at least 1,000 this maximum may be increased by one-half, *i.e.*, to 24 per cent."

574. For the purposes of criticism we may divide the foreign methods of insurance into two classes :—

(1) Methods which involve separate schemes of insurance with separate funds and separate organisations for separate trade-groups* ;

(2) Methods for the insurance in one fund of all classes of workmen as workmen and not as members of particular trade-groups.

The first of these methods we shall refer to as "Trade-Group Insurance" and the second as "General Insurance."

575. The great difficulty in regard to any scheme of General Insurance against un-employment is the tendency of any such scheme to result in the accumulation of "bad risks."¹ In commercial insurance against death or sickness, the "bad risks" are eliminated by medical examination—or, if not eliminated, are forced to pay a higher premium. But in insurance against unemployment, it is precisely the "bad risks," *i.e.*, those most subject to unemployment, who most need and press for insurance. As a rule, in "general" schemes the premiums are based on wages, and the bad risks, being less well paid, pay less, not greater, premiums than the regular highly-paid workman. The good workmen, who obtain regular employment at good wages and are rarely out of work, do not care to pay premiums which are practically all absorbed by the irregular or bad workmen who are constantly out of work. The consequence is that, where such schemes are compulsory, as at St. Gall, there is practically a revolt amongst the better class of workmen, and where they are voluntary, the better class workmen either do not join, or else, as at Basle, abandon the fund, which then becomes merely a species of savings bank for less competent workmen largely subsidised by charity.²

General Insurance.

* Note.—By "trade-group" is meant any association of persons engaged in the same occupation or in kindred occupations, liable approximately to the same risk of unemployment.

¹ Chapman, 84872-4.

² Memorandum by Board of Trade on Insurance. Vol. IX., App. xxi. (k.)

General
Insurance.

576. Moreover, as Sir Edward Brabrook has pointed out, in regard to a system of general insurance covering various trades, there are no sufficient materials upon which any actuary could compute the proper contribution which different trades should make, while the possibility of a levy applying to all trades would very likely give rise to many disputes and much dissatisfaction.¹ The lack of statistics upon which to found reliable premiums for unemployed insurance, either for particular trades or for workmen in general, has also been referred to in the special reports by skilled actuaries which we have caused to be prepared on the subject.² In the present state of our knowledge, it would seem that the only alternatives available for a General Insurance scheme would be, either to fix the premiums on a basis of wages, with the disadvantages we have already pointed out, or else to fix what would be practically arbitrary premiums for different trades, or one arbitrary premium for all workmen. Such arbitrary premiums would not be acquiesced in by the various trades unless they had a voice in fixing such premiums, and it is difficult to see how, if each trade had such a power, any common agreement could be arrived at.

Trade-group
Insurance

577. On the other hand, the advantages of Trade-Group insurance are that the risks within each trade are, even if inaccurately, yet voluntarily estimated and borne by that trade, and the premium can be adjusted according to each trade's estimate of the risk. There is a sense of solidarity amongst the men within a trade, which permits them to be content to pay for the support of the less fortunate members of that trade. And though all insurance rests on the principle of the fortunate paying for the unfortunate, yet, as the Board of Trade has pointed out, "the principle of solidarity clearly cannot be carried successfully beyond the point up to which it is supported by the sentiment of solidarity."³

578. Another advantage of trade-group insurance is that all the men in the trade-group are more or less known to one another, and the chance of fraudulent unemployment or malingering is reduced to a minimum. It is in the interest of each workman to see that a fellow workman does not draw unemployed benefit when work is available for him. The available work is, as a rule, well-known within a Trade Union by means of its organisation, with the consequence that a supervision can thus be ensured, which, in the case of a General Insurance fund, would be almost impossible, or, if not impossible, would involve an expenditure on the supervising staff which would largely add to the cost of the scheme. We are, therefore, clearly of the opinion that *a priori* considerations tend to show the superiority of Trade-Group Insurance over General Insurance against unemployment, and this is amply borne out by experience abroad, where the only form of insurance which has obtained any modicum of success is that based on trade organisations.

Disadvantages of
a compulsory
universal scheme.

579. But, in addition to this general division of insurance schemes into "Trade-Group" and "General," there is another important classification of them which we must notice. They may, in their application, either be voluntary and partial, or compulsory and universal. The disadvantage of a compulsory scheme is that, in the existing unorganised state of a large part of the labour market, such a compulsory scheme must either work on a "General" rather than a "Trade-Group" basis, or else must, as a condition precedent to its success, force all the labourers into trade-group organisations.⁴ At the present time it is estimated, even by the Trade Unionists themselves, that not more than a quarter of the working classes in England are organised in Trade Unions; while Sir Edward Brabrook estimates that the Trade Unionists are only one-sixth of the total number of workmen.⁵ It therefore follows that a compulsory universal scheme, if founded on a Trade-Group basis, would require compulsion to be applied to at least three-quarters of the working classes to form or join trade organisations; and if not founded on a trade-group basis, it would lack solidarity in its premiums, risks, and payments.

580. A compulsory universal scheme not on a trade-group basis would, therefore involve the State in the difficulties of fixing, enforcing, and collecting the premiums, and in the invidious and costly task of detecting malingering. These features would add enormously to the difficulty and expense of administering a compulsory as compared with a voluntary scheme.

¹ Brabrook, 35232, 35242.

² Statistical Appendix, Part xvi. Nelson, Stat. 6; Ackland, Stat. 23-25.

³ Board of Trade Memo. on Insurance, Vol. IX., App. xxi. (k).

⁴ Board of Trade Memo. on Trade Union

Unemployed and Travelling Benefit, Vol. IX., App. xxi. (k).

⁵ Brabrook, 35147 (S. 14).

581. Further, a universal compulsory scheme would necessarily be opposed by the existing trades and benefit organisations, especially if it were enforced by means of deductions from the workmen's wages.¹ It would interfere and compete with such voluntary organisations, and upon the basis of compulsion such competition would probably be successful. For this and other reasons it has been found that, in most instances, the working classes either oppose such a compulsory general scheme, or where, as at St. Gall, they have first proposed it, on ascertaining its results they have been the first to insist on its abolition.

582. This investigation seems to show that a scheme of insurance against unemployment based upon the voluntary system, and resting on trade groups, is the most likely to attract general support. If, then, the leading idea be the encouragement of voluntary organisations, it would follow that insurance against unemployment should be developed and encouraged by assisting existing organisations in much the same way as one might develop a system of invalidity pensions through friendly and other kindred societies. This view is supported by Trade Unionists, by economists, representatives of Friendly Societies, and other eminent witnesses.² The Trade Unionists consider that—by reason of their machinery by which workmen are sent to places where work can be got; of their assistance to men travelling in search of work; of their recognised agencies in every part of the kingdom; of their large unemployed benefits; of their knowledge of the character, suitability, and industry of their members—they should be the recognised agency to deal with that class of workers described by Mr. Long as respectable men temporarily in distress owing to their inability to obtain employment.³

583. Professor Chapman thinks that Trade Unions can undertake insurance against unemployment because—

- (1) They determine the wages which may be taken.
- (2) They exercise compulsion on their members and find them places which they are expected to show reasonable ability to keep.
- (3) They are organised by trades. A trade organisation can detect any disposition on the part of a member to slacken his efforts to find work, and the general feeling among the other members about a man who was too often out of work, or who stayed out for what was considered an unreasonably long time, would be a sufficiently strong deterrent against imposition.⁴

584. Amongst the foreign methods described to us there is one in operation at Ghent and elsewhere which seems to us to be much in accord with what we are suggesting. The essence of this system is that either the State or the Municipality add a fixed amount to the benefit actually paid to an unemployed workman by a Trade Union or other organisation. Thus at Ghent, Antwerp, and other Belgian towns and provinces that have adopted the system, the proportion which the municipal allowance bears to the Trade Union allowance may be as much as 50 per cent., while in France the subvention by the State ranges from about 20 per cent. to 25 per cent. of the allowance given by Trade Union or other organisations.⁵

585. The advantages of this system are various:—In the first place, we may refer to the economy of the system as compared with other forms of assisting unemployed workmen. Mr. Beveridge has summarised the cost of relieving men under the Unemployed Workmen Act at about 30s. a week per man, and the cost of relieving them by Trade Union benefit at about 15s. per week per man.⁶ Now, the State on the Ghent system would pay a maximum of only one-half of this 15s., whereas, under the Unemployed Workmen Act, the whole 30s. is provided at the public cost.* It would, therefore, follow that the Ghent system would cost the general public per man relieved only one-quarter of the cost of the existing system of maintaining an unemployed man at the public expense. In addition, the public would be saved the always high and sometimes prohibitive cost of investigation under the present system.

* NOTE.—i.e. by subscriptions, taxes, or rates, provided by the general public

The Ghent system
and its
advantages.

586. The second advantage of the Ghent system is that the State obtains gratis all the benefit of the trade organisation in detecting imposture.

587. Lastly, the association of insurance with membership of a trade organisation would, we think, give an impulse to unskilled workmen to form such organisations, and would, we hope, in this way help on the movement towards that regularisation of unskilled unemployment which we have seen is so desirable.

588. Unless some such combinations are formed amongst the unskilled workers, we do not believe it to be possible to improve the condition of these low grade workers.

Effect of intro-
ducing principle
of Ghent system
in England.

589. With regard to the actual effect which the introduction of a system like that of Ghent would have upon workmen in England in inducing them to join trade group organisations, we can speak with no confidence. It is true that abroad the subsidy system has not had any marked effect in increasing the number joining trade organisations, but it is thought that the subvention will "probably have an effect in preventing those who had once joined from leaving the unions."¹ It must be remembered, however, that abroad the experiments have been purely local and on a somewhat diminutive scale. For instance, at Strassburg, where the Ghent system has been in force since the beginning of 1907, the total municipal subvention in 1907 was only £250: and it would appear that the whole system of municipal relief is not very well-known.² On the other hand, while the working classes generally were hardly aware of the benefits of the new insurance system, it was well-known to Trade Union management. Thus at Ghent the introduction of a municipal subvention had a considerable effect in developing the practice amongst Trade Unions in providing unemployed benefit.³ The advantages which we hope, therefore, from the system in England would be three: first, it should encourage trade organisations not now paying unemployed benefit to pay that benefit; second, it should encourage trade organisations paying only partial or incomplete benefit, to extend that benefit; third, it should in many cases encourage workmen having no trade organisation to become members of such an organisation (by joining one of the existing societies) for the sole purpose of gaining the benefit of insurance.

590. When we examine the figures furnished by the Board of Trade in regard to the extent to which Trade Union unemployed benefit is provided, it seems possible that there is a considerable margin of workmen who might be covered by this form of providence, if only some extra inducement could be supplied. Thus, among existing Trade Unionists, there are roughly some 650,000 men whose unions do not provide any form of unemployed benefit, although such benefit is in fact provided by other Unions of the very trades to which these 650,000 men belong. If, for instance, nine Unions of the transport trades find it feasible and necessary to provide unemployed benefit, it does not seem unreasonable to hope that a little extra inducement would be sufficient to cause the remaining forty-nine transport unions also to provide such benefit, and thus cover an additional 73,000 men whom they include among their members.⁴

591. Again, although there are nearly 1,500,000 men entitled to unemployed benefit in some form, this benefit, in many cases, is only travelling benefit, and, in others, is not a continuous allowance for a fixed period, but merely an intermittent and arbitrary grant on special occasions.⁵ We have no figures to show what proportion of these 1,500,000 men receive unemployment benefit in an incomplete or partial form; but it would appear that, taking only the 100 chief Trade Unions, there are over 145,000 members entitled to partial benefit only, and 990,000 to complete benefit. It may be assumed, therefore, that, out of the 1,500,000 men entitled to some form of unemployment benefit, there are probably 200,000 men who receive that benefit only in a partial form from their Unions.⁶ It is, we think, not unreasonable to hope that a little financial assistance would enable the Unions in question to transform this partial into complete unemployed benefit.

592. Furthermore, it would appear, from an estimate which the Board of Trade have furnished to us, that probably 6,000,000 or 7,000,000 men over twenty years of age belong to

⁵ *Ibid.*

⁶ Letter from the Board of Trade, September 16th, 1908, App. Vol. XI.

the classes from which Trade Unionists are drawn, but have not yet joined a trade organisation. There is therefore *a priori* some chance of enabling a very large proportion of the working population who at present enjoy no or only partial unemployed benefit, to obtain the right to such benefit in a complete and regular manner. If we consider the number of dependants of these men, it seems clear that any inducement which could bring them into the privileged class of those enjoying unemployed benefit would be, from a national point of view, extremely advantageous.

593. We are not able with our present limited knowledge to indicate precisely the form which such inducement should assume. In Denmark and France, it is a national contribution. In Ghent, Strassburg and elsewhere, it is a municipal contribution. There are objections to the latter form of assistance, as it confines those so helped to the locality helping them. On the other hand, whilst these schemes are in the experimental phase, it might be premature to assist them by national contribution.

Application of principle of Ghent system in England.

594. Several witnesses have expressed the opinion that a State subsidy would have the effect both of inducing many of the poorer Trade Unions who do not now provide unemployed benefit to provide such benefit; and, also, of inducing men who do not now belong to Trade Unions to join them.² We have little doubt ourselves that, if the Central Government, the Public Assistance Committees, the Voluntary Aid Committees, and the Trade Unions would combine to support and encourage the establishment of the scheme of insurance by propaganda and persuasion, they would enable the present field covered by Trade Unions' unemployed benefit to be very largely extended. If necessary, an additional inducement might be given by offering, as is done in many places on the Continent, preferential treatment at the national labour exchanges for those persons who have insured.

595. We have seen that, as the Friendly Societies do not insure against unemployment further than by giving, in some cases, travelling benefit and charitable grants, practically the only form in which such insurance has been attempted in England is by means of Trade Union unemployed benefit. Seeing, however, that not more than one sixth to one-fourth of the working classes in England are members of Trade Unions, it would not be just to give them a subsidy without extending a similar advantage to those not thus organised. We should, then, of course, recommend that a similar subsidy be granted to any Friendly Society providing unemployed benefit as part of its normal functions. But, having regard to the great difficulties already adverted to attending any attempt at "general insurance," it does not seem likely that Friendly Societies of the ordinary type, whose members are drawn from all classes and all occupations, and who have little or no trade solidarity, will be induced to undertake this branch of insurance even on the inducement of a subsidy.

596. If, however, the subsidy were to be offered to any provident organisation which would make unemployment insurance a leading feature of its business, we should look for the advent of a new type of Friendly Society, composed of men of similar or allied trades, who would have the necessary trade solidarity and knowledge of each others' circumstances, and whose interests would be sufficiently similar to prevent the "bad risks" crowding out the good. It would, in fact, be a Trade Union organised for provident benefits alone. If such societies came into existence under the encouragement of a subsidy, we might hope for insurance against unemployment becoming general over the field of labour. Such a result, we venture to say, would far more than counterbalance the expense of the subsidy.

597. One criticism which may be applied to this scheme is that it would not deal effectively with the intermittent and casual labourers. Abroad it has been found impossible to include the worst form of casuals (*Gelegenheitsarbeiter*) in the insurance scheme,³ and many of our witnesses have expressed the opinion that it would be impossible to include them in England.⁴

Possibility of including the unskilled and casuals in Ghent system.

598. But here again we must be careful to discriminate between intermittent labourers and labourers merely belonging to what are known as unskilled or casual trades. Some witnesses imply that the unorganised labourer, seasonal and casual workpeople, could not, *unaided*, provide against unemployment out of their own earnings even if they would.¹ One or two witnesses differentiate, however, between the seasonal trades and the casual labourers,² and it is interesting to observe that many of the foreign schemes, though they exclude the worst forms of casuals, do include both seasonal labourers and the lower class of unskilled labourers. Indeed, another important witness thinks that effective organisation would enable even the unskilled labourer in many more cases than at present to meet the difficulties which now have to be dealt with by the Poor Law. The difficulty which prevents the unskilled labour class from forming associations is the lack of a definite standard of skill and the nature of their work. The hope for them, this witness thinks, lies in amalgamation with the other groups of the trade, unskilled labourers being pulled up, as it were, by the skilled members of that group. "It may be possible, but I cannot easily conceive a union of unskilled labourers except as members of a trade."³ Whether, therefore, along these lines or along others, we see no reason why a very large number of unskilled labourers, induced by the advantages held out by insurance and the labour exchanges, should not form themselves into organisations capable of participating in the system of insurance assisted by public funds.

599. An alternative scheme would be, in addition to the subsidy of trade organisation benefit, to form a general insurance fund through the labour exchanges to which all classes of workmen could belong.⁴ But to do this at the outset would reduce the inducement to enter the system we have been describing. At first we should prefer to establish a scheme of insurance only operating through trade organisations. If it is shown that the Trade Unionists do not take up or support the trade-group scheme sufficiently, it may become necessary to superimpose a supplementary scheme. We do not, however, feel hopeless as regards the financial possibility of including in trade-group insurance a large number of unskilled workmen and labourers.

600. For instance, at Cologne, where a general fund was established, which in many ways was a failure, a large majority of so-called skilled beneficiaries of the fund were seasonal workmen, *e.g.*, bricklayers, whitewashers, carpenters and painters, and some 30 per cent. were generally unskilled labourers and navvies. Even with such unpromising material, which produced a percentage of unemployed members as high as 84·8, the proportion of premiums paid to allowances received by the insured has been as high on an average of years as 50 per cent.⁵ We see, therefore, no *a priori* reason why regular unskilled labourers should not be brought into a trade-group scheme. It might even be made incumbent on the labour exchanges, by furnishing information and advice and by other methods, to more or less actively co-operate in the formation among unskilled labourers of organisations for insurance on a trade-group basis.

Difficulties of Ghent system.

601. We are well aware that there are several objections to the Ghent system. It may be argued that it implies public control of trade organisations and their proceedings. On the question of the solvency of a Trade Union benefit fund, it may be pointed out that, under the system, the public insurance fund would not suffer but rather gain from any failure of the Trade Union fund, because payments are only made from that fund after the Trade Union has actually made a payment to the unemployed man. Of course, some arrangement satisfactory to the public contributing authority must be made for the separation of unemployed benefit from strike benefit; for the public contribution could not apply in cases of trade dispute unemployment. What the public allowance does is to add to the weekly allowance paid by the Trade Union to members of that union out of employ. No public contribution is made to the general funds of the union, and, if the unemployment is due to a trade dispute, no payment would be made to any one out of employ-

⁴ Beveridge, 78014; Wilson-Fox, 99057. ⁵ Memorandum by Board of Trade on Insurance, Vol. IX., App. xxi. (K).

ment in consequence of that dispute. To this end no payment ought to be made in respect of any man's unemployed benefit unless upon the certificate of the local labour exchange. But for the rest we think the position would be summed up by saying that the trade organisations, which would suffer most by any failure of their insurance fund, would under the new system have the benefit of public advice as to the means for preventing such failure. It is true that, if the fund fails, the local rates may have to support some of the workmen, but in that case the men will be more affected than the State, and are more likely therefore to avoid the contingency.

Difficulties of
Ghent system.

602. There is another subject which we must allude to, and that is the attitude which employers generally might assume in connection with proposals to subsidise trade organisations with public money. Although the subsidy would be only for purposes of insurance against unemployment not arising from labour disputes, such a system would probably increase the number and improve the financial position of the trade organisations. Against any apprehension on the part of employers which an augmentation of trade organisations might create, we may urge the following considerations :—

Distress caused by unemployment or under-employment prejudicially affects employers in two respects :—

First, it increases the burden of the rates, and the increase of the local rate is a direct tax upon the enterprise of the employer whose business is within the locality where the rate is raised.

Second, it deteriorates the workman and consequently the character and quality of his work.

603. If employers desire to have at their disposal that reserve of labour which they sometimes profess to require, they should in their own interest acquiesce in measures which would avert deterioration amongst those whom they may want to employ.

604. This review of unemployment insurance enables us to arrive at the following conclusions :—

First, that the establishment and promotion of Unemployment Insurance, especially amongst unskilled and unorganised labour, is of paramount importance in averting the distress arising from unemployment.

Second, that the attainment of this object is of such national importance as to justify, under specified conditions, contributions from public funds towards its furtherance.

Third, that this form of insurance can best be promoted by utilising the agency of existing trade organisations or of organisations of a similar character which may be brought into existence.

Fourth, that no scheme either foreign or British which has been brought before us is so free from objections as to justify us in specifically recommending it for general adoption.

605. Owing partly to want of time, and partly to the absence within the Commission of expert and actuarial experience upon insurance, we have not ourselves attempted to formulate a scheme. It will require much close general investigation and knowledge of local conditions before the foundation of a general or a national system of insurance can be safely laid. But the question is urgent. We, therefore, recommend that a small Commission or Departmental Committee of experts and representatives of existing trade benefit organisations be at once appointed with an instruction to frame as quickly as possible a scheme or schemes for consideration.

606. We further suggest that, after that Committee has reported, a special Advisory Board be set up to help and to promote schemes adapted to the varying conditions of different industrial communities.

(2) The Permanent System of Public Assistance for the Able-bodied.

607. Though the suggestions we have made in our last section may, we hope, do much to prevent capable and deserving men from being reduced to destitution through lack of employment, yet these preventive measures will require some time for their complete development. Side by side with these preventive measures must be established a permanent organisation to which those, whom our preventive measures fail to reach, can have recourse if necessary in times of distress. We propose that in future there shall be in every district four separate but co-operating organisations, viz. :—

Organisations for assisting unemployed workmen.

- (1) An Organisation for Insurance against Unemployment.
- (2) A Labour Exchange managed by the Board of Trade with the help of a local committee.
- (3) A Voluntary Aid Committee, representing local organisations subject to the conditions we elsewhere state.†
- (4) The Public Assistance Authority representing the County and County Borough Councils and acting locally through Public Assistance Committees.

608. Two of these organisations, the Insurance Scheme and the Voluntary Aid Committee, will be representative of self-help and voluntary effort, and will be worked through voluntary organisations. The other two, viz., the Labour Exchange and the Public Assistance Authority, will be public organisations, financed by public money, and staffed by public officials. The object of all four will be broadly the same, viz., the maintenance or restoration of the workman's independence. Each will, however, have a distinct sphere marked out for itself. The function of the Insurance Organisation will be to develop and secure the greatest possible benefits to the workmen from co-operative insurance against unemployment. The function of the Labour Exchange will be to provide efficient machinery for putting those requiring work and those requiring workers into prompt communication, but the Labour Exchange will not provide work or give relief. The function of the Voluntary Aid Committee will be to give advice and aid out of voluntary funds, especially to the better class of workmen who may be reduced to want before the Labour Exchange can find them employment, and we have pointed out in Part VII. of our Report what resources both of money and of personal service will, we hope, be at the disposal of the Voluntary Aid Committee.

The functions of the Public Assistance Committee will be :—

First, To assist, with a view to their ultimate self-support and independence, those who are able to work and who can show that they have taken active measures to obtain work, but without success, and cannot in consequence support themselves or their families.

Second, To assist, under curative and reformatory conditions calculated to restore self-respect :—

- (a) Those who, though willing to work, cannot offer a return in work adequate to the wage demanded or received, and are in consequence without employment and unable to support themselves or their families.
- (b) Those who, though able to work, cannot show that they have taken active measures to obtain work, and are in consequence unable to support themselves or their families.

One authority only to administer public relief to necessitous persons.

609. We have dealt elsewhere* with the method by which we propose to establish these various organisations and we need not here amplify the subject. There is, however, one principle in connection with the policy to be pursued in regard to Public Assistance, which is of such importance in connection with the treatment of the able-bodied, that we propose to re-state it. It should, we think, be a fundamental condition of the assistance system of the future that the responsibility for due and effective relief of all necessitous persons at the public expense should be in the hands of one and only one authority in each County and County Borough. It is difficult to conceive any system, in which different public

† See Part VII.

* Viz. :—As to Insurance and Labour Exchanges, previously in this chapter ; as to Voluntary Aid Committee in Part VII. : and as to Public Assistance Authority in Part IX.

authorities have power simultaneously to administer relief to much the same class of applicant in the same locality, which will not result in overlapping, confusion, and divergence of treatment and practice. We have shown how all these inconveniences have arisen and are still at work under the machinery set up by the Unemployed Workmen Act, and we have accordingly recommended that this Act be not continued. Under the system which we propose, one authority, and one authority only the Public Assistance Authority, will for the future be responsible for the public relief of the able-bodied suffering from distress due to want of employment. The Public Assistance Authority will, as before stated, act locally through the Public Assistance Committees.

610. The principles which should guide the various organisations in their treatment of the able-bodied may be briefly summed up in three words: Co-operation, Discrimination, and, so far as possible, Restoration. The principle of co-operation.

611. The Public Assistance Committee should co-operate in every way with all other agencies possessing information about, or having special methods of treating, the cases which come before it. Thus, the Voluntary Aid Committee, the Labour Exchange and the Public Assistance Committee should freely exchange information. The Voluntary Aid Committee should refer to the Public Assistance Committee all cases which are more suitable for treatment by that Committee, or which, though suitable for voluntary treatment, are unable to obtain from this source the assistance which they require.

612. On the other hand, the Public Assistance Committee should in its turn recognise and develop the usefulness of the Voluntary Aid Committee by referring to it any cases, which it is thought might more properly be met through agencies outside the sphere of Public Assistance. Generally speaking, a first application for assistance will naturally be made to the Voluntary Aid Committee. Temporary need due to non-recurrent causes will belong primarily to the sphere of voluntary aid; chronic distress or destitution to the Public Assistance Committee. In rural districts there may be delay or difficulty in forming Voluntary Aid Committees, but as there are few able-bodied men out of employment in such districts, the want of such Committees will not greatly affect the treatment of able-bodied unemployed.

613. General rules should be laid down and accepted by each authority as to what class of cases should be dealt with by the Voluntary Aid Committee and the Public Assistance Committee respectively. When, therefore, the case of an able-bodied man came up before either Committee, it would at once be recognised whether his case was or was not one which, according to the rules agreed upon, should be dealt with by that Committee. Moreover, in course of time, the practice of the Committees would be so well-known in the district that the applicants for assistance themselves would know to which of the two Committees they ought to apply. In this way, we do not think it would happen that an applicant would apply for assistance to the wrong Committee. We have suggested in the arrangements for the constitution of the two Committees that representatives of each should sit on the other, and we contemplate that the offices of the two Committees should be in telephonic communication. In a word, it is of the essence of the proposed co-operation between Voluntary Aid and Public Assistance in the treatment of the able-bodied that such co-operation should result in more prompt and more efficacious treatment than heretofore.

614. As with the Voluntary Aid Committee, so with the Labour Exchange. The Public Assistance Committee should be in close communication with the Labour Exchange, and should (except in cases of urgent necessity) refuse to maintain an able-bodied applicant until he has registered himself at the Labour Exchange, and until the Labour Exchange has informed the man and the Public Assistance Committee that there is no suitable work available. Again, in considering the best form of treatment or training to be given to an unemployed man, the Public Assistance Committee and the Voluntary Aid Committee should not neglect to seek the advice of the Labour Exchange as to what trade or calling would be most likely to offer the best chance of independent livelihood. The Labour Exchange on its part would refer to the Public Assistance Committee or the Voluntary Aid Committee applicants for whom it deemed Public Assistance or Voluntary Aid to be required. Thus the co-operation between these three organisations would be constant, close, and effective.

615. The second principle which should guide the Public Assistance Committee and its co-operating organisations in the work of relieving or preventing distress is The principle of discrimination.

Discrimination. The Public Assistance Committee should as far as possible endeavour to select treatment which will restore the individual to independence, but it should at the same time endeavour in its treatment of individual cases so to shape its policy as to make it one of general encouragement to the thrifty and independent. Discrimination and individual treatment will be facilitated through classification by and in institutions, and the general tendency of classification will be to operate to the advantage of the well-conducted, and the encouragement of those who previous to their period of distress have made real efforts towards self-maintenance and insurance.

The principle of restoration.

616. The third principle is partially covered by what we have said in the preceding paragraph, viz., that restoration to independent habits of life should be an ever-present consideration in the minds of the various organisations in prescribing treatment. In some cases in which such restoration may seem to be impossible, curative treatment may be effective if undertaken by voluntary organisations having within their ranks persons of experience whose whole lives are given to this work. On the other hand, if past misconduct seems to mark out the applicant for assistance as irreclaimable, care must be taken that he is sent to a place of detention under another authority, where his evil influence and example cannot contaminate associates less hardened than himself.

617. We lay some stress upon the necessity of restorative treatment, where practicable, for the able-bodied, as such treatment hardly figures in our Poor Law processes; nor is it difficult to give the reason. The Royal Commission of 1832 were confronted by a national danger of urgent importance. Indiscriminate relief to the able-bodied was demoralising the whole community. They very properly concentrated their attention on stamping out what was a dangerous and spreading epidemic. They intended their system to produce "negative rather than positive effects," and an examination of the conditions under which they reported explains this attitude. They had to deal with the Poor Law as it was, and they did not look to it "for the general diffusion of right principles and habits."¹ Their policy was successful in restoring and maintaining the independence of the main body of the working class, but it did not aim at a restorative treatment of individuals who had fallen out of the ranks.

618. Hitherto relief, either outdoor or indoor, as at present administered, has generally resulted in the deterioration of the able-bodied. We hope that in the future our suggestions will make it possible for the action of the Public Assistance Authority, even when applied to the relief of the able-bodied, to be restorative.

619. It will have been observed that in previous sections of our Report various terms have been used in attempting to classify the necessitous unemployed. For our present purposes it is enough to divide them into three classes:—

Class I.—Those who require temporary maintenance with work.;

Class II.—Those who require for a longer period maintenance with work and training;

Class III.—Those who require detention and discipline.

(a) *Class I.*—Those who require Temporary Maintenance with Work.

Assistance to Class I.

620. This class will consist of those in need of temporary help, who, to judge by their industrial record, will shortly be again able to maintain themselves at their own trades. We hope that our scheme of Labour Exchanges, Insurance, and Voluntary Aid Committees will greatly reduce the numbers in this class resorting to the Public Assistance Committee; still the possibility of such resort, especially in times of prolonged distress, must be met. Moreover, the class will contain, as a rule, the best characters and the most hopeful cases. It is therefore useful to consider at some length how the new system may provide restorative treatment for this class.

621. A man will be placed in this class chiefly as a result of an examination of his industrial record in the possession of the Labour Exchange, together with the opinion of that institution that the man has a good chance of obtaining employment in the occupation which he has hitherto followed. Broadly speaking, the men in this class will

¹Report of Poor Law Commission, 1832. [Cd. 2728], 1905, p. 362.

be the men for whom the Unemployed Workmen Act was intended by its promoters, and the possibility of recognising such cases will, for the first time, be made easy by the particulars which the Labour Exchanges will possess of the man's qualifications and record, and by the test which in the ordinary course of its operations the Labour Exchange will be in a position to offer as to the man's willingness to work.

622. The distinguishing feature of men in this class is that the treatment required for them, so as to restore them to permanent independence, is temporary maintenance in health until they are able to resume their ordinary occupations. The methods of Assistance available for them would be : First, Outdoor Relief, or as we shall call it, Home Assistance ; second, relief given on the principle of the Modified Workhouse Test, or as we shall call it, Partial Home Assistance ; and, third, Indoor Relief, or we shall call it Institutional Assistance. The general conditions under which these various forms of Assistance will be administered will be defined later on. (*Vide pars.* 630, etc.)

623. An essential principle to be observed in connection with Home Assistance to the able-bodied is that it shall be in some way less agreeable than assistance given by the Voluntary Aid Committee. Unless the superiority of the assistance afforded by the Voluntary Aid Committee is in some way secured, it is doubtful whether that Committee will be able to collect voluntary subscriptions for the purpose of helping deserving cases of unemployment. Experience has again and again shown that the charitable public will not contribute to any extent towards a purpose for which they are also taxed or rated. It therefore follows that if, as is our desire, cases in the class we are considering should be chiefly dealt with by the Voluntary Aid Committee, it is necessary that the aid given by that committee should confer greater benefits, or have less onerous conditions attached to it than the Home Assistance given by the Public Assistance Committee. It is also important that the Home Assistance given in these cases should in some way or other be less agreeable than the receipt of Unemployed Benefit through insurance, otherwise the mere fact that out-relief can be given in such cases will in itself prevent a large number of men from insuring against unemployment. We think, therefore, that Home Assistance should be given only in cases where the man satisfies the conditions named in paragraph 630 (1). ^{(a) Home assistance.}

624. The second method of Assistance available for the class we are considering will be Partial Home Assistance granted on the principle of what is known as the " Modified Workhouse Test " system. The essence of this system is that a man is taken into an institution as a test, but his family remain and are assisted in the home. The class for which this form of assistance would be desirable might include even men who, though good workmen, are occasionally unsteady in their habits. For such men Home Assistance might be demoralising, and might leave them less fit to resume their work when the expected opportunity arose. On the other hand, the men are ex-hypothesi efficient workmen at their trades and are not in need of technical training as a condition precedent to their obtaining work. If they receive Home Assistance at all, it should be for their families and they should receive indoor relief for themselves in suitable institutions where proper employment can be given them. The uninterrupted stay in such institutions may be either for the inside of each week or for a longer period, according as the character of the men permitted of a greater or lesser degree of liberty being accorded to them. ^{(b) Partial home assistance.}

625. If a man in this class was not suitable for Home Assistance or for Partial Home Assistance on account of the condition of his home or some other failure on his part to comply with the conditions specified in Par. 630 (1), the proper method of Assistance would be indoor relief for himself and his family in an Industrial Institution,* where he would be provided with an occupation as far as possible akin to his ordinary trade. The object of the Assistance would be the return of the man to his normal occupation, in good physical health and with no diminution of his former skill as a workman. ^{(c) Institutional Assistance.}

626. Where Institutional Assistance is given it should be associated with conditions which would enable the recipient to keep his name on the Labour Exchange, and to keep in touch with the Exchange. But the class of applicants whom we are discussing under this definition are not such as in our judgment would require or should be given long periods of institutional treatment. If such treatment became necessary because the applicant required it, he would be transferred to another class.

* See par. 634.

(b) Class II.—Those who require for a longer period Maintenance with Work and Training.

627. The second class, whose needs the Public Assistance Committee will have to meet, are those who require prolonged treatment for the purpose of training or of restoration to physical efficiency. It is difficult for us to do more than sketch out a general idea for the restoration of this class to industrial efficiency, for it includes individuals whose failure and collapse are due to such different causes that it is impossible to prescribe any general scheme likely to ensure success. But they all have this much in common: they require something more than maintenance to enable them to regain their place in the industrial world. For this class as a rule, therefore, institutional treatment and training would be required, and these would be available in the industrial or agricultural institutions or labour colonies which we propose to establish. Here the capacity of the individual could be properly tried and his physique improved. Young men might in some cases, if they showed promise, be sent to technical schools for training, the fee being paid by the Public Assistance Authority.

(c) Class III.—Those who require Detention and Discipline.

628. The last, and the most difficult, class with which the Public Assistance Committee will have to deal, are those who, before they have any chance of being restored to independence, require detention, discipline, and training for a prolonged period. We may sub-divide this class into two divisions:—

(1) Those unwilling to work.

(2) Those whose character and behaviour are such that no employer will engage them.

629. For both divisions of this class we would advocate a different kind of treatment from that which we laid down for the two preceding classes. It does not seem to us that the maintenance and detention of persons who will not work or whose recent character and conduct are an insuperable bar to their re-entering industrial life, are within the legitimate functions of a Public Assistance Authority. Detention under disciplinary treatment affords the best hope of their reformation or of preventing them by their example or conduct from contaminating those with whom they come in contact. They should be handed over to that authority whose special duty it is to detain those whose presence at large is a danger or a mischief to the community. Detention colonies under the control of the Home Office should, in our judgment, be established for the reception of this class. We believe that no system of labour or industrial colonies can be properly worked, unless there is in reserve a semi-penal institution to which those who refuse to comply with the rules and regulations of the colony can be sent upon proof of repeated or continuous misconduct.

(d) The Methods of Assistance.

630. We will now enumerate and further describe the methods of assistance, which, as we have already indicated, will be in future available for the treatment of the able-bodied by the Public Assistance Authority.

(1) Home Assistance on condition of daily work in an Industrial or Agricultural Institution or Colony or otherwise as the Public Assistance Authority may decide within regulations laid down by the Local Government Board. By Home Assistance we mean assistance at the home whether in money or kind, and given without requiring the recipient to live entirely in an institution. The conditions under which Home Assistance should be granted would be as follows :—

(a) That the requisite assistance is not forthcoming from any other source.

(b) That the assistance be given on condition of daily work.

(c) That the assistance should be only given to an applicant with a decent home and a good industrial record.

(d) That the order for assistance should only be for a strictly limited period and subject to revision.

(e) That the applicant should be registered at the Labour Exchange, and that the relief should cease as soon as suitable occupation has been offered through the Labour Exchange.

(2) Partial Home Assistance, *i.e.*, Home Assistance for the family of an applicant, the applicant himself being maintained in an institution and given work.

(3) Institutional Assistance, *i.e.*, continuous maintenance in an Industrial or Agricultural Institution or Colony without detention, except in so far as the applicant binds himself by a written agreement to stay for a definite period.

(4) Continuous maintenance under compulsory detention in a colony established and managed under the Home Office.

631. In recommending the above methods, it is not intended to suggest the establishment of separate institutions for each of the first three. One institution would usually suffice. In most of the County Boroughs the institution might be on the outskirts of the town built in an inexpensive manner and with sufficient land to employ a large number. For industrial occupations, inexpensive workshops would be erected. In many cases a disused workhouse might be adapted for the purpose. If the institution be properly planned, and there be sufficient area for the purpose, such classification as may be required would be possible.

632. In county areas there would be little difficulty in setting up conveniently situated institutions of the kind suggested, to which Public Assistance Authorities of other areas might send men on payment.

633. It may be necessary to provide other institutions in the shape of Labour Colonies for those persons who are willing to work and who would bind themselves for a stipulated period, and who would be benefited by prolonged treatment and training in industrial or agricultural pursuits. Such men, it is hoped, might be permanently reinstated as industrious workmen either in this country or abroad. It is not proposed that an institution of this kind should be established in every area by the Public Assistance Authority nor indeed in any area if voluntary or charitable effort can be induced to make the necessary provision. One such training colony may be sufficient for a number of County Boroughs or for several Counties.

(e) Industrial or Agricultural Institutions.

634. The Industrial and Agricultural Institutions to which we have referred will to a large extent supersede the existing general workhouse as a method of dealing with the able-bodied. For the future, the different treatment and classification of the able-

bodied should commence from the time that the application for assistance is entertained and every effort* should be made, at an early stage, to dissociate the respectable unemployed from the habitual “in and out.” On entrance into the institution the applicant should as far as possible be placed on work adapted to his previous occupation and his capability and willingness to work will thus be ascertained. The Industrial and Agricultural Institutions will be in direct communication with the Labour Exchange, and one of the primary objects of their officials should be the restoration to industrial efficiency and independence of the inmates under their care.

635. These Industrial and Agricultural Institutions will include housing accommodation for those receiving Institutional Assistance or Partial Home Assistance, and also workshops or land where work can be done. It will probably be found necessary to establish separate Industrial Institutions for women.

(f) Labour Colonies.

636. We obtained a considerable amount of evidence upon the subject of Labour Colonies. We visited personally certain of the colonies which have been established in this country by charitable and religious bodies. We also saw the colony of the London Central (Unemployed) Body at Hollesley Bay¹ and a deputation of our colleagues visited various institutions of the colony type in Holland, Belgium, Germany, and Switzerland. The experience gained during this tour is recorded in a Report contained in the Appendix.

637. The advantages claimed for the colony, as contrasted with the workhouse system of dealing with able-bodied, can be stated in a few sentences. The advocates of the colony system assert that by the workhouse methods now applied to able-bodied, the home is destroyed and the man demoralised, both morally and economically, and that the cost to the ratepayers is great. In contra-distinction they maintain that, under the colony system the home is preserved, the man improved, and this at a much less cost per head for a given time than is possible under the other system. Indirect advantages are also claimed for the colony system in the inducement or facilities it may give to townsmen to settle subsequently upon the land.²

638. The practical experience of labour colonies in this country is small. Until quite recently the only labour colonies in existence in England were connected with religious and charitable organisations. At Lingfield³ and Hadleigh⁴ and the German Colony at Ware good results in a certain number of cases have been obtained, and high praise is due to the spirit of devotion and self-sacrifice animating the officers and staffs of these establishments. Temporary improvement has doubtless been achieved in some cases, but we cannot, on the evidence and figures given, speak positively as to the actual percentage of those thus benefited, nor as to the period during which the improvement lasted. Hollesley Bay is an institution belonging to the Central Unemployed Body for London. It has been too short a time in existence to afford trustworthy data for analysis and criticism. Its promoters assert, and we believe correctly, that through its operations a number of persons have been enabled to emigrate and are doing well.⁵

639. The English experiments, though few in number, and limited in duration, show that with proper grading and a good influence operating within the colony itself, much better results can be obtained from the colony system than from that of the workhouse. The colony has been in some, if not many, cases, a suitable refuge for the necessitous, and it has, but to what extent we cannot accurately estimate, led individuals back to a life of independence and of self-support. But the work of these colonies has been limited by two conditions. They are all voluntary and have behind them no powers of detention. They thus serve as temporary refuges only. Nor do they attempt, as a rule, to combine industrial training of different kinds with field work, as is the practice of labour colonies on the Continent.

* It may, however, be necessary in some instances to establish Receiving Houses for the temporary reception of the able-bodied.

¹ Visits: Miscell. ² Smart, 84500 (91-4). See also Tagg, Vol. VIII. App. lxxvii. (14); Morgan Vol. VIII. App. lvi. (21). ³ Hunt, 80952 *et seq.* ⁴ Visits: Miscell. ⁵ Smart, 84510-6.

640. The evidence which we have received from abroad supports the general conclusions we have arrived at as regards English colonies. Our Committee which visited these colonies reported that with certain advantages the free colony at Frederickoord in Holland represents much the same conditions as those prevailing at Hollesley Bay, and the Arbeiterkolonien may stand for the Salvation Army Colony; but the other establishments visited by them are places of detention of a reformatory type.

641. In recommending the policy of establishing Labour Colonies we do so with a full appreciation of their limitations as at present recorded by their work. But the substitution of colonies for the general workhouse means open air or outside treatment for the able-bodied in place of the present intra-mural workhouse treatment; it affords opportunities for more varied methods of industrial treatment than are possible in the somewhat confined space of a workhouse. We cannot doubt that healthier influences, both physical and moral, will be associated with these new conditions and will conduce to the reform or rehabilitation of those sent to the colonies.

642. As regards cost, we do not think that the colonies will be found expensive in comparison with the present system. The expense of maintenance, site and building should be less than in the case of urban workhouses. Against this saving we must remember that, if supervision is to be thorough and stimulating, the staff of officers will bear a higher proportion to the number of inmates than is generally the case in the workhouse.

643. A colony is but another name for an institution, and classification is as necessary here as in other institutions. True, the colony in space and area is larger than the average institution: consequently division of inmates and their separation, if necessary can be more easily effected.

644. Many of our witnesses who are in favour of Labour Colonies expect from them the attainment of two objects which cannot be promoted by the same class of treatment. On the one hand it is held that Labour Colonies should be institutions providing technical and general training for men to whom it is desirable to teach a new occupation, and on the other hand, it is urged that the Labour Colony should be a more or less permanent haven for the derelicts of industrial life.¹

645. Experience would seem to show that to endeavour to combine both objects in one colony would result in the failure of both, unless it were possible to effect complete division between the classes of persons treated. This was acknowledged by a number of our witnesses. They consider that colonies should be graded so as to admit of three or four different systems of treatment.² This would enable the Public Assistance Authority to deal with applicants in a way suitable to their respective antecedents and capacity.

646. If we take age as the criterion, the aged or those past hard work should receive different treatment and accommodation from men who are young or who have not attained middle age. The one class from age or infirmity have retired from active industrial life, the other class are, if possible, to be qualified by treatment to re-enter industrial life. No similarity of treatment for these two classes should be allowed. If we take conduct and antecedents as the criterion, there would again be a necessary gradation between persons who (say, previous to emigration) were sent for a short training, and those who came back to the colonies periodically. The treatment and accommodation of the former should be more eligible than that of the latter. It is clear also that, if it should be necessary to have colonies for women, they should be separate.

647. Assuming that the colony system must provide several distinct classes of treatment, we would leave to the Public Assistance Authority after consultation with the Local Government Board, discretion as to whether each class was to be treated in a separate colony or to be made a distinct division in one colony. It would probably be found convenient and economical for two or more authorities to combine and establish colonies for common use, in which case the combined colony would probably be confined to the reception and treatment of one class only.

¹ Beveridge, 77832 (49); Hammond, 80733 (1 *et seq.*), T. Smith, 86726 (30); Hunt, 81054. ² Bolton Smart, 84501 (83-88); 84553, 84722-3; Stepney, 79619 (15), 79795-802; Hunt, 80953 (7), 81012-9, 81055-63, 81036-44; Wood, 85747; Hughes, 85438.

648. Moreover, there are voluntary religious bodies who have establishments specially devoted to the cure and restoration of those who have fallen or slipped out of industrial employment. We strongly advocate the utilisation of these institutions for restorative purposes. The staff of such institutions is largely composed of earnest and devoted men, who bring a religious fervour and constancy to the discharge of their work which no rebuff or occasional failure can check or discourage.

649. To establish Labour Colonies on such a scale as to make them a leading feature in the future administration of Public Assistance, will require much forethought, control and supervision. Unless the treatment in these colonies is uniform so that one class in one colony gets much the same treatment, food, and accommodation as a similar class in another colony, the new institutions will set up and repeat the very evils, inconsistencies and anomalies which we have shown to exist in the present administration of workhouses.

650. The colony system if it is to be effective must be carefully controlled and supervised at the outset by a strong body of officers and inspectors from the Local Government Board, and so far as we know there is not at present in that office sufficient expert opinion for this new and difficult duty. We therefore recommend that such an addition be made to that Department as will be adequate for this purpose.

651. Before we leave the subject of institutional treatment by the new Public Assistance Authority, there is one point of importance upon which we would propose a departure from the existing law and practice. Under the Poor Law, as now administered, there is no means by which a well-conducted and hard-working man in an institution can, if he performs well his daily task, receive any payment. We would relax this principle in the case of well-conducted men in institutions or colonies, and if a man shows industry during his time of training he might, we think, receive at the discretion of the Superintendent some small gratuity in the shape of good conduct pay: the greater part of such sum to accumulate and to be given him when he leaves the colony.

652. In proposing the establishment of the various institutions we have now described, we wish it to be clearly understood that in our view they should be available for a very different class from that which is commonly found in a workhouse. They should be suited to those whose unemployment is due to causes wholly beyond their own control, no less than those with whom it is self-caused—for the one they should be an honourable retreat from the storm—for the other a place for testing capacity and willingness to work. We look to them to provide the machinery for dealing with the results of prolonged depression in trade, a severe winter, a war, or any such interruption with the normal course of things. At the same time they will be available for individuals who are temporarily out of work, and will prevent the loss of efficiency which too often follows unemployment.

(g) Detention Colonies.

653. So far we have dealt only with colonies in which compulsory detention is not to be in force, but the experience of foreign countries is practically universal that no system of colonies can be effective unless there is in reserve a detention colony, to which those can be committed who either refuse to comply with the regulations of the voluntary colony, or as vagrants and beggars become a public nuisance.

654. We have given much consideration to the question as to whether these places of detention should form part of the system of the new Public Assistance Authority and be under their control or whether they should be an addition to the places of detention at present under the Home Office.

655. It would, in our opinion, be unwise to impose upon the new Public Assistance Authorities a duty outside their recognised functions, and which from its very nature they could not perform as adequately as the authority specially established to discharge similar duties. The Home Office have already the experience, the officials and the machinery essential for the proper control and supervision of institutions intended for the enforced detention of their inmates. We think, therefore, that the detention colonies for the able-bodied, which we now propose, should also be under the control and supervision of the Home Office.

656. But we do not consider that the cost of such places of detention should be wholly an Imperial charge. An arrangement should, we think, be made by which each Public Assistance Authority should pay the full cost of the maintenance of the individuals sent by them. As regards the details of the internal management of these colonies, such as diet, etc., we endorse the recommendations of the Departmental Committee on Vagrancy.*

657. We have now to consider the nature of the statutory offence which would entail committal to the detention colonies. We would define it as a wilful and persistent repetition within a given period of any of the following offences :—

(a) Wilful refusal or neglect of persons to maintain themselves or their families (although such persons are wholly or in part able to do so), the result of such refusal or neglect being that the persons or their families have become chargeable to the Public Assistance Authority.

(b) Wilful refusal on the part of a person receiving assistance, to perform the work or to observe the regulations duly prescribed in regard to such assistance.

(c) Wilful refusal to comply with the conditions, laid down by the Public Assistance Authority, upon which assistance can be obtained with the result that a person's family thereby become chargeable.

(d) Giving way to gambling, drink, or idleness, with the result that a person or his or her family thereby become chargeable.

The counterparts of the first two of the above offences are already punishable under the Vagrancy Acts, and a third repetition of them renders the offender liable to imprisonment for not more than one year with hard labour.

658. For this punishment we propose to substitute committal to a detention colony for any period between six months and three years. This proposal is in general harmony with the recommendations of the Departmental Committee on Vagrancy, and we believe it to be essential to the proper treatment of the ins-and-outs, the "workshy" and the loafer. Moreover, by removing these cases to the care of another Authority, the Public Assistance Authority will be enabled to deal more effectively and more hopefully with the better class of workmen applying for assistance.

* Report of Departmental Committee on Vagrancy. [Cd. 2852] 1906. Pars. 290-2.

(h) Migration and Emigration.

659. With regard to Emigration, we have found considerable diversity of opinion amongst our witnesses. Many are in favour of it as an important means of lessening the evil of unemployment;¹ some object to it on the ground that there is derelict land available in this country which should be utilised before sending men abroad,² others on the ground that the best men are sent away while the worst remain on our hands.³ But the conditions of agriculture, and of labour in general, are so different in England and her Colonies that we do not regard either consideration as conclusive. In new countries, there is always room for much low-skilled labour which may be superfluous in an old country. There is ample evidence in the records of Emigration Societies to show that men who are "inefficient" in relation to the conditions of industry in England, may be "efficient" in relation to conditions in Canada. Some of the most successful work done under the Unemployed Workmen Act has been by way of emigration, and an analysis of the men sent by the Central Unemployed Body for London shows that a large proportion were unskilled labourers. The Secretary of the West Ham Distress Committee says of emigration that it is:—

"The most beneficial form of assistance rendered under the Act, both in the relief to the locality as well as to the emigrants. The objection raised to such form of assistance under the Act on the ground that it is robbing the country of some of its best workers is greatly discounted in the fact of the small percentage of the best workers that register under the Act, and the small number of these who seek emigration aid. Of over 250 married and single applicants assisted out by the West Ham Distress Committee four only were of Class I." (*i.e.*, skilled and regular artisans), "and sixty of Class II." (*i.e.*, irregular artisans and regular labourers).⁴

660. The Lingfield Labour Colony, which deals with "the dull, the drunken, the intractable, the lazy, the physically or mentally unfit, and the unfortunate," finds emigration the best method of dealing with its cases after reclamation, and claims that its emigrants do well.⁵

661. The Church Army considers emigration "a most successful and ready means of permanently benefiting them, and at the same time of lessening the competition in the home labour market."⁶

662. While it cannot be considered that emigration by itself is a sufficient remedy for unemployment, we nevertheless regard it as a valuable means of dealing with a certain class of cases which are likely to make a fresh start under new conditions. More especially do we consider it as indispensable in dealing with districts where an excessive congestion of labour has taken place and where exceptional treatment is called for. As instances of such districts we may mention West Ham, Poplar, and Bermondsey; and we think that the new authority when constituted should turn their attention primarily to the dispersal of labour from those districts. The distress there is chronic and tends every winter to become acute; and any attempt to deal with it on the spot only perpetuates the evil. Every effort must be made by migration and emigration to break up the congested mass of labour, and to allow the ordinary conditions of industry to resume their course. It may be found that special grants are necessary to carry out this policy, and if so we think that there should be no hesitation in making them.

663. We think also that this work of emigrating poor persons at the public expense falls well within the functions of the Public Assistance Authority, which would, however, naturally co-operate with established emigration agencies, and would be—either through those agencies or immediately—in close touch with the responsible authorities in the country of destination.

664. With regard to the previous training of emigrants and the use to be made of farm colonies for that purpose, we would call attention to the Report of the Department Committee appointed in 1906 to consider Mr. Rider Haggard's Report on Agricultural Settlements in British Colonies. The following extract indicates the proper functions of farm colonies in this connection :—

“ We have incidentally had brought before us the utility of farm colonies in the United Kingdom in connection with the selection of suitable persons for emigration ; and with their preparation for colonial life. We do not regard it as essential, nor in many cases even desirable, that an attempt should be made to provide instruction or training in agriculture in this country. We have had evidence from several witnesses that the difference between the conditions of agricultural work in this country and the colonies makes it desirable that the emigrant should receive the necessary training in the colony to which he proceeds.

“ Accordingly, we do not suggest that a period of work on a farm colony should be made a necessary condition of any assisted emigration.

“ We think, however, that farm colonies may have a distinct utility in connection with emigration. There are, we believe, many cases in which persons who might be very suitable for emigration, and who would be likely to become successful colonists if they were in good condition, could not, temporarily enfeebled as many of them are, be advantageously sent out, without a period of physical training in the country. Moreover, a farm colony offers, perhaps, the most suitable means of subjecting applicants for emigration to a test of their willingness to work, and to face with courage and energy, the inevitable hardship of an emigrant's life. We anticipate, therefore, that the farm colonies conducted in connection with committees under the Unemployed Workmen Act, 1905, or with philanthropic societies, will be found of considerable value in the working of any organised system of emigration from this country.”¹

665. The Departmental Committee recommended a grant in aid to be made for emigration either to committees under the Unemployed Workmen Act, or to Emigration Societies.

666. We have recommended that in order to facilitate migration, passes be issued by the Labour Exchange entitling workmen for whom situations have been found to travel at specially cheap railway fares. We think that as the Labour Exchange is to be under the Board of Trade, a limited sum from the Exchequer might be placed at the disposal of the local Labour Exchanges, so as to enable them to defray the cost of these passes in suitable cases ; but when this is done, the expenditure incurred should be in the nature of a loan or advance recoverable either through the employer or otherwise from the wages of the workman who has received the pass. Some of us, however, are of opinion that the necessary expenditure should be provided and recovered by charitable agencies or the Public Assistance Authority.

(i) Political Disqualifications on Account of Public Assistance.

667. The question how far relief from the Public Assistance Authority should disfranchise its recipient is more closely connected with the relief of the able-bodied than with any other class of recipients of Public Assistance. We hold generally to the principle that those, who either from misfortune or otherwise have failed to successfully manage their own affairs, ought not by law to have power to interfere in the management of the affairs of others. But Public Assistance will often assume a transient form, and we are not disposed to disfranchise wholesale and unconditionally all who receive public assistance. We therefore recommend that only persons who have received assistance other than medical relief, for not less than three months in the aggregate in the qualifying year be disfranchised.

668. We have now described the changes and additions we propose to make in the permanent methods of assistance applicable to the able-bodied unemployed. They consist as will be seen, of a co-ordination of agencies, some existing, some new, but all of which will work in accord and whose object will be to meet distress by methods of assistance, curative and restorative in their principles. The governing principle is that there shall be only one authority in each district dispensing public relief, but associated with such authority there shall be a number of co-operating organisations, each with a distinct sphere of action and each aiming at maintaining or restoring the independence of the unemployed workman.

¹ Report of Departmental Committee, 1906 [Cd. 2978], p. 7, pars. 31-3.

(3) Transitional Measures.

Ultimate adequacy of Public Assistance system for dealing with all distress.

669. In the preceding sections we have described at length the new organisations which we propose to establish for the purpose of meeting distress arising from want of employment.

670. We have recommended the formation of a national system of labour exchanges, connected and in close communication with one another, and working under the direction of a Central Authority, viz., the Board of Trade. These institutions if duly developed upon the lines of sympathetic co-operation between employers and employed, should become effective instruments in promoting mobility of labour; time, however, will be required for their expansion.

671. We have recommended the general adoption of schemes of insurance against unemployment, to be set in motion either through existing trade organisations or through groups of persons engaged in similar occupations and combined into an organisation for the express purpose of insurance. We have suggested that assistance from public funds be given to encourage such organisations. Time, again, will be necessary before insurance can become a great operative force.

672. We have recommended the recasting of the present system of Poor Law relief. In future, if our proposals are adopted, there will be at the offices of the Local Government Board, under the charge of an Assistant Secretary, a separate Public Assistance Division in which all matters relating to Public Assistance will be dealt with. Emphasis will be given to the existence and importance of this separate and specialised Division by the presentation to Parliament of an Annual Report relating to Public Assistance in a separate volume distinct from the remaining portions of the Annual Report of the Local Government Board. The work of this Division will be of a very responsible character, as it will have to consider and control the new proposals put forward by the Public Assistance Authorities in connection with the various forms of assistance enumerated in our last chapter, and which should be at the disposal of these local bodies. New institutions, colonies, and other establishments will have to be set on foot and existing institutions reorganised. Combination between different local authorities for these purposes may be necessary, and, possibly, will have to be enforced. To further these objects effectually the staff at the disposal of the Public Assistance Division of the Local Government Board will have to be strengthened and enlarged. There will thus be a centre of Public Assistance in Whitehall with improved sources of information, watching over the many problems connected with the relief of the necessitous and the working of the new and reorganised institutions.

673. Correlated to this Central Authority will be the local authorities. These will not be so numerous as at present. In each County and County Borough there will be a Public Assistance Authority, or Statutory Committee of the Council, formed on broad lines of selection and nomination. This authority, according to the terms of its constitution, will be the responsible local organisation, acting under the supervision and, if it be ultimately necessary, under the direction of the Central Authority.

674. Appointed by the Public Assistance Authority, there will be in each County and County Borough one or more Public Assistance Committees. These will not be independent but auxiliary bodies. They will have at their disposal all the machinery provided by the Public Assistance Authority of the County or County Borough, or by two or more such authorities, acting in association, for the assistance of necessitous persons by means of industrial colonies or institutions. Thus they will be in close touch with a local centre of Public Assistance—a centre where questions of distress can be considered for the County or County Borough as a whole, where emergencies may, as far as possible, be anticipated, and where in any case preparation and readiness will be a first duty.

675. Allied to these Public Assistance Authorities and Committees, and constantly* co-operating with them, there will be in every district statutory Councils of Voluntary Aid and Voluntary Aid Committees supplementing the work of Public Assistance in various ways, and bringing beneficial and preventive influences to bear upon those in distress. These Voluntary Aid Councils and Committees will be connected with the Central Authority

* See Part VII.

in London. In this way, we hope to do away with the separation now existing between voluntary and official forces, and to secure co-operation in place of isolation and mutual exclusiveness.

676. Under these arrangements we may, we think, anticipate a definiteness, consistency, and completeness of policy which have not hitherto been possible.

677. When all the different parts of our scheme are properly developed, we believe that, in the aggregate, it will be adequate to arrest and deal with the distress due to unemployment. It is upon this assumption that we have insisted that, in the future, there should be, in each area, one, and only one, public authority empowered to grant assistance out of public funds to necessitous individuals. We therefore recommend that the Unemployed Workmen Act, 1905, should expire as soon as the new system has come into operation.

678. It is clear, however, that the permanent system which we propose to set up will take some time before it can become thoroughly effective. This applies not only to the organisation directly dealing with distress, but also to the measures, preventive of distress, which we suggest. But, during the earlier stages of their development prolonged distress of an acute kind may occur. If there be no special machinery in reserve, and our proposals, not having had time to develop, should prove inadequate to meet this exceptional distress, the new system of Public Assistance may be overtaxed. It seems, therefore, necessary for the success of the reforms we propose that, during the early years of their existence, they should be, for a strictly limited period, safeguarded by some kind of reserve power or safety valve, available only under exceptional circumstances.

Need of interim measures in case of prolonged acute distress.

679. Any special machinery for dealing with exceptional distress is open to objections, the force of which we fully admit. Such machinery tends to shake public confidence in the sufficiency of the permanent system of relief, and to give occasion to competing schemes. But unless, during the inevitable transition period, there is some official organisation ready to meet the emergencies to which we have referred, the public will insist upon extemporising in the future, as they have done in the past, remedies both dangerous and demoralising, and they may even force the Government into passing hasty and temporary legislation.

680. The evil of extemporised, and in a sense opportunist, methods does not end with their inadequacy nor with the demoralisation which they temporarily produce: they tend to persist, as methods, after the emergency which called them into existence has passed away. Nor is this all: in persisting, they sometimes deteriorate and come to be looked upon as permanent methods of assistance parallel with the normal Poor Law or Public Assistance system, and, to a certain extent, superseding it in a harmful way. Thus, charitable efforts, which worked well under proper supervision and organisation at the time of the Lancashire cotton famine, in later years have been superseded by "Press funds" and "Unemployed Funds," with the unfortunate results upon which we have been obliged to animadvert. Similarly, municipal relief works, which were advocated by the Central Authority for times of special distress, have tended, especially in certain localities to persist and become recurrent; indeed in some places they have outlived the establishment of the distress committees which were intended to supersede them.¹ Again, we have seen how the Unemployed Workmen Act was intended to meet times of exceptional distress, and how, in fact, it has come to be regarded as part of the normal and permanent machinery of relief.

681. If, then, there is any likelihood that during the early years of the schemes we propose, at a time of exceptional distress, pressure will be exerted upon the Government to supplement our proposals by special remedies or special works, we must take such a contingency into consideration.

682. Past experience shows that extemporised methods of relief have generally been futile and mischievous in their ultimate effect. This is inevitable when uncontrolled impulse attempts to deal off-hand with difficult social phenomena. The conclusion is, therefore, forced on us that, if any such reserve power is to be brought, even for a limited period, to the aid of the ordinary system of Public Assistance, its scope, character, and effect should be carefully thought out in advance.

Precedent and arguments for special "commercial" works.

683. The Lancashire Cotton Famine in its magnitude and duration is, perhaps, the most intense instance of industrial depression ever known in this country. Towards its close, charity had become well organised and was working in cordial co-operation with public relief, but in the opinion of the Government of that day further measures were necessary. Additional aid was given to the distressed districts in the form of public works started, managed, and regulated on a commercial basis. No demoralisation was caused among those engaged upon the works. Neither was there any expectation or demand that such work should become a perennial source of occupation in the localities where they had been started. In contrast with the comparatively good results then obtained from works of this character, we must place the conclusions contained in the reports and evidence made to us as regards the relief works set in operation during the last few years. (*Vide* pars. 392-408.)

684. A good example of the different results obtained under the two systems, both in regard to the workmen and in regard to the cost of the work done, is afforded by the following instance of the operation of "commercial-works" and "relief-works" in the same locality and on the same class of inhabitants. The quotation is from the statement of evidence of the engineer of a large County Borough:—

"Commercial" works.

"In the year 1903, the corporation took in hand an extension to their sewage works (about five miles from town), the estimated cost of which was £32,000. In view of the unemployment in the borough it was decided to carry out this work by direct employment, and to give a preference to . . . (local) men. Subsequently arrangements were made to convey the men to and from the work in motor waggons, which were purchased for the purpose of conveying materials to the site. The charge of the works was placed in my hands. My instructions were that the men to be engaged were to be fit for their work, and that I was to have the usual power of discharging any men whose conduct or work was not satisfactory. In short, the engagement of the men was on the same terms as if the work was being carried out by contract. The standard rate of wages was paid. The result has been quite satisfactory; the work has been well-done and at a reasonable cost. Of course, there have been a large number of changes among the workmen, some being discharged and others leaving of their own accord, but the number has not been greater than might have been expected in any contract of this magnitude. The work is still proceeding, and the number of men employed upon it is now about 100."

"Relief" works.

"A distress committee was formed in * * * under the Unemployed Workmen Act, 1905, but the Act did not pass until after the special period of distress to which I have alluded had come to an end, and there was no real need for exceptional measures at the time the committee was formed. The committee received applications from a number of unemployed workmen during the winter, and at their request the corporation found work for some of these men, first in laying a sewer, and second in levelling a playground in one of the parks. The arrangement made was that the distress committee should pay the wages of the men employed, and that the corporation should pay the committee for the work according to its value as measured up by me. The result showed that the labour cost the committee 75 per cent. more than its value. It was necessary to employ along with the men provided by the distress committee some efficient labour to carry out the timbering, pipe-laying, etc., which could not be entrusted to inexperienced hands. It was found that the good workmen deteriorated while employed alongside the others, and instead of his raising the standard of the unemployed to his own level the reverse was the case, and my inspectors and foremen have had considerable trouble in bringing back to their former efficiency the men who have worked alongside the unemployed."¹

685. The vital distinction between these two instances is that, in the case of the relief works the men were taken on because they were necessitous, and the idea that they were necessitous and thus entitled to relief governed their engagement, their dismissal, and the whole conditions of the work. In the case of the commercial works it may be true that the men employed were necessitous, but they were engaged and dismissed in their capacity and according to their fitness as workmen and not from any idea of their claim for relief from public funds.

686. We therefore strongly hold that if, under the contingencies contemplated, any works are to be started to relieve a locally congested labour market, such works should be upon a "commercial" basis and be executed under contract.

687 It may be asked if work of this description will really help the situation. What ever its nature, and, in all probability, whatever its amount, there will inevitably be left outside unemployed men of all trades and of all grades of skill. And, if the engagement is left to contractors, those who get employment in this way will be the best men for the particular kind of work, not the greatest sufferers, and not persons who have any preferential claim on public help. Moreover, as the work in question will probably be of

¹Stubbs, Vol. VIII., App. lxxv. (7-8.)

a kind involving the employment principally of muscular unskilled labour, this will actually give a kind of protection to this class of worker over skilled artisans, tradesmen, and others who work more with their brains than with their muscles. All this we grant. But we would urge that no measures to meet exceptional distress have ever yet been devised which did more than employ a small number of those actually in distress; that the occupation provided has always been almost entirely unsuitable for the skilled artisan, tradesman, and others; and that such measures did, on the whole, afford a kind of protection for the unskilled classes.

688. On the other hand, we see two positive advantages in the “commercial” work recommended. Firstly, such work, if put on the market at a time of special distress, will help to restart the industrial machine at a time when the contagion of discouragement, want of enterprise, and timidity is making it move slowly and with great friction. The work will thus anticipate and tend to induce that general revival of industry which, in the present industrial organism, once started is equally contagious. Secondly, it will relieve the labour market to some extent, while assisting the classes least able to provide for themselves by insurance and trade organisation, and, therefore, most liable to deterioration.

689. We make no claim to having discovered a scheme for employing men profitably at a time when private capital and private employers cannot do so. But we may fairly claim to have had every aspect of the difficulty under our consideration; and if we put forward this, it is because it seems to us to involve the least disturbance, and to avoid the greater evils in which experience shows that “relief works” usually end.

690. We have now to consider the authority to whom this provision for exceptional and protracted distress should be given, and the precautions and restrictions to be imposed before any such works can be sanctioned.

The proper authority to provide special works.

691. We dismiss at once any idea of such works being initiated, financed, or superintended by a National authority. It may be that schemes of great magnitude such as afforestation, the general arrest of coast erosion, and the provision of waterways are outside the grasp of any Local Authority or any reasonable combination of such authorities. If such works are undertaken it would be on the ground of national utility and they should be promoted as “commercial” works. But they will, as a rule, necessitate the provision of housing accommodation for those engaged upon them. The enterprise will tend to become permanent to employees, or at any rate will require continuous work over a number of years for its completion. On the other hand it is of the essence of such works as we recommend that they should not last longer than the exceptional distress which they have to meet.

692. Dismissing, then, the idea that the National Authority should undertake works of the class or character we suggest, we have to decide what Local Authority or what branch of a Local Authority should be entrusted with their promotion and control. We have devoted much of our Report to pointing out the confusion, overlapping, and other evils caused by the duplication of relief works by Voluntary, Municipal, and Distress Committees, alongside of the Poor Law Guardians, and we cannot recommend the renewal of these evils. If the works were to be “relief” works we should have recommended that the Public Assistance Authorities should undertake them, but as they are to be carried out on ordinary commercial lines and as such works would be quite outside the functions of a Public Assistance Authority, we require to fall back on other bodies who would be conversant with undertaking works of this character. Our opinion, therefore, is that the bodies best qualified to carry out this exceptional task during the period of transition are the Works’ Committees of the various now existing Local Authorities.

693. We now turn to the financial aid which may have to be offered to the Local Authorities to undertake this duty, and also the restrictions to be imposed and the conditions to be complied with before any such help can be obtained. Two alternative methods suggest themselves.

Financial inducements to the provision of special works.

694. The first is a direct Government Grant towards works which are approved by the Government. This has been in effect the method adopted in distributing the grant

Financial inducements to the provision of special works.

of public money voted under the Unemployed Workmen Act. It has many disadvantages inherent in or inseparable from the method itself. Among others it creates the idea that the Government out of National funds are providing local work for the unemployed. This method, in our judgment, is thoroughly bad, and we cannot recommend it.

695. The alternative method is for the Government to act through the Local Authority by lending them, on advantageous terms, money to facilitate the undertaking of special works. At the time of the Lancashire cotton famine, the course was adopted of allowing the Local Authorities to borrow from the Government at a less rate of interest than they themselves could have obtained in the open market, but the money was not advanced to the Local Authorities at a lower rate of interest than that at which the Government itself could borrow. What the Local Authorities enjoyed was the advantage of National over Local credit. Since 1863 the practice of Local Authorities borrowing money through the Public Works Loan Board has been largely extended, though the operations of the Board have recently been curtailed. The Board now refuses to lend money (except for the purposes of education, small holdings, etc.) to a Local Authority, the rateable value of whose area amounts to £200,000 or upwards, and in the case of other Local Authorities the Board will only lend for certain purposes, *e.g.*, education, Poor Law, sanitary works, housing, small holdings, etc.¹ We suggest that these limitations upon the powers of the Public Works Loans Board should be cancelled in regard to loans required by Local Authorities for the purpose of carrying out special works for the relief of the labour market such as we suggest. It is a condition of all loans granted by the Public Works Loans Board on the security of local rates that the rates of interest, which are fixed by the Treasury, shall be such that no loss is thrown upon the Local Loans Fund, but, without abandoning this principle, we think that it should be within the power of the Board to grant loans for the purposes we have indicated at the rate of interest at which the Imperial Government can borrow.

Safeguards against abuse.

But to give a Local Authority special financial facilities for the prosecution of public works might result in the inception of schemes unsound in themselves, and advanced only in order to enable the Local Authority to participate in the special loans. This undoubted danger is one which must be guarded against. We think, therefore, that, before a Local Authority should be allowed to thus borrow from the Public Works Loan Commissioners for the purpose of meeting temporary local distress, certain indispensable preliminaries should be complied with, which we will now enumerate. We suggest two safeguards:—

First.—The proof of exceptional and protracted distress due to severe industrial depression.

Second.—The proof of the soundness and utility of the schemes themselves.

These two conditions should be complied with before the special loan is granted, and we will now specify how these conditions can be fulfilled.

696. Under our scheme there will be in each locality a Labour Exchange well organised and forming part of a national system of Labour Exchanges. Through this exchange full and authoritative information as to the amount and intensity of local unemployment in any one place can be obtained by the Board of Trade.

697. Thus the Board of Trade will receive weekly from the labour exchanges accurate and detailed information as to the amount of unemployment throughout the country. From the time they are started the local labour exchanges would be able to give to the Board of Trade full and authoritative information as to the amount and intensity of local unemployment. In short, a Government Department will hereafter be able to test to the full the amount of alleged exceptional and protracted distress in any industrial locality in the country.

698. The Voluntary Aid and Public Assistance Committees, again, will be the agencies dealing respectively with private and public assistance; through them could be obtained an accurate report as to the adequacy or inadequacy of their resources to meet the local distress. Thus the amount of distress and the resources of assistance would be capable of authoritative comparison and the Local Government Board would have trustworthy data on which to go in deciding upon the necessity for special loans.

699. We would not allow any authority to apply for a special loan until it had reports from the Voluntary Aid Committee and Public Assistance Authority of such a character as to justify the application. When the application has been made the

¹ Thirtieth Annual Report Public Works Loan Board, 1904-5 (224, 1905), par. xiii.

sanction of the Local Government Board, after consultation with the Board of Trade would have to be obtained.

700. To those accustomed to the haphazard methods of relief now in vogue, the procedure here laid down may seem tedious and to require more time for its consummation than is possible in an emergency. Our reply is simple. Measures hastily taken in an emergency are generally ill-thought out, ill-organised, costly, and ineffective. With the exercise of a little prescience and vigilance impending distress, especially if it be abnormal, can be foreseen. This is shown by the experience of the Indian Government. Necessity for preparation beforehand.

701. The Indian Government is probably the most highly organised system of administration known. The local governments have each a separate and fully developed local administration, and above them is a Central Authority invested with almost absolute executive power, which it can exercise at once in time of emergency. Yet, even with the advantage of these rare administrative powers, experience has taught the Government that public works for relief of distress cannot be improvised, and that unless an emergency is anticipated by a careful preparation of schemes in advance, waste and demoralisation are certain to ensue when the emergency arises. The duty is therefore imposed upon every province and district to have schemes of this character thought out, and periodically revised and ready to be put at once into operation when the emergency arises, and all the engineer departments of the different provinces are so instructed and so act.

702. We therefore suggest that schemes for special works be prepared and drawn up by the Local Authorities in co-operation with other authorities and be revised from time to time; such schemes to be submitted to the Local Government Board for approval. Works of this character need not necessarily be confined to the area of the Local Authorities promoting them but may be carried on outside such area.

703. Having thus laid down a procedure which would exact, on the one hand, proof from authentic and official sources of the existence of local distress from exceptional industrial depression, and would ensure, on the other hand, that the work proposed for the relief of the locality was of public utility, we may now recapitulate our recommendations:—

(1) Assuming that the Local Government Board, after consultation with the Board of Trade, are satisfied that the above conditions have been complied with, then, for the purpose of carrying out special approved works, the Public Works Loan Board should be empowered to lend to the Local Authorities money at the rate at which the Imperial Government can borrow.

(2) The special works should be carried out on ordinary commercial lines, by contract, and the fitness or unfitness of workmen for the work shall be the main consideration in engaging or dismissing them and in determining the conditions of their employment. All workmen so employed shall, as far as practicable, be taken from the register of the Local Labour Exchange.

(3) The wages paid will be the ordinary market wages for the kind of work done—whether piecework, or time rates.

704. We would further propose that the period of repayment of any loan sanctioned under this plan should vary according to the utility and durability of the work proposed. The less the durability the shorter should be the period of repayment.

ANALYSIS OF RECOMMENDATIONS AND SUGGESTIONS IN PART VI. CHAPTER 4.

(A.) PERMANENT PREVENTIVE MEASURES OF A SOCIAL OR INDUSTRIAL CHARACTER.

I.—Labour Exchanges.

(1) A national system of Labour Exchanges should be established and worked by the Board of Trade (507) for the general purposes of assisting the mobility of labour and of collecting accurate information as to unemployment. (487.)

(2) The Labour Exchanges should be in charge of officers of the Board of Trade, assisted by Committees of employers, workmen, and representatives of local authorities. (507.)

(3) There should be no compulsion to use the Labour Exchanges, but the object of the Government and the Local Authorities should be to encourage and popularise them in every way, *e.g.*, by propaganda and by making use of the exchanges in engaging workmen. (519, 528.)

(4) The Labour Exchanges should be granted free postal and telephone facilities by the State. (520, 528.)

(5) Arrangements should be made to enable the Labour Exchanges to grant passes entitling workmen travelling to a situation to specially cheap railway fares; in suitable cases the cost of the passes might be provided and recovered afterwards from the workmen. (528, 666.)

II.—The Education and Training of the Young for Industrial Life.

(6) The education in our public elementary schools should be made less literary and more practical, and better calculated than at present to adapt the child to its future occupation. To this end the curriculum should be revised. (553.)

(7) Attention is drawn to the suggestions in paragraph 549 :—

(a) That boys should be kept at school until the age of fifteen instead of fourteen.

(b) That exemption below this age should be granted only for boys leaving to learn a skilled trade; and

(c) That there should be school supervision till sixteen and replacing in school if not properly employed.

(8) There is urgent need of improved facilities for technical education after the present age for leaving school. (550.)

(9) With a view to the improvement of physique, a continuous system of physical drill should be instituted which might be commenced during school life, and be continued afterwards. (555.)

(10) In order to discourage boys from entering occupations which offer no prospect of permanent employment, there should be established, in connection with the Labour Exchange, a special organisation for giving boys, parents, teachers, and school managers, information and advice as to suitable occupations for children leaving school. (527), (537-547.)

III.—The Regularisation of Employment.

(11) Government Departments and Local and Public Authorities should be enjoined ;

(a) To regularise their work as far as possible. (561, 568.)

(b) To endeavour, as far as possible, to undertake their irregular work when the general demand for labour is slack. (566, 568.)

(12) The Board of Trade should send officers to visit and hold inquiries in localities where intermittent employment prevails, and should endeavour through conference with employers and employed to arrange schemes for the progressive decasualisation of such employment. (563-568.)

IV.—Unemployment Insurance.

(13) The establishment and promotion of unemployment insurance, especially amongst unskilled and unorganised labour, is of paramount importance in averting distress arising from unemployment. (604.)

(14) The attainment of this object is of such national importance as to justify, under specified conditions, contributions from public funds towards its furtherance. (604.)

(15) This form of insurance can best be promoted by utilising the agency of existing trade organisations, or of organisations of a similar character, which may be brought into existence. (604.)

(16) No scheme of Unemployment Insurance, either foreign or British, which has been brought before us, is so free from objections as to justify us in specifically recommending it for general adoption. (604.)

(17) A small Commission or Inter-Departmental Committee of experts and representatives of existing trade benefit organisations should be appointed with an instruction to frame a scheme or schemes for consideration. (605.)

(18) After that Committee has reported, a special Advisory Board should be set up to help and promote schemes adapted to the varying conditions of different industrial communities. (606.)

(B.) THE PERMANENT SYSTEM OF PUBLIC ASSISTANCE FOR THE ABLE-BODIED,

V.—Organisations engaged in Public Assistance and their Functions.

(19) There shall be in every district four separate but closely co-operating organisations with the common object of maintaining or restoring the workmen's independence (607, 608), viz. :—

(a) An organisation for Insurance against Unemployment, to develop and secure (with contributions from public funds (604)) the greatest possible benefits to the workmen from co-operative insurance against unemployment. (608.)

(b) A Labour Exchange established and maintained by the Board of Trade to provide efficient machinery for putting those requiring work and those requiring workers into prompt communication. (608.)

(c) A Voluntary Aid Committee to give advice, and aid out of voluntary funds. (607-608)

(d) A Public Assistance Authority representing the County or County Borough and acting locally through a Public Assistance Committee, to assist necessitous workmen under specified conditions at the public expense. (607, 608, 609.)

(20) It shall be a fundamental principle of the system of Public Assistance that the responsibility for the due and effective assistance of all necessitous persons at the public expense shall be in the hands of one and only one authority in each County and County Borough, viz., a Statutory Committee of the County or County Borough Council (Part IX., p. 23) entitled the Public Assistance Authority (609.)

(21) The guiding principles of the organisations engaged in the work of Public Assistance should be:—

(a) Co-operation, so as to secure prompt and efficacious treatment of appropriate cases by the various agencies. (611–614.)

(b) Discrimination, so as to select treatment appropriate for each case and yet encourage general thrift and independence. (615.)

(c) Restoration, so as to prepare workmen by restorative treatment, for return to independent life. (616–618.)

(22) From the point of view of treatment, the necessitous unemployed may be divided into three classes. (619, 622, 627, 628):—

Class I.—Those requiring temporary maintenance and work. (620–622.)

Class II.—Those requiring for a longer period maintenance and work with training. (627.)

Class III.—Those requiring detention and discipline. (628.)

(23) For Class I. and Class II., there will be available various methods of treatment under the Public Assistance Authority (622–626–627), but Class III. will be handed over to another authority—the Home Office—and dealt with in Detention Colonies. (629, 655–6.)

VI.—Methods of Treatment.

(24) There will be available for the Public Assistance Authority the following methods of treatment of the able-bodied (630):—

(1) Home assistance.

(2) Partial home assistance.

(3) Institutional assistance.

(4) Continuous maintenance in a Detention Colony under the Home Office.

(5) Emigration. (663.)

VII.—Home Assistance.

(25) By Home Assistance we mean assistance at the home, whether in money or in kind, and given without requiring the recipient to live entirely in an institution. The conditions under which such assistance should be granted to the able-bodied would be as follows (630):—

(a) That the requisite assistance is not forthcoming from any other source.

(b) That the assistance be given on condition of daily work in an industrial or agricultural institution or colony, or otherwise as the Public Assistance Authority may decide within regulations laid down by the Local Government Board.

(c) That the assistance should only be given to an applicant with a decent home and a good industrial record.

(d) That the order for assistance should only be for a strictly limited period, and subject to revision.

(e) That the applicant should be registered at the Labour Exchange, and that the relief should cease as soon as suitable occupation has been offered through the Labour Exchange.

(26) An essential principle to be observed in connection with Home Assistance to the able-bodied is that it should be, in some way, less agreeable than aid given by the Voluntary Aid Committee or than the receipt of Unemployed Benefit through Insurance. (623.)

VIII.—Partial Home Assistance.

(27) By Partial Home Assistance we mean Home Assistance for the family of an applicant, the applicant himself being maintained in an institution and given work. (624), (630.)

IX.—Institutional Assistance.

(28) By Institutional Assistance we mean continuous maintenance in an Industrial or Agricultural Institution or Colony without detention, except in so far as the applicant binds himself by a written agreement to stay for a definite period. (625.)

X.—Industrial or Agricultural Institutions.

(29) Industrial or Agricultural Institutions should be situated in the country or on the outskirts of towns (631–632), in many cases a disused workhouse might be adapted. (631.)

(30) They should include housing accommodation for those receiving Institutional or Partial Home Assistance. (635.)

(31) They should be built in an inexpensive manner and with sufficient land to employ a large number of persons. (631.)

(32) For industrial occupations, inexpensive workshops should be erected. (631.)

(33) The workshops and land need not necessarily be adjacent to the housing accommodation. (635.)

(34) The Industrial and Agricultural Institutions will be in direct communication with the Labour Exchange, and one of the primary objects of their officials should be the restoration to industrial efficiency and independence of the inmates under their care. (634.)

(35) On entrance into the institution the applicant should, as far as possible, be placed on work adapted to his previous occupation, and his capability and willingness to work will thus be ascertained. (634.)

(36) The different treatment and classification of the able-bodied should commence from the time that the application for assistance is entertained, and every effort should be made, at an early stage, to dissociate the respectable unemployed from the habitual “in-and-out.” (634.)

(37) It will probably be found necessary to establish separate industrial institutions for women. (635.)

XI.—Labour Colonies.

(38) While appreciating the limited experience and success of Labour Colonies, we recommend their establishment (641) and use on the following grounds:—

(a) The open-air life will conduce to the re-habilitation of those subjected to its influence. (641.)

(b) The expense of maintenance, site, and building should be less than in the case of Urban Workhouses. (642.)

(c) The colony affords better opportunities than the workhouse for more varied methods of industrial treatment (641), and for classification. (643.)

(39) The colony system should provide several distinct classes of treatment, either in separate colonies or in distinct divisions of the same colony. (647.)

(40) Public Assistance Authorities might combine to establish a colony or colonies for their common use. (647.)

(41) The colonies of voluntary and religious bodies should be utilised by the Public Assistance Authorities for restorative treatment in suitable cases. (648.)

(42) The colony system should be carefully controlled and supervised by the Local Government Board. (650.)

XII.—Good-Conduct Pay in Public Assistance Authorities' Institutions and Colonies.

(43) Well-conducted men in institutions or colonies might, if they show industry, be awarded small gratuities in the shape of good-conduct pay, the greater part of such pay to accumulate and be given to the men on leaving the colony or institution. (651.)

XIII.—Detention Colonies.

(44) Compulsory Detention Colonies are essential to the success of a system of voluntary Labour Colonies. (629), (653.)

(45) Detention Colonies under the control and supervision of the Home Office should be established (655); to which might be committed, for any period between six months and three years (658) persons guilty of a wilful and persistent repetition of any of the following offences (657):—

(a) Wilful refusal or neglect of persons to maintain themselves or their families (although such persons are wholly or in part able to do so), the result of such refusal or neglect being that the persons or their families have become chargeable to the Public Assistance Authority.

(b) Wilful refusal on the part of a person receiving assistance to perform the work or to observe the regulations duly prescribed in regard to such assistance.

(c) Wilful refusal to comply with the conditions laid down by the Public Assistance Authority, upon which assistance can be obtained, with the result that a person's family thereby become chargeable.

(d) Giving way to gambling, drink, or idleness, with the result that a person or his or her family thereby become chargeable.

(46) Public Assistance Authorities should pay the full cost of maintenance of persons sent to Detention Colonies at their instance. (656.)

XIV.—Emigration.

(47) While emigration by itself cannot be considered as a sufficient remedy for unemployment, it is, nevertheless, a valuable means of dealing with a certain class of cases, which are likely to make a fresh start under new conditions. More especially is it indispensable in dealing with districts where an excessive congestion of labour has taken place, and where exceptional treatment is called for. (662.)
